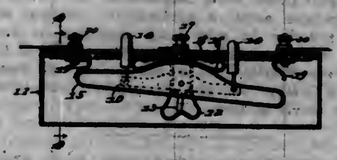
1. In a window construction, a trackway adapted to be secured to a window frame, said trackway having attaching and body portions and an inwardly offset guideway, the opening of which is concealed from view when in use.

1,628,188. THIMBLE. OVID PULLEN, Harmony, N. C. Filed Apr. 2, 1926. Serial No. 99,304. 3 Claims. (Cl. 30—14.)

1. In a device of the class described, an annular support, a blade mounted for right-line reciprocation on the support, a member mounted on the support for axial rotation with respect thereto, and means connecting the blade with said member to impart right-line reciprocation to the blade when said member is rotated.

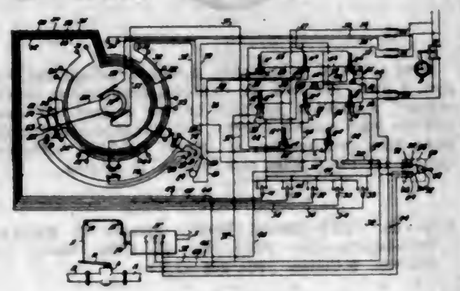
1,628,189. TOY TRICK BOX. AUGUST C. RAISNER, Philadelphia, Pa. Filed July 13, 1926. Serial No. 122,099. 9 Claims. (Cl. 206—1.5.)



2. In a trick box having opposed sides and a bottom secured to the sides; a back swingably mounted on the sides; a lid hinged to the back, and means in the bottom for locking the back in closed position.

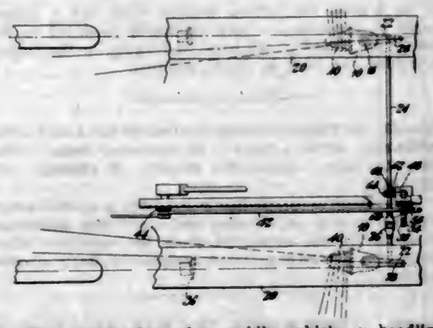
1,628,190. METHOD OF PRODUCING FINELY-DIVIDED NICKEL. MURRAY RANEY, Chattanooga, Tenn. Filed May 14, 1926. Serial No. 109,169. 7 Claims. (Cl. 23—236.)

1. A method of preparing a catalytic material which includes the step of alloying the same with aluminum and dissolving the aluminum from the resultant alloy, whereby the catalytic material remains in finely divided condition.



1,628,191. DOUBLE-POLE TWO-WAY PUSH-BUTTON SWITCH. JOSEPH J. RATTAY, McKeesport, Pa. Filed Feb. 18, 1922. Serial No. 537,481. 1 Claim. (Cl. 200—6.)

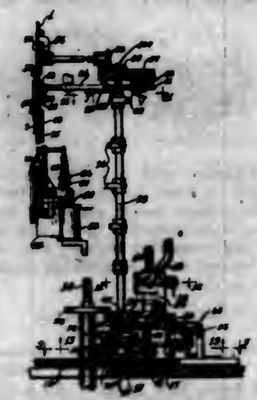
A two-way double pole switch for house lighting having a plurality of simultaneously movable push button actuable rockers, terminal and intermediate contacts disposed in operative relation with each rocker which is provided with an intermediate approximately concentric portion



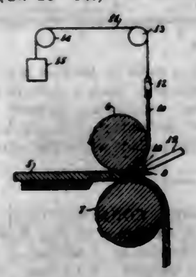
engaged with the intermediate contact and having a circumferentially arranged contact element for engagement with the terminal contact, the rocker having a radial pin, and a spring looped around the rocker and bent at the loop to provide a hump traversed by the pin when the rocker is moved on its pivot to hold the contact elements of the rocker in engagement with either of said terminal contacts.

1,628,192. CONTROL CIRCUITS. PALMER W. REYNOLDS, Bronxville, N. Y. Filed Nov. 24, 1925. Serial No. 71,202. 14 Claims. (Cl. 137—139.)

1. In a control system the combination with a motor-operated valve, of a main switch, means whereby the closing of said switch causes said motor to open said valve, means for intermittently causing said motor to close and open said valve after the closing of said switch, and means whereby the opening of said switch causes said motor to close said valve and stops the intermittent closing and opening thereof.



1,628,193. HEADLIGHT FOR MOTOR VEHICLES. FREDERICK WILLIAM RIEHL, Yonkers, N. Y. Filed Dec. 6, 1922. Serial No. 605,147. 7 Claims. (Cl. 240—7.1.)

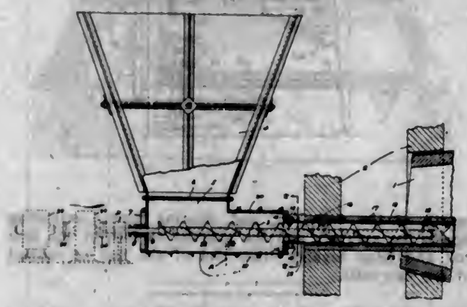


1. The combination of a mobile vehicle, a headlight lamp mounted in a frame at the side of the vehicle, said frame being adjustable about a substantially horizontal axis, and said frame being attached to the vehicle so as to be adjustable about a substantially vertical axis, a parabolic reflector in said lamp arranged to direct a stream of light rays substantially in the direct line of travel of the vehicle, and a reflector in the lamp for throwing a stream of rays substantially transverse of the line of travel of the vehicle.

1,628,194. VENDING APPARATUS FOR LIQUIDS. ROBERT R. ROBINSON, Los Angeles, Calif., assignor to Lucy L. Hicks, Oxnard, Calif. Filed Mar. 2, 1925. Serial No. 12,574. 8 Claims. (Cl. 194—6.)

1. In a vending apparatus having a measuring cylinder for vending gasoline or the like, the combination of a rotary variable stop-device operating to arrest the movement of the measuring piston at selective points, a solenoid and a circuit therefor having switches which may be closed by coins of different denomination, means actuated by the solenoid for operating the rotary variable stop-device, and automatic means for determining the amount of movement imparted by the solenoid to the rotary stop device to correspond with the denomination of the inserted coin.

1,628,195. METHOD OF MANUFACTURE OF COAGULUM-RUBBER ARTICLES. ROBERT W. ROST, Newark, N. J., assignor of one-half to Andrew F. Bigger, New York, N. Y. Filed Feb. 12, 1925. Serial No. 8,858. 11 Claims. (Cl. 18—50.)



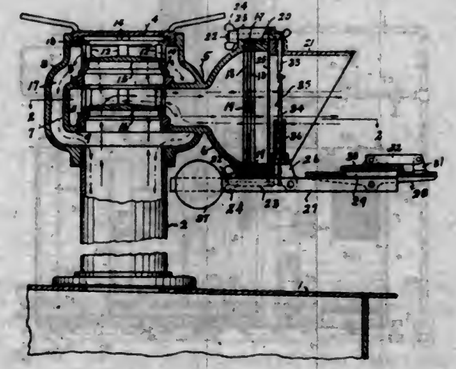
6. The method which consists in splitting from a slab of unvulcanized coagulum rubber sheets having crust thereon for discard of the sheets, and splitting the remainder of the slab into sheets of desired thickness and free from crust for forming articles thereof.

1,628,196. SPRING-PAD CONSTRUCTION. GEORGE E. RYAN, Los Angeles, Calif., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed July 1, 1924. Serial No. 723,575. 2 Claims. (Cl. 68—9.)

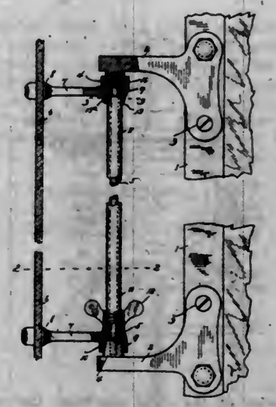
2. A spring pad construction for pressing machines comprising a base plate, coiled springs mounted on the base plate and having outward extensions of their lower coils overlying the plate, and means for securing said extensions to the plate, a covering over the upper ends of the springs, the springs having means selfcontained therewith for hooking into the covering and thus holding the springs from lateral movement.

1,628,197. CEMENT-KILN FEEDER. ROBERT W. RYDER, San Francisco, Calif., assignor to Santa Cruz Portland Cement Company, San Francisco, Calif., a Corporation of California. Filed Nov. 14, 1925. Serial No. 68,994. 6 Claims. (Cl. 214—18.)

1. A cement kiln feeder comprising a tube in substantially horizontal extension, a spiral conveyor fitting therein for forcing material therethrough, said tube connecting with a material receiving box of larger internal dimensions, and said conveyor extending into the box whereby foreign heavy matter delivered with the material to the box for feeding by the spiral conveyor may separate and fall below the working diameter of the conveyor, and a door on said box for the removal of such matter.



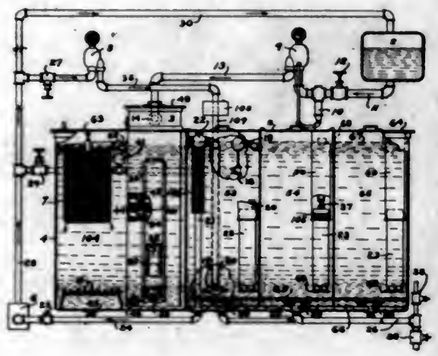
1,628,198. WINDSHIELD WIPER. EDMUND O. SATHER, Oakland, Calif. Filed Feb. 2, 1925. Serial No. 6,401. 16 Claims. (Cl. 121—169.)



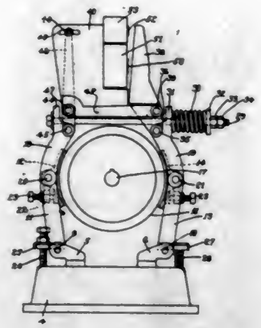
1. In a wiper mechanism, a cylinder having a flexible wall, a suction operated piston reciprocable in the cylinder, means carried by the piston to form a bulge in said wall traveling along the wall with the piston, an arm carried by the piston and extending from said cylinder through said bulge, a wiping element carried by said arm, and means for automatically reversing the travel of the piston.

1,628,199. COMBINATION TANK VENT, FLAME ARRESTER, AND AUTOMATIC SNUFFER. GEORGE C. SCHMIDT and FRANS G. D. MULLER, Houston, Tex. Filed Mar. 30, 1925. Serial No. 19,385. 5 Claims. (Cl. 220—88.)

1. An apparatus adapted for application to a fluid reservoir and having a passageway provided for the exit of fluid from said reservoir and the inlet of air into the reservoir, valve seats in said passageway, valves cooperating with said seats and controlling said passageways, one of said valves being adapted to open under the influence of pressure outwardly from said reservoir, through said passageway, the other of said valves being adapted to open under the influence of fluid pressure in the opposite direction through said passageway, swinging doors adapted to close said passageway and one of which is arranged to normally be held closed by gravity, means tending to swing the other door into closed position and means including a fusible link normally holding the last named door open.



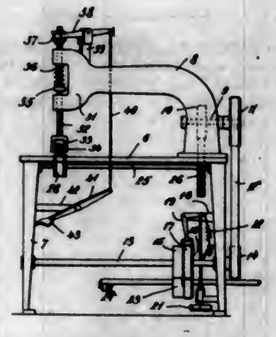
1,628,200. WINDSHIELD-WING MOUNTING. LOUIS RAYMOND SCOTT, Toronto, Ontario, Canada, assignor to George L. Mitchell, Detroit, Mich. Filed Apr. 28, 1924. Serial No. 709,582. 2 Claims. (Cl. 296—84.)



1. In a device of the character described, the combination with a pair of spaced carrier brackets, and means connecting said brackets in a fixed spaced relation, of a pair of supporting brackets seating respectively upon said carrier brackets between the latter, a compression member extending between the two supporting brackets and seating at one end against one thereof, and a nut threaded upon the other end of said compression member and bearing upon the other supporting bracket, one end of said compression member having a flat lateral face engaging a corresponding face of the adjacent supporting bracket to restrain said compression member and bracket from relative rotation.

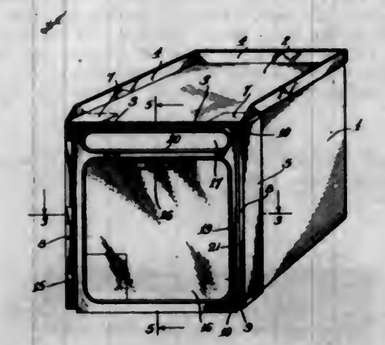
1,628,201. LIQUID CONDITIONING AND SUPPLY SYSTEM. EUGENE M. SCOVILLE, Milwaukee, Wis., assignor of one-half to Floyd L. Swanberg, Danville, Ill. Filed May 31, 1924. Serial No. 716,946. 27 Claims. (Cl. 210—44.)

1. In combination, a source of oil supply, a preliminary purifier communicating with said source, a filter communicating with said purifier, a final purifier, and means for interchangeably conveying oil either directly from said filter to said source or from said filter through said final purifier to said source.



1,628,202. ELECTRIC BRAKE. OSCAR F. SHEPARD, Cincinnati, Ohio. Filed Jan. 15, 1924. Serial No. 686,431. 13 Claims. (Cl. 188—171.)

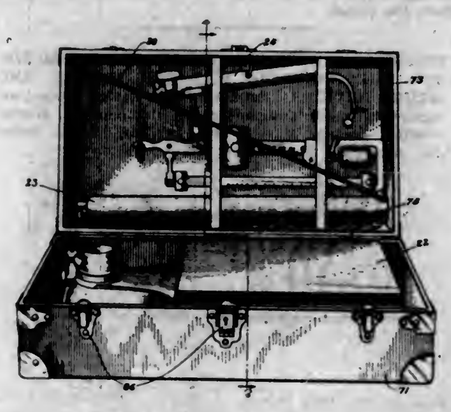
1. In a device of the class described the combination with a brake drum of brake shoes for engagement with the drum, a pivotally mounted armature controlling the brake shoes and a plurality of electro magnets operative on said armature, the electro magnets being aligned perpendicular to the axis of the pivotal mounting of the armature and arranged for jointly controlling said armature.



1,628,203. MACHINE FOR UNITING SHEET RUBBER. JACOB STEIN, New York, N. Y. Filed Nov. 8, 1924. Serial No. 748,615. 10 Claims. (Cl. 154—1.)

1. A machine for uniting rubber sheets, which comprises the combination of a table, a roll mounted in the table and having a portion of its face exposed through an aperture in the table, driving means for this roll, a second roll resiliently held with its face in contact with the first roll, this roll having a length less than the

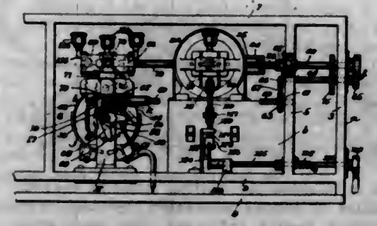
length of the first roll, and clearing means extending across the aperture and the exposed surface of the first roll and lying beyond either end of the line of contact of the two rolls.



1,628,204. DISPLAY COVER. GEORGE A. TAYLOR, Weehawken, N. J., assignor to National Biscuit Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 8, 1921. Serial No. 499,232. 23 Claims. (Cl. 220—82.)

1. A display cover for association with the open side of a receptacle, said cover being formed of sheet metal and including a main frame, continuous flanges extending rearwardly from three edge portions thereof, a pair of spaced flanges extending rearwardly from the fourth edge of said frame and disposed adjacent the ends of said fourth edge, all of said flanges being adapted for engagement solely with similar faces of said receptacle to maintain the body of said frame applied to said receptacle, and an auxiliary frame hingedly secured to one of the sides of said main frame.

1,628,205. SCALE. MATHIAS J. WEBER, Chicago, Ill., assignor to Continental Scale Works, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1921, Serial No. 506,656. Renewed Mar. 26, 1927. 15 Claims. (Cl. 265—55.)

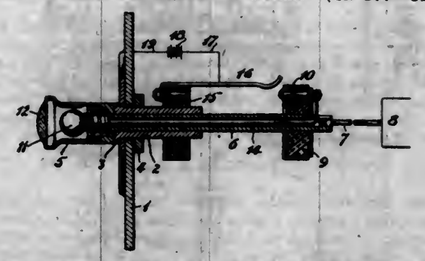


1. A portable platform scale outfit, comprising, a demountable scale, and a carrying case, said demountable scale being arranged to have greater dimensions when set up than when demounted and said case being constructed to receive the separate scale parts when demounted and to retain said parts in fixed and predetermined positions.

1,628,206. MOLDED PRODUCT AND PROCESS FOR ITS MANUFACTURE. HOWARD F. WEISS and RALPH F. NORRIS, Madison, Wis., assignors, by mesne assignments, to C. F. Burgess Laboratories, Inc., Dover, Del., a Corporation of Delaware. Filed June 17, 1924. Serial No. 720,511. 23 Claims. (Cl. 18—47.5.)

11. The process which comprises mixing an intumescent binder with a filler, introducing the batch so formed into a mold and there rapidly heating it until the material puffs to a porous coherent product.

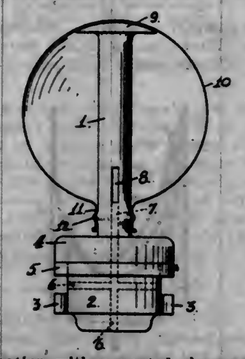
1,628,207. THERAPEUTIC DEVICE. GEORGE STARR WHITE, Los Angeles, Calif. Filed July 30, 1923. Serial No. 654,654. 4 Claims. (Cl. 174—177.)



1. A device of the character disclosed adapted to control the illumination of two lamp members, including four segmental members arranged in spaced cooperating pairs, a switch member for play upon such segmental members, such segmental members being adjustable as to the length of path to be traversed by such switch member, whereby selected periodicity of the illumination of each respective lamp may be regulated.

1,628,208. MATCH-BOX HOLDER OR THE LIKE. WILLIAM H. WHITE, Chicago, Ill. Filed Sept. 16, 1925. Serial No. 56,685. 2 Claims. (Cl. 232—1.)

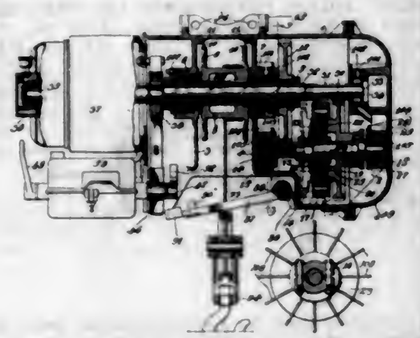
1. As a new article of manufacture, a match box container formed from a single piece of material and including a back portion, side portions and front face of the container, and side portions and floor of a coin receptacle positioned beneath said container, the side portions of the container having slots, and tongues formed on the front face of the container and the floor of the coin receptacle for cooperation with said slots.



1,628,209. SIGNAL FOR CHOKERS AND THE LIKE. EDSON B. WILCOX, Meriden, Conn. Filed Jan. 22, 1926. Serial No. 82,950. 2 Claims. (Cl. 177—311.)

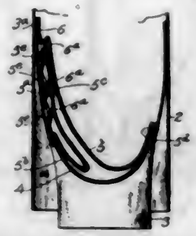
1. A warning signal for a choker operating device for a gasoline carbureter comprising, a movable rod to operate a choker, a support therefor, a handle for said rod, and electric signal in front of said support a signal circuit controller at the rear of said support, and operable by the movement of said rod to cause the signal to go "on" when said rod is in one position, and to cause said signal to go "off" when in another position.

1,628,210. VAPOR CONDENSER. JOHN J. WILT, Bakersfield, Calif. Filed Mar. 22, 1926. Serial No. 96,493. 3 Claims. (Cl. 257—25.)



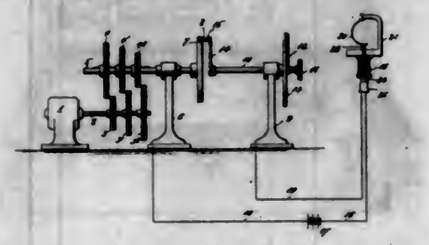
1. In combination with a vented closure-member of a liquid-container, an inflatable-member in receiving and draining communication with the vent of said closure-member, and resiliently associated with said closure-member to afford automatic release of excess pressure.

1,628,211. METHOD OF GRINDING VISCOUS MATERIALS. HARRY F. WINSLOW, Brooklyn, N. Y. Filed June 29, 1921. Serial No. 481,324. 5 Claims. (Cl. 83—12.)



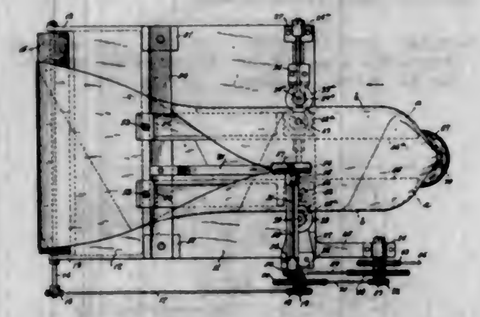
2. The method of grinding viscous materials which consists in passing the same over a sequence of grinding rolls, causing the material adjacent the ends of a later roll in the sequence to be deposited on an earlier roll, and delivering as a finished product the remainder of the material on said latter roll.

1,628,212. LOAD LIFTER. FRANK J. WINTERER, Philadelphia, Pa. Filed Aug. 2, 1923. Serial No. 655,178. 5 Claims. (Cl. 184—11.)



1. In a load lifter having a casing forming an oil chamber, a roof on the chamber, pairs of bearings for rotating parts disposed one above the other in a chamber, a fin wheel rotatable between a pair of lower bearings and adapted to splash oil against the roof whence it is deflected into the upper bearings which have oil ducts formed in their bottoms whereby oil will pass from the upper to the lower bearings, and means to rotate the fin wheel.

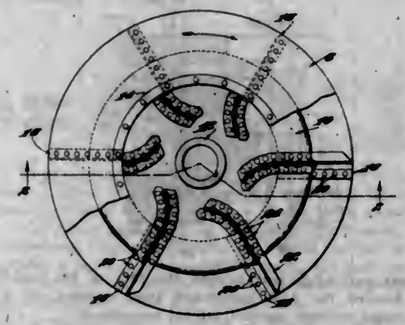
1,628,213. WEARING APPAREL. ALBERT WITZ, Philadelphia, Pa. Filed Sept. 13, 1926. Serial No. 135,093. 5 Claims. (Cl. 128—159.)



1. In a garment of the character specified, a trousers portion, an inner suspensory strap comprising front and rear portions having their lower ends connected with the front and rear portions of the seat of the trousers respectively, the upper ends of the strap portions being connected together and adapted to extend upwardly within the trousers, and means for adjustably attaching the upper end of said strap to the front of the garment above the crotch.

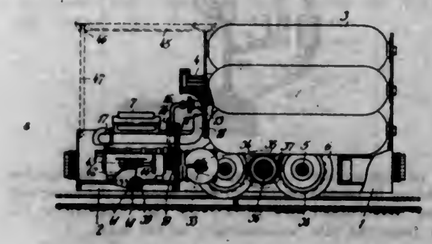
1,628,214. METHOD AND MEANS FOR DETERMINING THE ERROR IN WATCHES, CLOCKS, AND OTHER DEVICES. EZEKIEL WOLF, Boston, Mass., assignor, by mesne assignments, to Hammond V. Hayes, trustee, Boston, Mass. Filed Dec. 16, 1921. Serial No. 522,853. 10 Claims. (Cl. 73—51.)

1. The method of measuring differences in the frequencies of two oscillating systems which consists in bringing the two systems initially into simultaneous operation, adjusting one of the systems whereby the two systems will be maintained in phase and determining the difference in frequencies between the two systems by measuring the amount of said adjustment.



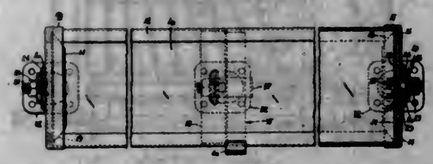
1,628,215. SLITTING MACHINE. ORRIN B. ZOLINE, New York, N. Y., assignor to Brand & Oppenheimer, Incorporated, New York, N. Y., a Corporation of New York. Filed July 10, 1925. Serial No. 42,673. 7 Claims. (Cl. 164—60.)

1. In a machine for slitting tubuular material, the combination of slitting mechanism, spreaders adjustable in directions toward and away from each other over which the tubular material passes to said slitting mechanism, and feeding devices located partly within said spreaders and partly exteriorly thereof for feeding said tubular material lengthwise of said spreaders.



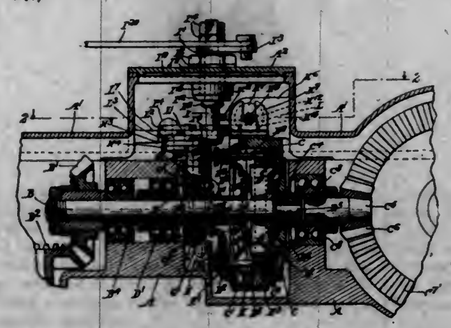
1,628,216. BLOWER. GEORGE W. ALLEN, Hyde Park, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1923. Serial No. 658,132. 4 Claims. (Cl. 230—11.)

1. A blower wheel comprising a pair of annular side plates, having large central openings for admission of air, a solid rotatable central disk between the side plates of a diameter less than the outer diameter of the side plates and greater than their inner diameter, and a series of floats having flanges at their ends reveted to the disk and to the side plates, the inner portions of the floats and the flanges thereon adjacent the disk extending inwardly beyond the inner margin of the side plates and



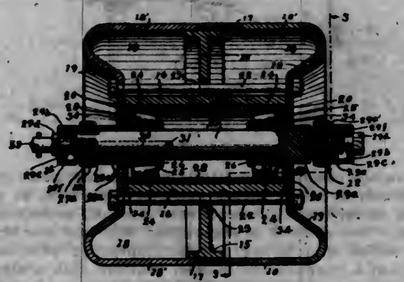
near the center of the disk to provide additional riveting surfaces to the disk without obstruction of the air admission openings of the side plates.

1,628,217. COMPRESSED-AIR LOCOMOTIVE. ERNST OTTO BAUM, Jungenthal, near Kirchen, Germany. Filed Aug. 2, 1924, Serial No. 729,712, and in Germany Aug. 10, 1923. 10 Claims. (Cl. 105—65.)



1. A compressed air locomotive, comprising a front frame section and a rear frame section both having vertical end walls adapted for close contact and detachably connected with each other, a compressed air tank mounted on one of said sections, a motor mounted on the other section, tubular means having a detachable joint and connecting said tank with said motor, driving wheels supporting the tank carrying section, and power transmitting means including a detachable joint and connecting said motor and driving wheels.

1,628,218. ADJUSTABLE REFLECTOR. DORA F. BEAUCHAMP, Forest Hills, N. Y. Filed Feb. 9, 1926. Serial No. 87,110. 17 Claims. (Cl. 45—97.)

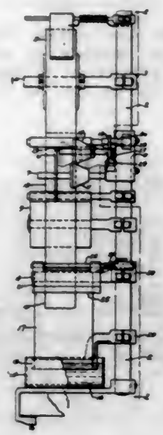


1. A device of the character described comprising an elongated reflecting panel, an end member fitting one end of the panel, longitudinal members fitting the edges of said panel and engaging said end member to hold it in place against the end of said panel, a cap fitted over said end member and ends of the longitudinal members, and a supporting member connected to said end member and retaining said cap in place.

1,628,219. CLUTCH MECHANISM. CHARLES H. BENEDICT, Streator, Ill., assignor to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed July 10, 1926. Serial No. 121,520. 46 Claims. (Cl. 192—17.)

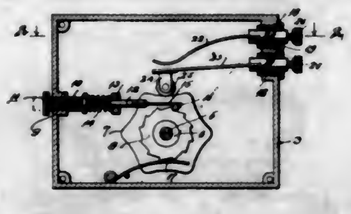
3. In a drive mechanism, a drive shaft, a driven shaft, a clutch connection therebetween, a brake mechanism, actuating mechanisms for said clutch and brake mechanisms, each including toggle links, a control shaft transversely positioned in relation to the drive and driven shafts a lever thereon, and a link connection between it and the brake and clutch controlling toggles respectively.

1,628,220. PULLEY. NANSTAD BERG, Cleveland, Ohio, assignor to Berg Manufacturing Company, Cleveland, Ohio, a Copartnership composed of Andrew C. Denison and Nanstad Berg. Filed June 18, 1925. Serial No. 37,961. 5 Claims. (Cl. 64—17.)



1. A pulley structure comprising a hub having intermediate its ends a spider terminating in an annular member, a pair of opposed shells having annular walls disposed in abutting relation and end walls, the abutting ends of said annular walls fitting over and supported on the annular member of said spider and said end walls being formed with openings through which said hub extends, and means for maintaining said shells in fixed relation to said annular member.

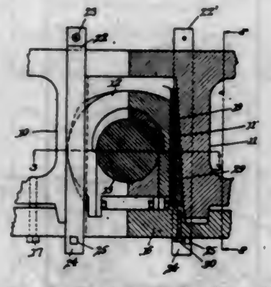
1,628,221. DEVICE FOR MOISTENING ADHESIVE TAPE. SAMUEL BERGSTEIN, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Feb. 5, 1926. Serial No. 86,348. 6 Claims. (Cl. 91—14.5.)



1. An adhesive tape moistening device including in combination, a container for a liquid, a normally station-

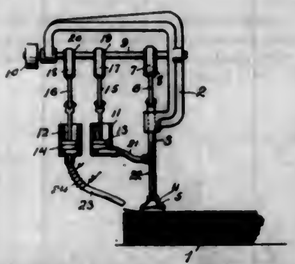
ary web extended into the liquid in a manner to cause the liquid to rise by capillary action in the web to a portion thereof contacting with a length of tape drawn

over the web, means to regulate the distance between the liquid and said point of contact and means to regulate the pressure between the web and tape at said point.



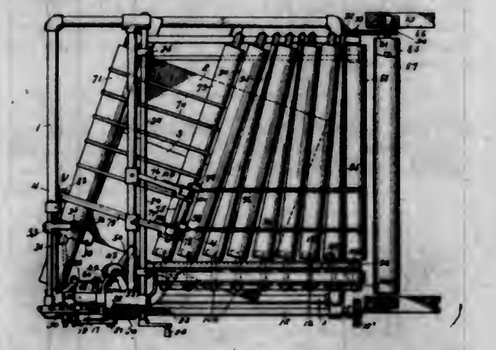
1,628,222. AUTOMATIC SWITCH FOR ELECTRIC LIGHTS. ARTHUR BERTH, Sheboygan, Wis. Filed Apr. 25, 1923. Serial No. 634,434. 1 Claim. (Cl. 200—54.)

A switch comprising a rigidly coupled multipoint cam and a ratchet wheel having twice as many teeth as the points on said cam, a contact arm, a second contact arm movable into and out of engagement with said first arm, said second arm having a roller contacting with said cam, and a reciprocatory member provided with a single pawl for engaging the teeth of the ratchet wheel for rotating the ratchet wheel a space of one tooth when said reciprocatory member reciprocates in one direction only, whereby the contact arms close at every other complete reciprocation of said reciprocatory member.



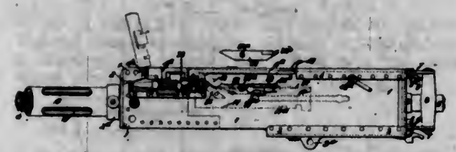
1,628,223. DRIVING-BOX MOUNTING. WILLIAM R. BLACKLEY, Hamlet, N. C., and ROBERT M. MEREDITH, Savannah, Ga. Filed Aug. 25, 1926. Serial No. 131,452. 11 Claims. (Cl. 105—81.)

1. In combination with a driving box and a frame receiving the same between spaced pedestal jaws, of detachable shoe retaining strips supported on the frame on opposite sides of one pedestal jaw and projecting beyond the face of said jaws toward the other jaw, a relatively flat shoe element interposed between the box and the pedestal jaw, said shoe being positioned between the projecting portions of said strips, and a relatively flat wedge element between the box and the other pedestal jaw, and a pair of detachable shoe retaining strips supported on the frame on opposite sides of said wedge



element and projecting beyond the face of the pedestal jaw toward the first mentioned jaw, whereby to hold the wedge element against lateral movement.

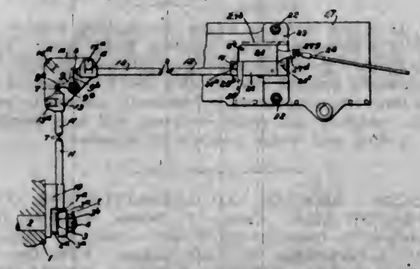
1,628,224. PAPER FEEDING. HARRY BRADSHAW, Kansas City, Mo. Filed Jan. 28, 1921. Serial No. 440,600. 10 Claims. (Cl. 271—27.)



1. In feeding sheets of paper from a pile, the method consisting in projecting heated fluid against the outer side of the outer sheet preliminary to the removal of the sheet from the pile, substantially as set forth.

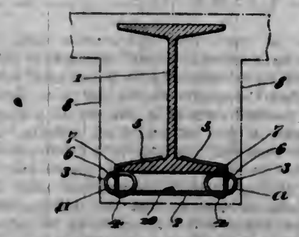
1,628,225. PAPER FEEDING. HARRY BRADSHAW, Topeka, Kans. Filed Aug. 7, 1924. Serial No. 730,630. 9 Claims. (Cl. 271—13.)

1. In paper feeding, means for lifting a corner portion of the outer sheet of a pile of paper, and means for engaging said corner portion and withdrawing the sheet from the pile with its sides reversed and in a direction at an angle to the adjacent longitudinal edge of the pile.



1,628,226. AUTOMATIC FIREARM. JOHN M. BROWNING, Ogden, Utah; John Browning administrator of said John M. Browning, deceased. Filed July 31, 1923, Serial No. 654,955. Renewed May 15, 1926. 77 Claims. (Cl. 89—8.)

7. In an automatic firearm, the combination of a breech casing, a barrel and barrel extension supported for longitudinal movement in said casing, a breech block supported for longitudinal movement in said barrel extension, and a mechanism connected with the barrel extension for absorbing a part of the energy of recoil, the said mechanism being located within the casing and comprising a composite spring buffer and liquid brake.

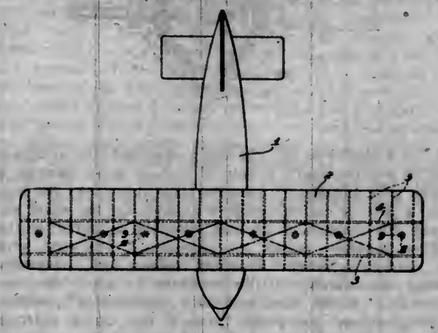


22. In an automatic firearm, a casing, a barrel and barrel extension supported and guided for longitudinal movement in said casing, a rocking lever having an operative connection with said barrel extension to lock said barrel and barrel extension in rearward position, and means for yieldingly holding said lever in locking relation with said barrel extension, said means comprising a flat spring co-operating with a recess in the hub of said lever.

1,628,227. FIRING CONTROL FOR AUTOMATIC MACHINE GUNS. JOHN M. BROWNING, Ogden, Utah; John Browning executor of said John M. Browning, deceased. Filed July 14, 1924. Serial No. 725,868. 32 Claims. (Cl. 89—27.)

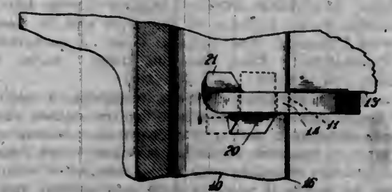
1. In a firing control for an automatic machine gun, the combination of a breech casing and a trigger mechanism unit carried by said casing and constituting a part additional thereto, the said unit comprising means whereby the gun to which it is applied may be fired, at will, either in synchronism with a rapidly rotating element or automatically at the normal rate of fire of the gun.

1,628,228. CONCRETE CLIP. ROBERT E. CARRICK, Larchmont, N. Y. Filed Mar. 15, 1926. Serial No. 94,671. 6 Claims. (Cl. 72—109.)



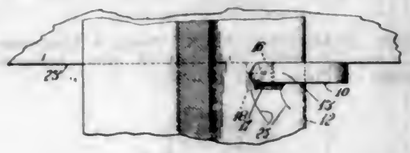
1. A concrete clip consisting of a metal rod or wire of suitable length having an intermediate portion terminating in loops at its opposite ends and the said rod or wire having its end portions extended across the said loops and transversely of the said intermediate portions, which end portion are adapted to engage a girder, beam, column, or the like.

1,628,229. SOAP-SHEET PACK. PETER J. CHRISTMAN, Jr., Green Bay, Wis. Filed July 12, 1924. Serial No. 725,635. 1 Claim. (Cl. 87—23.)



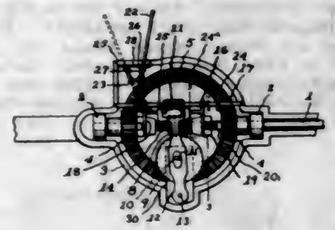
A new article of manufacture comprising a package consisting of a series of separate interfolded sheets of paper impregnated with soap, with the folded portion of one sheet enclosing the ends of the adjacent sheet to thereby protect successive sheets, whereby one sheet may be removed without moistening the next sheet, and will cause a portion of the next sheet to assume a freely accessible position.

1,628,230. UTILIZING FABRIC OF AIRCRAFT AS DIAPHRAGM FOR LOUD SPEAKERS. JAMES M. COBURN and BERNARD KNAPP, Kansas City, Mo., assignor to Plane Speaker Corporation, Kansas City, Mo., a Corporation of Delaware. Filed June 2, 1926. Serial No. 113,181. 7 Claims. (Cl. 244—31.)



1. An aircraft comprising in combination an expanded frame structure having a surface covering secured thereto, and a sound reproducing device secured to said cover to constitute a section thereof a sound producing diaphragm.

1,628,231. RAIL ANCHOR. ROBERT L. COCHRANE, Chicago, Ill. Filed Aug. 9, 1926. Serial No. 128,087. 32 Claims. (Cl. 238—321.)

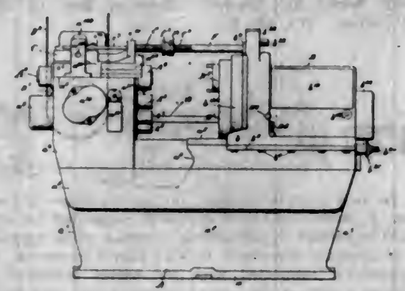


23. A one-piece rail anchor comprising jaws formed with teeth disposed at an angle to each other and adapted to be driven into biting engagement with the top and bottom surfaces of the rail base.

1,628,232. RAIL ANCHOR. FREDERICK A. PRESTON, Highland Park, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1926. Serial No. 136,511. 10 Claims. (Cl. 238—330.)

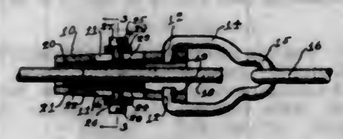
1. A rail anchor adapted to grip one flange only of a rail and consisting of a flat metal plate, recessed to provide upper and lower jaws adapted to be forced into gripping engagement with the top and bottom surfaces of a rail base; one of said jaws being formed with a resilient tooth bent outwardly from one side of the body of the plate but which is adapted to bite into the rail base at a point within the side planes of the jaws during the application of the anchor to a rail.

1,628,233. REVERSING-GEAR MECHANISM. ALEXANDER DANIEL, Cleveland, Ohio. Filed Mar. 16, 1926. Serial No. 95,028. 11 Claims. (Cl. 74—50.)



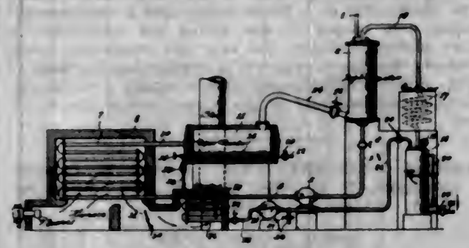
1. In a device of the character described, the combination of a drive shaft, a pair of pinions loose thereon, a driven gear engaged at opposite sides thereof by the pinions, a pair of clutch members slidable on the shaft adjacent the respective pinions, slidably mounted clutch shifting members which are operatively connected with the respective clutch members, means for alternately sliding the clutch shifting members to move the corresponding clutch members into inoperative position, yielding means interposed between the clutch shifting members whereby when one of the clutch shifting members is moved to retract the corresponding clutch member the other clutch shifting member is moved under the action of the yielding means to shift the other clutch member into operative position, and means for moving the clutch shifting members toward each other to disable the mechanism.

1,628,234. MACHINE TOOL. ADOLPH L. DE LEEUW, Plainfield, N. J., assignor to The Goss and De Leeuw Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 30, 1923. Serial No. 615,884. 57 Claims. (Cl. 29—38.)



10. A metal working machine comprising a bed; a turret and a turret-head mounted for translation simultaneously along said bed; a cylindrical cam coaxial with said turret; a member normally stationary with respect to said bed and engaging said cam; means for rotating said cam to enable it to coact with said member and be thereby self-propelled and means for intermittently rotating said turret in its head.

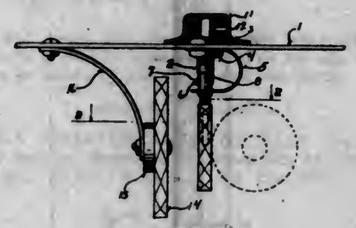
25. A metal working machine combining a head; an elongated shaft journaled in the respective end walls of said head; a turret affixed to one end of said shaft and carried thereby; means operative through said shaft for indexing said turret; an external contractile clamp



means for binding a peripheral portion of said turret against the end wall of said head; and means for automatically operating said clamp.

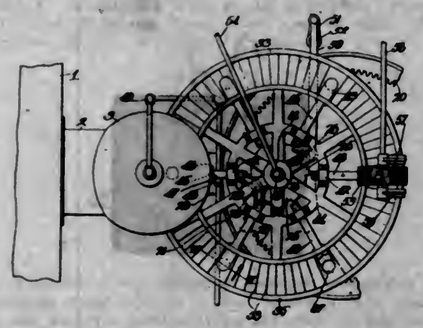
1,628,235. LINE CLAMP. VLADIMIRO DE MEO, Waterbury, Conn. Filed Jan. 6, 1927. Serial No. 159,388. 11 Claims. (Cl. 24—126.)

1. In a line clamp, a hollow conical body member, a pair of semi-conical wedge members fitting within said body member, means connected with said body member for permanently securing one end of a line, the other end of said line being adapted to be frictionally gripped by said wedge members, and means enclosing said body member for holding said wedge members in alinement.



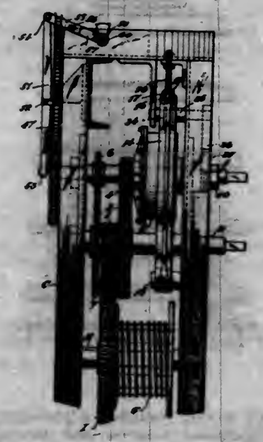
1,628,236. PROCESS AND APPARATUS FOR CONVERTING OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 8, 1921. Serial No. 506,225. 11 Claims. (Cl. 196—62.)

1. A process of converting hydrocarbon oils, which comprises passing a stream of oil through a cracking zone where said oil is subjected to a cracking temperature, in delivering the highly heated oil to an insulated vapor chamber located outside of the cracking zone and in which chamber a pool of liquid oil collects, in discharging vapors from said chamber to a dephlegmator, in returning reflux condensate from the dephlegmator to the oil stream passing through the cracking zone, in discharging uncondensed vapors from the dephlegmator to a final condenser and receiver, in removing incondensable gases from said receiver, in heating said gases, and in then passing the heated gases into a conduit immersed



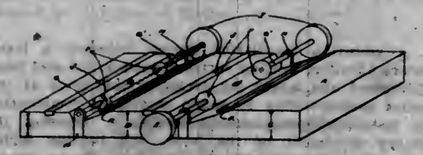
in the liquid oil in the vapor chamber, in discharging the gases from said conduit into said oil, and in maintaining a superatmospheric pressure on the oil in the cracking coil and in said vapor chamber.

1,628,237. VARIABLE INDUCTANCE UNIT. MILTON MERWIN EELLS, Chicago, Ill., assignor to Western Coil & Electrical Co., Racine, Wis. Filed Sept. 20, 1926. Serial No. 136,627. 5 Claims. (Cl. 171—119.)



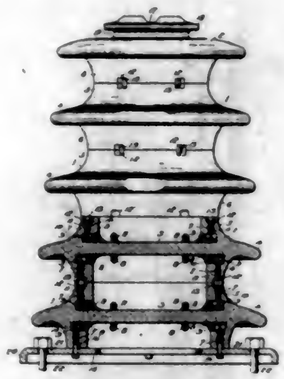
1. The combination of a panel, a stationary coil supported therefrom, a shaft mounted approximately parallel to the plane of the stationary coil and at right angles to the axis thereof, a support for said shaft, means for rotating said shaft, and a movable coil mounted tangentially with reference to said shaft, whereby said movable coil may be rocked approximately about a tangent and may thus vary its effect on the stationary coil.

1,628,238. MOLTEN-GLASS-FEEDING MECHANISM. ENOCH T. FERNGREN, Toledo, Ohio. Filed Feb. 23, 1912. Serial No. 679,236. 38 Claims. (Cl. 49—55.)



82. In glass manufacturing, the method which consists in intermittently emitting a voluminous freely vertically descending discharge of fluent glass from a flow spout, successively associating shearing means with said glass while in transit beyond said spout and cutting off quantities therefrom without previously affording under support for said quantities with said shearing means, receiving each cut-off quantity in a mold that is awaiting the same, and periodically in between such emitting of glass, and immediately after each cutting thereof effecting a limited discharging movement of glass in said spout and delivering heat to the glass that is in said spout.

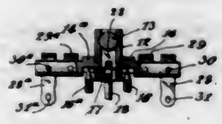
1,628,239. ELEVATING APPARATUS. HENRY S. GERMOND, Jr., Bayonne, N. J., and HAROLD GREEN, Yonkers, N. Y., assignors to said Germond. Filed July 24, 1925. Serial No. 45,803. 23 Claims. (Cl. 192—15.)



2. In an elevating apparatus, the combination of means for raising a load comprising a cable, a drum for winding said cable, two driving shafts, a driving connection between both of said shafts and said drum whereby said drum can be rotated at different speeds from said shafts, and manually releasable brake mechanism operable at all times except when manually held released to hold both said shafts against rotation under influence of gravity on said load in the direction to lower the load and operable to release said shafts automatically upon rotation of either of said shafts under influence of force applied thereto in either direction to permit raising and lowering of the load respectively under influence of said force.

1,628,240. COIN-WRAPPING MACHINE. GEORGE T. GILLETTE, Los Angeles, Calif. Filed June 1, 1926. Serial No. 112,777. 4 Claims. (Cl. 93—2.)

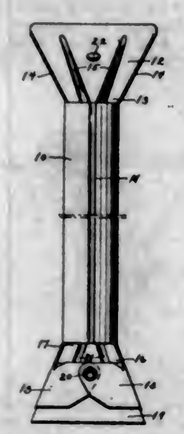
4. A coin wrapping machine comprising a front horizontal section of low height, a holder extending across and attached to sides of such section, a plane sided groove terminating such front horizontal section and rising to a rear horizontal section of greater height, the front side of said groove being at a greater angle to the horizon than the rear side of said groove, and movable abutments having their centers on about the bisector of the angle made by the plane sides of the groove suspended in said groove.



1,628,241. INSULATOR. WALTER T. GODDARD, Hamilton, Ontario, Canada, assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Oct. 1, 1921. Serial No. 504,667. 6 Claims. (Cl. 173—318.)

3. In a high tension insulator, a plurality of units arranged in superposed relation and having contacting faces formed with mating recesses, securing bolts arranged in circular series and embedded within the units with their threaded ends projecting into said recesses, and nut members upon said ends of the bolts and located within the mating recesses.

5. In a high tension insulator, a plurality of sections of insulating material of disk form, nuts secured to said sections, and turnbuckle means for engaging the nuts to secure the sections together.



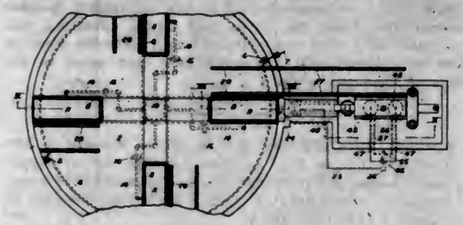
1,628,242. SOUND-VIBRATION-TRANSLATING DEVICE. ELWOOD GRISSINGER, Buffalo, N. Y. Filed Aug. 18, 1923. Serial No. 658,009. 23 Claims. (Cl. 274—35.)

1. A vibration translating device including a lever, members affording bearing surfaces upon which said lever is fulcrumed and means for actuating said lever at frequencies corresponding to sound waves, in combination with restoring spring means resiliently opposing the vibratory movement of the lever, and bearing spring means acting approximately in the plane of the pivotal axis of the lever to maintain the bearing surfaces in intimate non-slip contact, but substantially without restoring spring effect upon said lever.

1,628,243. KITCHEN UTENSIL. JULIUS S. HAGEN, Des Moines, Iowa. Filed Mar. 12, 1924. Serial No. 698,688. 2 Claims. (Cl. 15—245.)

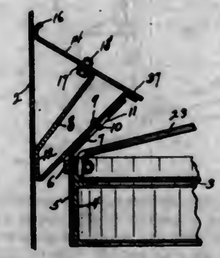
1. A kitchen utensil, comprising a tubular handle substantially circular in cross-section, a blade formed integrally on one end of said handle, said blade being formed with flanges on its side margins, and a flexible scraping element mounted against said blade and extending beyond the free margin thereof, said flanges being bent around the lateral margins of said scraping element

into a plane substantially parallel with said blade, said scraping element being engaged and held by the side flanges of said blade.



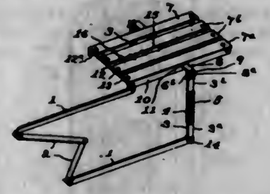
1,628,244. SPOOLLESS TWINE BALL, CROSS-WOUND BOBBIN, OR THE LIKE. WILLEM HOOS, Wassenaar, Netherlands, assignor to Naamlooze Vennootschap Vereenigde Touwfabrieken, Rotterdam, Netherlands. Filed June 29, 1926, Serial No. 119,375, and in Germany Mar. 22, 1926. 4 Claims. (Cl. 242—128.)

1. In a coreless twine ball, cross-wound bobbin or the like having a central hole from one end of which projects the free end of the twine, a stopper inserted in said end of the central hole to lock the said free end of the twine.



1,628,245. METHOD OF AND APPARATUS FOR WELDING. PEACY E. HUNTER, Pittsburgh, Pa., assignor to Pittsburgh Annealing Box Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 2, 1923. Serial No. 629,256. 22 Claims. (Cl. 78—82.)

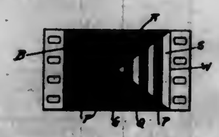
1. Means for heating metal and then quickly subjecting it to formative treatment consisting of a pressure exerting machine having an upper fixed anvil and a lower vertically moving co-acting die, a portable heating fur-



nace, and means for moving a metal blank from the furnace to a position between the anvil and die whereby it may be raised by the die against the anvil.

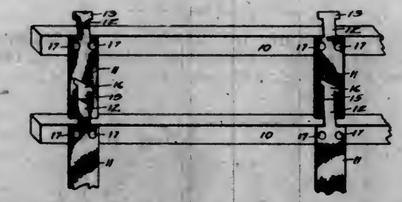
1,628,246. NONEVAPORATING OIL TANK. FRANK ALBERT IDDINGS, Warren, Ohio. Filed July 18, 1924. Serial No. 726,795. 2 Claims. (Cl. 220—26.)

1. In an oil tank, a floating deck of less diameter than the tank, means slidably interposed between the deck and the side of the tank, a cover plate over the slidable means and a pin firmly attached to the slidable means and loosely moving in an under support of the slidable means.



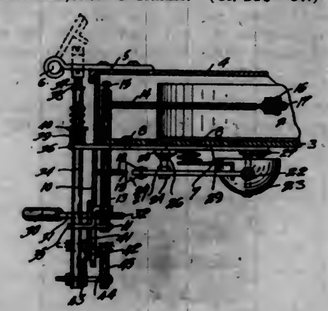
1,628,247. MAGAZINE AND BOOK SUPPORT. FLOYD D. JONES, Cleveland, Ohio. Filed Aug. 14, 1925. Serial No. 50,210. 8 Claims. (Cl. 45—82.)

7. A device of the character described, comprising a supporting frame adapted to rest loosely upon a chair seat and having a portion fitting flat upon the seat and adapted to receive the weight of the occupant of the chair, spaced pivoted uprights projecting therefrom and having slotted upper ends, a flat cross bar connecting the uprights, clamping bolts carried by the ends of the cross bar and pivotally mounted within the slots of the uprights for adjustably and removably clamping the cross bar to the uprights, and a table mounted upon the cross bar and having flanges provided with openings receiving and interlocking with the sides of the flat cross bar to hold the table in position thereon.



8. A device of the character described, including a pair of side bars adapted to be arranged upon opposite sides of the occupant of a chair, means connecting the side bars adjacent their free ends and extending across the chair seat so as to receive the weight of the occupant of the chair, uprights pivotally connected to the side bars, means for holding at said pivots the uprights in an adjusted position, and a table supported by the uprights for rotative adjustment thereon.

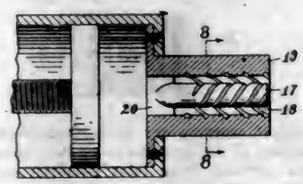
1,628,248. PHOTOGRAPHIC IMAGE AND METHOD OF MAKING SAME. WILLIAM V. D. KELLEY, Los Angeles, Calif., assignor, by mesne assignments, to Prizma, Incorporated, a Corporation of New Jersey. Filed Nov. 19, 1919, Serial No. 339,044. Renewed Oct. 21, 1926. 45 Claims. (Cl. 95—2.)



1. A support carrying dry photographic emulsion, separated portions of the emulsion being light insensitive and intervening portions being light sensitive, said portions being additive.

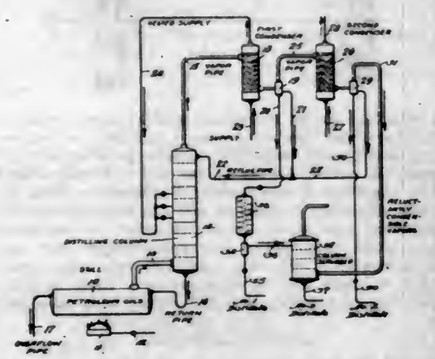
1,628,249. STRUCTURE FOR TRELLISES AND THE LIKE. JOHN S. KIRFMAN, Des Moines, Iowa. Filed Oct. 13, 1924. Serial No. 743,396. 1 Claim. (Cl. 47—44.)

A structure having a series of parallel bars, means for connecting these bars comprising a plurality of connecting members, each comprising a plate substantially rectangular in outline having at one end a T-shaped head and at the other a substantially T-shaped slot with the laterally extending portions of said slot inclined from the longitudinal axis of the plate, whereby the completed structure has expansibility and contractability with possible movement of the bars toward or from each other, so that the bars may be arranged in a circle or other forms, without removal of said T-shaped head from said slot.



1,628,250. MOTION-PICTURE APPARATUS. WILLIAM J. KNORRE, Spokane, Wash., assignor of one-half to Grover C. Ealy, Spokane, Wash. Filed June 12, 1926. Serial No. 115,630. 3 Claims. (Cl. 116—67.)

3. The combination in an attachment for motion picture apparatus with an annunciator and its actuating means, of a rock shaft having a detent for co-action with

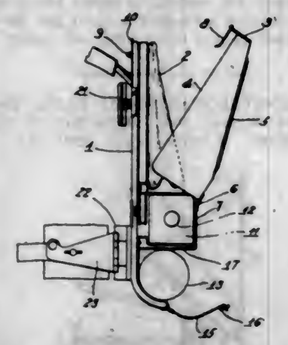


said means, an arm on the rock shaft and a friction element on the arm for co-action with an unwinding picture strip, a pin on the shaft and a counterweight on the pin, a setting bolt actuated by the closing of the door of the apparatus, and a lever on the bolt for co-action with said pin for setting the rock shaft in operative position.

1,628,251. METHOD OF MAKING CANDY. WILLIAM B. LASKEY, Marblehead, Mass. Filed Apr. 30, 1921. Serial No. 465,643. 1 Claim. (Cl. 107—54.)

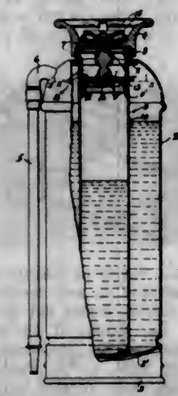
The method of forming chocolate candy in elongated form, which consists in forcing cold solid chocolate composition through a die under sufficiently heavy pressure to form a continuous piece of chocolate which retains the shape given it by said die.

1,628,252. METHOD OF REFINING PETROLEUM. WALTER E. LUMMUS, Lynn, Mass. Filed May 21, 1923. Serial No. 640,332. 7 Claims. (Cl. 196—94.)



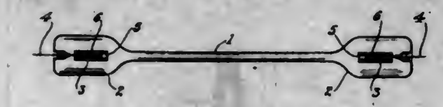
2. The method of refining petroleum oils by separating the heavier oils from the lighter and passing the vapors of the latter through a plurality of condensers which condense and discharge condensate fractions of the vapors of different boiling points, and subjecting the uncondensed vapors from the last condenser to the absorbing action of a higher boiling of said condensate fractions.

1,628,253. ANCHORING DEVICE. MORTIMER CARLISLE LYDDANE, Yonkers, N. Y. Filed Dec. 2, 1925. Serial No. 72,686. 14 Claims. (Cl. 85—2.4.)



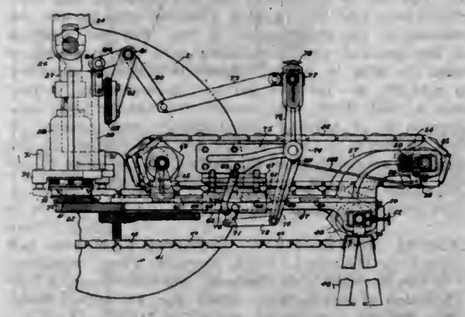
1. An anchoring device comprising a rigid expanding member and a soft metal expansible member adapted to be assembled in coaxially extending relation to each other by a relative axial movement of said members so that one end of the expanding member is disposed in expanding contact with an opposed end of the expansible member without distorting the latter, and means operating concurrently with such assemblage of said members whereby they are permanently connected with each other in the form of a composite unit.

1,628,254. BREATHING APPARATUS. GEORGE S. MCCAA, Pittsburgh, Pa., assignor to Mine Safety Appliance Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 21, 1923. Serial No. 640,295. 4 Claims. (Cl. 128—191.)



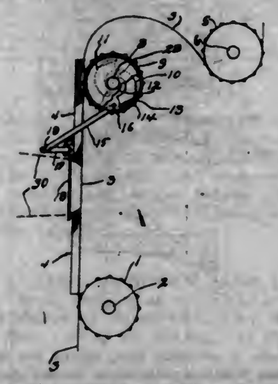
1. In a breathing apparatus, a supporting frame having a breathing bag attached to its upper end, and a protecting hood for said bag pivotally attached to said frame whereby access may be quickly had to the breathing bag.

1,628,255. FIRE EXTINGUISHER. PETER G. MACGREGOR, Pequannock, N. J., assignor to Pyrene Manufacturing Company, Newark, N. J., a Corporation of Delaware. Filed Oct. 13, 1924. Serial No. 743,348. 1 Claim. (Cl. 169—32.)



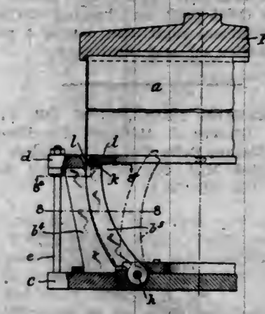
In a fire extinguisher, a liquid container of substantially uniform diameter throughout its length having openings in its wall near the top and formed with an inwardly pressed bead in its wall below said openings, an annular lip positioned upon and secured to said bead within said container, said lip extending inwardly and downwardly thereby forming a seating surface, and a stopple having a diameter substantially equal to the inside diameter of said container and adapted to seat upon said seating surface.

1,628,256. NEON TUBE. RAYMOND R. MACHLETT, New York, N. Y., assignor to Rainbow Light, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 16, 1926. Serial No. 142,026. 10 Claims. (Cl. 176—125.)



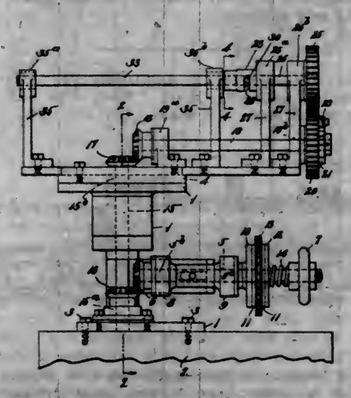
1. A luminous tube having a monatomic gaseous conducting atmosphere therein and having interior electrodes and means within the tube for supplying a foreign gas localized in the immediate neighborhood of the electrodes for facilitating transfer of energy from each electrode to the conducting gas, as set forth.

1,628,257. APPARATUS FOR FORMING ARTICLES FROM PAPER OR SIMILAR MATERIAL. GEORGE P. MALLORY, Philadelphia, Pa., assignor to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed May 26, 1923. Serial No. 641,591. 38 Claims. (Cl. 18—19.)



1. An apparatus for forming articles from sheet material comprising, in combination, dies for punching blanks from said material, and shaping dies movable into and out of position to receive said blanks from said punching dies.

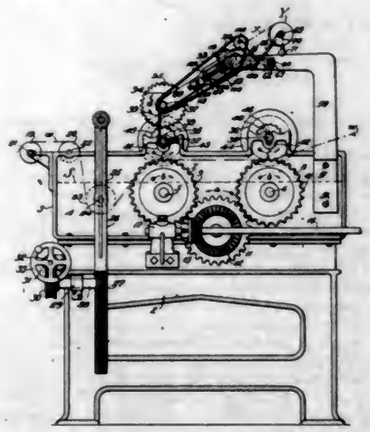
1,628,258. SAFETY DEVICE FOR MOTION-PICTURE-PROJECTING MACHINES. WILLIAM MALM, New Orleans, La. Filed May 21, 1925. Serial No. 31,870. 4 Claims. (Cl. 88—17.)



1. In a motion picture machine, the combination with a motion picture film, of means for automatically protecting said film from fire, comprising an automatic light shutter actuated by a suitable clutch device, said clutch device being driven by an auxiliary sprocket wheel, said sprocket wheel meshing with said film and moving in synchronism with said film and located at a suitable point between the intermittent driving sprocket and upper feed sprocket of said machine.

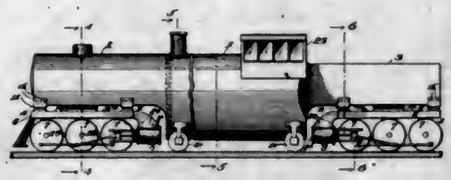
1,628,259. PROCESS AND APPARATUS FOR INCREASING THE STRENGTH OF ARTICLES. ALFONS MAUSER, Cologne-Marienburg, Germany. Filed Nov. 6, 1924, Serial No. 748,031, and in Germany Sept. 20, 1924. 10 Claims. (Cl. 153—70.)

1. The process of corrugating a blank of bendable material to form a container having a corrugated end portion, the diameter of which increases progressively from the end towards the mid-length of said container which consists in exerting pressure upon opposite sides of said blank along a plurality of spaced line contacts only, by means of pressure producing instrumentalities distributed along spaced longitudinally extending converging lines inclined laterally to the sides of said blank in overlapping staggered relationship, and producing relative longitudinal movement between said blank and the pressure producing instrumentalities, while preventing movement of the pressure producing instrumentalities relatively to each other during the corrugating action to form progressively and simultaneously in said blank a plurality of longitudinally extending corrugations of gradually increasing depth by a combined longitudinal and transverse folding of the material.



1,628,260. POWER-TRANSMISSION UNIT. JESSE H. MAXIM, Everett, Mass. Filed Oct. 27, 1926. Serial No. 144,439. 3 Claims. (Cl. 74—101.)

1. A power transmission unit comprising, in combination, a frame; a rotary turret surmounting the frame; a rotary shaft horizontally disposed on the frame and furnished on its outer end with a frictionally engaged,

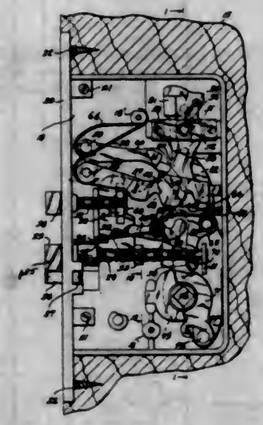


spring-controlled sprocket; a second rotary shaft horizontally disposed on the turret and furnished on its outer end with a gear loosely mounted thereon and driven by a spring controlled pawl and ratchet affixed to the outer end of the shaft; a third rotary shaft horizontally disposed on the turret above and parallel to the second shaft above mentioned and furnished on its outer end with a gear affixed thereto and engaged by the gear on said second shaft; a vertically disposed rotary shaft operatively connecting the inner ends of the first and second mentioned shafts; bearings on the turret in axial alignment with the third shaft mentioned for receiving and holding an additional shaft; and a clutch on the inner end of the third shaft for grasping and holding an end of such additional shaft, and having a part of one independent rotation on said third shaft.

1,628,261. TEXTILE PROCESSING OR FINISHING MACHINE. GEORGE J. MCGANN, Providence, R. I., assignor to Slasher Rolls Co., a Corporation of Massachusetts. Filed Mar. 26, 1925. Serial No. 18,546. 19 Claims. (Cl. 28—28.)

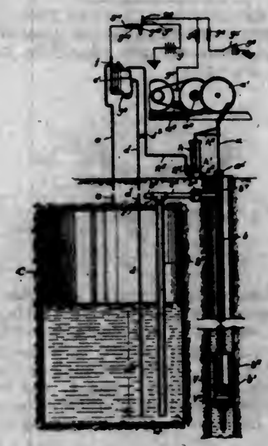
1. In a processing machine, the combination of cooperating rolls between which material passes, of which one is a press roll, and means whereby strand material may be applied to cover the face of said press roll by operating said machine.

1,628,262. HEAVY-DUTY LOCOMOTIVE. DAVID R. MCGINNIS, Kalispell, Mont. Filed Feb. 12, 1926. Serial No. 87,822. 3 Claims. (Cl. 105—37.)



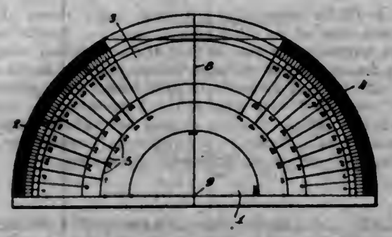
1. In a locomotive, the combination with driving wheel trucks, of a boiler down between said driving wheel trucks and having at its ends projecting units overhanging said trucks, and ball bearing devices interposed between said trucks and said projecting units whereby the boiler is supported upon the trucks.

1,628,263. GAS COCK OR VALVE. FRANK W. MOORE, Redlands, Calif. Filed Mar. 22, 1926. Serial No. 96,516. 2 Claims. (Cl. 67—16.)



1. In a gas-cock, the combination of a body and a rotatable plug with cooperating gas ports, said body having a fixed stop on the said body, a single stop member mounted to move with the plug for engaging the fixed stop in the "off" position of the gas-cock, a handle for rotating the plug in a direction to bring the gas-cock to its "full on" position with the gas ports in full communication, said body having a second stop beyond the position of the stop-member in the "full on" position of the gas-cock and cooperating with the stop-member when the plug is rotated further in the same direction to hold the gas ports in partial communication, to produce a small flame, said second stop-member being constructed to be adjusted longitudinally and mounted so that its end face abuts against the stop-member on the plug, and accessible from the exterior of the valve to enable the size of the small flame to be regulated.

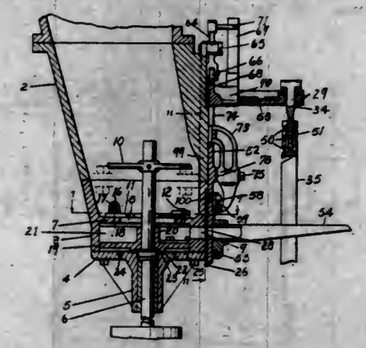
1,628,264. HOTEL LOCK. ALEXANDER K. MORTON and JOHN A. HALLORAN, South Norwalk, Conn., assignors to The Norwalk Lock Company, Norwalk, Conn., a Corporation of Connecticut. Filed Apr. 15, 1924. Serial No. 706,683. 29 Claims. (Cl. 70—71.)



1. In a lock, a movable bolt, means for withdrawing said bolt from holding position, a second means for retracting said bolt, independent means for rendering the second means ineffective, and means operable by said first mentioned means to render said second mentioned means effective when said first mentioned means is operated to withdraw the bolt.

1,628,265. HYDROPNEUMATIC CONTROLLER FOR WATER SYSTEMS. GLENN MUFFLY, Cleveland Heights, Ohio. Filed Sept. 25, 1922, Serial No. 590,449. Renewed Oct. 14, 1926. 8 Claims. (Cl. 103—25.)

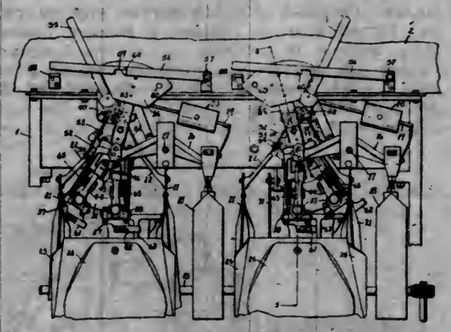
1. In a water supply system of the character described a fluid pressure gauge having a column of liquid arranged to rise and fall within a closed chamber under the action of pneumatic pressure, and means controlled by the rise and fall of said liquid for operating an electrical switch.



1,628,266. PROTRACTOR AND METHOD OF USING SAME. GENARO M. NAVA, New York, N. Y. Filed June 11, 1926. Serial No. 115,152. 4 Claims. (Cl. 33—1.)

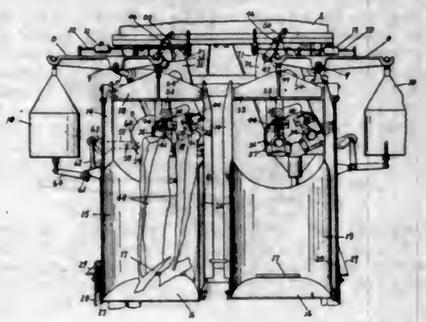
1. A protractor for use in determining the relative positions between the frets of stringed instruments, including a semi-circular body having means thereon defining a central segment and other segments arranged on opposite sides of said central segment, respectively, said other segments being divided by radial lines into at least six equal parts.

1,628,267. FILLING MACHINE. LEWIS D. NELSON, Coldwater, Mich., assignor of two-thirds to Robert M. Neale and William M. Hatch, Union City, Mich. Filed Mar. 20, 1924. Serial No. 700,566. 15 Claims. (Cl. 221—120.)



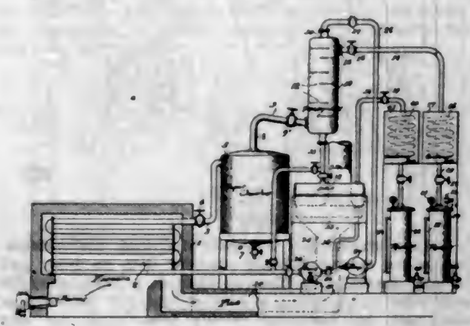
4. In a structure of the class described, the combination of a horisontally disposed cylinder having a central inlet opening at the top, an adjusting valve for said opening comprising opposed segmental members, means for simultaneously adjusting said valve members whereby the feed to the cylinder is maintained centrally thereof, and a rotor comprising a web having ejector blades on its upper side, said cylinder having a discharge opening in the horizontal plane of said blades.

10. In a structure of the class described, the combination of a vertically disposed cylinder having a central valved inlet opening at the top and a peripheral discharge opening, and a rotor comprising a web having ejector blades on its upper side.



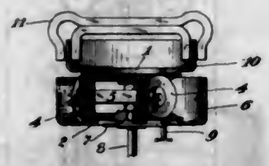
15. In a structure of the class described, the combination of a hopper, a cylinder disposed vertically below said hopper and having a central inlet opening, a rotor shaft disposed vertically through said cylinder and projecting into said hopper, a rotor comprising a web-like body having ejector blades disposed on the upper side thereof, said cylinder having a discharge opening in the horizontal plane of said ejector blades, and an agitator on said shaft within said hopper.

1,628,268. FILLING MACHINE. LEWIS D. NELSON, Coldwater, Mich., assignor of one-half to Robert M. Neale, Union City, Mich. Filed Nov. 29, 1924. Serial No. 752,887. 36 Claims. (Cl. 249—60.)



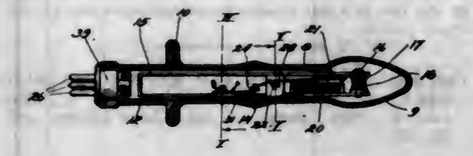
1. In a structure of the class described, the combination of an ejector cylinder provided with an inlet port opening centrally at the top thereof, a rotor provided with blades and having a deflector disposed centrally of said port, an upwardly seating inlet valve for said port, an arm on which said valve is rotatably mounted, the axis of the valve coinciding with that of the rotor shaft, a rock shaft by which said arm is carried, an actuating means for said rock shaft including a cam, a feed valve, a weighing mechanism, means for controlling said feed valve operatively associated with said weighing mechanism to be controlled thereby, and means for controlling the rock shaft actuating cam operatively associated with said weighing mechanism to be controlled thereby.

1,628,269. RAG-FILLING MACHINE. LEWIS D. NELSON, Coldwater, Mich. Original application filed Mar. 20, 1924, Serial No. 700,566. Divided and this application filed Aug. 17, 1925. Serial No. 50,721. 35 Claims. (Cl. 240—60.)



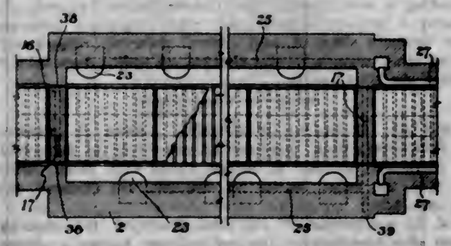
1. In a structure of the class described, the combination of a feed valve, a weighing mechanism including a scale beam, an oscillating carrier pivotally mounted on said scale beam, means for actuating said carrier controlled by the vertical movement thereof on said scale beam, spouts pivotally mounted on said carrier to be successively brought into register with said feed valve, means for normally holding said spouts in erected position, means for automatically releasing said spouts on the downward movement of the carrier, a pivoted platform carried by said scale beam, means for normally supporting said platform in erected position, means for releasing said platform on the downward movement of the scale beam, a dog for holding said carrier in its actuated position adapted to be disengaged by the downward movement of the carrier, and means for actuating said valve operatively associated with said scale beam.

1,628,270. PROCESS AND APPARATUS FOR CRACKING PETROLEUM OIL. ROBERT T. POLLOCK, Boston, Mass., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 6, 1920, Serial No. 428,790. Renewed Oct. 6, 1926. 17 Claims. (Cl. 196—48.)



2. A process of cracking petroleum oil, consisting in subjecting the oil to a cracking temperature under a superatmospheric pressure to cause substantial vaporization, subjecting the generated vapors to reflux condensing action by passing them directly to a reflux condenser also maintained under a superatmospheric pressure, delivering reflux condensate to a still where it is subjected to distillation at substantially atmospheric pressure to release those constituents that are of the desired predetermined end point, then returning the liquid portions of said reflux condensate to the cracking zone, and heating said atmospheric still by the flue gates from the furnace of the cracking zone.

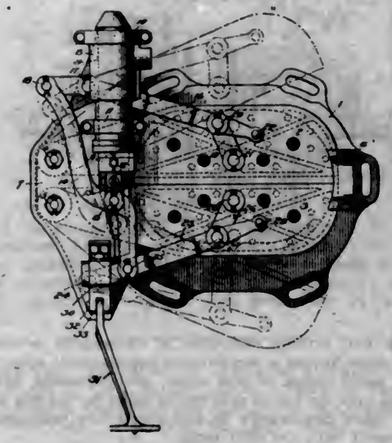
1,628,271. SPEEDOMETER. GEORGE RAMSET, Brooklyn, N. Y. Filed Nov. 24, 1925. Serial No. 71,088. 4 Claims. (Cl. 264—10.)



1. In a speedometer, a differential gear unit comprising a pair of main gears and a planetary train, an eddy current member mounted to rotate with one of said main gears, a stationary magnet adapted to brake said eddy current member, a scale member mounted to rotate with the other of said main gears, means to bias said scale member in a particular position, and means to rotate the planetary train in response to the rotation of a machine part.

1,628,272. DILATOR. ALBERT F. RUITZ, Kansas City, Mo. Filed Nov. 23, 1925. Serial No. 70,797. 2 Claims. (Cl. 128—41.)

1. A dilator comprising a hollow casing closed at one end and open at its other end, an electric vibrator mechanism within the closed end of the casing and comprising a frame member mounted within said casing, an electric vibrator coil mounted in said frame, a vibrator element associated with said coil and operating by impact alternately against one end of said coil and the adjacent portion of said frame, and an external switch for controlling the circuit through said mechanism.



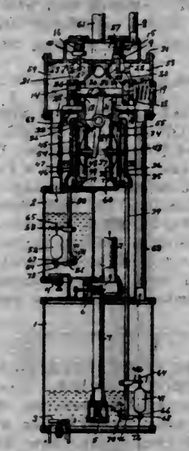
1,628,273. METHOD AND APPARATUS FOR BURNING CLAYWARE. WILLARD D. RICHARDSON, Columbus, Ohio. Filed May 23, 1924. Serial No. 715,325. 35 Claims. (Cl. 25—142.)

7. The method of burning clay ware in tunnel kilns which comprises sealing one portion of the kiln from another and passing gases through a portion of the seal.

14. In combination with a tunnel kiln of means on the conveying units for sealing the passage of gases above the ware and means for controlling the passage of gases through successive conveying units.

1,628,274. FIRE DOOR FOR FURNACES. JAY G. ROBINSON, Chicago, Ill. Filed Nov. 22, 1920. Serial No. 425,850. 15 Claims. (Cl. 110—177.)

1. The combination of a pair of oppositely swingable fire doors working in a vertical plane and meeting in a substantially horizontal joint, door operating levers pivotally connected to the said doors, and fluid actuated mechanism including a vertically arranged cylinder associated with the levers for both positively opening and closing the doors.



1,628,275. CURETTE. SAMUEL F. ROBINSON, Columbus, Ohio. Filed Apr. 30, 1926. Serial No. 105,716. 1 Claim. (Cl. 128—304.)

A curette having an elongated handle and a substantially circular concavo-convex blade having a circumambient operating rim, said blade secured eccentrically thereof at its concave side to the handle within the rim thereof and in a position having the major portion of its diameter including said connection lying at an acute angle to the axis of said handle and the portion beyond said connection at an obtuse angle to said axis whereby both said portions are available for removing obstructions from the ear.

1,628,276. PNEUMATIC PUMP. HOMER S. ROGERS, Milwaukee, Wis., assignor to Milwaukee Air Power Pump Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,606. 7 Claims. (Cl. 103—238.)

2. In a pneumatic pump of the class described, a plurality of pump chambers, a valve chest communicating with each of said chambers, an exhaust chamber common to both said pump chambers and communicating therewith through said valve chests, valves for controlling the latter communication, an air admission chamber also common to and communicating with both said pump chambers and said valve chests, valves mounted in said admission chamber for controlling such communication and means for actuating said valves.

1,628,277. BUMPER. WILLIAM F. SCHACHT, Huntington, Ind. Filed Aug. 29, 1925. Serial No. 53,324. 2 Claims. (Cl. 4—148.)

1. A bumper for the purpose specified comprising a longitudinally curved body of uniform cross section provided with knobs on its under sides adjacent its ends, and with sockets for the accommodation of fastening devices.

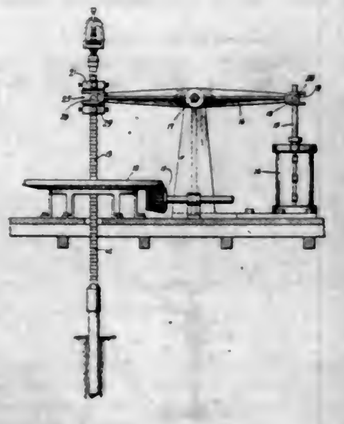
1,628,278. JEWELRY. SYDNEY SCHRUBB, Brooklyn, N. Y. Filed Mar. 17, 1926. Serial No. 95,429. 2 Claims. (Cl. 63—2.)

2. An article of jewelry comprising, an ornamental object for display on the back of the hand, a flexible loop for engaging a finger and receiving the knuckle of said

finger, a loop for engaging the wrist, means for securing the object to the finger engaging loop, means for securing the object to the wrist engaging loop, and means to take up slack to fit the article to different sized hands and retain the ornamental object in snug contact with the back of the hand.

1,628,279. SENSITIVE LAYER ON A SUITABLE BASE AND PROCESS OF MAKING SAME. MAXIMILIAN PAUL SCHMIDT and WILHELM KRIEGER, Biebrich-on-the-Rhine, Germany, assignors to Kalle & Co. Aktiengesellschaft, Biebrich-on-the-Rhine, Germany, a Corporation of Germany. Filed June 19, 1925, Serial No. 38,288, and in Germany May 28, 1924. 8 Claims. (Cl. 95—7.)

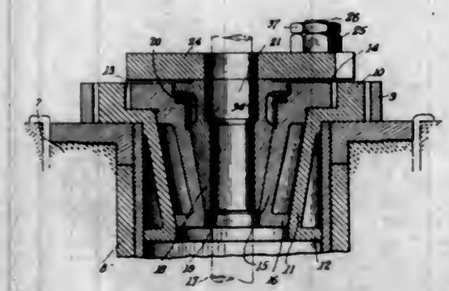
1. Process for producing sensitive layers on a suitable base, consisting in covering the base with a diazo compound being formed from amino compounds containing at least one other amino group and an azo dyestuff component.



1,628,280. PROCESS FOR PREPARING NITRILES OF THE BENZANTHRONE SERIES. MAXIMILIAN PAUL SCHMIDT and WILHELM NEUGEBAUER, Biebrich-on-the-Rhine, Germany, assignors, by mesne assignments, to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 23, 1926, Serial No. 90,205, and in Germany Nov. 17, 1924. 3 Claims. (Cl. 260—61.)

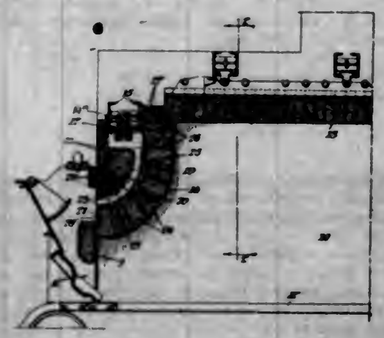
3. As a new product, dicyanobenzanthrone.

1,628,281. PROCESS OF MAKING BASIC OPEN-HEARTH STEEL. JULIAN L. SCHUELER, Peoria, Ill. Filed Mar. 27, 1926. Serial No. 98,018. 8 Claims. (Cl. 75—27.)



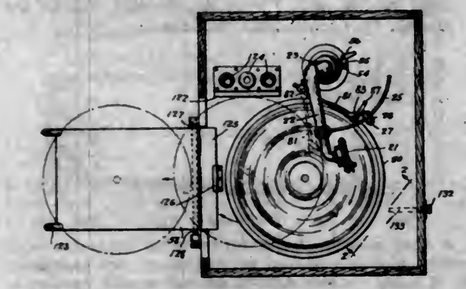
1. The process of making basic open hearth steel using cold charges, which consists in first charging an insufficient amount of limestone to form a finishing slag with respect to the weight and kind of metal charged, and without removing the slag formed, finally making up the insufficiency of limestone after the charge has melted by the addition of burned lime to form the finishing slag.

1,628,282. WELL-DRILLING APPARATUS. WALDO SHELDON, Greenwich, Conn. Filed May 29, 1923. Serial No. 642,182. 15 Claims. (Cl. 255—22.)



1. In deep oil well drilling apparatus, the combination with a rotary table having a chuck passage at the center for the drill steam, of a power device supported in fixed relation at one side of the rotary table and a drill controlling and pressure applying lever extending from said power device over the table and having provision for a rotary connection with the drill stem.

1,628,283. WELL-DRILLING CHUCK. WALDO SHELDON, Greenwich, Conn. Filed Sept. 6, 1924. Serial No. 736,206. 48 Claims. (Cl. 255—23.)

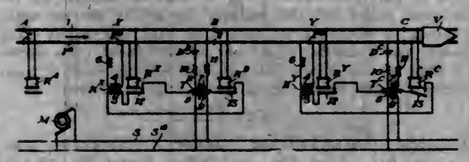


1. In well drilling apparatus, a horizontally mounted rotary table having a downwardly faced conical socket, a spring collet seated in said socket and adjustable means engaged over the top of said spring collet for forcing said spring collet downwardly in said socket into compressive engagement with the drill stem.

1,628,284. FURNACE-ARCH CONSTRUCTION. NATHANIEL D. STEVENS, Hazleton, Pa., and LOUIS H. HORBEIN, Chicago, Ill., assignors to M. H. Detrick Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1920. Serial No. 422,775. 24 Claims. (Cl. 110—99.)

1. In a furnace having a fuel inlet at a margin of a grate, an ignition arch arranged above the margin of the grate, at which fuel is introduced, said ignition arch comprising a series of spaced-apart depending frame members having a convex inner portion rising abruptly from the lower end, said convex portion having a laterally projecting flange for a part of its length, and a series of wedge-shaped bricks having in their smaller ends recesses accommodating the said flange to sustain said bricks in abutment with one another.

1,628,285. PHONOGRAPH. HENRY C. STOLL and HUGO L. SCHRODER, New York, N. Y., assignors, by direct and mesne assignments, of one-third to Harry B. Kanter and one-third to Philip S. McLean, New York, N. Y., and one-third to said Schroder. Filed June 1, 1921. Serial Serial No. 474,114. 22 Claims. (Cl. 274—10.)

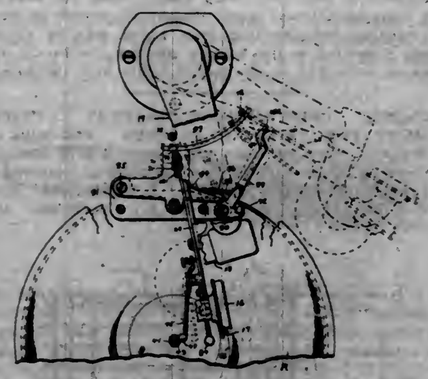


1. In a phonograph, a turn-table rotating in a fixed plane and provided with a retractable center pin, means for retracting said pin clear of the topmost of a pile of records on the turn-table and means for shifting the topmost record when thus freed clear of the turn-table.

1,628,286. METHOD OF MAKING RUBBER TUBES. JAMES D. TEW, Hudson, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 13, 1925. Serial No. 22,549. 1 Claim. (Cl. 154—8.)

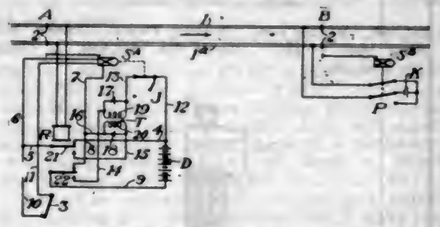
The method of making rubber tubes which comprises forming successive elongated blanks of warm and tacky rubber stock, longitudinally feeding the said blanks of stock in procession to a rolling position without intermediate storage of the blanks, and there mounting each blank upon a mandrel by rolling the mandrel transversely upon the blank, the blanks being formed in spaced-apart relation in procession by severing and removing zones of stock from a continuous strip of stock.

1,628,287. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 25, 1926. Serial No. 83,441. 7 Claims. (Cl. 246—34.)



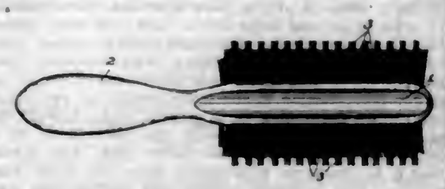
1. Railway traffic controlling apparatus comprising a stretch of railway track, a source of track circuit current for said stretch, a transformer having a primary constantly supplied with alternating current and two secondaries, means for constantly connecting one said secondary with the rails of said stretch, and means for at times supplying train controlling current from the other said secondary to at least one rail of said stretch.

1,628,288. RADIATOR. JOSEPH TRISKA, Omaha, Nebr. Filed Feb. 1, 1923. Serial No. 616,349. 2 Claims. (Cl. 137—72.)



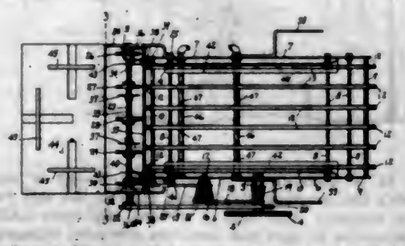
2. In a radiator of the class described, the combination with upper and lower tanks, inlet and outlet pipes connecting respectively with said tanks, and a connecting body between said tanks having multiple passages for the flow of liquid from one to the other; of an overflow-pipe starting in the upper portion of the upper tank, thence descending through said tank, through the connecting body, thence through the lower tank at a portion thereof adjoining the outlet pipe, and thence directed to discharge impingingly upon the outlet pipe whereby a flow of steam through said overflow-pipe may serve to thaw frozen liquid in and thereby open a continuous passage through the radiator between the inlet and outlet pipes thereof.

1,628,289. PHONOGRAPH. JOHN WAHLBERG, New York, N. Y. Filed May 17, 1922. Serial No. 561,586. 33 Claims. (Cl. 274—9.)



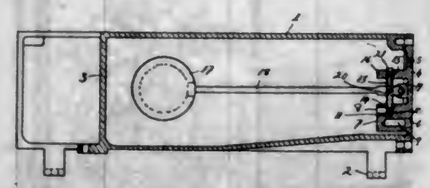
1. In a phonograph, a turn-table having a record guiding pin provided with a cam sunk in the side thereof, a swinging tone arm, a pivoted trip lever adapted to be carried by said tone arm into operative engagement with said cam at the end of the playing of a record on the turn-table and means for controlling a function of the phonograph under control of said trip lever.

1,628,290. RAILWAY SIGNALING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 9, 1926. Serial No. 140,450. 7 Claims. (Cl. 246—41.)



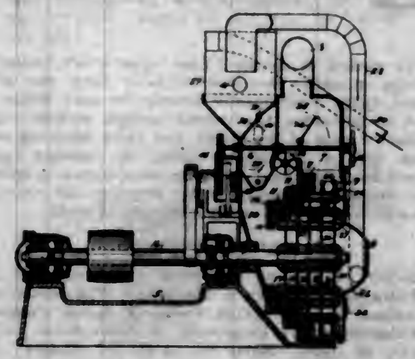
1. In combination with a railway signal having the usual operating mechanism, a circuit for said mechanism, means for at times interrupting such circuit for a brief interval, and means for supplying a surge of energy to the mechanism during such interval.

1,628,291. HAIRBRUSH. FRANK R. WEBER, Troy, N. Y., assignor to Mohawk Brush Company, Albany, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,830. 1 Claim. (Cl. 15—160.)



A hair brush comprising an elongated body portion, one end thereof forming a handle and the other end thereof being relatively thin and having its longitudinal sides curled upwardly to provide a brush back substantially U-shaped in cross section, and a plurality of bristles arranged in longitudinally extending substantially parallel rows and projecting outwardly from the convex face of said substantially U-shaped back, said bristle tufts providing a brushing and combing surface which is substantially at least semi-circular and the outer ends of the tufts of each row being spaced from the ends of the tufts of adjacent rows whereby to provide a series of combing and brushing rows which may be successively presented to the hair by rotating the handle and back as the brush is also moved bodily over the hair.

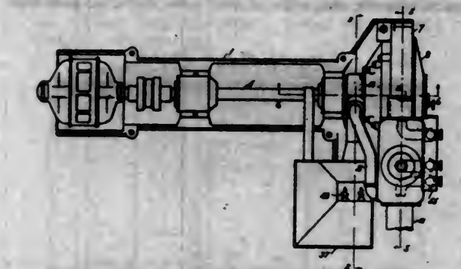
1,628,292. PRINTED-SHEET-DELIVERY ATTACHMENT FOR PRINTING PRESSES. FREDERICK J. WERMES, Norwood, Ohio, assignor to S & W Machine Company, Cincinnati, Ohio, a Partnership composed of Frederick J. Wermes and Robert H. Steitenpohl. Filed Feb. 15, 1924. Serial No. 693,117. 6 Claims. (Cl. 271—69.)



1. In an attachment for printing presses of the character described, means for conveying printed sheets off of a printing press, said sheets having an unprinted margin at each side, said conveying means operating at a given speed in combination with said wheels for engaging said sheets on said margin, said feed means operating at a greater rate of speed to precipitate said sheets to a given point.

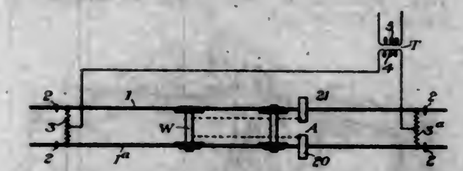
1,628,293. FLOAT CHAMBER. THOMAS C. WHITEHEAD, Detroit, Mich. Filed Jan. 7, 1924. Serial No. 684,861. 1 Claim. (Cl. 137—103.)

A float chamber for a refrigerating apparatus comprising a casing having an opening at one end thereof, of a cap for said opening having an inlet passage at the upper end thereof through which the refrigerant may be supplied to the chamber and having an inwardly extending enlargement, said enlargement having spaced longitudinally extending passages respectively opening interiorly and exteriorly of said chamber and a transversely extending passage connecting said longitudinally extending passages, an inwardly extending projection above the enlargement, a valve pin slidably mounted in the projection and enlargement for controlling the flow of fluid through the transversely extending passage, and means for controlling the movement of said valve pin including an arm pivoted upon the cap intermediate the projection and enlargement and pivotally connected to the valve pin, and a float carried by said arm.



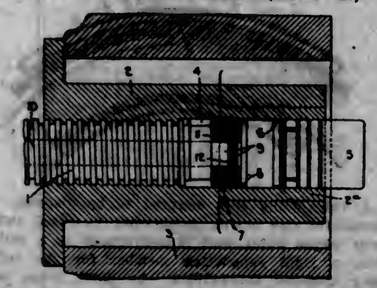
1,628,294. COAL PULVERIZER. ALGOT A. WICKLAND, Chicago, Ill. Filed Dec. 19, 1923. Serial No. 681,455. 14 Claims. (Cl. 83—11.)

1. In a device of the kind described and in combination a pulverizer comprising a housing having an inlet and outlet for the material, a rotary driven shaft therein, a plurality of series of pins driven by said shaft, and grinding rings, one spaced about each series of pins, the said rings and the cooperating ends of said series of pins being arranged in stepped relation.



1,628,295. PULVERIZER. ALGOT A. WICKLAND, Chicago, Ill. Filed Feb. 20, 1925. Serial No. 10,458. 31 Claims. (Cl. 83—11.)

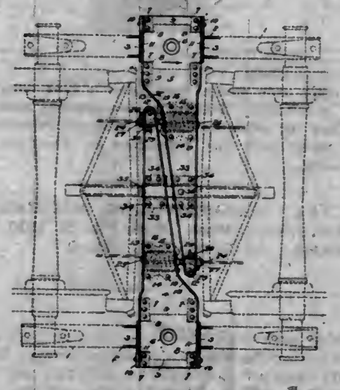
1. In a pulverizer, a pulverizing chamber, a coal receiving chamber mounted adjacent to said pulverizer chamber, a coal deflecting and distributing sleeve formed in said receiving chamber; a coal receiving well, an upwardly inclined chute joining the said well to the said coal receiving chamber, said well being adapted to be



supplied with un-pulverized coal from a hopper mounted there-above; and means in said well to agitate the coal in the well, forward toward said inclined chute.

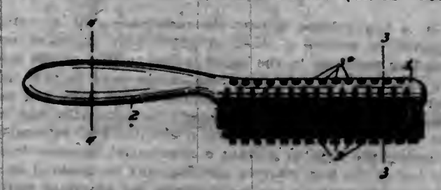
1,628,296. TRAIN-CARRIED RECEIVER FOR AUTOMATIC TRAIN-CONTROL SYSTEMS. CONRAD H. ZIERDT, Rosedale, Penn Township, Allegheny County, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1926. Serial No. 95,863. 2 Claims. (Cl. 246—63.)

1. A train carried receiver comprising a pair of cores disposed transversely over the two track rails respectively and each provided with two legs projecting downwardly on opposite sides of the associated rail, and a winding made up of a coil on each leg said coils being connected in series in such manner that the electromotive forces induced in such winding by fluxes due to current flowing in the same direction in the track rails are additive but that the resultant electromotive force created in said winding by foreign fluxes passing through said cores is substantially zero.



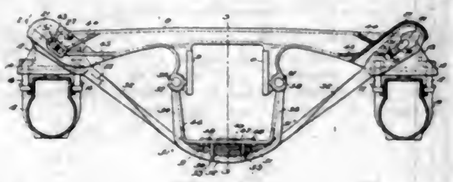
1,628,297. MEANS FOR AUTOMATICALLY RELIEVING THE PRESSURE ON PRESSURE MEMBERS WHEN THE SAME ARE SUBJECTED TO UNDUE STRESS. WILLIAM ERNEST ABBOTT, Rochdale, and JOHN ROBERT ELGEY, Littleborough, England, assignors to George Spencer, Moulton & Company, Limited, London, England, a Company of Great Britain. Filed June 11, 1926, Serial No. 115,412, and in Great Britain Nov. 12, 1925. 3 Claims. (Cl. 18—2.)

1. A pressure relieving device, comprising a support provided with a screwthreaded hole and a pressure chamber for fluid, a screw for applying pressure engaging



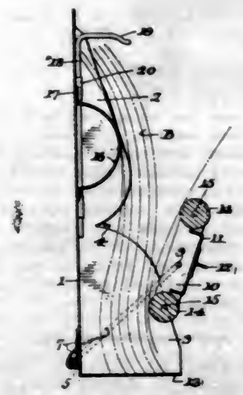
with the said hole and having an outlet for the fluid, a piston slidable in the pressure chamber and bearing against the end of the screw and having a longitudinal passage, an imperforate disk of frangible material normally closing the said passage, and a plunger slidable in the pressure chamber and operated by the pressure therein.

1,628,298. CAR TRUCK. GUSTAF A. ANDERSON, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed June 2, 1922, Serial No. 565,319. Renewed Mar. 5, 1927. 30 Claims. (Cl. 105—179.)



1. In a car truck, the combination with longitudinally movable side frame members, of means connecting said side frame members, said means including inwardly extending cooperating portions rigidly carried by said side frame members, and yieldable means connecting said cooperating portions upon opposite sides of the longitudinal center of the truck, said yieldable means being energized upon displacement of the side frame members from normal position and acting to restore said side frame members to normal position upon cessation of the force producing displacement.

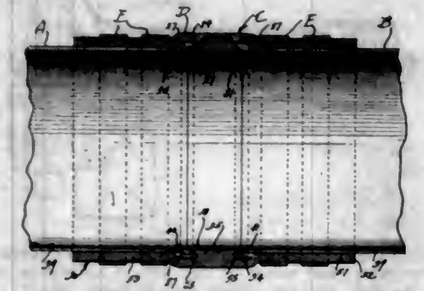
1,628,299. HAIRBRUSH. GAYNS B. AUFSESSER, Albany, N. Y., assignor to Mohawk Brush Company, Albany, N. Y., a Corporation of New York. Filed Aug. 27, 1925. Serial No. 52,810. 2 Claims. (Cl. 15—160.)



1. A hair brush comprising a handle member having a longitudinal extension forming a brush back, a plurality of substantially parallel rows of bristle tufts arranged longitudinaly of said back in outwardly diverging relation to one another, the rows being arranged to provide a brushing surface which is at least substantially semi-circular with the back constituting substantially the axis of the arc defined by said brushing surface, the outer ends of the tufts of each row being spaced substantially from the ends of the tufts of adjacent rows whereby to provide a series of combing and brushing rows which may be successively presented to the hair by rotating the handle and back as the brush is also moved bodily over the hair.

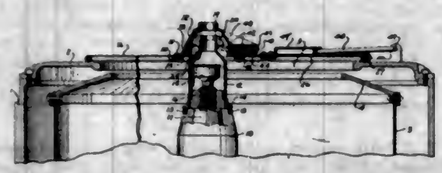
1,628,300. TRUCK SIDE FRAME. DONALD S. BARROWS, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Mar. 16, 1925. Serial No. 15,856. 30 Claims. (Cl. 105—204.)

1. A truck side frame comprising a cast compression member, a relatively flexible tension member, and means intersecting the adjacent ends of said members and connecting them with the formation of non-rigid joints therebetween.



1,628,301. BAG-DELIVERING MACHINE. EARL BLACKER, Everett, Wash. Filed Feb. 23, 1926. Serial No. 90,143. 1 Claim. (Cl. 211—2.)

In a bag holding device, the combination of a casing adapted to receive a stack of paper bags, mounted upstanding members in the upper inside portion of the casing to cause the upper portions of the bags to bow upwardly, an arm adjustably mounted on the bags and extending over the bags and loosely engaging the top of the outermost bag, and means resiliently and releasably engaging the bags at a point a substantial distance from the top of the bag, whereby one bag may be removed at a time readily without tearing the bags, the aforesaid resilient bag engaging means including swingable arm members, plates swingably mounted on said arm members, said plates carrying loosely mounted rollers at each end thereof to engage the bags, substantially as described.

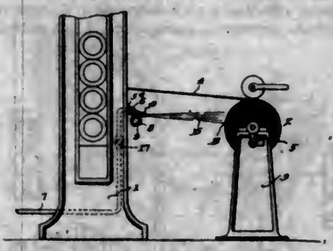


1,628,302. COUPLING SLEEVE FOR DREDGING PIPES. NORMAN C. BRAY, Portland, Oreg. Filed June 13, 1925. Serial No. 36,896. 3 Claims. (Cl. 285—90.)

1. In a flexible dredging pipe joint the combination of a pair of pipe sections, and a coupling arrangement including a flexible sleeve with a passageway therethrough adapted to receive the ends of said pipe sections, said sleeve internally thereof providing a filler band against which the ends of said pipe sections may abut to fill the space between the ends of said pipe sections, said pipe

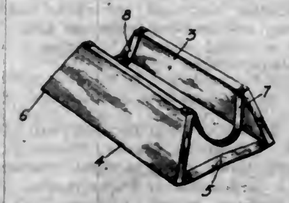
sections at their ends and filler band being so formed as to provide an expansion and contraction pocket at the juncture of each of said pipe sections with said band.

1,628,303. SAFETY GUARD FOR CENTRIFUGAL MACHINES. TANDY A. BRYSON, Troy, N. Y., assignor to Tolhurst Machine Company, a Corporation of New York. Filed July 5, 1923. Serial No. 649,458. 23 Claims. (Cl. 192—136.)



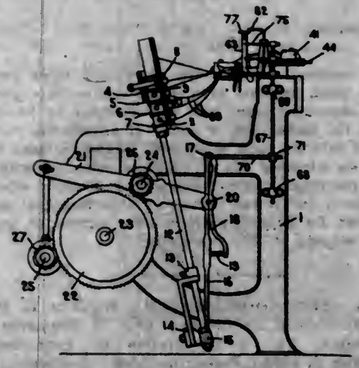
2. A safety device for centrifugal machines, including in combination a basket, a hub therefor, a closure for the basket, a locking member carried by the closure at substantially the central part thereof, a cooperating locking member carried by the hub and rotating therewith, one of said locking members being rotatable relatively to the part on which it is mounted, said two locking members normally locking the cover closed, and permitting unlocking of the cover only when the said relatively rotatable locking member is slightly rotated.

1,628,304. SECTIONAL AIR BAG. RICHARD S. BURDETTE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 10, 1925. Serial No. 22,206. 7 Claims. (Cl. 18—45.)



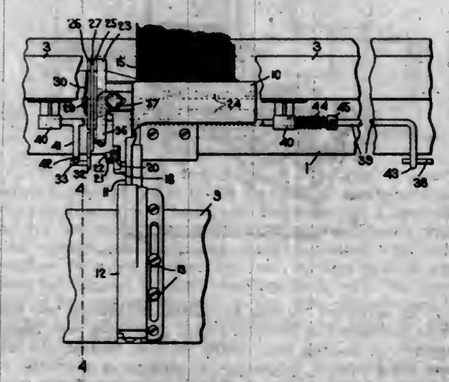
1. A vulcanizing core adapted to be disposed within a pneumatic tire casing comprising a closed inflatable member whose outer wall is continuous in a radial direction, a rigid supporting member for the inflatable member disposed therewithin, the parts being so constructed and arranged that the ends of the inflatable member are not secured to the supporting member but are free to roll therealong when the container is inflated.

1,628,305. SPRAY MARKER. WILLIAM H. CANNARD, Green Bay, Wis., assignor to Fort Howard Paper Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 25, 1924. Serial No. 734,114. 7 Claims. (Cl. 93—93.)



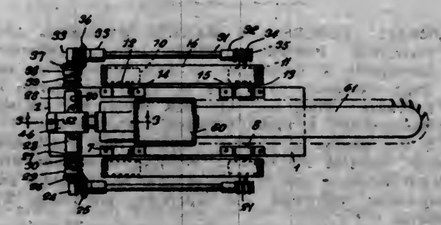
1. In a method of dividing a web into equal sections, the step of spraying a marking fluid upon a moving web at intervals predetermined by the speed of travel of the web.

1,628,306. TIRE-DISPLAY HOLDER. RUFUS W. CLARK, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 10, 1923. Serial No. 656,654. 3 Claims. (Cl. 211—24.)



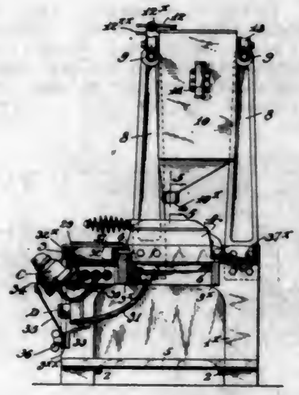
1. A tire holder comprising two rigid quadrilateral members disposed in side-by-side relation, means connecting the bottom portions of said members, and spaced flexible means connecting the top portions thereof and adapted to cause the top portions to move toward each other in clamping relationship to support a tire between the members.

1,628,307. FILLING CLAMPING AND PARTING MECHANISM FOR SHIFTING SHUTTLE-BOX LOOMS. EDWARD A. CUNNIFF, Waltham, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 29, 1925. Serial No. 65,584. 14 Claims. (Cl. 139—116.)



1. A shifting shuttle box loom comprising filling clamping mechanism located normally out of position to receive a filling extending from the selvage to an inactive shuttle and means actuated upon each shift of the shuttle boxes to cause the clamping mechanism to move into a position to receive such a filling.

1,628,308. FILLING CLAMPING AND PARTING MECHANISM FOR SHIFTING SHUTTLE-BOX LOOMS. EDWARD A. CUNNIFF, Waltham, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 29, 1925. Serial No. 65,585. 9 Claims. (Cl. 139—116.)



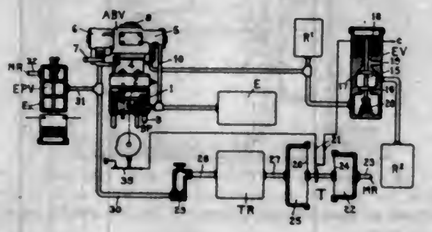
1. A shifting shuttle box loom comprising filling clamping and parting mechanism located adjacent the selvage on the drop box side, and means acting upon the completion of the first pick succeeding a shift of the boxes to cause said mechanism to clamp the filling running to a shuttle shifted from active to inactive position and to part said filling between the selvage and the point at which it is clamped.

1,628,309. MINING-MACHINE CARRIER. KENNETH DAVIS, St. Benedict, Pa., assignor, by mesne assignments, to Rembrandt Peale, St. Benedict, Pa., W. Sanders Davis, New York, N. Y., and William S. Wallace, Philadelphia, Pa., trustees. Filed June 28, 1919, Serial No. 306,156. Renewed May 13, 1925. 9 Claims. (Cl. 180—4.2.)

3. A carrier for mining machines comprising a relatively long shallow platform, tractor treads mounted on each side thereof and constructed and arranged to support said platform in underslung relation thereto in close proximity to the ground, a transverse shaft journaled relatively to said platform, means including clutches to selectively drive said treads from said shaft, a first worm gear on said shaft, a second worm gear having a conical bore hole therein and journaled for rotation in operative relation with said first worm gear, a stub shaft in said bore hole and associated with said second worm gear to drive the same, said stub shaft having a permissive movement in said bore hole to aline it with the driving connection of a mining machine when in loading position upon said platform.

1,628,310. ELECTRICAL COOKING APPARATUS. MILTON J. DE ROOS, New York, N. Y. Filed Feb. 2, 1925. Serial No. 6,218. 6 Claims. (Cl. 107—66.)

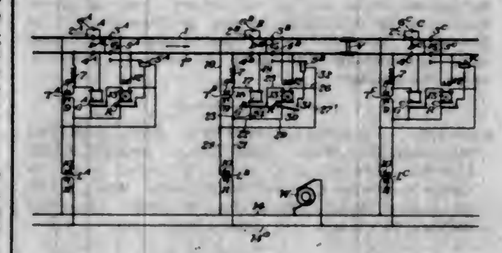
1. An electrical cooking apparatus comprising two end frame members and horizontal bars connecting said frame members at the top and toward the base thereof, the top bars being spaced to provide a support, a plurality of waffle irons each having a lateral projecting flange resting on said horizontal bars and each iron having electrical connections extending between and below said bars and leading to a switch at the front of the apparatus, two risers carried by each frame member, each riser being connected to the corresponding riser at the opposite end of the apparatus, by means of a horizontal rod, and a batter container disposed between the rods and depending from supporting wheels adapted to roll upon the rods.



3. In cooking apparatus, a set of cooking irons arranged side by side in a row, independent heat controls for said irons arranged below and in front of the same and a batter carrier mounted for travel over the rearward portions of said irons so as to leave the forward portions of said irons fully exposed and provided with a forwardly pitched discharge spout for delivering the batter to the central portions of the irons.

1,628,311. PROCESS OF MAKING MAGNESIA AND CALCIUM PENTASULPHIDE. VIGGO DREWSEN, Larchmont, N. Y., assignor to West Virginia Pulp and Paper Company, New York N. Y., a Corporation of Delaware. Filed Dec. 11, 1923. Serial No. 680,043. Renewed Oct. 8, 1926. 8 Claims. (Cl. 23—138.)

8. The process of treating dolomitic lime which comprises, effecting the chemical reaction of sulphur with slaked dolomitic lime to form calcium pentasulphide and magnesium hydroxide, and separating magnesium hydroxide.

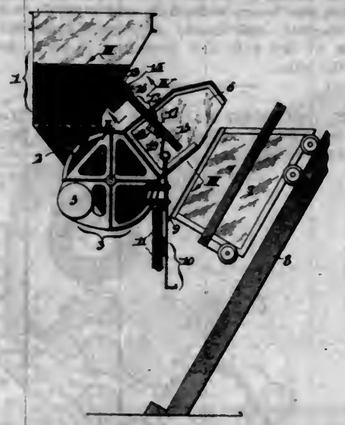


1,628,312. BRAKE-APPLYING APPARATUS. SAMUEL W. DUDLEY, New Haven, Conn., and CHARLES S. BURNELL, Rochester, N. Y., assignors to General Railway Signal Company, Rochester, N. Y. Filed May 11, 1925. Serial No. 29,430. 12 Claims. (Cl. 303—13.)

1. Brake applying apparatus for trains employing a braking system of the type in which the brake pipe is normally charged and in which venting thereof effects a brake application; the combination of an equalising reservoir, a brake pipe, an equalising discharge piston valve connecting said equalizing reservoir and brake pipe for exhausting air from the brake pipe to atmosphere if brake pipe pressure is higher than equalising reservoir pressure, and two reduction reservoirs normally connected together; a brake applying valve which may be controlled manually; automatically controlled pneumatic means for operating said valve to the brake applying position, said valve if operated to the brake applying position connecting said equalizing reservoir to one of the reduction reservoirs, thereby effecting a predetermined reduction in equalizing reservoir pressure; pneumatically controlled means

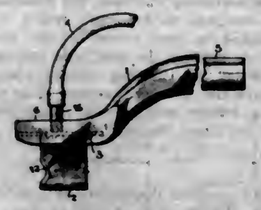
connected to be operated when said first mentioned pneumatic means is operated for isolating said two reservoirs from each other; and means annulling the effect of said last mentioned means effective a predetermined time after said automatically controlled pneumatic means is operated, whereby said two reservoirs are again connected together and a second stage of reduction of equalizing reservoir pressure results.

1,628,313. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 17, 1926. Serial No. 88,799. 6 Claims. (Cl. 246—34.)



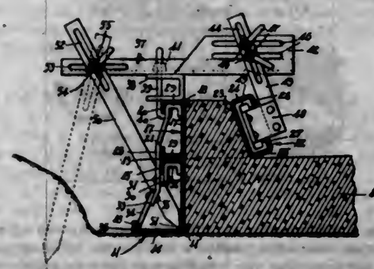
1. In combination, a stretch of railway track divided into two track sections by a short intermediate portion of track separated from both said sections by insulated joints in the track rails, a source of alternating current connected with the rails of one said section, a track relay having two windings one of which is connected with the rails of the other section, and means normally effective but rendered ineffective if any of said insulated joints break down for supplying alternating current to the remaining winding of said track relay.

1,628,314. SKIP-HOIST SYSTEM. WILLIAM E. HALE, Fort Washington, Pa., assignor to R. H. Beaumont Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 7, 1925. Serial No. 7,509. 5 Claims. (Cl. 214—125.)



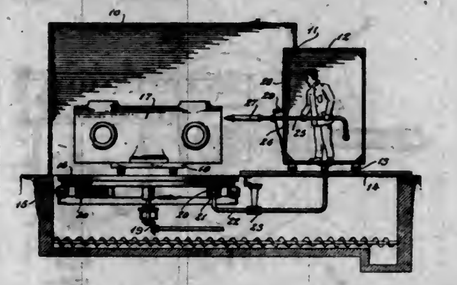
1. In a system of the character described, the combination with a skip bucket and a cooperating loader, of

gravity-influenced interconnected members, serving to normally lock the loader positively against lateral displace-



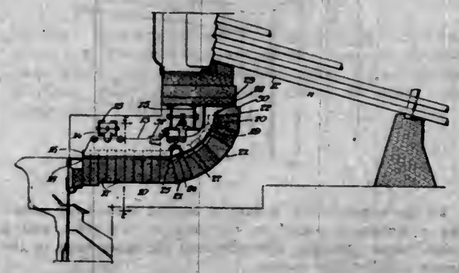
ment in inactive position but automatically actuable to release the same when the bucket approaches loading position.

1,628,315. CUTTING TOOL. CHARLES E. HAMILTON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 14, 1925. Serial No. 2,370. 3 Claims. (Cl. 30—9.)



1. A tire regrooving tool comprising a holder adapted to retain a cutting blade, and a lubricant conducting tube positioned over the blade and communicating therewith through the holder to permit the flow of fluid evenly to all parts of the blade during operation of the tool.

1,628,316. CONCRETE FORM. JOHN N. HELTZEL, Warren, Ohio. Filed Dec. 8, 1925. Serial No. 74,018. 32 Claims. (Cl. 25—118.)

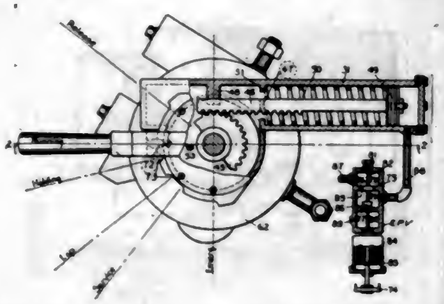


1. In a concrete form, a device adapted to be disposed at the exterior of a form having means for clamping it between and against the flanges of a lower form rail and having a portion for holding in place an upper form rail

1,628,317. CARRIAGE ARRANGEMENT FOR SAND-BLAST APPARATUS. HERMAN F. HONVEL, New York, N. Y. Filed Dec. 24, 1921. Serial No. 524,626. 4 Claims. (Cl. 51—15.)

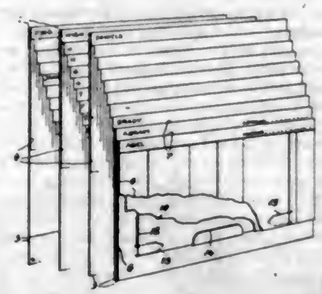
1. In apparatus of the character described, a rotary support for the work to be treated, a nozzle-carriage movable toward and from said support, and a connecting rod one end of which is connected eccentrically with said support, the other end being connected with said carriage to cause movement of the carriage toward and from the support to occur simultaneously with the rotation of the support in such a way that the carriage is always approximately at the same distance from the surface of the work to be treated.

1,628,318. FURNACE-ARCH CONSTRUCTION. LOUIS H. HOSBEIN, Chicago, Ill., and RAYMOND D. FOLTZ, East Orange, N. J., assignors to M. H. Detrick Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1921. Serial No. 461,358. 22 Claims. (Cl. 110—95.)



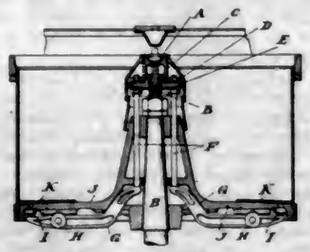
1. In furnace arch construction, the combination of a main arch bar, a row of bricks carried thereby, a rear extension member on said bar having a rearwardly and upwardly curved brick-supporting portion, and a series of tapering bricks carried by said member and having their broader end faces associated to form a rearwardly and upwardly curved deflecting surface constituting a continuation of the bottom arch surface formed by surfaces of bricks on the main arch bar.

1,628,319. TRAIN CONTROL. WINTHROP K. HOWE, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Original application filed Oct. 7, 1922, Serial No. 593,073. Divided and this application filed Nov. 27, 1925. Serial No. 71,670. 11 Claims. (Cl. 303—56.)



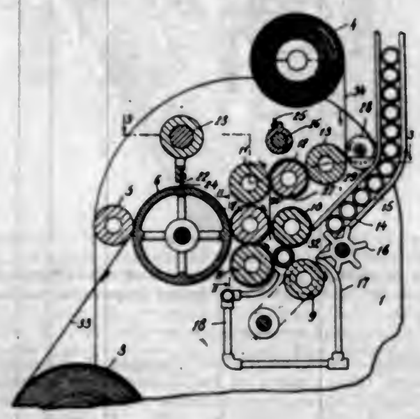
1. In a braking system, the combination with an engineer's brake valve having a rotary valve therein; mechanism including a handle for operating said rotary valve to the release, the running and the brake applying position; automatic means for operating said rotary valve; said mechanism being constructed so as not to

permit said rotary valve to be moved toward the release position manually when it is automatically operated even though the force produced by the automatic means is



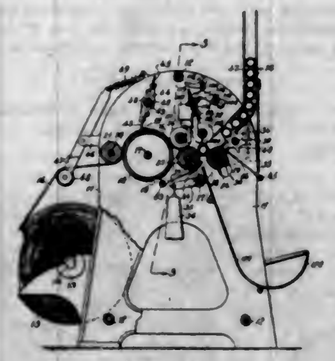
less than that exertable by the engineer, and circuit closing means closed when said valve is in a brake applying position.

1,628,320. FILING AND POSTING SYSTEM. CHARLES N. JACKSON, New York, N. Y. Substitute for application Serial No. 328,657, filed Oct. 6, 1919. This application filed Feb. 27, 1922. Serial No. 539,751. 26 Claims. (Cl. 129—16.5.)



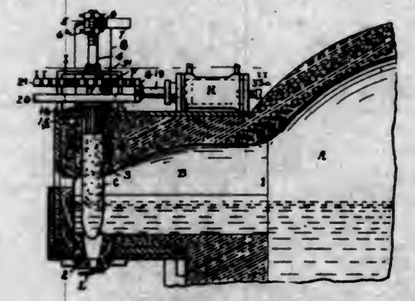
26. In combination, a carrier having means for securing a statement sheet on the face of the same and a ledger sheet hingedly secured along its upper edge to the upper edge of the carrier.

1,628,321. CENTRIFUGAL MACHINE. RICARDO LEHKY, Buenos Aires, Argentina. Filed May 13, 1926. Serial No. 108,843. 5 Claims. (Cl. 127—19.)



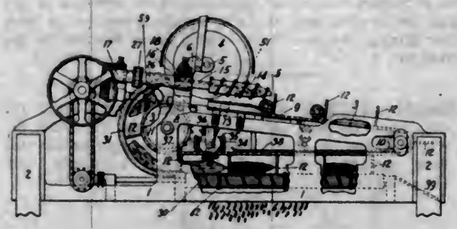
1. In a centrifugal machine used in the manufacture of pile sugar, the combination with a centrifugally operated receptacle and an upright axle therefor, of a ring superposed on the bottom of the receptacle, and means operating to raise the ring off of the said bottom comprising a plurality of pins operating under the ring, pivoted radial levers actuating said pins to move them axially thereof, and means adjustable from the upper elevation of the axle and operating to rock the levers to lift the pins.

1,628,322. WINDING MACHINE. NICHOLAS MARCALUS, Plainfield, N. J. Filed Mar. 12, 1923. Serial No. 624,357. 53 Claims. (Cl. 93—4.)



1. In a web-winding machine, the combination of winding rollers designed to hold and rotate a core, feeding rollers designed to feed a web to the core, means for perforating or cutting the web, and means for stopping the rotation of the feeding rollers when the desired length of material has been wound upon the core, while the winding rollers continue to rotate, thus detaching the wound roll from the web.

1,628,323. WEB-WINDING MACHINE. NICHOLAS MARCALUS, Plainfield, N. J. Filed Aug. 18, 1925. Serial No. 50,903. 17 Claims. (Cl. 93—1.)

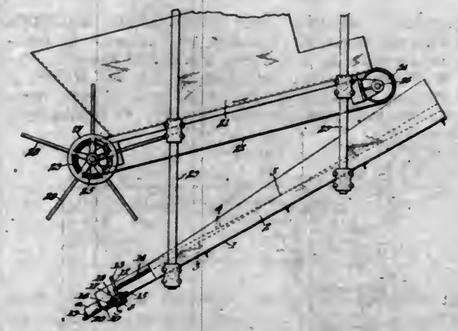


1. In a web-winding machine the combination of winding means, means for feeding a web to the winding means, means for arresting the winding and feeding means when the desired length of material has been wound, and means acting automatically and in synchronism with the feeding and winding means for severing the wound roll from the web.

1,628,324. PROCESS AND APPARATUS FOR FEEDING GLASS. WILLIAM J. MILLER, Swissvale Borough, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed July 22, 1921. Serial No. 486,712. 30 Claims. (Cl. 49—55.)

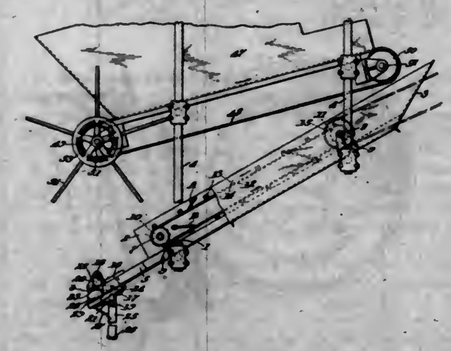
1. In glass feeding mechanism, the combination of a receptacle for molten glass provided with a discharge orifice, means reciprocating within said receptacle for propelling the glass through said orifice, and a rotary stirring tool immersed in the glass within said receptacle, for the purpose described.

1,628,325. CORN-HUSKING MACHINE. WILLIAM W. MORRAL, Morral, Ohio, assignor of one-half to Samuel E. Morral, Morral, Ohio. Filed Jan. 23, 1926. Serial No. 83,173. 33 Claims. (Cl. 130—5.)



1. In a corn husking machine, a butt removing device, a pair of husking rollers arranged below said butt removing device and extending lengthwise of said machine, a single conveyor for moving an ear of corn transversely to its length past said butt removing device and along said husking rollers, and means interposed between said butt removing device and said husking rollers for turning said ear and causing the same to be presented to said husking rollers in a position substantially parallel therewith.

1,628,326. METHOD OF TREATING RUBBER. WILLIAM G. O'BRIEN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 22, 1923. Serial No. 626,895. 1 Claim. (Cl. 18—53.)

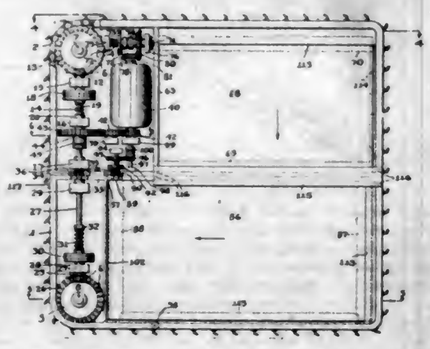


The method of making a rubberized fibrous composition which comprises treating a quantity of rubber cement with hydrogen sulphide and sulphur dioxide and permitting interaction thereof for a short period of time, diluting the mixture with a quantity of rubber solvent prior to the jellation thereof, mixing a quantity of thoroughly separated fibers with the mixtures precipitating the rubber upon the fibers, straining the fibers from the liquid, and permitting them to jell.

1,628,327. SLIDE FEEDER FOR MATCH MACHINES. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed May 29, 1924. Serial No. 716,676. 8 Claims. (Cl. 198—30.)

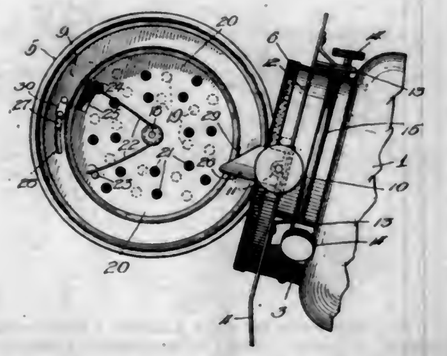
1. In a slide feeder for match machines, a feeder trough adapted to feed slides by gravity, a plurality of alternately oppositely inclined guide members uniformly spaced apart to form slide receiving paths between them, whereby slides deposited in said trough in haphazard arrangement will fall into said paths and under the influence of gravity assume uniform predetermined positions therein and travel therethrough in such positions, a stop member arranged adjacent to the discharge end of each path for the purpose of arresting the travel of the slides therein, and means for simultaneously moving all of said stop members out of slide arresting position for the purpose of successively feeding series of slides from said paths in uniform predetermined order.

1,628,328. SLIDE FEEDER FOR MATCH MACHINES. LUCIAN E. PARKER, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Jan. 16, 1925. Serial No. 2,969. 22 Claims. (Cl. 198—30.)



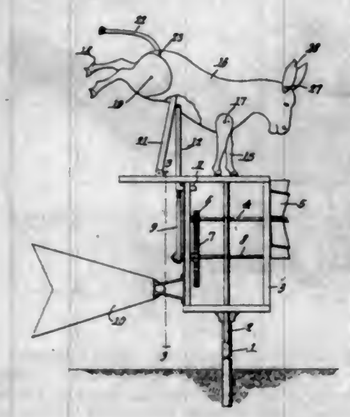
2. In a slide feeder for match machines, a feeder trough adapted to receive slides in haphazard arrangement, means in said trough defining a plurality of paths adapted to receive said slides in predetermned position and in which said slides travel, and means adjacent to the discharge ends of said paths arranged to frictionally engage said slides and arrest their travel, said slide arresting means capable of actuation to positively discharge said slides from said paths in uniform series.

9. In a slide feeder for match machines, an inclined trough adapted to receive slides in haphazard arrangement, means defining a plurality of paths longitudinally of said trough and adapted to receive slides in predeter-



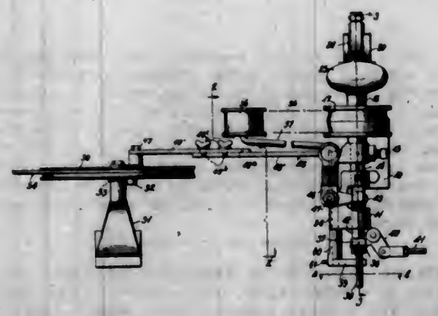
mined position only, and means including a rod extending transversely of said trough and travelling longitudinally thereof entirely above said path-defining means for ensuring the positioning of the slides in said paths in the desired position.

1,628,329. MINING AND CONVEYING MACHINE. RICHARD PEALE, St. Benedict, Pa., assignor, by mesne assignments, to Rembrandt Peale, St. Benedict, Pa.; W. Sanders Davies, New York, N. Y.; and William S. Wallace, Philadelphia, Pa. Filed June 9, 1919. Serial No. 302,929. Renewed Jan. 12, 1927. 35 Claims. (Cl. 262—30.)



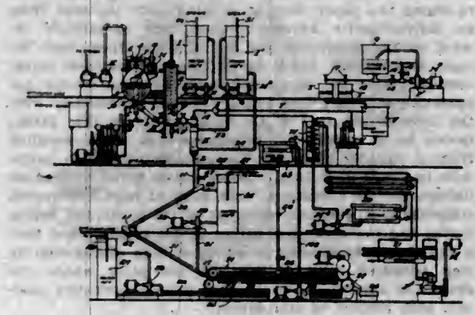
1. A mining machine including in combination a frame adapted to rest upon the mine bottom and to enter the kerf as it is cut, a kerf cutter running in the exterior of said frame, and an endless belt conveyor within the frame and entirely below the top of the cut kerf.

1,628,330. DISPLAY RECEPTACLE. ROBERT G. PECK and ALBERT BROWN, Chicago, Ill., assignors to The Aridor Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 3, 1923. Serial No. 678,109. 24 Claims. (Cl. 215—48.)



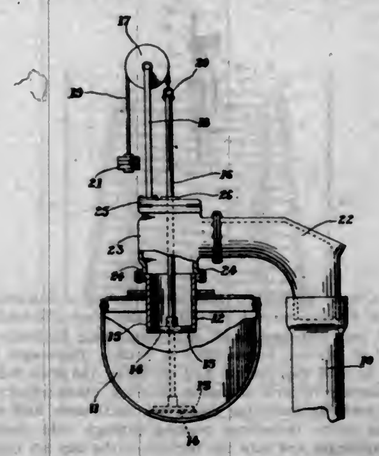
1. A display receptacle comprising, in combination, a transparent container for displaying an enclosed mass of hard candies; a door for opening and closing the receptacle; a hygroscopic medium protected from the atmosphere while the receptacle is open, and communicating with the interior of the receptacle when closed, for conditioning the interior of the receptacle to keep the candies dry and glistening for effective display; and means for covering and uncovering said medium when the receptacle is open and closed respectively.

1,628,331. MECHANICALLY-OPERATED FIGURE TOY. ALONZO HALLIN PENCE and WILLIAM ALONZO PENCE, Somerville, Ala. Filed Aug. 3, 1925. Serial No. 47,964. 2 Claims. (Cl. 46—40.)



1. The combination with a structure mounted for rotation, a wind wheel carried thereby, and a vane, of a figure comprising pivotally connected members, one member of the figure being anchored to said structure, a cam actuated by the wind wheel, means operated intermittently by the cam for shifting the other members of the figure relative to said structure, and means connected to said structure and to one of the shiftable members of the figure for moving said shiftable members relative to each other during the movement of the figure relative to the structure.

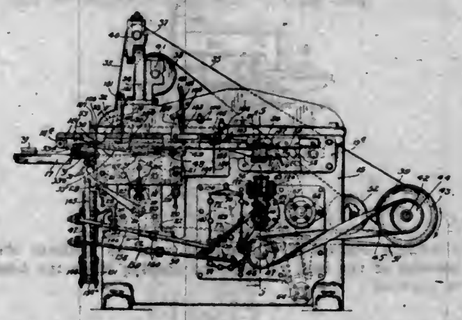
1,628,332. SAFETY STOP DEVICE. JOHN REID, Oil City, Pa. Original application filed Feb. 20, 1924, Serial No. 694,146. Divided and this application filed Sept. 29, 1924. Serial No. 740,674. 2 Claims. (Cl. 137—140.)



1. In combination, a governor, a valve control member, a releasable connection between said governor and valve control member, said governor being driven by a belt gearing, an idler pulley associated with said belt gearing, said idler pulley being displaceable when said belt gearing breaks and means operatable by the displacement of said idler pulley for disengaging said releasable connection between said governor and valve control member.

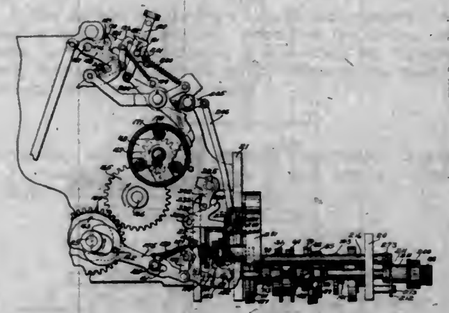
1,628,333. APPARATUS FOR AND ART OF MANUFACTURE AND FILLING OF CAPSULES. JACOB SCHAUB, Lawrenceburg, Ind., assignor to The Theroz Company, New York, N. Y., a Corporation of New York. Filed Jan. 9, 1924. Serial No. 685,209. 54 Claims. (Cl. 18—4.)

5. The art of manufacturing and filling capsules including forming the tube, cooling a liquid filler, forcing said liquid filler into the tube, and severing the tube into capsules.



1,628,334. DIP-PIPE CONSTRUCTION FOR THE HYDRAULIC MAINS OF GAS PLANTS. WILLIAM SEYMOUR, Sault Ste. Marie, Ontario, Canada. Filed Sept. 19, 1925. Serial No. 57,374. 1 Claim. (Cl. 48—172.)

In combination with a collecting main of a gas plant, a standpipe, a bridge pipe, an elongated dip pipe extending into the collecting main, a valve seat formed in the inner end of said dip pipe, a valve formed with an elongated stem adapted to engage with said seat to close the dip pipe, said valve when in open position being adapted to drop to the bottom of the collecting main, a connecting pipe for connecting the bridge pipe and the dip pipe, said connecting pipe being adapted to receive the elongated stem of the valve, and means for raising and lowering the valve.



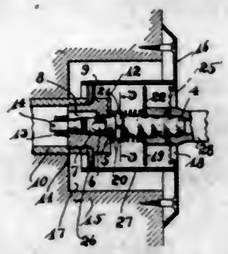
1,628,335. FLOORING-END MATCHER. WILLIS S. SHERMAN, Minneapolis, Minn. Filed May 12, 1921. Serial No. 468,820. 36 Claims. (Cl. 144—91.)

1. In a machine of the character described, the combination with a cut-off saw and a cutter, of a feed throat for delivering strips to said saw and from thence to said cutter, an oscillatory power-driven arm, and a pair of rake-acting feed bars pivoted to said arm for independent vertical movements, said feed bars having primary and

secondary driving shoulders, the former serving to feed the strips to and past the saw and the latter serving to feed the strips to and past said cutter.

1,628,336. CASH REGISTER. BERNIS M. SHIPLEY, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed May 7, 1923. Serial No. 637,216. 39 Claims. (Cl. 235—3.)

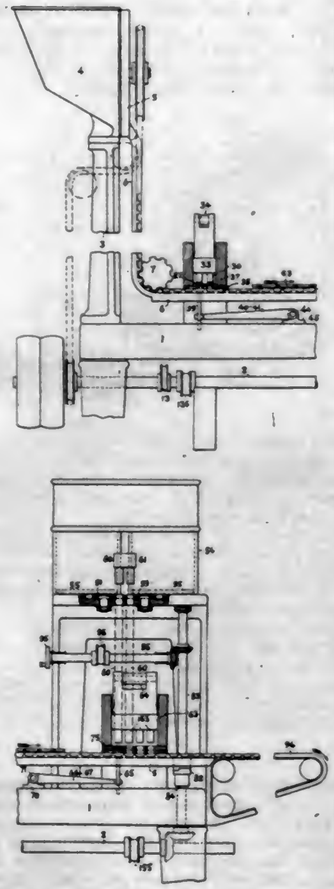
2. In a machine of the class described, the combination of check issuing mechanism, driving means therefor, disconnecting means for said driving means, and means adapted to be controlled by an inserted slip for rendering the disconnecting means effective.



8. In a machine of the class described, the combination of severing mechanism, driving means therefor, disconnecting means for said driving means, and means adapted to be controlled by an inserted slip for rendering said driving means ineffective.

11. In a machine of the class described, the combination of type wheels, a hammer cooperating therewith, a plurality of banks of control keys, a plurality of cams adapted to be differentially set by said banks of keys, and means controlled by said cams for preventing operation of said hammer when certain keys are depressed.

1,628,337. GAS CONTROL. DAVID H. SHOGRAN, San Diego, Calif. Filed Aug. 17, 1926. Serial No. 129,764. 4 Claims. (Cl. 251—9.)

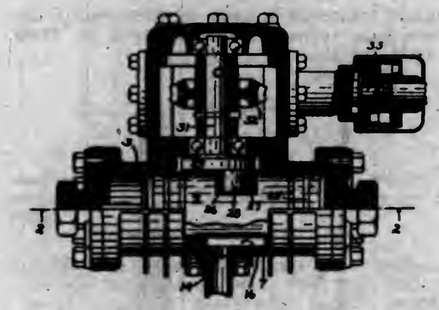


1. A gas-control comprising, in combination with a gas supply pipe embedded in a wall with the end of the pipe terminating within a recess of the wall, a gas-cock with connecting nipple longitudinally disposed in the end of said pipe and so as to protrude from said recess, a cover-plate disposed over said recess and having an opening through which a gas hose may be applied over said nipple,

and an indicating plate of a size to close said opening from the rear of the cover-plate and operatively and

yieldingly connected to the said cock to indicate the position of the cock through the opening when the hose is removed.

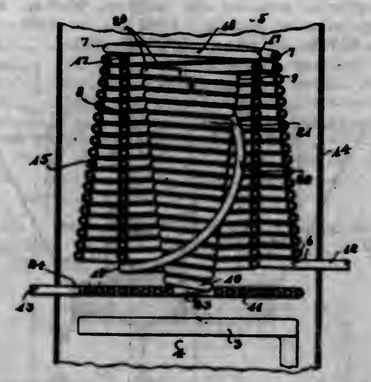
1,628,338. MACHINE FOR MANUFACTURING BOTTLE CAPS. HENRY ARNOLD SKOV, Copenhagen, Denmark, assignor to Dansk Pressefabrik A/S, Copenhagen, Denmark. Filed Nov. 5, 1925. Serial No. 67,093. 9 Claims. (Cl. 113—80.)



1. A machine for manufacturing bottle caps in the form of a metal cap with paper and cork discs fitted therein, comprising in combination, a feeding device constructed to feed the caps to the machine and intermittently advance them step by step in the longitudinal extension of the machine in two rows side by side, a paper disc fitting device disposed transversely across the path of the advancing rows of caps, means for operating said disc fitting device synchronously with the step by step feed of the caps, said disc fitting device being constructed to stamp the paper discs to be fitted into the caps from an intermittently advanced paper tape operatively related to the apparatus and to introduce them into the caps, a cork disc fiting device likewise disposed transversely across the advancing rows of caps, means for operating said cork disc fitting device synchronously with the intermittent feed of the caps, said cork disc fitting device being constructed to receive cork discs, supplied from a suitable container and simultaneously to introduce two cork discs into caps previously fitted with paper linings, devices common to both rows of caps constructed temporarily to suspend operation of the paper disc fitting device and the cork disc fitting device in the event that a cap should be missing in either or both of the step by step advanced rows of caps, in the place where one should be and which is about to assume operative position with respect to said device.

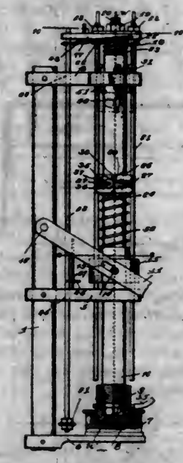
1,628,339. AUTOMATIC CUT-OUT. CHARLES M. STARR, South Bend, Ind. Filed July 11, 1925. Serial No. 42,969. 1 Claim. (Cl. 200—83.)

As a new article of manufacture, an automatically operable electric circuit cut-out of the class described, a flanged cup, the bottom of said cup being centrally depressed to provide a concavity, a flexible diaphragm connected to said cup bottom and spanning the open side of the concavity to form a suction chamber, diametrically opposite contacts including relatively stationary and rigid coacting parts, fastenings passing through said contacts and diaphragm and into the bottom of the cup for mounting said contacts on said cap, a connection between the intermediate portion of one of the contacts and the central portion of the diaphragm, a suction tube connected with the depression and communicating with said suction chamber, and a cover adapted to fit upon said cup to enclose said contacts, said cover being provided with diametrically opposite bayonet slots cooperable with the contacts and with said suction tube for maintaining the cover in place.



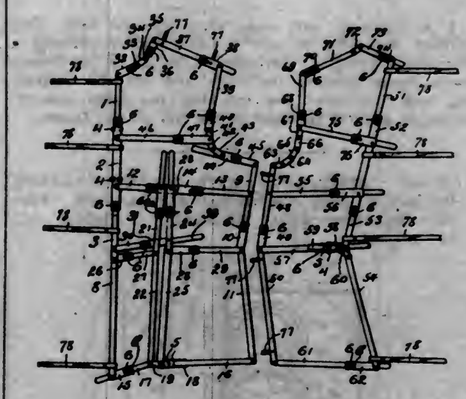
1,628,340. PUMP. WILLIAM H. THOMPSON, Berkeley, Calif. Filed June 17, 1924. Serial No. 720,481. 3 Claims. (Cl. 230—27.)

1. A fluid pump comprising a cylinder having closed ends, bearings provided in said ends, an inlet port arranged in a side thereof intermediate said ends, and outlet ports arranged adjacent said ends; a piston having a cavity therein arranged to communicate with said inlet port and having outlets arranged in opposite ends thereof; a valve stem slidably mounted in said bearings; and oppositely disposed valves fixed on said stem and arranged



to alternately engage said piston cavity outlets, said valves and stem being arranged to be reciprocated with said piston.

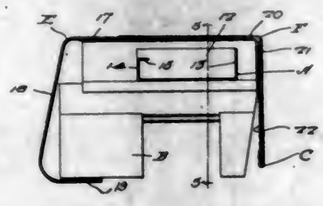
1,628,341. WATER HEATER. WILLIAM J. TOWLES, EUGENE L. TOWLES, and GEORGE M. TOWLES, Los Angeles, Calif. Filed Dec. 22, 1924. Serial No. 757,425. 2 Claims. (Cl. 122—250.)



1. In a water heater, a conical water coil disposed with its wider winding at the bottom and with the narrower winding at the top and provided with a cool water supply connection, a second coil with windings in a cylindrical form having communication with the first coil, a third coil of conical form with the wider winding disposed at the top and the narrower winding at the bottom having communication with the second-named coil, the cylindrical coil being disposed between the two conical coils so as to form two comparatively equal passages on both sides of the cylindrical coil wider at the bottom and narrower at the top so as to assure an even heating of the central cylindrical coil, and a flat coil disposed transversely below the other three coils having communication with the last-named coil and forming the water outlet of this coil system.

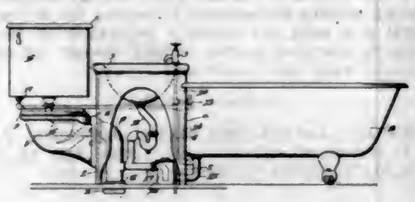
1,628,342. METHOD OF AND MECHANISM FOR PERFORATING PLASTIC MATERIAL. ANDREW H. TYSON, Washington, D. C. Filed Aug. 15, 1922. Serial No. 582,000. 26 Claims. (Cl. 49—35.)

1. The method of piercing a hole through material, including molding the material, supporting the molten material by a mold, and forcing a perforating pin forward from its concealed position entirely through the molten material while held in said mold.



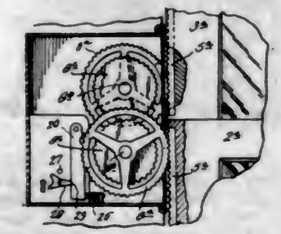
1,628,343. ADJUSTABLE WAIST PATTERN. JAMES J. WALSH, Kansas City, Mo. Filed July 11, 1925. Serial No. 43,048. 3 Claims. (Cl. 33—15.)

1. In a dress or coat pattern, a waist pattern comprising two side ribs each having an upper portion and a lower portion pivoted to said upper portion, first and second ribs intermediate of said side ribs each having an upper portion and a lower portion pivoted thereto, an extensible bust rib fastened to the upper portions of said side ribs and upper portions of said intermediate ribs, an extensible bust rib fastened to the lower portions of said side ribs and to the lower portions of said intermediate ribs, two extensible waist ribs respectively fastened to said side ribs and to



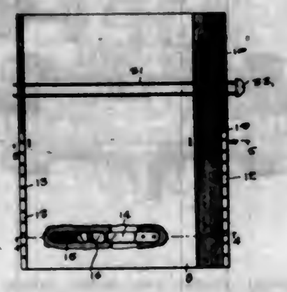
said intermediate ribs, and an extensible auxiliary spacing rib fastened to the upper portion of one of said side ribs, and fastened to the upper portion of the second intermediate rib and adjustable independently of said first rib.

1,628,344. RADIATOR ATTACHMENT. PATRICK J. WALSH, Morris, Ill. Filed Oct. 3, 1925. Serial No. 60,364. 1 Claim. (Cl. 237—78.)



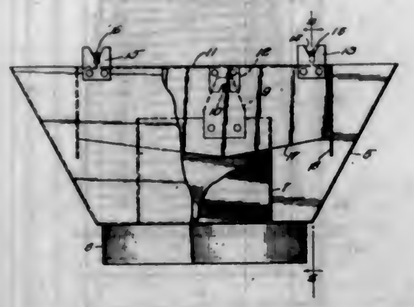
An air humidifying attachment including, in combination, a pair of supporting brackets, a pan resting on the supporting brackets for holding a quantity of water and a shield disposed over the pan and extended under the brackets for holding the pan on the brackets against accidental misplacement.

1,628,345. BATHROOM UNIT. ARTHUR K. WHITE, Zarephath, N. J. Filed Apr. 10, 1926. Serial No. 101,105. 8 Claims. (Cl. 4—2.)



1. A plumbing unit comprising separate bath room fixtures connected to one another, and comprising a stationary toilet, a stationary tub and a stationary basin frame between the toilet and tub and supporting both the toilet and tub, and the toilet counterbalancing part of the load of the tub on the frame.

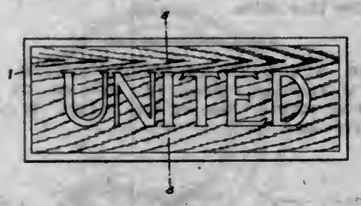
1,628,346. SASH LOCK AND COUNTERBALANCE. WILLIAM WALTER WHITE, Los Angeles, Calif. Filed Mar. 13, 1926. Serial No. 94,476. 3 Claims. (Cl. 16—201.)



3. The combination of a sash frame, slidable sashes in said frame and movable in parallel planes and equipped with racks, gears mounted in one of the stiles of the frame and meshed with the racks of the sashes and connected together whereby they are caused to turn in concert, a casing containing said gears and having a keyhole, and means controllable by a key introduced through the keyhole of the casing and arranged to cooperate with the teeth of one of the gears for the positive locking of the gears.

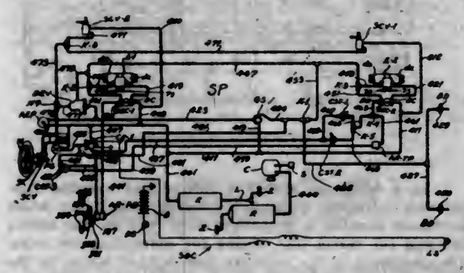
1,628,347. WRITER'S GUIDE. GEORGE YENOFKIAN, Lawrence, Mass. Filed Oct. 9, 1925. Serial No. 61,604. 4 Claims. (Cl. 35—8.)

1. An apparatus of the character described comprising a frame, means carried by the frame whereby the frame may be laterally extended, a cover sheet movably mounted on the frame, and a guide member comprising a pair of parallel rods mounted in suitable notches formed on the sides of the frame.



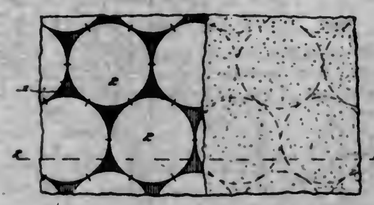
1,628,348. SEAL. HAROLD V. ATWELL, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Oct. 16, 1925. Serial No. 62,788. 3 Claims. (Cl. 137—53.)

1. A seal comprising an open conduit member communicating with a vapor space, a pan surrounding said conduit member and adapted to contain a liquid, an inverted cup over said conduit member and having its sides immersed in the liquid in the pan, said cup being pivotally supported at one side of its center of pressure, and interchangeable members of varying predetermined weights adapted to loosely rest in removable contact with said pan and cup and supported by the walls of the cup or the pan according to the relative changes in position of the cup in the pan.



1,628,349. SIGN. FREDRICK H. AULD, Columbus, Ohio, assignor to The D. L. Auld Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 7, 1925. Serial No. 73,714. 9 Claims. (Cl. 40—135.)

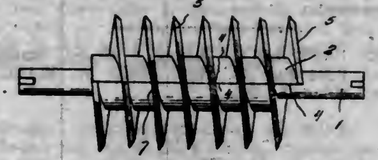
9. In the herein described sign, a metal base having a depression in one face thereof, individual blocks fitted in such depression and having raised indicia; individual spacing strips between the indicia blocks to properly position them; filler strips in parts of the depression not occupied by said bolcks, and a veneer of



wood seated in the depression at places adjacent the indicia and over the spacing strips and over the filler strips.

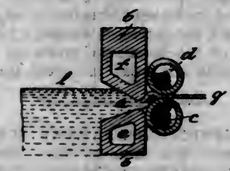
1,628,350. AUTOMOTIVE VEHICLE. RUFUS W. BAILEY, Kansas City, Mo. Filed Apr. 16, 1926, Serial No. 102,392. Renewed Apr. 9, 1927. 33 Claims. (Cl. 303—6.1.)

1. In a vehicle control pneumatic means for setting the brakes and for opening a closure, manually operable valve elements for controlling said means, the one of which controls the closure, being automatically returnable to a door closing position, and means operable from the brake setting means adapted to prevent automatic return of the closure control until the brakes are off.



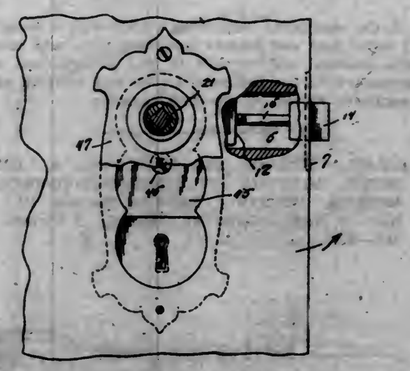
1,628,351. WALL. EMILE BERLINER, Washington, D. C. Filed Mar. 24, 1926. Serial No. 97,012. 6 Claims. (Cl. 72—17.)

6. A wall structure formed adjacent its surface with a plurality of hollow cells covered with a resonant cementitious material.



1,628,352. STONE-DRESSING TOOL. ETTORE BONASSI, Montpelier, Vt. Filed Feb. 18, 1925. Serial No. 10,039. 1 Claim. (Cl. 125—3.)

A tool comprising a shaft, a plurality of spaced spiral disks about the shaft, each disk having a central opening and a slot extending from said opening to its periphery, and the ends of the disk at opposite sides of the slot being spaced from and disposed at opposite sides of the plane of the major portion of the



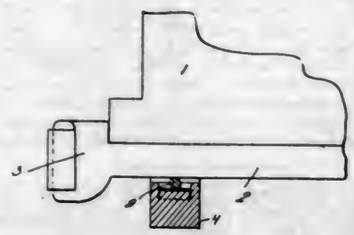
disk, spiral washers arranged about the shaft and between the disks, and means holding the disks and washers to the shaft.

1,628,353. PROCESS AND APPARATUS FOR MAKING SHEET GLASS. LOUIS BOUDIN, St. Gobain, France, assignor to Société Anonyme des Manufactures des Glaces & Produits Chimiques de Sant-Gobain, Chauny & Cirey, Paris, France. Filed Apr. 27, 1926, Serial No. 105,039, and in France Oct. 9, 1924. 16 Claims. (Cl. 49—33.)

1. The hereinbefore described process of feeding molten glass through a submerged issue opening of a glass container to a forming pass which comprises causing the glass to issue in a substantially horizontal direction in a highly heated condition through the issue opening under the head pressure of glass above the opening, and moving the glass issued from the opening to the forming pass at a rate which permits the creation under the head pressure of a meniscus on the glass outside of the opening.

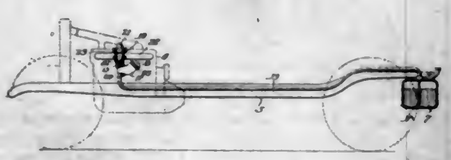
1,628,354. COMBINED LOCK AND LATCH. GEORGE CAWTHRON, Redwood City, Calif. Filed Mar. 9, 1926. Serial No. 93,481. 1 Claim. (Cl. 70—29.)

In a combined lock and latch of the class described, a casing, a latch bolt mounted in the casing, means for normally urging the latch bolt outwardly of the casing, a knob controlled spindle arranged within the casing, means carried by the spindle co-operating with the inner end of the latch bolt for retracting the same, and means for automatically returning the spindle to its normal position, said means comprising a pair of spaced members



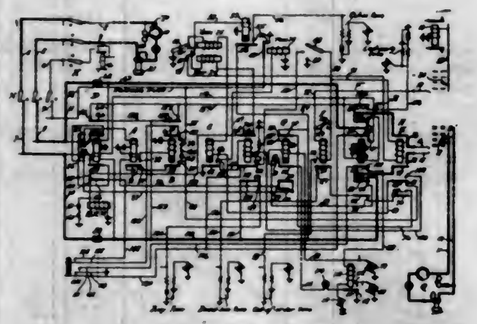
mounted on the spindles, a spring coiled about the spindle and confined between the spaced members, a pin projecting laterally from the casing, the free ends of the spring extending on opposite sides of the pin in engagement therewith.

1,628,355. NUT LOCK. ROGER I. CLAPP, Shanghai, China. Filed July 13, 1925. Serial No. 43,113. 1 Claim. (Cl. 151—15.)



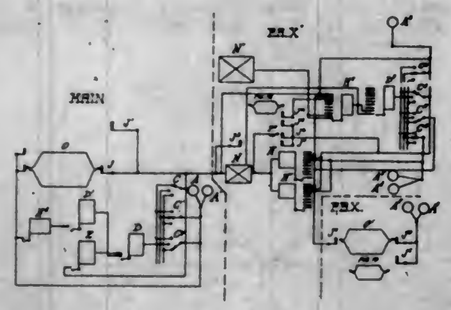
In combination with a threaded bolt and nut of a locking plate, the plate having an opening of a diameter corresponding to the diameter of the bolt at the basis of the threads and beveled as to its margin on both sides of the plate to enter the thread groove, the bevel on the two sides increasing in width about the circumference of the opening in opposite directions of rotation, the opening having a point of increased diameter to allow the bevel to cross the thread, the increased diameter being produced by the meeting of the maximum bevels on the opposite sides, and the plate lying flat in locked position.

1,628,356. ANTIFRICTION DRAWBAR SUPPORT. EDWARD E. DUFFY, San Antonio, Tex. Filed Dec. 10, 1925. Serial No. 74,533. 4 Claims. (Cl. 213—61.)



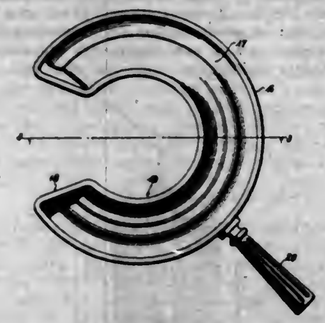
4. Car equipment comprising a body with a chamber in its upper side and pockets depending from said chamber, rolls disposed and movable in said pockets, and a roll superposed on the first-named rolls and movable on and lengthwise thereof in the said chamber.

1,628,357. METHOD OF SUPPLYING A COMBUSTIBLE MIXTURE TO INTERNAL-COMBUSTION MOTORS. WILLIAM A. EDWARDS, Bartlett, Ill. Filed Nov. 13, 1920. Serial No. 423,987. 7 Claims. (Cl. 261—72.)



1. A method of supplying an internal combustion engine with fuel which consists in producing at a point remote from the engine a mixture of air and fuel, conducting said mixture unmodified to said engine when idling, and automatically modifying said mixture by introducing auxiliary air thereto at a point adjacent the engine in proportion to the speed thereof during the operations other than idling.

1,628,358. AUTOMATIC TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Chicago, Ill. Filed Oct. 27, 1920, Serial No. 420,016. Renewed June 7, 1926. 71 Claims. (Cl. 179—18.)

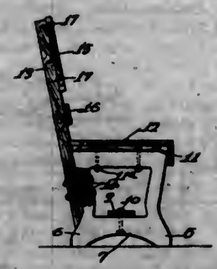


1. In a telephone system a calling and a called line, switches including a connector having coordinate wiper movement forming a temporary train between the calling line and the called line, means for controlling the selective movement of the switches, and further means in the connector for automatically transitorily projecting a tone audible along the calling line consequent to and following the first selecting movement of the connector.

1,628,359. AUTOMATIC TELEPHONE SYSTEM. HERBERT M. FRIENDLY, Portland, Oreg. Filed May 3, 1921. Serial No. 466,433. 137 Claims. (Cl. 179—27.)

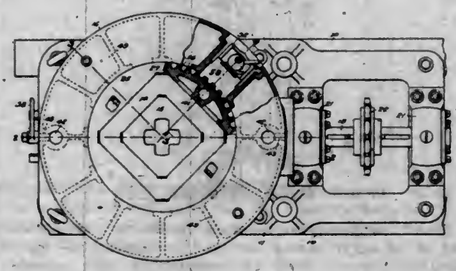
1. In a telephone system, a trunk line extending from a first to a second exchange and terminating at said second exchange in a pair of independently operable automatic connecting switches, a plug companionably associated with said trunk line at said second exchange, called lines in said second exchange, a group of said called lines accessible to said pair of automatic switches, the remainder of said called lines being accessible to said plug through the medium of jacks.

1,628,360. COOKING UTENSIL. THEODORE GEFFAS, Ogden, Utah. Filed Jan. 6, 1927. Serial No. 159,363. 5 Claims. (Cl. 53—10.)



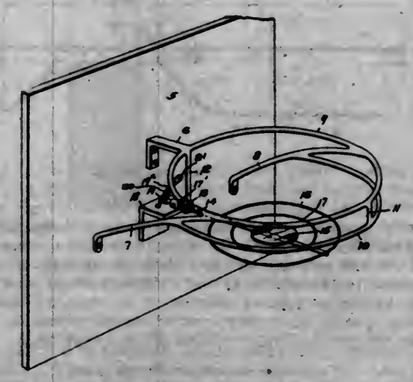
1. In an article of the character described, a body portion open at one side and provided with a central bore, whereby said body may be placed around and removed from the support of a cooking appliance, there being a trough-like recess extending around said body portion into which drippings from said cooking appliance will fall.

1,628,361. ELASTIC WEBBING. HAROLD ST. J. GUILD, Jamaica Plain, Mass. Filed Nov. 25, 1925. Serial No. 71,354. 4 Claims. (Cl. 139—428.)



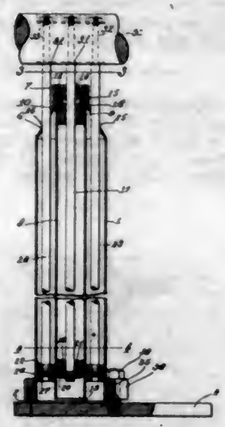
1. That improvement in the process of weaving elastic webbing which consists in arranging warp threads and strands of rubber to form two sheds, one above the other, with the strands of rubber forming the top of the lower shed and the bottom of the upper shed, inserting two filling threads in said sheds simultaneously at each pick with one thread in each shed, manipulating warp threads between picks to interlock them with said filling threads and thereby weave a fabric, and moving an additional strand of rubber up or down across both sheds at one end of said sheds between successive picks to cause both filling threads to be wrapped around it at the end of each pick, two adjacent filling threads being passed over and the next two adjacent filling threads passed under said strand of rubber, thereby producing a tubular selvage enclosing said additional strand of rubber.

1,628,362. COMBINATION CONCRETE AND WOODEN BENCH. LEO G. HAASE, Pasadena, Calif. Filed Apr. 24, 1924. Serial No. 708,662. 5 Claims. (Cl. 155—196.)



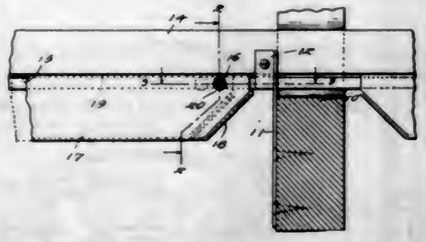
1. A bench comprising two concrete members each forming front and back legs for the bench, which are connected by integral top and bottom members, a seat secured to said top members, the back legs presenting surfaces which are upwardly and backwardly inclined below the seat, straight uprights having their sides adjacent the lower ends bearing against said surfaces from the seat downwardly to substantially their lower ends and rigidly secured thereagainst, and back members secured to said uprights forming an upwardly and backwardly inclined back for the bench.

1,628,363. ROTARY-DRILLING MACHINE. HU M. HARRIS and OLIVER H. ATTRIDGE, Chattanooga, Tenn., assignors to Lucey Manufacturing Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Apr. 20, 1925. Serial No. 24,470. 18 Claims. (Cl. 225—23.)



1. In a rotary drilling machine, the combination of a base, a concentrically arranged inner table having upper and lower sections and outer ring supported by said base, said inner table having a central bore, and work gripping means in said central bore, an integrally formed portion of the lower section of said inner table projecting radially outward to form a ledge on which the ring is supported and a portion of the upper section of said inner table projecting radially outward to overlie said ring with the top surfaces of said table and ring lying in the same plane.

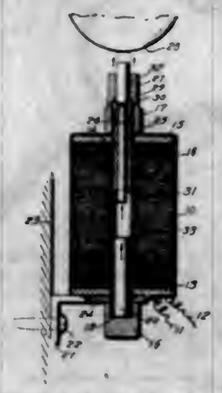
1,628,364. GOAL AND GOAL INDICATOR. EVAN WOODARD HIETT, Houston, Mo. Filed Mar. 27, 1925. Serial No. 18,738. 2 Claims. (Cl. 116—114.)



1. The combination with a support of a horizontally disposed ring constituting a goal for the passage of a ball, a horizontally disposed lever located beneath said ring and pivoted intermediate its ends, a reflecting disc constituting a visual signal secured to the outer portion of said lever and lying, substantially, centrally beneath the ring.

1,628,365. TIRE PUMP. WALTER M. INGRAM, Baltimore, Md., assignor to The Reliance Pump and Machine Company, Baltimore, Md., a Corporation of Maryland. Filed Dec. 4, 1922. Serial No. 604,713. 2 Claims. (Cl. 230—27.)

1. An air pump for inflating pneumatic tires consisting of an outer casing having a portion at the top of smaller diameter than the cylinder, a high pressure cylinder secured to said portion and extending down into the outer casing, a transfer port near the bottom of the high pressure cylinder, the space between the inner cylinder and the outer casing forming a low pressure cylinder, an annular piston having flexible packing edges extending downward along both walls of the low pressure cylinder, a piston in the high pressure cylinder having flexible packing with oppositely disposed edges, parallel piston rods connected to a single handle, a delivery opening near the top of the high pressure cylinder and an intake opening near the top of the low pressure cylinder.

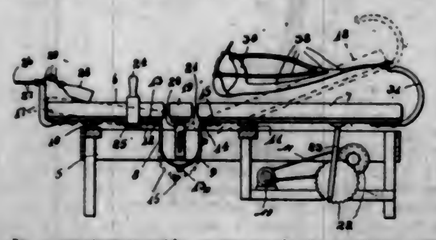


1,628,366. POULTRY PERCH. FRANK J. KUMMETH, Heron Lake, Minn. Filed Dec. 8, 1926. Serial No. 153,347. 3 Claims. (Cl. 119—25.)

1. A poultry perch comprising a perch pole having longitudinal grooves in its sides, a receptacle disposed beneath the pole and having slidable engagement in said grooves, the receptacle having a filling opening, and the pole having an opening adapted to be registered by the filling opening upon movement of the receptacle on the pole, whereby to permit refilling of the receptacle.

1,628,367. BELL. ALLAN F. LAKE, Oakland, Calif., assignor to Lake Mfg. Co., San Francisco, Calif., a Corporation of California. Filed Jan. 2, 1926. Serial No. 78,900. 1 Claim. (Cl. 177—7.)

An audible signal apparatus comprising a solenoid coil adapted to be included in an alternating current circuit, means for mounting said coil in a vertical position upon a support, a sound producing element, disposed above said coil, a sleeve of nonmagnetic material disposed through said coil and extending beyond the opposite ends thereof with its ends externally threaded, a magnetic bushing disposed in the upper end of said sleeve; a head on said bushing and extending laterally over the upper end of said sleeve for suspending said bushing within said sleeve; a member threaded over the



externally threaded upper end of said sleeve for clamping the head of said bushing against the end of said sleeve, a striker slidably disposed through said bushing; a magnetically controlled member disposed in said sleeve for projecting said striker into forcible contact against said sound producing element; and a closure member internally threaded to engage over the lower end of said sleeve and secure said coil to a support.

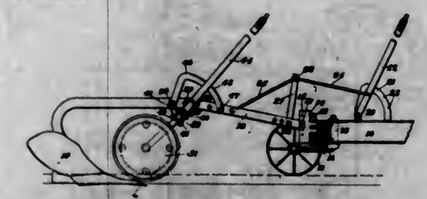
1,628,368. WATER SKI. THOMAS J. LEASE, Wayne Township, Marion County, Ind. Filed Feb. 27, 1925. Serial No. 12,155. 7 Claims. (Cl. 9—21.)

1. A water-ski including a runner shaped shell constituting an air-tight chamber provided with a filling-tube, the shell being smooth externally and having tapered opposite end portions, one end portion being curved upwardly, and means comprising a keeper and flexible devices connected centrally to the top of the shell to fasten a foot thereto.

1,628,369. TREATMENT TABLE. MATTHEW R. MCBURNEY, Los Angeles, Calif. Filed Sept. 8, 1924. Serial No. 736,570. 1 Claim. (Cl. 128—71.)

In a treatment table, a top made in sections certain of the sections being swingably mounted for swinging actions in a vertical plane in opposite directions yieldingly connected at adjoining edges in spaced relation, another top section having means for vertical adjustment to form a comparatively stationary part between the opposite swinging parts, supports spaced from the opposite ends of the whole table and from the said adjoining edges, operating means in operative connection with one of the first-named top sections by which the connected top may be tilted alternately with the near ends of the oppositely swinging sections moving simultaneously up and down past the said stationary part, and attaching means firmly mounted on the free swinging ends of the said sections for holding a patient to the swinging parts while partly resting on the said stationary part.

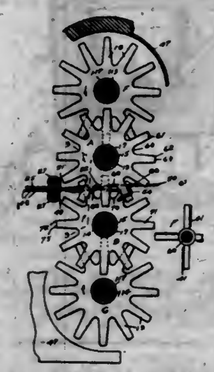
1,628,370. WATERPROOFING COMPOSITION AND METHOD OF MAKING THE SAME. ALFRED N. NELSEN, Long Beach, Calif. Filed Dec. 11, 1923. Serial No. 680,040. 3 Claims. (Cl. 134—11.)



1. The water-proofing composition set forth containing linseed oil, litharge and sulphur in the proportions substantially of 1 gallon linseed oil, 1 pound of litharge, 1½ pounds of sulphur.

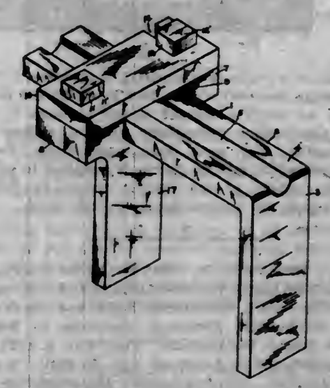
1,628,371. LAMINATED SPRING. JOHN HENRY STOTT, Glen May, England. Filed July 26, 1926, Serial No. 125,026, and in Great Britain Apr. 27, 1925. 5 Claims. (Cl. 267—47.)

1. A laminated spring comprising a main plate, a reinforcing plate spaced apart from the main plate for a portion of its length near the end of the reinforcing plate, and a spring tip associated with the end of the reinforcing plate, said tip being of greater resiliency than the reinforcing plate and constructed to provide a progressively increasing resistance to bending with uniform increases in load.



1,628,372. COMBINED GAUGE WHEEL AND COLTER. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 19, 1921. Serial No. 462,619. 3 Claims. (Cl. 97—209.)

1. In a plow including a beam and a plow body carried thereby, the combination therewith of a crank axle rockably journaled on the beam and having a spindle at its free end, a combined gauge wheel and colter supported on said spindle, a lever secured on the axle and operative to rock said axle and swing the gauge wheel and colter upwardly and rearwardly of the point of the plow body in an arc eccentric to the vertical cutting edge of the plow boody.

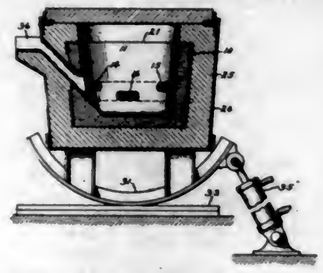


1,628,373. MACHINE AND PROCESS FOR SEPARATING THREADS FROM FABRIC. LEWIS IRVING THOMPSON, Portland, Oreg. Filed Apr. 28, 1926. Serial No. 105,109. 6 Claims. (Cl. 19—83.)

1. In a machine for separating threads from fabrics, the combination of feed rolls; with two series of loosely interlocking or overlapping star shaped plucking discs revoluble in opposite directions, the arms of each disc being rounded, and the line of first intersection of the arms being opposite the nip of the fed rolls; and two star

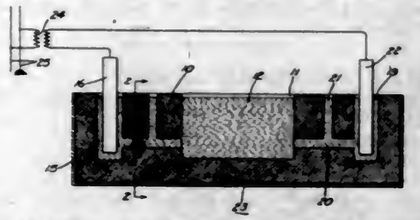
shaped clearer discs each closely interlocking or overlapping a plucking disc and filling the space between its adjoining arms and revoluble in the same direction with said plucking disc.

1,628,374. AUTOMOBILE APPARATUS. JOSEPH A. TONNA, Cincinnati, Ohio. Filed Aug. 21, 1925. Serial No. 51,600. 10 Claims. (Cl. 280—89.)



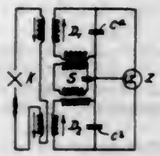
1. In a steering control, an L-shaped member having a groove in the outer side thereof, a T-shaped member having a groove therein adapted to receive the grooved leg of said L-shaped member, a plate adapted to extend over the groove in said T-shaped member and means for maintaining said plate in fixed position relative to said T-shaped member, substantially as and for the purposes specified.

1,628,375. APPARATUS FOR REFINING METALS. MAGNUS UNGER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 31, 1925. Serial No. 78,667. 3 Claims. (Cl. 204—64.)



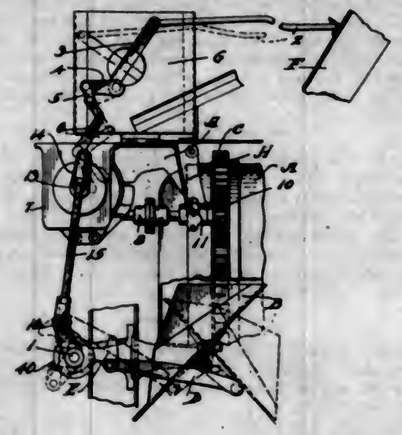
1. A crucible for molten metal comprising refractory material forming a reservoir for the charge and an annular channel in which a portion of the charge forms a closed secondary, said refractory material providing two openings spaced in a direction at right angles to the

axis of said channel connecting one end of said channel with said reservoir, and a single opening connecting the opposite end of said channel with said reservoir, and a



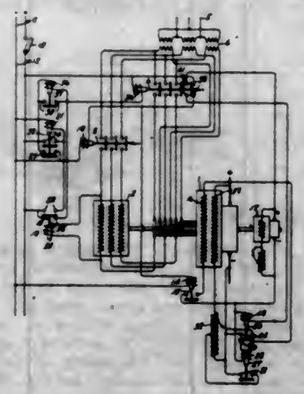
primary winding arranged to induce heating currents in said secondary and produce circulation of molten charge by electromagnetic repulsion.

1,628,376. ELECTRIC FURNACE. IRVING R. VALENTINE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed Feb. 26, 1925. Serial No. 11,863. 4 Claims. (Cl. 204—64.)



1. An electric furnace comprising a refractory crucible for the charge provided with a duct in which the charge is heated by an electric current passed through it, and a reservoir providing a hydrostatic head of molten charge communicating with said duct intermediate the ends thereof from which molten charge is supplied to said duct to prevent rupture of the electric circuit by the pinch force acting on the molten charge in said duct.

1,628,377. MEANS FOR CONTROLLING AMPLITUDE OF HIGH-FREQUENCY OSCILLATIONS. HANS VOGT, Berlin-Schoneberg, and JOSEF ENGL and JOSEPH MASSOLLE, Grunewald, Germany, assignors to Tri-Ergon Limited, Zurich, Switzerland. Filed Apr. 4, 1921, Serial No. 458,630, and in Germany Apr. 7, 1919. 9 Claims. (Cl. 179—171.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

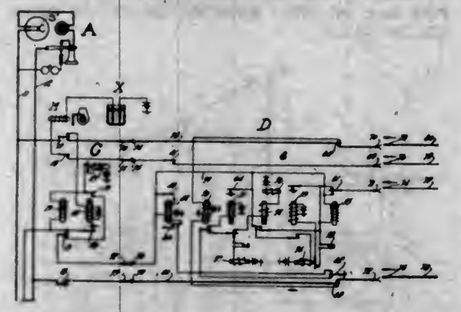


1. In electric-oscillation controlling devices, the combination of a tuned high-frequency oscillatory circuit, containing inductance and capacity constituting the tuning factors of said circuit, means for setting up high frequency oscillations in said circuit, a photoelectric cell and means for coupling said cell to said circuit by one of said tuning factors to vary the inductance-capacity product thereof and thereby somewhat untune the same in accordance with variations of light received by said cell.

1,628,378. AUTOMATIC DISCHARGE FOR CONCRETE MIXERS. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Jan. 30, 1925. Serial No. 5,827. 49 Claims. (Cl. 83—73.)

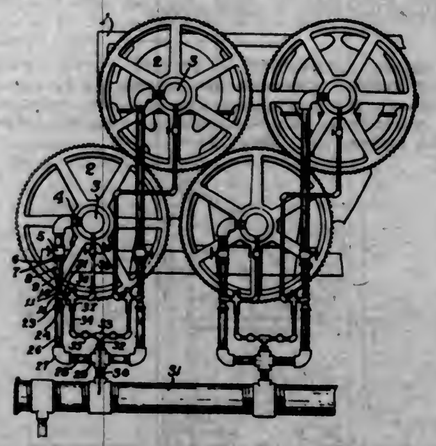
1. In combination, a power driven mixer, charging means for the mixer, discharging means for the mixer, power means driven by the mixer for actuating the discharge means, and timing mechanism controlled by the charging means and controlling the said power means.

1,628,379. AUTOMATIC CONTROL SYSTEM. FRANK P. WHITAKER, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed June 9, 1925. Serial No. 36,046, and in Great Britain June 14, 1924. 11 Claims. (Cl. 171—118.)



1. In combination, a supply circuit, a dynamo electric machine, a starting motor for said machine mechanically connected thereto, means for connecting said motor and machine in series across said supply circuit to start said machine, and means responsive to the voltage drop across said starting motor for effecting the connection of said machine directly to said supply circuit.

1,628,380. PROCESS FOR THE MANUFACTURE OF SODIUM AZIDE. FRANK WILCOXON, Ithaca, N. Y., and BENNETT GROTTA, Tamaqua, Pa., assignors to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 27, 1924. Serial No. 746,247. 5 Claims. (Cl. 23—101.)

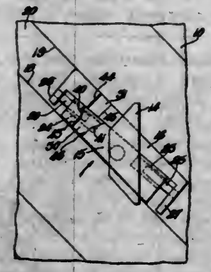


1. The herein described process of manufacture of sodium azide which consists of bringing together hydrazine hydrate, an alkyl nitrite and a sodium alcoholate solution.

1,628,381. MEASURED-SERVICE TELEPHONE SYSTEM. BERNARD D. WILLIS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 11, 1922, Serial No. 587,601. Renewed Oct. 7, 1926. 20 Claims. (Cl. 179—9.)

1. In a telephone system, a line, an ampere-hour meter for said line, trunk lines, automatic switches for extending the line over said trunk lines to called lines, and another switch operable simultaneously with a certain plurality of said automatic switches for preparing an operating circuit for said meter.

1,628,382. STEAM-CIRCULATING FITTING. JOHN OSBOURNE WOODSOME, New York, N. Y. Filed Jan. 16, 1925. Serial No. 2,868. 10 Claims. (Cl. 34—48.)

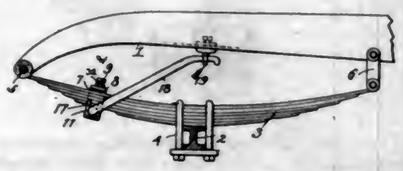


1. The combination with a paper making machine drying cylinder, of a steam supply pipe, a steam inlet pipe connecting the steam supply pipe with the interior of the said drying cylinder, and a Venturi type steam circulating fitting connected in said steam inlet pipe.

1,628,383. TELEPHONE RECEIVER. ARTHUR PRIMROSE YOUNG, Kenilworth, England, assignor to General Electric Company, a Corporation of New York. Filed Apr. 14, 1925, Serial No. 22,973, and in Great Britain Apr. 17, 1924. 5 Claims. (Cl. 179—117.)

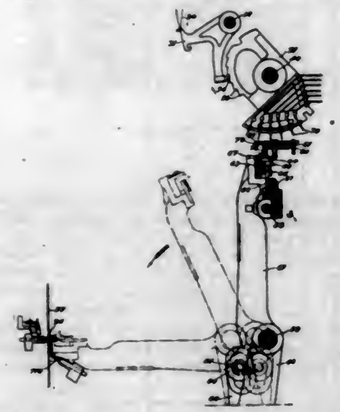
1. A telephone receiver or like device comprising a flat bar permanent magnet and a pole piece embracing one end of said magnet and in contact with the end surface thereof.

1,628,384. CLAMPING DEVICE FOR PRINTING PLATES. SAMUEL W. MARVIN, Cambridge, Mass., assignor of one-third to William J. Marsh, Stow, Mass., and one-third to Charles G. Wells, Boston, Mass. Filed Dec. 9, 1926. Serial No. 153,559. 5 Claims. (Cl. 101—387.)



4. A clamping device of the character described, comprising wedge-shaped members of unequal length and connected together to be moved as a unit and to be moved individually with relation to each other, said wedge members having in their upper surfaces transverse co-operating slots for the reception of an operating tool, the slot in the shorter member being of greater width at its end adjacent the slot in the longer member to provide a space for the insertion of an operating tool into both slots when said members are in their locked position.

1,628,385. CASING OR MOLD BOX FOR CONCRETE BEAMS OR TIES. BRUNO BAUER, Vienna, Austria. Filed Aug. 21, 1925, Serial No. 51,558, and in Austria May 14, 1925. 5 Claims. (Cl. 25—131.5.)



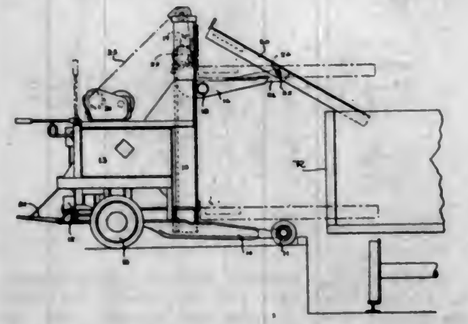
1. A casing or mold box for producing concrete beams or ties comprising in combination a U-shaped member with an enlarged base, and channel-shaped lateral extensions provided with an outwardly turned rim arranged on the said member near the top end of the latter.

1,628,386. SNUBBER ATTACHMENT FOR VEHICLE SPRINGS. WILLIAM BLACKMORE, Sharon, Pa., assignor of one-third to Elmer Bell, Sharon, Pa., and one-third to William C. Blackmore, Cleveland, Ohio. Filed July 7, 1926. Serial No. 120,956. 8 Claims. (Cl. 267—48.)

1. The combination with a spring formed of superposed leaves which have a relative endwise movement upon flexure of the spring, of a substantially U-shaped clip formed of resilient metal and having a base portion and a pair of spaced arms extending laterally from the base portion, said clip being adapted to be placed on the spring with the base extending across one side of the spring and the arms extending across the leaves at the top and bottom thereof, and means mounted on one of the arms for applying a clamping pressure to the superposed leaves of the spring.

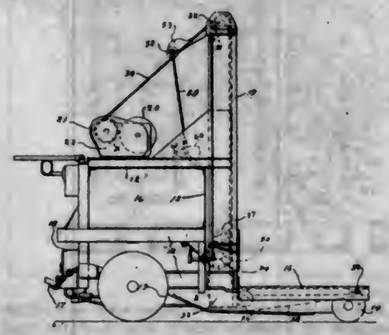
1,628,387. THREAD-FEEDING DEVICE FOR TUFTED-FABRIC LOOMS. FERNAND BOYER, Paris, France. Filed May 19, 1925. Serial No. 31,274, and in Switzerland, May 22, 1924. 8 Claims. (Cl. 139—3.)

1. In an apparatus for tufted carpet looms for the preparation and supply of tufting material of different colors to one and the same tufting tool in manufactured colored tufted carpets the combination with movable guides in which are arranged endlessly supplied pile threads of different colors, of a Jacquard mechanism which controls the movable guides in any desired sequence of colors, a gripper member adapted to seize a pile thread and pull it out from its guide to the length required, a transfer device provided with take off members which take the pile thread from the gripper and supply it to a tufting tool of the apparatus, and a cutting device which severs the pile thread to the length required before it is supplied to the tufting tool.



1,628,388. BRAKE SHOE. JOHN R. CAUTLEY, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 12, 1925. Serial No. 62,078. 21 Claims. (Cl. 188—250.)

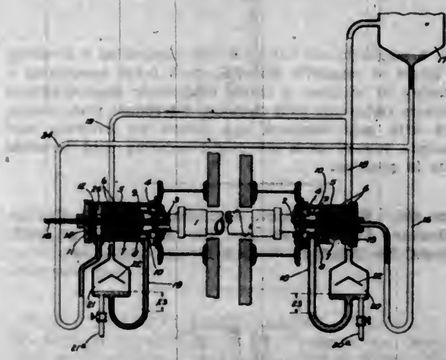
19. A brake comprising, in combination, a shoe having a cylindrical outer part and a separate stiffening member having staggered sets of tongues along its outer edge secured to opposite sides of the inner face of said outer part and which member has a portion projecting beyond the end of the outer part, and another shoe



having stiffening means including spaced projecting arms straddling the end of the projecting portion of the stiffening member.

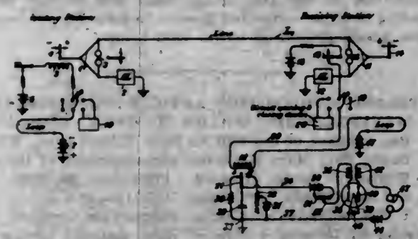
1,628,389. INDUSTRIAL TRUCK. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 20, 1924. Serial No. 738,839. 12 Claims. (Cl. 214—121.)

1. In an industrial truck of the tier lift type, the combination of an upright frame, load elevating mechanism traversing the frame, a tiltable platform carried by said mechanism, a dump body on the platform, a latching device carried by said load elevating mechanism for preventing a tilting movement of the platform, means to release said latch to permit the platform and dump body to tilt, the dump body having a gate and a latch mechanism carried by the dump body for maintaining the gate in a closed position.



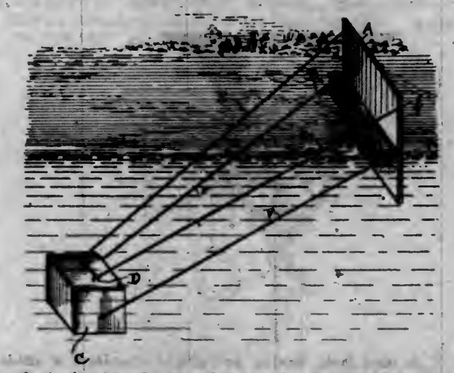
1,628,390. ELEVATING PLATFORM TRUCK. CLYDE E. COCHRAN, Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 20, 1924. Serial No. 738,840. 5 Claims. (Cl. 254—175.)

1. In an industrial truck, the combination of a load-elevating platform, a motor and mechanism driven thereby for lowering and elevating the platform, a battery,



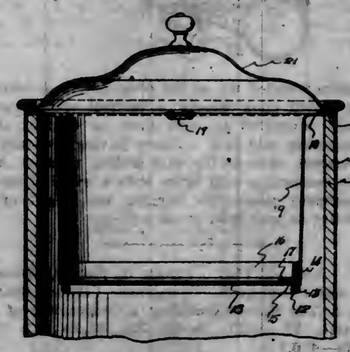
a circuit connecting the motor to the battery, an electrically operated brake for the motor, a solenoid connected in said circuit and operating the brake, a switch in said circuit adapted to be opened when a lowering movement of the platform is extraneously interfered with, whereupon the solenoid and motor are deenergized and the brake is caused to arrest movement of the motor, a second circuit connecting the motor and solenoid to the battery, and a manually operated switch controlling both of said circuits, whereby the motor and solenoid may be connected to the battery when the first named switch is open.

1,628,391. VAPOR GENERATOR. ROBERT HUGH COLLINGHAM, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed June 30, 1925, Serial No. 40,674, and in Great Britain July 2, 1924. 7 Claims. (Cl. 122—11.)



1. The combination with a vapor generator comprising a support and a tube rotatably mounted therein, of sealing means for an end of the tube comprising a casing, impeller means carried by the tube inside the casing, a liquid chamber located above the tube, said chamber being adapted to contain a supply of liquid, and conduits connecting the chamber at points above and below the level of the liquid in the chamber to the casing at opposite sides of said impeller means, the conduit connecting the casing with the chamber below the level of the liquid being in communication with the interior of the tube.

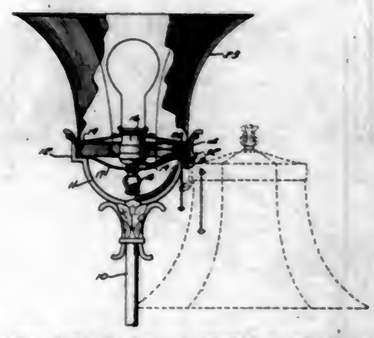
1,628,392. TELEGRAPH DISTORTION MEASURING SYSTEM. SAMUEL I. COBY, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 30, 1925. Serial No. 65,859. 9 Claims. (Cl. 178—69.)



1. In a system for measuring total distortion of telegraph signaling impulses, the combination with a source of impulses to be measured of a relay responsive to the said impulses, a condenser connected with the said relay, a source of potential in series with a variable resistance the magnitude of which for any setting is known to charge the said condenser during the time in which the said relay remains operated by one of the said impulses, and a vacuum tube having its input side connected across the said condenser and its output side connected with an indicating device to measure the charge upon the said condenser.

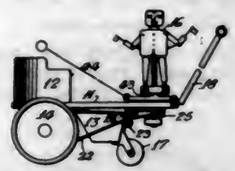
1,628,393. AQUATIC SIGNBOARD. JOHN ECHOLS CRAMER, Carrollton, Ga. Filed Dec. 17, 1925. Serial No. 76,084. 2 Claims. (Cl. 40—125.)

1. A sign board adapted to receive inscriptions or pictures on its surface, a float attached to the sign board at its lower portion to maintain part of the sign board sufficiently high above the supporting water to render the inscriptions or pictures visible, an anchor and a rod hingedly connecting the top of the sign board with the anchor, the hinged portion extending horizontally across the top of the anchor so as to hold the sign board to a vertical movement, and a second connection between the bottom of the sign board and the anchor all arranged to maintain the sign board in upright position.



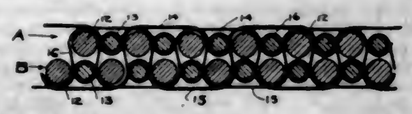
1,628,394. COFFEE RETAINER FOR URNS. BERESFORD B. DE MONTMORENCY, Detroit, Mich. Filed Aug. 1, 1925. Serial No. 47,438. 1 Claim. (Cl. 53—3.)

A coffee retainer of the class described adapted for use with coffee urns comprising: an imperforate sleeve forming member; supporting means on the upper end of said sleeve forming member adapted for engaging said urn and supporting said sleeve therein; an inwardly projecting flange on the lower end of said sleeve, said flange being curled to form an inwardly offset bead; a clamping ring having an inwardly directed flange at its lower end, said flange being adapted for resting on the upper surface of said beaded flange of said sleeve; a co-operating clamping ring adapted for positioning within said first mentioned clamping ring; an inwardly directed flange on said co-operating ring, said flange being of greater length



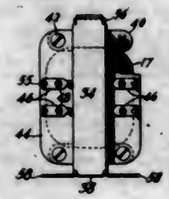
than the flange on said first mentioned clamping ring; and a porous member clamped between said rings and extending across the opening therein for forming a closure for the lower end of said sleeve.

1,628,395. FLOOR LAMP. LEROY C. DOANE, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed June 17, 1925. Serial No. 37,656. 10 Claims. (Cl. 240—81.)



1. A floor lamp having an upright standard, a shade supporting and lamp carrying frame, and a horisontal pivotal connection between the stand and frame and placed to one side of the axis of the standard, the frame being movable through 180° to convert the lamp from a bridge lamp to a torchière.

1,628,396. FIGURE WHEELED TOY. HARRY W. DYER, New York, N. Y. Filed Dec. 18, 1925. Serial No. 76,307. 4 Claims. (Cl. 46—45.)



4. A figure wheeled toy of the class described including a body mounted upon wheels, a vertical stem having a cam rigidly supported by said body, a vertical sliding member engaging said cam, a figure having pivotally connected members operated by said sliding member, means operatively connecting said figure with a wheel of said toy and independent means for varying the height of said figure relative to said cam.

1,628,397. AIR FILTER. FRANK K. EWING, Worcester, Mass., and STANLEY R. CUMMINGS, Canton, Ohio, assignors to The Hoover Company, a Corporation of Ohio. Filed Oct. 12, 1925. Serial No. 61,960. 1 Claim. (Cl. 139—410.)

A multiple ply fabric for filters comprising loosely twisted yarns, each ply comprising alternately arranged relatively large and small loosely twisted yarns, each ply offset to place a large yarn of one ply under a small yarn of an adjacent ply, and warp yarns securing the loosely twisted yarns in place.

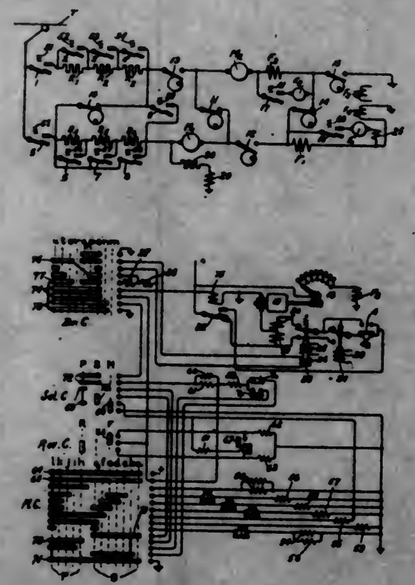
1,628,398. MAGNETIC COIL. WILLIAM L. CASPER, Brooklyn, N. Y., and FRANK E. FIELD, Somerville, N. J., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 6, 1922. Serial No. 566,421. 6 Claims. (Cl. 175—356.)

1. A magnetic coil having a core comprising a plurality of layers of magnetic material, each layer comprising a plurality of sections, a frame comprising channel-shaped members embracing said sections, a terminal plate associated with said members and means for drawing said members toward each other and securing said terminal plate in position.

1,628,399. RECEPTACLE FOR CONNECTING PLUGS. GUSTAVE FRANKEL, Chicago, Ill. Filed Sept. 22, 1921. Serial No. 502,554. 2 Claims. (Cl. 173—330.)

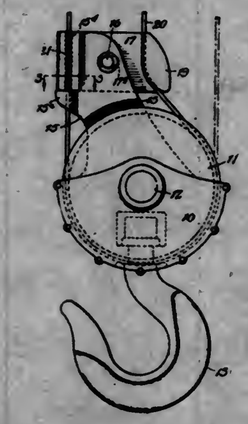
1. A plug receptacle comprising two like members made of insulating material, connecting means adapted to connect said members, each of said members having two longitudinal recesses extending throughout its length and a longitudinal bridge portion intermediate said longitudinal recesses, said longitudinal bridge portion having lateral projections extending into said longitudinal recesses, contact springs having longitudinal portions located in passages, each of which is formed by two of said longitudinal recesses when the said members are assembled, each said contact spring having a laterally bent portion thereof bent around and under the corresponding lateral projection of the said bridge, each said contact spring having a screw connected thereto underneath the respective lateral projection of the said bridge.

1,628,400. COMPOSITION ARTICLE AND METHOD OF MANUFACTURE. WILLIAM J. GAVEN, Wilkes-Barre, Pa., assignor of one-half to Mary Ellen Gaven, Wilkes-Barre, Pa.; Mary E. Gaven administratrix of the said William J. Gaven, deceased. Filed June 30, 1923. Serial No. 648,829. 7 Claims. (Cl. 18—48.5.)



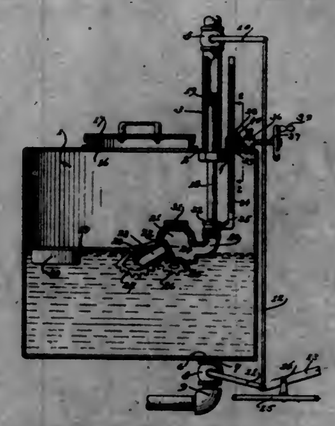
1. The method of making composition articles, consisting in forming a core of light material having the general contour of the object desired, by placing comminuted material within a mould, subjecting the material to heat and pressure to transform the material into a fixed form, then coating the core while in a moist and heated condition with a powder of resinous material, and again subjecting the core with its coating to the action of heat and pressure.

1,628,401. APPARATUS FOR CLEARING OIL WELLS OF PARAFFIN DEPOSITS. HENRY J. HARRE, Cleveland, Ohio. Filed July 15, 1922. Serial No. 575,313. 8 Claims. (Cl. 166—17.)



1. A cartridge for heating the bottom of oil wells, comprising a hydrate of an alkali metal and a container therefor formed of a metal with which the hydrate has an exothermic reaction.

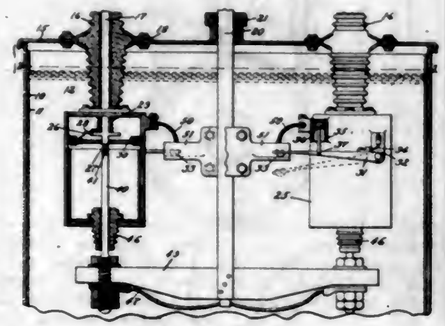
1,628,402. MOTOR-CONTROL SYSTEM. WILLIAM S. H. HAMILTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1925. Serial No. 30,852. 18 Claims. (Cl. 172—179.)



1. In a motor control system, the combination of an electric motor adapted to operate as a load driven generator, switch mechanism for connecting the motor to a source of supply for motoring operation and for regenerative operation, and automatic electroresponsive means connected to be energized responsively to the voltage of the motor and rendered operative upon establishment of the regenerative braking connections for controlling the motor to maintain the regenerated voltage thereof at a constant predetermined value independent of the supply voltage.

1,628,403. REDUCTION BLOCK. ELLSWORTH J. HANNA, Ottumwa, Iowa. Filed Jan. 14, 1922. Serial No. 529,162. 14 Claims. (Cl. 254—192.)

1. In combination a reduction block, a cable movable therethrough, and means associated with said blocks adapted to be contracted into engagement with said cable to lessen the reduction power of said block.

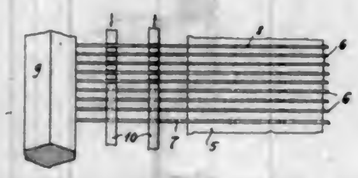


1,628,404. LIQUID-DISPENSING APPARATUS. ARNOLD H. HEUBMANN, Teutopolis, Ill. Filed May 18, 1923. Serial No. 639,320. 5 Claims. (Cl. 221—113.)

1. A liquid dispensing apparatus comprising a tank, an inlet pipe extending upwardly therefrom, a discharge pipe extending from the bottom of said tank, a valve in each

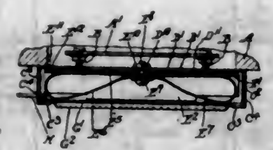
of said pipes, the valve in said inlet pipe being open when the valve in said discharge pipe is closed, a tube in said tank having its upper end slidably receivable in said inlet pipe, a float mechanism associated with said tube, and adapted to control the liquid supply through said inlet pipe and said tube, and means for manually raising and lowering said tube for adjusting said float mechanism to a predetermined height.

1,628,405. ELECTRIC SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 23, 1922. Serial No. 570,394. 14 Claims. (Cl. 200—150.)



12. A switch comprising main current carrying contacts, secondary arcing contacts in shunt therewith, means comprising other contacts in shunt with the main contacts for preventing burning of said secondary contacts when said switch is being closed, and means for rendering said means inoperative when the switch is being opened.

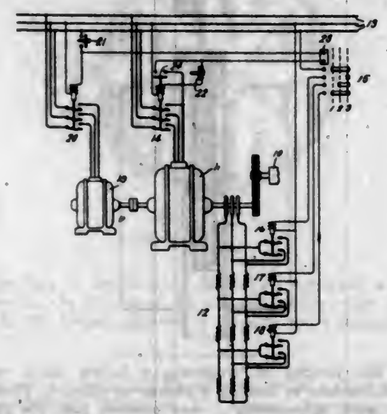
1,628,406. SERVICE SWITCH AND APPURTENANT PROTECTIVE FITTING. BAYSON D. HORTON, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1919, Serial No. 285,269. Renewed Sept. 10, 1926. 41 Claims. (Cl. 247—2.)



1. In a system of protective enclosures for electric service distributing systems, a plurality of enclosed basic switch units of the same or different size depending upon the current carrying capacities, said units being fitted with apertures of different sizes depending upon the size of the unit, a plurality of meters of the same or different configurations, a plurality of meter adapters, and means whereby any of the meter adapters can be connected to any one of said units in the said apertures, the said connection being readily detachable to facilitate interchangeability between the meter adapters and the basic units.

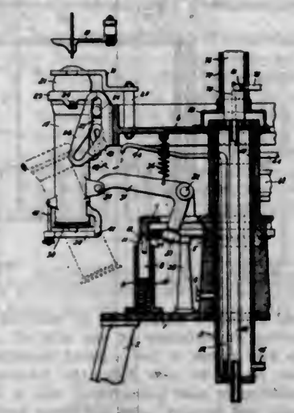
1,628,407. KNITTING MACHINE. JOSEPH IMBRIANI, Brooklyn, N. Y. Filed Apr. 3, 1925, Serial No. 20,320, and in Germany Mar. 10, 1925. 2 Claims. (Cl. 66—75.)

1. In combination with the reciprocating needles of a jacquard knitting machine, an actuating element for each needle in line therewith and abutting against one end thereof, and adapted to be operated by the jacquard roller of the machine, and a guide member for said actuating elements extending at right angles to the line of movement thereof and shiftable relative thereto to subject said elements to a restraining influence to prevent their casual or longitudinal shifting movement and thereby also prevent casual shifting movement of the needles from their operative positions.



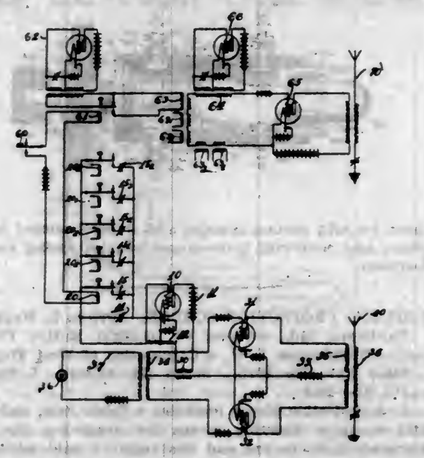
1,628,408. COIN-CONTROLLED CLOCK. ANDREW ALLAN JOHNSON, Chicago, Ill., assignor to Delos E. Ward, Chicago, Ill. Filed May 28, 1926. Serial No. 112,198. 26 Claims. (Cl. 194—54.)

1. In a coin controlled clock, a clock mechanism, a coin container associated therewith, and a closure for such container, a clock control means positioned to be enclosed to said container, locking means for said closure adapted to be released in response to coin insertion, and means for limting the movement of such closure, after such coin release, to a movement sufficient to expose the clock control means, and insufficient to permit the removal of coins from the container.



1,628,409. CONTROL SYSTEM FOR ELECTRIC MOTORS. CHARLES A. KELSEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 15, 1925. Serial No. 62,615. 3 Claims. (Cl. 172—179.)

1. In a control system for electric motors, a variable speed alternating current motor, adjustable speed regulating means therefor, a second alternating current motor mechanically connected to said first motor and having a lower synchronous speed than that of the first motor, controlling switch mechanism for said motors, and connections requiring operation of said switch mechanism to effect simultaneous energization of said motors with the said speed regulating means adjusted for a low speed of said first motor for starting at a definite low speed, subsequently requiring the continued energization of said first motor and the deenergization of said second motor for



running at higher speeds, and then requiring the simultaneous energization of said motors with the said speed regulating means adjusted for a low speed of said first motor to reduce the speed of the motors to the said definite low speed.

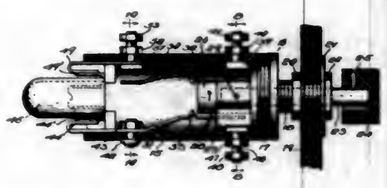
1,628,410. EXHAUSTING MACHINE. WILLEM KONING, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed Feb. 12, 1924. Serial No. 692,393, and in the Netherlands Mar. 17, 1923. 6 Claims. (Cl. 49—2.)

1. In a machine of the character described, the combination with a movable frame, and a plurality of tubulating mechanisms mounted on said frame, each comprising tube holding jaws and a bulb holder movable relatively to each other, and a perforating burner movable into and out of operative relation to a bulb in said bulb holder, of welding burners mounted adjacent to path of said mechanisms to weld a tube in said tube holding jaws to a bulb in said bulb holder, and actuating means mounted adjacent the path of said mechanisms for actuating said bulb holder, said perforating burner, and said jaws of each mechanism in succession during the movement of said frame.

1,628,411. SYSTEM OF SECRET WIRELESS TELEPHONY. FREDERICK W. KRANZ, Geneva, Ill. Filed Feb. 1, 1923. Serial No. 616,361. 13 Claims. (Cl. 250—6.)

5. An apparatus for sending signals comprising an electrical oscillating circuit, a plurality of devices for altering the period of said circuit means associated with said devices for sending controlling waves of a plurality of characters, one character for each of said devices.

1,628,412. CHESS. ISADORE LAWRENCE LESAVOY, New York, N. Y. Filed Aug. 11, 1926. Serial No. 128,530. 10 Claims. (Cl. 275—137.)



1. A chess-man carrying visibly thereon, when the chess-man is located at a particular square on the chess board, an indicium suggestive of a permissible movement of said chess-man on said board.

9. A chess-man shaped to suggest graphically its familiar prototype and also shaped to suggest a numerical figure.

1,628,413. SWITCH AND FUSE. ALFRED F. C. LOTZ, Chicago, Ill., assignor to Electrical Engineers Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 10, 1925. Serial No. 22,027. 5 Claims. (Cl. 200—114.)

1. In combination, an enclosing sleeve, contact springs mounted in said sleeve and each having a terminal open-

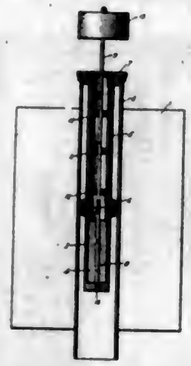
ing through the sleeve, terminal contacts mounted in said sleeve for contact with said springs, an operating ele-

ment for said contact springs, and a fuse mounted in the sleeve and connected between one contact spring and its terminal.

1,628,414. PROJECTION SCREEN. ARTHUR L. MACBETH, Baltimore, Md., assignor to Daylight Motion Picture Co., Washington, D. C., a Corporation of West Virginia. Filed Nov. 16, 1925. Serial No. 69,500. 5 Claims. (Cl. 88—24.)

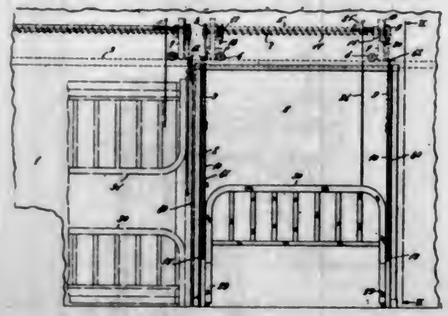
3. A projection screen including a fabric base, and heat and moisture resisting means for rendering the base translucent, opelescent and weatherproof, said means including Canadian balsam, linseed oil, oil of sassafras and a filler.

1,628,415. ELECTRIC KEY SOCKET. CHARLES STANLEY MALLETT and WILLIAM J. ALDIS, Toronto, Ontario, Canada, assignors to General Electric Company, a Corporation of New York. Filed May 7, 1925. Serial No. 28,654. 6 Claims. (Cl. 173—346.)



1. In a key socket, the combination with the porcelain body having a transverse orifice, of two stationary contacts mounted within the body to extend into opposite ends of the aforesaid orifice, a slidable contact located within the transverse orifice to bridge the stationary contacts, an operating key adapted to impart longitudinal movement to the said sliding contact alternately in opposite directions, and stop portions on said stationary contacts extending across the transverse orifice with which the sliding contact alternately engages to limit the length of its stroke in opposite directions.

1,628,416. MEANS FOR ATTACHING MOTION-PICTURE FILMS TO WINDING CORES. ANDRÉ NOËL MERLE, Paris, France, assignor to Pathé Cinéma Anciens Etablissements Pathé Frères, Paris, France. Filed Feb. 14, 1925, Serial No. 9,364, and in France Oct. 25, 1924. 2 Claims. (Cl. 242—74.)

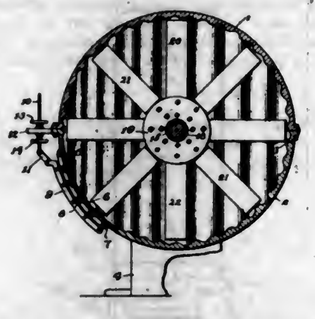


1. The method of attaching a motion picture film to a winding core which consists in making the end of the film which is adapted to be attached to said core narrower than the main part of the film, providing upon the periphery of the core a groove of the same width as said narrowed end of the film and winding said narrowed end of the film about said groove on the core.

1,628,417. METHOD OF MOLDING SILICA. LEVI B. MILLER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 24, 1925. Serial No. 71,245. 4 Claims. (Cl. 49—78.1.)

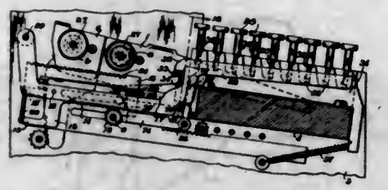
1. The method of producing a hollow silica article which consists in heating a charge of silica to plasticity in a mold, introducing a core member into the plastic charge, then cooling to cause said charge to slidify, in the mold with said member in place, the cooling occurring with sufficient rapidity after introduction of the core member to prevent adhesion of the charge and core member and finally removing the mold and core from the solidified charge.

1,628,418. MEANS FOR SUPPORTING AND CONCEALING FOLDING BEDS. HARRY L. MONROE and WILLIAM CRAMER, St. Louis, Mo. Filed Sept. 22, 1922. Serial No. 589,796. 18 Claims. (Cl. 5—170.)



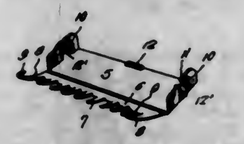
1. In a bed structure adapted to be received in a hollow wall having an entrance at one side of a passageway between two rooms, a bed support movable through said entrance so as to pass from the interior of said wall to a position in said passageway, and a folded bed carried by said bed support, said bed being movable with said support from an upright position in said wall to an upright position in said passaegway, and said bed being movable relative to said support from the last mentioned position to a horizontal position partly within said passageway and partly within said two rooms.

1,628,419. DISINTEGRATOR. GUST W. NELSON, Cloquet, Minn. Filed Aug. 4, 1926. Serial No. 127,036. 3 Claims. (Cl. 83—11.)



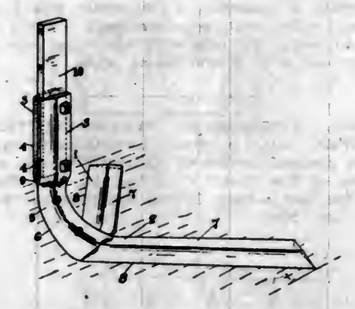
1. A disintegrator comprising a casing, including a peripheral wall in which is formed an outlet, and side walls in one of which is formed an inlet, a plurality of pivoted

slats closing the outlet and forming a continuation of the peripheral wall, means for pivotally adjusting the slats



to produce a number of outlets of regulated size to determine the fineness of the material, and a rotary beater within the casing mounted in the side walls thereof.

1,628,420. COMBINED CASH REGISTER AND ADDING MACHINE. WILLIAM L. PADEN, Saginaw, Mich. Original application filed Oct. 6, 1923, Serial No. 666,981. Divided and this application filed Feb. 25, 1926. Serial No. 90,539. 27 Claims. (Cl. 235—130.)

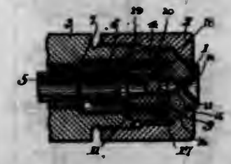


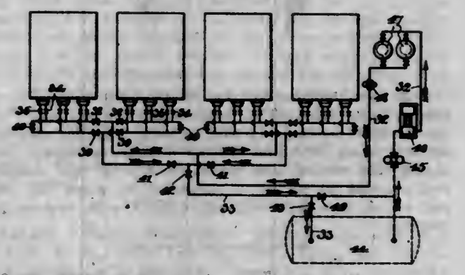
1. In a machine of the character described, a normally unlocked main operating device, a series of value keys, a series of special transaction keys and a series of clerks' keys, means upon the depression of a key in one of said two latter series of keys for locking said main operating device, means upon the depression of a key in the other of said latter series of keys for partly unlocking said main operating device, and means upon the depression of a value key for completely unlocking said main operating device.

1,628,421. ATTACHMENT FOR HAIR CLIPPERS. HECTOR F. PATENAUDE, Bisbee, Ariz. Filed Mar. 30, 1926. Serial No. 98,488. 2 Claims. (Cl. 30—1.)

1. An attachment of the class described including a substantially rectangular body of resilient material in the nature of a plate, having one longitudinal edge merging into a comb body from which project curved teeth, the end teeth terminating in overhanging hooked extensions, a lug integrally rising from the other longitudinal edge of the first body, ends rising from the transverse edges of the first body and having curved tongue portions.

1,628,422. WEED-CUTTING DEVICE. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 9, 1923. Serial No. 650,317. 4 Claims. (Cl. 97—207.)



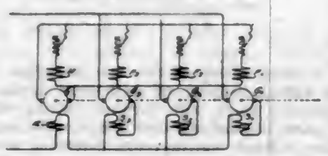


1. In a weed cutter of the type described, the combination with a support, of dual units having vertical and horizontal parts with forward cutting edges, said vertical parts secured together and to said support and presenting a single cutting edge extending downwardly and rearwardly from said support to the horizontal parts.

1,628,423. ART OF SWEETENING HYDROCARBON OILS. MAX G. PAULUS, Casper, Wyo., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed May 28, 1925. Serial No. 33,501. 2 Claims. (Cl. 196—33.)

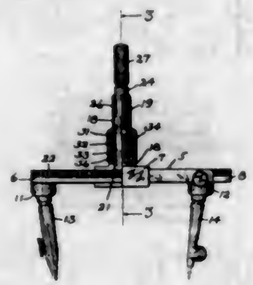
1. The method of treating sour light hydrocarbon oils, which comprises passing still gases containing hydrogen sulfide in intimate contact therewith, thereby effecting the solution of hydrogen sulfide in said oil, and subsequently subjecting the oil to the action of doctor solution.

1,628,424. APPARATUS AND METHOD FOR BURNING LIQUID FUEL. ERNEST H. PEABODY, Pelham Manor, N. Y., assignor to Peabody Engineering Corporation, New York, N. Y., a Corporation of New York. Filed June 7, 1922. Serial No. 566,569. 10 Claims. (Cl. 158—77.)



1. A method for controlling the combustion of liquid fuel which comprises delivering the fuel to a plurality of points of atomization arranged in groups, imparting

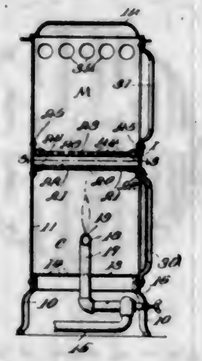
a whirling motion to said fuel prior to atomization, returning a portion of said fuel after imparting the whirling motion thereto, and regulating the return of fuel from all of said points collectively.



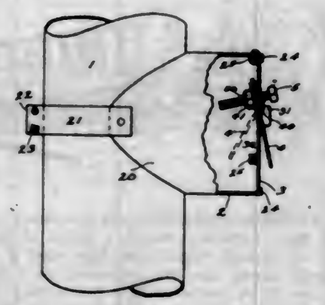
9. An apparatus for burning liquid fuel comprising a plurality of atomizers, a fuel return pipe from each atomizer, a fuel return pipe common to a group of burners, and means for separately controlling the flow of fuel through each of said return pipes.

1,628,425. CONTROL OF DYNAMO-ELECTRIC MACHINES. ALAN A. POLLOCK, Leamington Spa, England, assignor to General Electric Company, a Corporation of New York. Filed Sept. 28, 1926, Serial No. 138,291, and in Great Britain Oct. 12, 1925. 3 Claims. (Cl. 171—224.)

1. In combination, a group of direct current dynamo electric machines connected to operate in parallel, each of said machines having a separately excited field winding and a differential series field winding, and an exciter having an armature connected to said separately excited field windings on said machines, said exciter having a cumulative compounding winding energized in accordance with the total current of said group of machines.



1,628,426. BEAM COMPASS. DONALD E. PRENVEILLE, Oakland, Calif., assignor of one-half to Antoine E. M. Prenveille, Okland, Calif. Filed Feb. 12, 1925. Serial No. 8,658. 4 Claims. (Cl. 33—159.)



1. A beam-compass rod comprising a body member, an arm slidably mounted in said member, a manually rotatable shaft mounted in said member, a pinion mounted on said shaft, the arm having a rack operatively engaging said pinion, and means carried by said member and adapted to cooperate therewith to press the arm and pinion into frictional engagement with various intensities.

1,628,427. GAS HEATER. CHARLES P. PRICE, Boston, Mass. Filed Jan. 15, 1926. Serial No. 81,501. 4 Claims. (Cl. 126—90.)

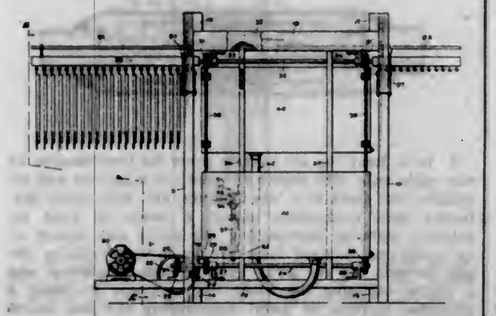
1. In a gas heater, a casing divided by a double-walled horizontal partition into a lower combustion chamber and an upper mixing chamber, one of said walls being of substantial mass to maintain constant the temperature of the air flowing into said upper mixing chamber, said partition having openings therethrough, and a damper to regulate the effective area of said openings.

1,628,428. DRAFT REGULATOR. CHANNING PRICHARD, Seattle, Wash., assignor of one-half to John T. Beamish, Baker, Oreg. Filed Sept. 2, 1926. Serial No. 133,159. 8 Claims. (Cl. 236—45.)

1. A draft regulator for furnaces comprising a casing having strap members adapted to pass over the smoke pipe, means for drawing together the ends of said strap members, said casing having a draft opening and a pressure controlled damper in the opening.

1,628,429. WRAPPER. ERIC H. RADFORD, Los Angeles, Calif. Filed Mar. 7, 1925. Serial No. 13,724. 2 Claims. (Cl. 229—87.)

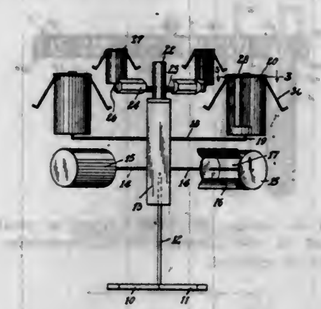
2. A wrapper of the class described constructed of sheet material, and of a length greater than the article to be wrapped therein, one of the margins thereof having a series of projections to form a covering for one end of the article, the opposite end of the wrapper projecting beyond the article having a length sufficient to form a handle for the wrapped article and there being tearing lines formed in the wrapper starting from the margin having said projections and continuing lengthwise thereof to points approximating the handle forming portion.



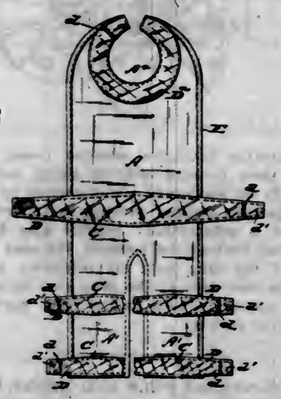
1,628,430. AUTOMATIC WATER TRAP. PAUL CHARLES RIBES, Colombes, France. Filed Dec. 29, 1924, Serial No. 758,568, and in France Oct. 15, 1924. 5 Claims. (Cl. 236—58.)

1. A water-trap comprising a body, a steam and water inlet and a water outlet on said body, a collapsible box supported by and within said body, a closing member for said water outlet and supported by said box and a liquid contained within said box and having substantially the following composition:

	Parts.
Water	50
Hexane	25
Benzine	25



1,628,431. AUTOMATIC DIPPING MACHINE. SHELDON S. ROBY, Meriden, Conn., assignor, by mesne assignments, to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 695,486. 11 Claims. (Cl. 91—46.)

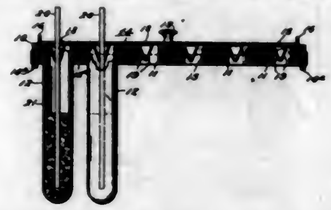


1. An automatic dipping machine having means for supporting articles to be dipped, means for raising a tank of liquid, to immerse the articles in the liquid, a second tank into which the liquid is received, means for raising the second tank and lowering the first tank, and means for supporting articles to be dipped as the second tank is raised, the drain permitting the reverse flow of the liquid.

1,628,432. ROTATING ADVERTISING DEVICE. ERNEST RUEGGER, Creswell, Oreg. Filed Oct. 11, 1926. Serial No. 140,747. 3 Claims. (Cl. 40—39.)

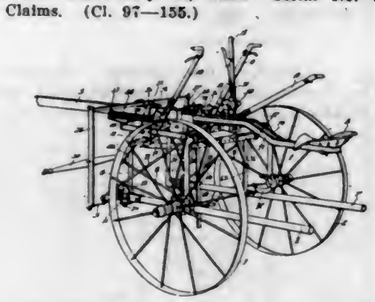
1. In a device of the class described, a base, a stud extending from said base, a square block rotatably mounted on said stud, an additional block above the first-named block and rotatable independently thereof, rotating cylinders mounted on each of said blocks, cylinder supports comprising horizontal bars having upright arms formed on their extremities, said cylinders being rotatably mounted on said arms.

1,628,433. GARMENT PROTECTOR. WALTER D. SCHILKE, Detroit, Mich. Filed June 24, 1926. Serial No. 118,174. 1 Claim. (Cl. 2—52.)



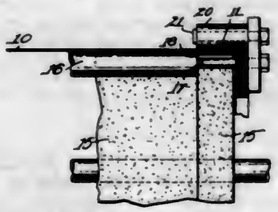
A garment protector comprising a strip of cloth having parallel side edges and bifurcated at one end to form separate leg portions; a plurality of tubular pockets formed of fabric stitched to the inner surface of the cloth strip in spaced relation to each other with the ends of the pockets extending beyond the marginal edges of the cloth, each of said pockets having an opening beyond said marginal edges through which spring clips may be inserted and removed; and a plurality of removable spring clips adapted to be housed in the several pockets for engaging the protector over the clothing of the wearer.

1,628,434. MOLD SUPPORT. MILTON SCHNAIER, New York, N. Y. Filed Apr. 26, 1924. Serial No. 709,178. 8 Claims. (Cl. 107—8.)



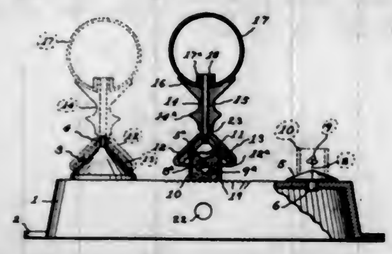
4. A device of the character specified comprising a support having openings therein to retain molds for producing a confection or the like having an embedded stem, a member adapted to engage with said support

and having openings therein registering with the openings in said support, and separate spring holding means on said member arranged at each of the openings there-



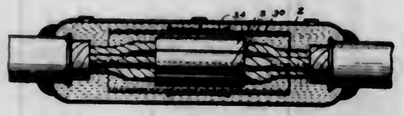
in, adapted to engage and hold a stem in position to be embedded in the contents of its respective mold, substantially as specified.

1,628,435. SEAT-GUIDE CULTIVATOR. JOHN P. SEAHOLM, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed May 22, 1924. Serial No. 715,124. 9 Claims. (Cl. 97—155.)



1. A cultivator having a wheeled frame, drag bars pivoted at their forward ends to swing both laterally and vertically on stationary pivots carried by the frame, a seat supporting member pivoted to the cultivator to swing about a substantially vertical axis for steering purposes, and connections between the seat supporting member and the drag bars for positively and quickly swinging the rear ends of the drag bars in unison with and in the same direction as the front portion of the seat supporting member.

1,628,436. CONVEYER BELT AND MEANS FOR GUIDING THE SAME. OSCAR E. SEGRIN, Springfield, and CARL J. CLEMENS, East Longmeadow, Mass., assignors to Universal Candy and Chocolate Machinery Company, Inc., Springfield, Mass., a Corporation of Massachusetts. Original application filed Jan. 5, 1923, Serial No. 610,799. Divided and this application filed Oct. 12, 1925. Serial No. 61,886. 5 Claims. (Cl. 198—202.)

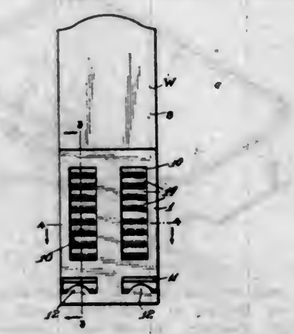


4. A conveyer belt having thickened edges, a rotating guiding device having recessed portions to receive said thickened edges and holding rolls adjacent said recessed portions effective to retain the thickened edges of said belt in said recessed portions, and an idle roll mounted above said belt adjacent said guiding device effective to retain said belt in engagement with said guiding device.

1,628,437. DENTAL CASTING DEVICE. JOHN C. SHOTTON, Lakewood, Ohio. Filed Jan. 27, 1923. Serial No. 615,207. 8 Claims. (Cl. 22—69.)

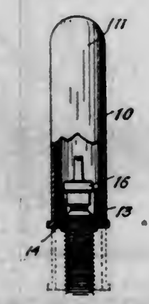
1. A dental casting device including a ring, a mold formed within the ring of material which is pervious to air, a removable cup adapted to engage the edges of the ring, a resilient bulb connected to the interior of the cup for varying the air pressure therein, and a plastic lining arranged within the cup and adapted to have the edge of the ring embedded therein to produce an air tight connection between the ring and the cup with only a light pressure.

1,628,438. CABLE JOINT. DONALD M. SIMONS, Osborne, Pa., assignor to Standard Underground Cable Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 3, 1925. Serial No. 358. 3 Claims. (Cl. 173—268.)



1. In a joint for an electric cable the combination of two cable ends with sheath cut away to a greater and insulation cut away to a less distance, and with bared conductor ends electrically united, a sleeve of solid insulating material surrounding the union and spaced at an insulating interval from the union and bridging the gap between the cut away ends of cable insulation, and a casing enclosing the whole, the structure including a grounded annulus of metal surrounding the said sleeve of insulating material throughout the mid-portion of its longitudinal extent, and surrounding such mid-portion at a narrower interval than that at which the casing surrounds the end portions of the said sleeve.

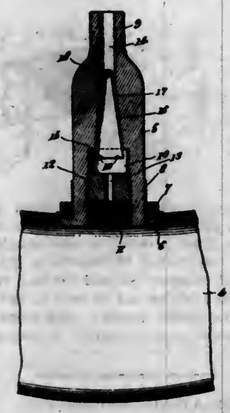
1,628,439. DISPLAY CONTAINER. JOHN STAUBLY, New York, N. Y., assignor to Eagle Pencil Company, New York, N. Y. Filed Feb. 23, 1924. Serial No. 694,540. 1 Claim. (Cl. 211—8.)



A device of the class described, comprising, a container having a face-plate, said face-plate having a delivery opening with dimensions sufficient to permit the passage of an article therethrough except for a flexible stop formed from said face-plate and comprising a portion of one of the edges of said delivery opening, the line defining the line of connection between said flexible stop

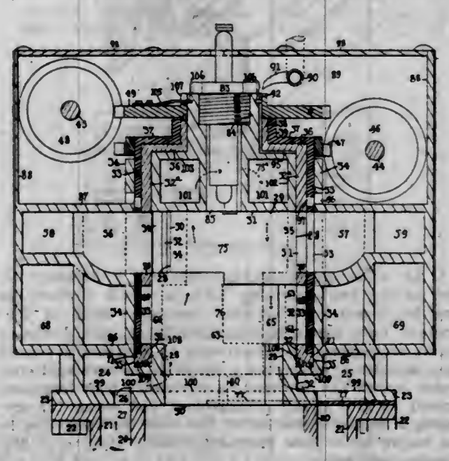
and said face-plate being of less length than the overall dimension of the edge of the discharge opening of which said flexible stop comprises a portion, and a hole

in the back of said container through which a finger may be introduced for pushing an article past said flexible stop and through said delivery opening.



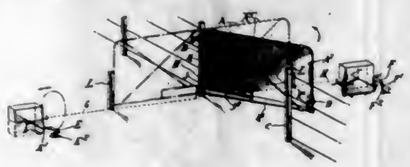
1,628,440. DUST CAP FOR TIRE VALVES. VERNON L. SMITHERS, Akron, Ohio. Filed Apr. 26, 1926. Serial No. 104,523. 6 Claims. (Cl. 152—12.)

1. A dust cap for tire valves comprising a shell which is closed except for an opening into which the valve stem is received, a flexible sleeve having one end thereof sealed to the inner surface of the shell adjacent said opening and normally projecting toward the closed end of the shell, said sleeve being adapted to grip the outer surface of the valve stem and form an airtight connection therewith and being also adapted to be turned inside-out and extend outwardly from the open end of said shell, and when in the latter position to permit air to escape from the interior of the shell along the outer surface of the valve stem.



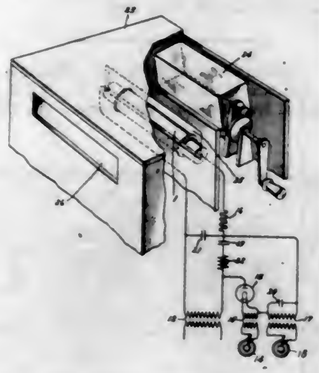
1,628,441. TIRE AIR VALVE. ANGELO L. SORESI, New York, N. Y. Filed Nov. 23, 1926. Serial No. 150,808. 4 Claims. (Cl. 152—12.)

1. A tire valve comprising a valve stem provided with an air passage having a metallic valve seat intermediate of its ends and a hollow metallic valve member arranged in said passage, said valve member being open at one end and having a wall section gradually decreasing in thickness to said open end thereof and expansibly yieldable



under internal air pressure in the closed position of the valve to maintain an air tight seal between the outer surface of said wall and the valve seat.

1,628,442. INTERNAL-COMBUSTION ENGINE. BURNHAM C. STICKNEY, Rutherford, N. J. Filed Oct. 31, 1923. Serial No. 671,853. 26 Claims. (Cl. 123—190.)

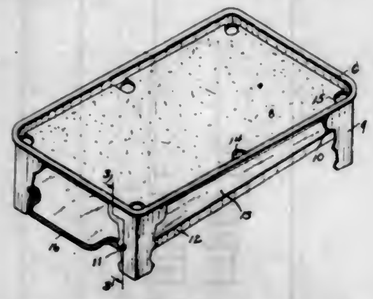


1. The combination with a ported explosion chamber or valve seat, of complementary ported shells fitted one within the other to form a composite valve fitting around said valve seat, and means for continuously revolving said shells in opposite directions, said composite valve ported coordinately with the porting in said seat to form two complete cycles of operations during each complete revolution of the valve, each shell being connected to make one revolution for each four revolutions of the engine-crank-shaft, the valve seat having diametrically opposite intake ports and also diametrically opposite exhaust ports, said intake ports being in a different zone from the exhaust ports in each shell and in said valve seat.

1,628,443. MECHANISM FOR OPENING AND CLOSING GATES, DOORS, AND THE LIKE. ARTHUR DOUGLAS THOMAS, Black Rock, Victoria, Australia. Filed Apr. 3, 1924, Serial No. 703,849, and in Australia Apr. 19, 1923. 4 Claims. (Cl. 39—34.)

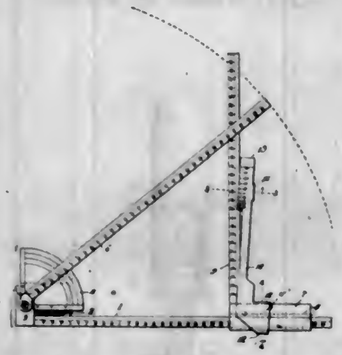
2. Mechanism for opening and closing gates, having rock shafts with depressible levers thereon, cranks on the said rock shafts, arms pivoted to said cranks and having a knuckle joint connection therewith, a hinging stile on the gate, a radial member on said hinging stile, a flexible connection attached to one end of each of the pivoted arms and leading to the radial member, and stops on the other ends of the pivoted arms adapted to engage the bodies of the cranks.

1,628,444. INDICATING APPARATUS. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 27, 1923. Serial No. 621,692. 5 Claims. (Cl. 171—95.)



1. An indicating apparatus comprising a discharge device having two electrodes between which a discharge may be passed, one of said electrodes being of filamentary form and extending linearly in said device, a circuit arrangement for impressing an electromotive force upon said device to produce a discharge between said electrodes, means for impressing a modulated high frequency current on said circuit arrangement, and means for producing a visible indication of the resulting variations in the length of a glow discharge formed along said filamentary electrode.

1,628,445. PROCESS FOR OBTAINING DIRECT POSITIVES BY REVERSAL. GEORGES EMMANUEL ZELGER, Vincennes, France, assignor to Pathe Cinema, Anciens Etablissements Pathe Freres, Paris, France. Filed Apr. 14, 1923, Serial No. 632,135, and in France Feb. 16, 1923. 3 Claims. (Cl. 95—88.)

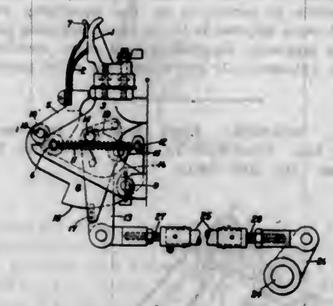


1. A photographic process for obtaining direct positives consisting in effecting a first development, then dissolving in an acid bath the silver of the image thus obtained, and then effecting the final reduction of the remaining silver salt in a non basic bath containing substances capable of reducing said silver salt in an acid bath even without any exposure to light.

1,628,446. GAME APPARATUS. ALBERT A. ALLINGER, Richmond Hill, N. Y., assignor to American Game & Toy Corporation, Brooklyn, N. Y. Filed May 23, 1925. Serial No. 32,465. 4 Claims. (Cl. 273—2.)

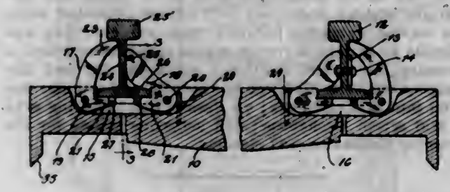
1. A pool rectangular table comprising a table top having an opening at each corner and oppositely disposed side openings therethrough, supporting legs attached to the corners of said top and an inclined runway connected to and bracing the supporting legs below the top whereby playing objects falling through said openings may roll to one end of the table.

1,628,447. RAFTER GAUGE. ELISHA ATTAWAY, Logansport, La. Filed Apr. 17, 1923. Serial No. 632,792. 1 Claim. (Cl. 33—97.)



In a measuring instrument, the combination of a plate having graduations marked thereon, a horizontal rule having graduations thereon and secured permanently at one side of the plate, a rule for determining angles in conjunction with the horizontal rule, means for pivotally securing the said rule to the plate, a vertical rule having graduations marked thereon, a base formed on the vertical rule and having a channel that is adapted to receive the horizontal rule whereby the vertical rule may be moved along the horizontal rule, and a fourth rule pivotally joined to the base of the vertical rule and having graduations on its upper end and further being provided with an upper portion that its adapted to partially surround a portion of the vertical rule.

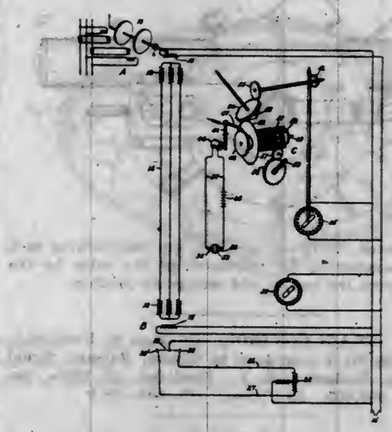
1,628,448. ELECTRIC SWITCH. WINFIELD A. ATWOOD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 21, 1924. Serial No. 707,832. 5 Claims. (Cl. 200—70.)



1. In an electric switch of the class described, relatively movable cooperating contacts, restraining means for holding said contacts in circuit closing position arranged to be held from restraining position while the

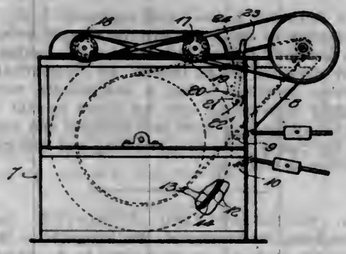
contacts are in the circuit open position, and an operating member for actuating one of said contacts arranged upon movement in one direction to move said contacts to circuit closing position and upon a predetermined movement in the opposite direction to move said restraining means from restraining position whereby to permit move-

ment of said contact from circuit closing position, and means for effecting the movement of the restraining means to restraining position after said contact is in circuit closing position arranged to have energy stored therein by the movement of the operating member in the circuit closing direction.



1,628,449. RAILWAY TIE AND RAIL FASTENER. CARL BIERNAT, Glasford, Ill. Filed Dec. 24, 1926. Serial No. 156,868. 3 Claims. (Cl. 238—170.)

3. A rail fastening comprising in combination with a railway tie having a depression in its body, a pair of pawls fulcrumed intermediate their ends, means in said tie forming the fulcrums of said pawls, locking means for said fulcrum forming means, lower, rail foot flange supporting means on said pawls, and upper, rail web engaging means on said pawls, said lower supporting means for the rail foot flanges adapted to be depressed under the weight of the rails and the rolling stock thereon for firmly pressing the upper web engaging means against the rail web on opposite sides of the rail, and a stop pin for locking the parts in their adjusted rail holding position.

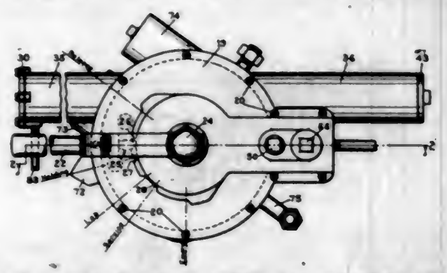


1,628,450. TELEMETRIC APPARATUS. WALTER P. BLANCHARD, Winthrop, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 4, 1924. Serial No. 754,002. 3 Claims. (Cl. 177—351.)

1. In a telemetric system, sending and receiving stations, electric impulse transmitting and receiving devices at said stations respectively, the transmitter at the sending station comprising means driven by a constant speed electric motor and controlled in accordance with the indication to be transmitted to transmit impulses at a rate dependent upon such indication, the receiving device at said receiving station comprising a variable ratio differential movement, one member of which is driven at the rate of the transmitted impulses and the other member

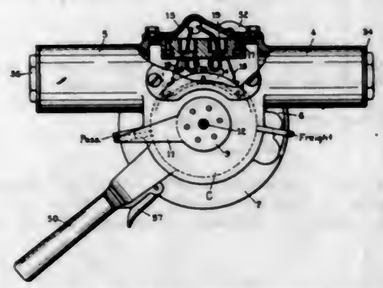
of which is driven by a constant speed electric motor, said two motors being energized by a common source of supply whereby the indication of the receiving device will remain fixed should said supply fail.

1,628,451. COTTON AND HULL SEPARATOR. CHARLES A. BRUST, Memphis, Tenn. Filed Sept. 23, 1926. Serial No. 137,327. 4 Claims. (Cl. 19—37.)



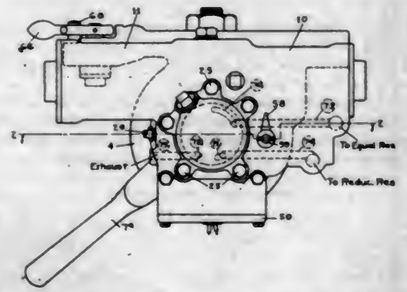
1. In a cotton and hull separating machine, a body structure, a cotton conveying drum rotatably mounted in said body structure, said drum having spaced longitudinal grooves in its periphery to receive the cotton but not the hulls, cotton-conveying and hull-impaling spikes arranged in said grooves with their outer ends projecting therefrom and beyond the periphery of the drum, and means for knocking the cotton hulls from said spikes.

1,628,452. TRAIN CONTROL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Gates, N. Y., a Corporation of New York. Filed Aug. 12, 1922. Serial No. 581,407. 48 Claims. (Cl. 303—56.)



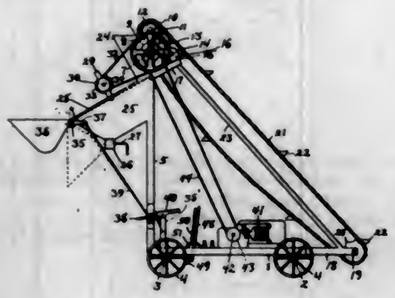
1. In an automatic brake valve operator, the combination with an engineer's brake valve, of means for automatically actuating said valve to the service brake ap-

plying position and for simultaneously releasing the operative connection between the brake valve handle and the valve and for preventing operation of the valve by the



handle toward the release position, but maintaining such operative connection for movement of the valve by the handle toward the service and emergency position.

1,628,453. TRAIN CONTROL. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Oct. 15, 1923. Serial No. 668,665. 35 Claims. (Cl. 303—18.)



1. In a combined manual and automatic brake valve, the combination of the usual engineer's brake valve comprising a casing of general cylindrical shape having a cap of smaller diameter bolted thereto, an automatically operated valve actuator having a downwardly extending web partially surrounding said cap bolted to said casing, and a handle projecting from said actuator and cooperating with the rotary valve in said casing and engaging the usual notches in said cap.

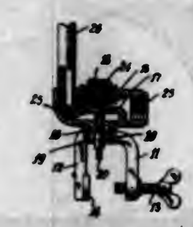
1,628,454. BRAKE-APPLYING APPARATUS. CHARLES S. BUSHNELL, Rochester, N. Y., assignor to General Railway Signal Company, Rochester, N. Y. Filed Mar. 20, 1925. Serial No. 16,937. 37 Claims. (Cl. 303—18.)

1. In a braking system for railway trains of the type in which the brake pipe is normally charged and in which a brake application is effected if brake pipe pressure is reduced; the combination of an equalising reservoir; a reduction reservoir; a valve member having a cavity, a seat on which said valve member is adapted to move having three openings therein, said openings being connected to the equalising reservoir the reduction reservoir and to atmosphere respectively, and being so arranged that the reduction reservoir is connected to atmosphere when the valve member is in the normal position, and the reduction reservoir is connected to the equalising reservoir when said valve member is in the brake applying position; means for manually controlling said valve member; and means for automatically operating said valve member.

1,628,455. SCREEN. EMIL EDWARD DRISTER, Fort Wayne, Ind. Filed July 15, 1926. Serial No. 122,545. 3 Claims. (Cl. 209—240.)

1. In a portable sand sizing apparatus, a vehicle having vertical standards at one end thereof; a bin supported in an elevated position by said standards and extending outwardly therefrom; a catch box hinged at the outermost end of the bin, so disposed as to swing into discharging position under said bin; a latch controlled windlass having actuating relation with the catch-box and operable to sustain the catch-box in receiving position; a screening mechanism positioned above the bin and discharging undersize material into the bin and oversize material into said catch-box; an elevator for supplying sand to said screen mechanism; and actuating means for the screening mechanism and elevator.

1,628,456. METAL FILAMENT. TED E. FOULKE, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed July 29, 1922. Serial No. 578,474. 6 Claims. (Cl. 176—131.)

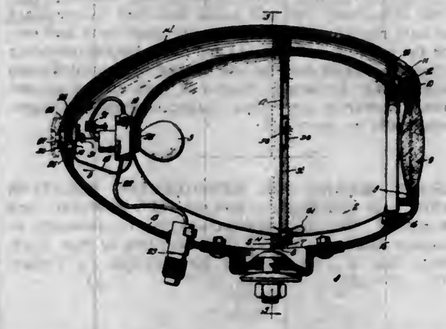


3. A filament for electric incandescent lamps and other electrical devices comprising filaments, consisting of a metal having its surface coated with a thin film of metallic oxide and having said film covered with a getter compound.

1,628,457. COP TUBE. JOSEF FRANZ, Bischofswerda, Germany. Filed Dec. 15, 1926, Serial No. 154,952, and in Germany June 9, 1925. 2 Claims. (Cl. 242—122.)

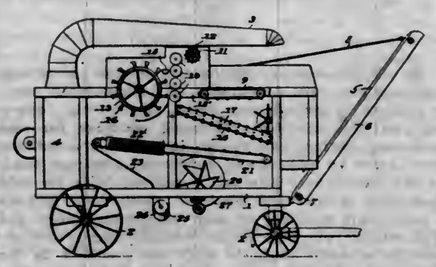
1. A cop tube composed of paper layers which are pasted together, and threads embedded between said paper layers so as to form circumferential ribs.

1,628,458. DUST-LAYING SPRAYING DEVICE. THOMAS FRENCH, Rumford, Me. Filed Mar. 5, 1926. Serial No. 92,449. 2 Claims. (Cl. 299—73.)



1. A spraying device comprising a spraying nozzle, a supply pipe therefor, a valve casing supporting said supply pipe and provided with a depending trunnion, a valve in said casing and having the stem thereof extending through and beyond said trunnion, a clamp pivotally supporting said valve casing at the trunnion on the latter, a depending arm secured to the valve casing and a cooperating lever pivotally secured to said depending arm and connected with said valve stem to actuate said valve.

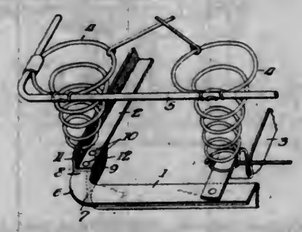
1,628,459. COMBINATION HOT-WATER AND HOT-AIR FURNACE. ANTON GABRIEL, East Chicago, Ind. Filed Dec. 20, 1926. Serial No. 155,826. 10 Claims. (Cl. 126—101.)



1. A combination hot water and hot air furnace, comprising a firebox, a hot air chamber disposed above the fire box, a smoke duct extending from the rear end of the fire box through the hot air chamber, and water piping extending through the fire box, the hot air chamber being separated from the fire box by a partition having a filling of heat-storing material.

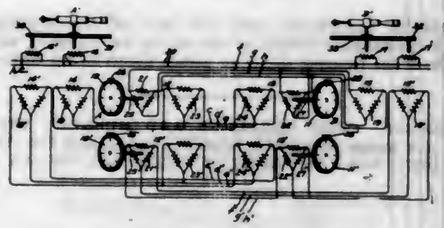
1,628,460. HEADLIGHT CONSTRUCTION. CHARLES E. GODLEY, Detroit, Mich., assignor, by mesne assignments, to C. M. Hall Lamp Company, a Corporation of Michigan. Filed Nov. 21, 1924. Serial No. 751,255. 14 Claims. (Cl. 240—41.)

1. In a lamp, a housing having an opening in its front, a reflector disposed within the housing and engaging the said front, the rear end of the reflector being spaced from the back of the housing; a focusing socket mounted on the rear end of the reflector; and a compression spring interposed between the said rear end and the back of the housing for forcing the reflector against the said front, the said spring having its forward end secured to the reflector and having its rear end in releaseable engagement with the back of the housing, the intermediate portion of the spring extending at one side of the focusing socket to permit access to the latter



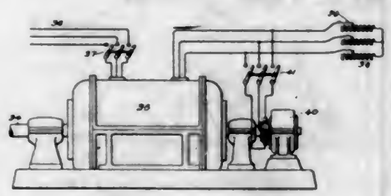
1,628,461. CORN SHREDDER AND HUSKER. HERMAN PETER GROSSMAN, Boonville, Ind. Filed Feb. 18, 1927. Serial No. 169,301. 6 Claims. (Cl. 130—5.)

1. In a corn shredder and husker, the combination with rollers for severing the stalks from the ears, and a shredder, of means for dividing the stalks while passing from the rollers to the shredder.



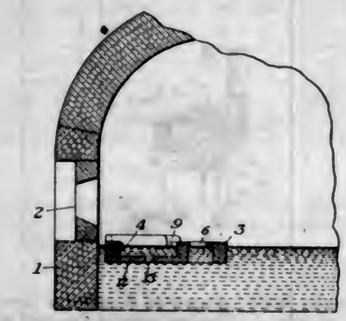
1,628,462. BEDSPRING. DARWIN HANAUER, La Grange, Ill., assignor to Kinney-Rome Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 25, 1922. Serial No. 603,171. 1 Claim. (Cl. 5—248.)

In a bedspring, the combination of transverse rows of vertical coiled springs having their upper ends connected together and to a border wire, and a main



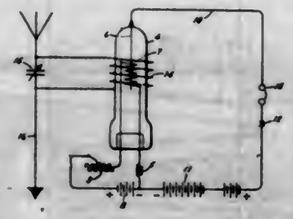
spring-supporting frame comprising side angle bars having outwardly projecting horisontal flanges and depending vertical flanges provided with integral inturned end portions in the same planes as the main portions thereof and forming rounded frame corners and inwardly projecting extensions, and end angle bars and intermediate cross bars rigidly secured to said side angle bars and carrying the rows of springs, said end angle bars terminating short of the frame corners and having horizontal flanges secured to the horizontal flanges of said extensions and vertical, upwardly projecting spring supporting flanges, substantially as described.

1,628,463. MEANS FOR REPRODUCING RELATIVE ANGULAR MOTION. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Jan. 4, 1922. Serial No. 527,012. 4 Claims. (Cl. 177—351.)



1. Means for reproducing relative motion comprising in combination with a plurality of independently movable objects, a reproducing device, inductively cooperating relatively movable polycircuit windings for said reproducing device, electrically inductive transmitting devices drven by said objects, polycircuit armature windings and single-phase alternating current fields for said transmitting devices, and electrical connections between the polycircuit windings of said reproducing device and the polycircuit windings of said transmitting devices respectively whereby magnetic fields are produced in the windings of said reproducing device, said fields varying in angular position in accordance with the angular positions of said objects.

1,628,464. INDUCTION MACHINE. HENRY M. HOBART, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 24, 1923. Serial No. 659,221. 4 Claims. (Cl. 172—274.)

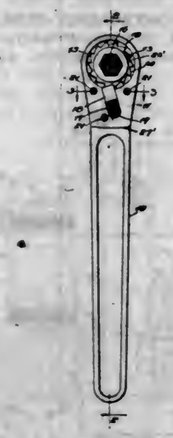


1. An induction cascade comprising a pair of induction machines of different pole numbers having cooperating coil wound stator and bar wound rotor windings, the rotor windings being mounted adjacent each other on the same shaft and interconnected in cascade relation by a system of continuous conductors.

1,628,465. GLASS-GATHERING RING. LEON J. HOUZE, Point Marion, Pa. Filed Nov. 20, 1926. Serial No. 149,638. 4 Claims. (Cl. 49—61.)

3. In a glass-gathering ring, the combination of a gathering opening, a melting hearth, a channel connecting the hearth with the gathering opening, and movable means for interrupting the flow of glass in said channel.

1,628,466. ELECTRON DEVICE AND METHOD OF OPERATING. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 15, 1921. Serial No. 515,409. 15 Claims. (Cl. 250—27.)

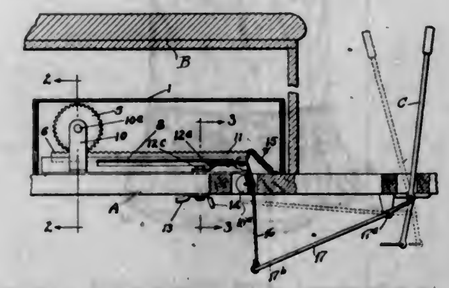


1. An electron discharge device having an electron-emitting cathode and an anode, one of said electrodes being helically arranged with respect to the other electrode and having an electrical conductivity sufficiently high to conduct a current of sufficient magnitude to generate a field parallel to the axis of said cathode capable of effectively decreasing by magneto-striction an electron discharge between said electrodes.

15. A current controlling apparatus comprising the combination of an electron discharge device having a thermionic cathode and an anode one of said electrodes being coiled about the other, means for conducting through said coiled electrode a current of sufficient magnitude to generate a magnetic field capable of materially reducing said discharge, means for varying said field, an output circuit connected to said electrodes, a source of energy in said output circuit, a load device in said output circuit and means for the passage of variable current from said output circuit to the circuit of said coiled electrode.

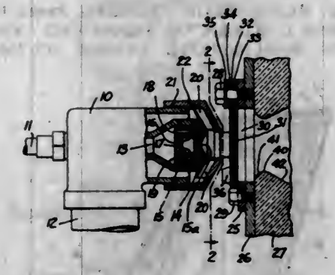
1,628,467. WRENCH. SIGMUND MANDL, Milwaukee, Wis., assignor to Husky Wrench Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 22, 1924. Serial No. 757,812. 3 Claims. (Cl. 81—60.)

1. A wrench comprising a flat integral body part having one end circular and its other end formed into a handle, said circular end having a concentric cylindrical pocket extending entirely transversely therethrough, a ratchet wheel within said pocket having an axially extending wrench opening, said body between its ratchet pocket and handle having a slot extending transversely through the entire thickness of said body part and opening into said pocket, a rectangular pawl longitudinally movable in said slot but confined against transverse movement therein, a spring in said slot pressing said



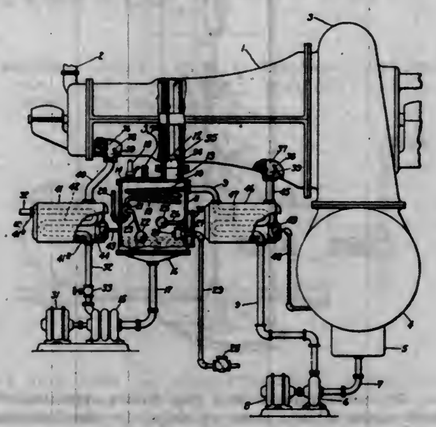
pawl into cooperation with the teeth of said ratchet wheel, and separable side plates for said body part closing the sides of said pawl slot and confining said ratchet wheel in said pocket, said plates being secured to the body part alongside of said slot in order to strengthen the body part at such point.

1,628,468. PROCESS OF PRODUCING VITREOUS SILICA. LEVI B. MILLER, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 29, 1926. Serial No. 157,870. 3 Claims. (Cl. 49—78.1.)



3. The process of producing vitreous or fused quarts from crystal quarts which consists in heating said material to a temperature adjacent to but below about 1700° C., cooling the same to a temperature below 270° C., and finally fusing said material in a vacuum.

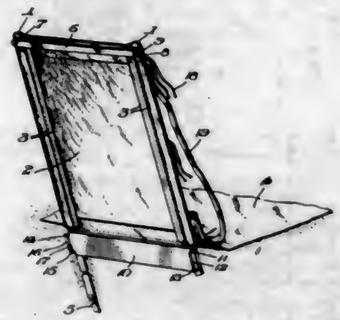
1,628,469. AUTOMOBILE-LOCKING APPARATUS. TED MILLER, Encinitas, Calif. Filed May 13, 1926. Serial No. 108,748. 5 Claims. (Cl. 70—127.)



2. In an automobile locking apparatus, an automobile brake lever, an electrical switch with a contact in electrical connection with the negative side of an automobile battery, and another contact in connection with and grounded on the automobile, key lock and gear means for opening and closing said switches, a lever in connection with said gear means adapted to engage and lock the brake lever with the movement of said lock, means, said key lock and gear means consisting of a conventional lock with a key, a shaft in operative connection therewith, a gear mounted on said shaft, and a gear rack meshing with said gear carrying a portion of said switch members.

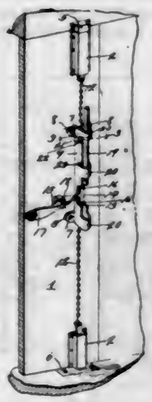
1,628,470. BURNER SUPPORT. ALBERT W. MORSE, Long Island City, N. Y. Filed Dec. 11, 1923. Serial No. 679,942. 1 Claim. (Cl. 158—73.)

In combination with a furnace, a burner of the externally mixing type, having a deflector cap with a central outlet and a nebulizer nozzle in fixed relation thereto, the said deflector cap having means to fasten the burner to the furnace comprising arms extending from the sides of the said cap, a plate having a circular opening in alignment with the outlet in the said cap and being in spaced relation thereto, screws fastening the said plate to the furnace, the said arms of the cap being integrally connected to the said plate, whereby the relation of the outlet in the said cap and the opening in the plate is kept constant, and a single shutter for the opening in the plate, pivotally connected to one of the said screws and interposed between the deflector cap and the plate, substantially as set forth.



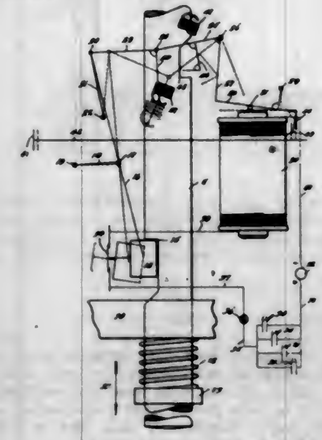
1,628,471. FEED-WATER HEATER. SANFORD A. MOSS, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 18, 1924. Serial No. 707,517. 4 Claims. (Cl. 261—117.)

1. A spray heater for use with a multistage extraction steam turbine for heating feed water, comprising a closed tank adapted to contain a supply of heated liquid, an inlet conduit of relatively large cross section connected with the tank through which is admitted extraction steam of substantially atmospheric pressure, a



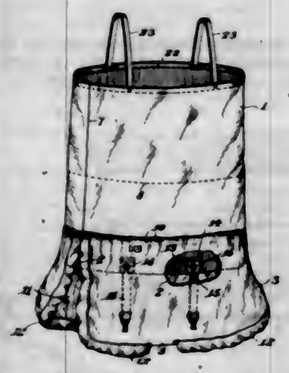
spray inlet nozzle in the tank through which liquid to be heated is supplied, a second spray inlet nozzle in the tank, means connected with the second-named nozzle for supplying thereto additional liquid to be heated, and a conduit connected with the tank for conducting therefrom excess liquid, said conduit having an extension below the point of connection with the tank providing a vertical length sufficient to create a liquid head having a pressure greater than atmospheric pressure.

1,628,472. BEACH CHAIR. NATHAN G. PERRY, Oakland, and LLOYD L. HANSON, Los Angeles, Calif. Filed Nov. 25, 1925. Serial No. 71,432. 8 Claims. (Cl. 155—153.)



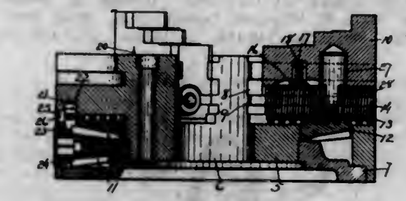
1. A beach chair including dowels, a flexible back secured to the dowels, strainers for the dowels, a loop secured to a dowel for receiving an end of at least one of the strainers, said strainer having notches formed in opposite sides of said end to be received in said loop.

1,628,473. LEVER-CONTROL BOLT FOR DOORS. JOHN POKORNEY, Burwell, Nebr. Filed Jan. 8, 1927. Serial No. 159,860. 3 Claims. (Cl. 292—36.)



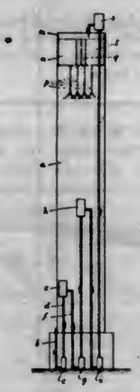
1. The combination with a door having oppositely disposed spring latched bolts, of means for simultaneously moving said bolts to open positions, said means comprising a casing carried by the door between the spring actuated bolts, a plurality of rollers within the casing, flexible members connected to the bolts and extending under said rollers, a pivoted lever pivoted at a right angle to the casing and extending into a recess in the casing between adjacent rollers, the ends of said flexible members being connected to the lever in the recess of the casing, a slidable bolt guided within the casing, means for moving said bolt longitudinally to an overlapped position over the lever in the recess of the casing, said bolt being slidably mounted on the rollers.

1,628,474. LATCH-CONTROLLED OPERATING MECHANISM. JOHN H. SAYERS, Brooklyn, N. Y. Filed Jan. 22, 1926. Serial No. 83,162. 11 Claims. (Cl. 192—116.5.)



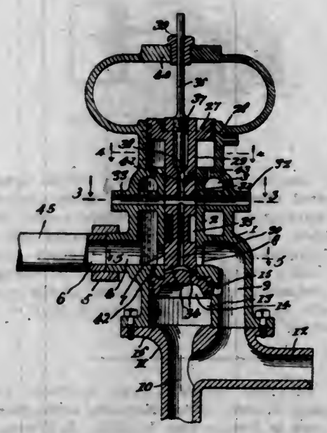
1. An automatic stop mechanism comprising a rod, a lug upon said rod, a housing through which said rod passes, and a spring compressible between said lug and said housing in combination with toggle means for holding said rod against the action of said spring, and electrical means for releasing said toggle means.

1,628,475. ENSEMBLE UNDERGARMENT. SARAH E. B. SHEPARD, Lowell, Mass. Filed Jan. 29, 1926. Serial No. 84,668. 1 Claim. (Cl. 2—78.)



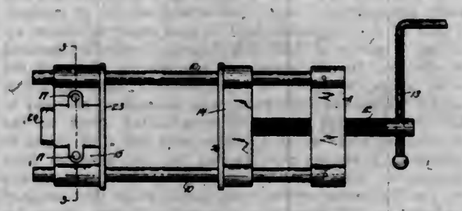
An undergarment of the ensemble step-in type comprising a one-piece body portion in the form of a continuous, non-split band providing a combined underwaist and skirt part, a lining in the form of a continuous, non-split band for and of less height than the height of said body portion, means for securing the upper end of the lining to said body portion a substantial distance below the top of the latter, means for securing the lower end of the lining to the lower end of the body portion, a two-fold body open at each side for a portion of its length and with the bend between the folds of less length than the width of these latter thereby providing a drawers part, the free ends of the folds of said two-fold body positioned against the outer face of said body portion at a point below its transverse center and in proximity to its lower end, rows of stitching for securing the free ends of the folds in side-wise abutting relation and further for securing the free ends of the folds to said body portion and lining, and said bend between the folds forming a crotch and positioned at the lower end of said two-fold body.

1,628,476. CHUCK. HARRY E. SLOAN, Hartford, Conn. Filed July 9, 1923. Serial No. 650,332. 2 Claims. (Cl. 279—123.)



1. A chuck comprising a chuck body, jaws movable radially in said body, a feed scroll mounted in the body, jaw carriers in engagement wtih said feed scroll, a feed screw for independently moving each of said jaws, each screw having a longitudinally extending notched portion in its periphery, a spring pressed detent carried by each jaw and having a head of a size to be received in the screw notch whereby it may be determined when the several jaws are concentric with the central axis of the chuck body.

1,628,477. REMOVAL OF SULPHURETED HYDROGEN FROM GAS AND APPARATUS THEREFOR. ERNEST WOODHOUSE SMITH and THOMAS CAMPBELL FINLAYSON, London, England, assignors of one-third to Woodall-Duckham Limited, London, England. Filed Nov. 14, 1925, Serial No. 69,108, and in Great Britain Dec. 10, 1924. 9 Claims. (Cl. 23—225.)

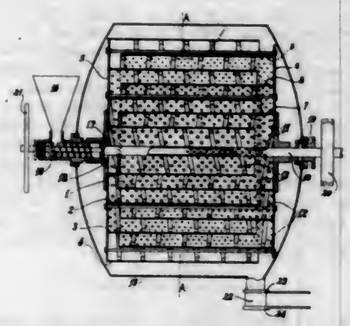


1. A process of regenerating spent liquor of the kind herein referred to, which consists in introducing air into the lower part of an upwardly moving column of the liquor so as to form an upwardly moving column of air and liquor.

1,628,478. ATTACHMENT FOR LOCOMOTIVES. CHARLES STERN, Jersey City, N. J., and RICHARD WALLACE BRADEN, New York, N. Y., assignors to B. & S. Manufacturing Products Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 8, 1921, Serial No. 490,605. Renewed Oct. 21, 1926. 5 Claims. (Cl. 121—137.)

2. A locomotive attachment comprising a casing having a chamber in communication with the steam dome of a locomotive, said casing further having cylinders therein in communication with the chamber at their inner portions and in communication with the locomotive steam chest pressure at their outer portions, said casing having a passage connecting with the steam chests of the locomotive and with said chamber, pistons in the cylinders, a stem connecting said pistons and adapted in one position to shut off the communication between said chamber and passage, and means for holding and trapping the accumulated steam chest pressure upon the outer face of one of the pistons whereby to shift the pistons and the valve stem to a position for opening communication between said chamber and passage when the throttle is closed.

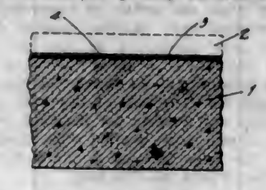
1,628,479. CLAMP. HUGO V. STEUERNAGEL, Hartford, Conn. Filed May 7, 1924. Serial No. 711,622. 3 Claims. (Cl. 144—289.)



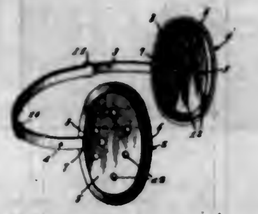
1. In a clamp, the combination with a tie-member, of a block sliding thereupon and having a clamping-face, a dog pivotally mounted intermediate of its ends directly in the said block for bodily movement therewith, a plunger mounted in the said block, operatively connected with the said dog and positioned to be manually operated by a blow for disengaging the dog from the tie-member, and a spring acting directly upon the said plunger for normally maintaining the said dog in engagement with the said tie-member.

1,628,480. ELECTRIC SWITCH. GEORGE B. THOMAS, Bridgeport, Conn., assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 13, 1922. Serial No. 552,225. 3 Claims. (Cl. 173—346.)

3. In an electric switch, a rotary switch spindle, a crank operated thereby and rotating substantially in a plane, a commutator pivoted to oscillate across the axis of said spindle, a spring interposed between said crank arm and commutator for imparting a quick throw to the latter, and a thrust rod having a thrust engagement with said commutator on the rotation of the crank to the same side of its axis of rotation as that on which the commutator lies.



1,628,481. DRYING DRUM. JEAN BAPTISTE VERNAY, Villeurbanne, France. Filed Nov. 27, 1926, Serial No. 151,088, and in France Dec. 5, 1925. 6 Claims. (Cl. 34—5.)

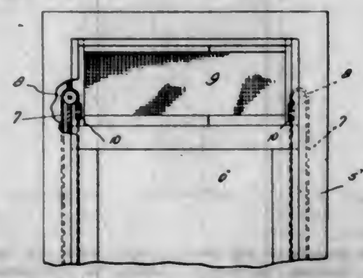


5. A drying apparatus comprising a perforated rotary shaft adapted to be connected with a source of vacuum, a pair of closure plates fixed to said shaft in spaced relation, a group of open-ended coaxial cylinders secured at one end to one plate and terminating short of the other plate, a group of open-ended coaxial cylinders nested within the first group and secured at one end to the second-named plate and terminating short of the first-named plate so as to unite with the first group in providing a zig-zag passage-way for the material from cylinder to cylinder, a chopping device at the inlet end of the innermost cylinder in position for the chopped material to fall therefrom into that cylinder, means for feeding the material to be dried to said device, an air-tight casing enclosing said cylinders and plates, and heating means inside said casing.

1,628,482. PAVEMENT AND PROCESS OF CONSTRUCTING PAVEMENTS. BERTRAND H. WAIT, New Rochelle, N. Y. Filed Mar. 12, 1926. Serial No. 94,212. 9 Claims. (Cl. 94—10.)

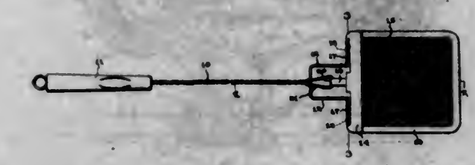
1. The process of constructing a monolithic pavement or the like having a stratum therein along which the monolith may be cleft or split, which comprises placing a course of concrete, working the same to produce a mortar surface thereon, placing on said surface a fabricated medium pervious to mortar but substantially impervious to coarse aggregate, and placing thereover a second course before the setting of the first course.

1,628,483. EAR PROTECTOR. GEORGE H. WIEGAND and VIOLA E. WIEGAND, Denver, Colo. Filed Nov. 4, 1926. Serial No. 146,194. 5 Claims. (Cl. 132—45.)



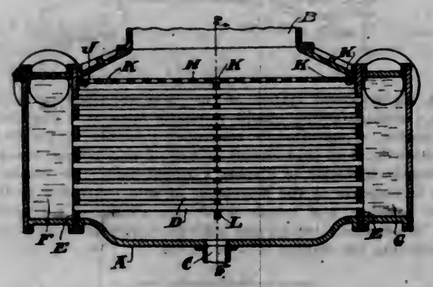
1. An ear protecting device comprising a pair of oppositely disposed protectors, each consisting of a plate formed of rigid material and provided with an inwardly extending edge flange co-extensive with the plate and of flaring contour, said plate formed with a row of spaced openings and with each opening of the row positioned between the center of the plate and the flange, and a holder for said protector, said holder having each end thereof attached to a protector.

1,628,484. DYEING OF ANIMAL FIBERS AND FABRICS OF A PROTEIN NATURE. SAMUEL WRIGHT WILKINSON, Westminster, London, England, assignor to Zair Syndicate, Limited, London, England, a British Company. Filed Sept. 10, 1925, Serial No. 55,617, and in Great Britain Sept. 11, 1924. 4 Claims. (Cl. 8—5.)



1. A process for dyeing animal fibers of a protein nature comprising the step of treating said fibers with an alkaline solution, subjecting such fibers to the action of ozone, and dyeing the same.

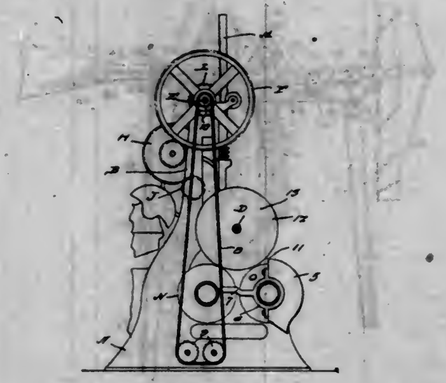
1,628,485. WINDOW SCREEN. ROBERT P. WILLIG, Pittsburgh, Pa. Filed May 20, 1926. Serial No. 110,463. 3 Claims. (Cl. 156—14.)



1. In combination with a window screen adapted for positioning within the upper portion of a window frame and adapted to rest on the upper edge of the upper sliding sash, means for operatively connecting the window screen to the inner flights of the usual weight-counterbalancing cord for the upper sliding sash whereby the screen will slide upwardly and downwardly into the frame simultaneous with the actuation of the upper sliding sash.

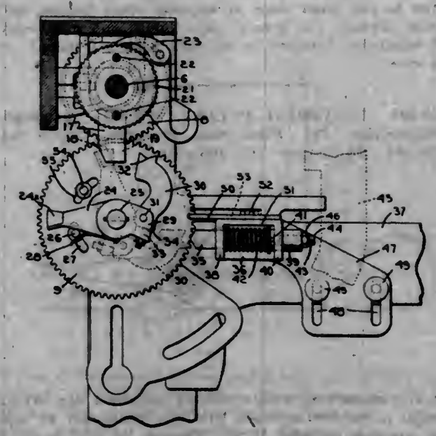
1,628,486. FLY SWATTER. JOHN AZAMBER, Pittsburg, Kans. Filed Oct. 26, 1926. Serial No. 144,297. 2 Claims. (Cl. 43—137.)

1. A device for the purpose indicated comprising a staff, a flat impact member having a hinged connection with the staff, the impact member having a tongue lying in the same plane with it and extending in the opposite direction from the hinged connection and a resilient member tensioned between the staff and the extremity of the tongue.



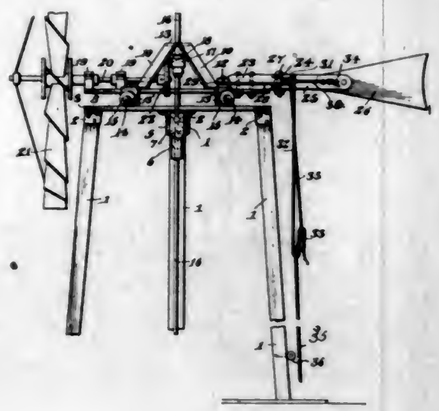
1,628,487. SURFACE CONDENSER. PAUL A. BANCEL, Nutley, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 20, 1926. Serial No. 149,652. 3 Claims. (Cl. 257—43.)

1. A surface condenser comprising a casing having a steam inlet and an outlet for uncondensible gases, water tubes within said casing interposed between said inlet and said outlet having portions of unequal specific steam condensing capacity, and means including a perforated plate having openings of graduated size to cause the steam to pass to said portions in proportion to their specific steam condensing capacity.



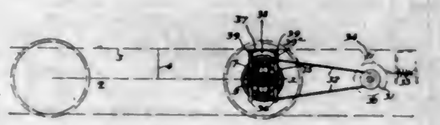
1,628,488. OPERATING APPARATUS FOR SAFETY GUARDS ON ROLL WINDERS OF PAPER MACHINES. EDWARD BOURGOED and ALVIN LEITL, Park Falls, Wis. Filed Aug. 14, 1925, Serial No. 50,284. Renewed Feb. 24, 1927. 2 Claims. (Cl. 74—105.)

2. An apparatus for operating a safety guard on a roll winder; wherein the roll winder includes among other elements a frame, a winder shaft, bearings for the winder shaft slidable in the frame, rack bars leading from the bearings, a shaft journaled in the frame, rack pinions on the last mentioned shaft meshing with the rack bars, and a pair of jacker rollers; comprising a guard revolvable about the axis of one of the rollers, an arm extending from the guard, a pair of sockets



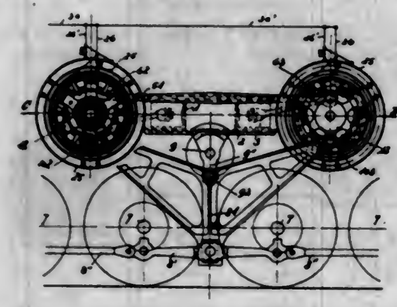
mounted on the frame, a sprocket mounted on the second mentioned shaft, a chain trained over said sprockets and connected with said arm.

1,628,489. INTERMITTENTLY-OPERABLE TAKE-UP MECHANISM FOR LOOMS. HORACE H. BURDETT, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 11, 1925. Serial No. 74,744. 15 Claims. (Cl. 139—24.)



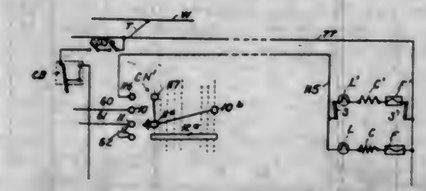
1. Intermittently actuated take-up mechanism for looms having a reciprocating lay, operable to produce transverse re-enforcing stripes in the web of fabric, comprising a take-up roll, continuously rotating means for actuating said take-up roll and means operable conjointly by the lay and said actuating means, at predetermined intervals, to release said take-up roll temporarily from operative relation to said actuating means.

1,628,490. WINDMILL. ARMSTEAD CHAUSSIER, New Orleans, La. Filed May 5, 1926. Serial No. 106,890. 1 Claim. (Cl. 170—46.)



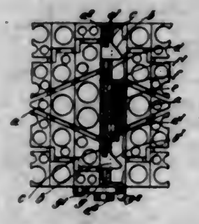
In a windmill structure of the character described, an upright supporting structure having a platform at its top, a power mechanism including a turn table, a spider mounted upon said turn table and having downturned ears depending below said table, journals on said ears, rollers on the journals and adapted to travel upon the platform, means centrally pivoting the spider to the platform, a vane support carried by the turn table, a wind vane having vertical pivotal connection with the support, a wind wheel mounted upon said turn table forwardly of the vane support, rope guides carried by the turn table on opposite sides of the vane support and each having a double hook terminal and a guide eye above the same, and ropes connected to the wind vane at opposite sides thereof and trained through the eyes of said guides and adjustably and detachably fastened in the double hook terminals of such eyes.

1,628,491. UNIVERSAL PULLEY. THOMAS CRAWFORD, Philadelphia, Pa. Filed Sept. 29, 1926. Serial No. 138,487. 13 Claims. (Cl. 105—102.)



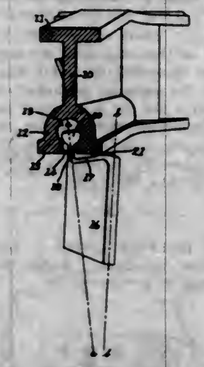
1. In combination with a railway passenger car having a body, a supporting truck pivotally connected to said body, an axle included in the elements of said truck, a resiliently pivoted electric generator on said body, and a driven pulley secured to the shaft of said generator; a longitudinally slidable universal driving pulley on said axle, a belt operatively connecting said pulleys; and means on the said body and engaging the driving pulley for maintaining true operative alignment between said belt and said pulleys, when said truck is moving on a curve and whereupon said truck axle assumes an angular position and moves longitudinally with respect to the shaft of said generator.

1,628,492. DRIVING GEAR FOR LOCOMOTIVES EQUIPPED WITH INTERNAL-COMBUSTION ENGINES. NIKOLAUS DOBROWOLSKI and OTTO GÜNTHER, Esslingen-on-the-Neckar, Germany. Filed Aug. 17, 1925. Serial No. 50,810, and in Germany Nov. 12, 1924. 6 Claims. (Cl. 105—62.)



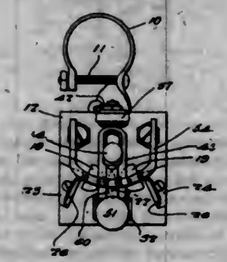
1. Locomotive comprising an internal combustion engine, driving wheels, a crank shaft at each end of said engine, a friction clutch at each end of said crank shafts, and means for transmitting power from said clutches to said wheels.

1,628,493. ELECTRIC SIGNALING SYSTEM. JOHN T. DONAHOE, Chicago, Ill. Filed Aug. 13, 1925. Serial No. 49,943. 4 Claims. (Cl. 177—352.)



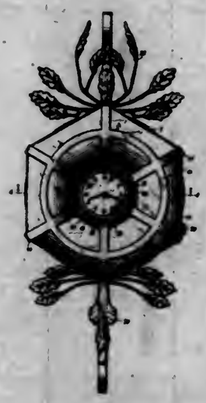
4. An electrical system of the class described comprising a motor-starting circuit normally open at a plurality of points, a motorman's controller movable to its first position to close said circuit at one of said points, means normally operative to display a signal before the conductor in response to the movement of said controller to its first position, and means under the conductor's control for subsequently completing said starting circuit and discontinuing the display of said signal.

1,628,494. FASTENING FOR BRACELETS, NECKLACES, AND OTHER ARTICLES OF JEWELRY. ANDREW DOWNES, London, England, assignor to Cartier Limited, London, England, a British Company. Filed Dec. 28, 1926, Serial No. 157,554, and in Great Britain Jan. 19, 1926. 8 Claims. (Cl. 24—230.)



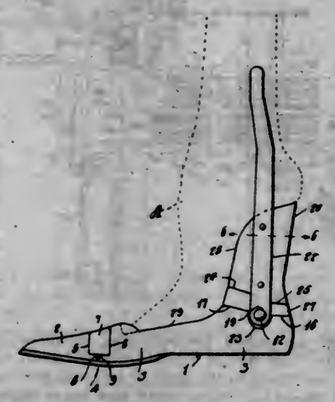
1. A fastening device for bracelets, necklaces and other articles of jewelry comprising inter-connecting parts on the contiguous faces of the two members, a sliding catch adapted to engage the inter-connecting parts to lock the same, a plunger associated with said sliding catch and adapted when actuated to unlock the said parts and means adapted to engage the plunger so as to prevent accidental actuation thereof.

1,628,495. RABBLE AND RABBLE ARM FOR FURNACES. FRANK A. FAHRENWALD, Chicago, Ill. Filed Jan. 16, 1926. Serial No. 81,764. 3 Claims. (Cl. 259—134.)



1. A rabble arm approximately I-shaped in cross section, the foot of the I being thickened and hollowed out and the bottom face being slotted, and scrapers having elongated heads received in the hollow and neck portions traversing the slot and blades depending from the arm, each blade making an oblique horizontal angle with its head.

1,628,496. SWITCH CONSTRUCTION. HARRY W. FAUST, Greenville, Ohio. Filed Dec. 21, 1925. Serial No. 76,696. 5 Claims. (Cl. 200—4.)



1. A switch comprising a base, a main contact post, a pair of headlight controlling contacts on the base, a pair of tail light controlling contacts on the base adjacent the respective headlight controlling contacts, a spot light controlling contact on the base directly rearwardly of the main post, a horn controlling contact on the base arranged forwardly of the contact post and between the aforementioned tail light controlling contacts, a lever pivoted at its rear end on the post, said lever adapted to connect the adjacent pairs of headlights and tail light controlling contacts when swung on its pivot, the lever being further adapted for slidable movement whereby the rear end thereof is brought into engagement with the spot light controlling contact, a contact carried by the forward end of the lever and adapted to engage the horn controlling contact when the forward end of the lever is depressed, and means for normally holding the last mentioned contact out of engagement with the horn controlling contact.

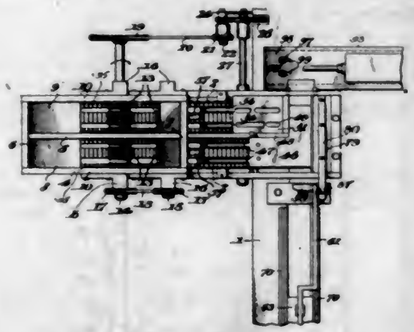
1,628,497. DEVICE FOR ILLUMINATING CLOCKS OR THE LIKE. MAUD C. FOX, New York, N. Y. Filed Aug. 24, 1925. Serial No. 52,241. 6 Claims. (Cl. 240—2.)

1. The combination of a skeleton-like frame having an approximately centrally arranged opening in its forward end, a lining of translucent material in said frame, said lining having an aperture registering with the central opening in said frame, lighting devices mounted in said frame laterally of said central opening, and an article supported in said frame at a distance from said opening and illuminated by said lighting devices.

1,628,498. ARTIFICIAL FOOT. GEORGE M. FRINK, Camden, N. J. Filed Nov. 5, 1925. Serial No. 67,052. 4 Claims. (Cl. 3—5.)

1. An artificial foot comprising a platform, a heel rest mounted on the platform, arms pivotally secured to the platform and rigidly secured to the heel rest, and a cushion interposed and completely filling the space between the platform and heel rest.

1,628,499. DENTAL APPLIANCE. BERNHARD JOESCH, St. Louis, Mo. Filed Oct. 20, 1924. Serial No. 744,610. 1 Claim. (Cl. 32—34.)



A dental appliance comprising crossed pivoted members, one of which curves toward the extremity of the other, a disc, a lug on said disc, a pivot element passing through said other member and through said lug preventing said

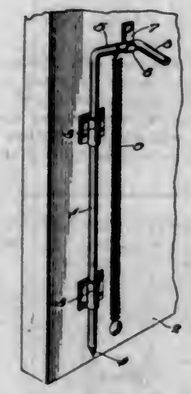
disc from turning laterally toward the upper and lower sides of said other member and permitting said disc to swing toward and away from the inner side of said other member, and an elastic cover enclosing the outer end of

said other member and enclosing said disc beyond the extremities of said two members and extending inwardly from the outer edge of said disc on the side of said disc that is toward said curved member.

1,628,500. FEEDING MECHANISM FOR CIGARETTE-PACKAGING MACHINES. IGNACIO LAZAGA, Habana, Cuba. Filed Mar. 25, 1926. Serial No. 97,323. 11 Claims. (Cl. 226—5)

6. Feeding mechanism for packaging machines including a transfer head having notches formed therein, means for feeding articles into the path of said transfer head to be engaged thereby, a cover plate and studs adjustably carried by said cover plate and extending into the path of the notches in the transfer head for holding articles in their bunched position until engaged by said head.

7. Feeding mechanism for packaging machines, including a feed hopper, endless conveyors for feeding the articles from said hopper along substantially the same horizontal plane, and means for receiving and directing the articles from each of the endless conveyors along a different horizontal plane from the articles delivered from the remaining conveyors.

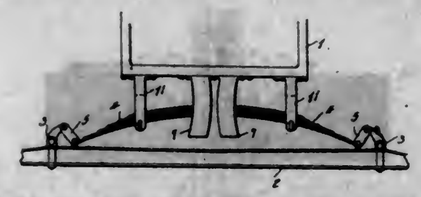


9. Feeding mechanism including a compartment, a plunger for feeding articles through said compartment, a reciprocating cross head pivotally connected with said plunger, and resilient means for normally holding said plunger out of alignment with the compartment.

1,628,501. REMOVABLE CROSSBAR FOR BUCKLES. IRVING R. LEDERER, Providence, R. I. Filed June 23, 1926. Serial No. 117,903. 4 Claims. (Cl. 24—265)

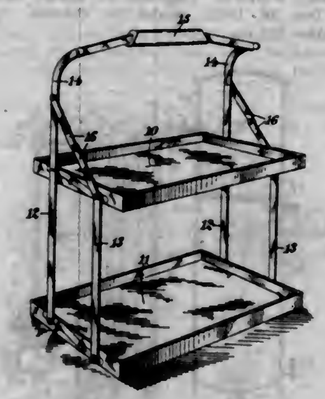
1. In a device of the character described having a pair of perforated side arms, a tubular cross bar extending between said arms, a pivot pin in said tube of a diameter less than that of the inside of the tube and of a length greater than that of the tube with its opposite end portions extending in substantially axial alignment beyond both ends thereof, the ends of the tube being reduced to form central bearings for the protruding ends of the pin, and the body of said pin being offset laterally within the tube to frictionally engage the walls thereof and permit of a relative endways movement and be retained in adjusted position within the tube.

1,628,502. DOOR HOLDER. FRED A. LETZAU, Lansing, Mich. Filed Jan. 10, 1923. Serial No. 611,794. 1 Claim. (Cl. 292—175.)



In combination with a retaining member including spaced guide brackets, a rod slidably mounted within said brackets, a penetrating point on one end of said rod, the other end of said rod bent transversely to the body portion to provide a substantially horizontal portion, a saddle attached to the door or gate in which the portion which is horizontal, rests when in an operative position, the extreme end of the rod beyond the horizontal portion being bent at right angles to said horizontal portion to form a handle, and a coil spring having one end secured to the door or gate adjacent the pointed end of the rod extending parallel with the rod and having its end engaged with the horizontal portion for reciprocating the rod within the brackets upon releasing the same from the saddle.

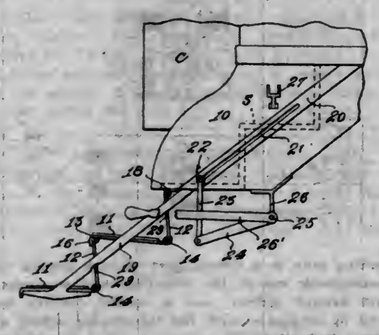
1,628,503. SHOCK ABSORBER. JOSEPH LEVESQUE, Nashua, N. H. Filed Apr. 29, 1924. Serial No. 709,828. 1 Claim. (Cl. 267—28.)



Shock absorbing means comprising oppositely disposed quarter springs shackled at their outer ends to an axle of the vehicle, oppositely curved hangers depending from the vehicle body and receiving the inner ends of the respective quarter springs, helical springs disposed within each of the hangers, the one above and the other below the quarter springs, and brackets depending from the vehicle body and loosely engaging the quarter springs and

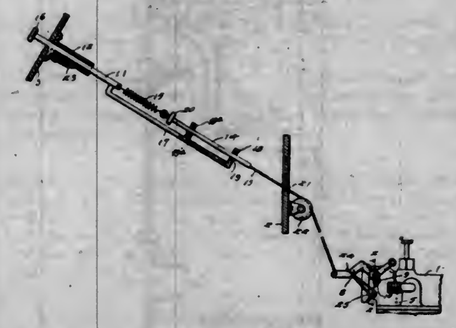
acting jointly with the hangers to prevent fore and aft movement of the quarter springs while at the same time admitting of free vertical movement thereof to com-

pensate for shock, vibration and jolt, said brackets being relatively close to the sides of the body and materially spaced from the hangers.



1,628,504. CAKE STAND AND LIKE PORTABLE STAND. EDWARD STANISLAUS LOUIS, London, England. Filed Feb. 25, 1925. Serial No. 11,601, and in Great Britain Mar. 10, 1924. 4 Claims. (Cl. 211—14.)

1. A portable collapsible stand comprising in combination a rectangular tray arranged to rest on the ground and to constitute the base of the stand, parallel vertical links arranged in pairs at opposite ends of the tray aforesaid, with the members of each pair spaced apart in the end plane containing them and pivotally connected at their lower ends to the marginal portions of the tray in such manner as to permit of swinging movement of the links in the aforesaid end plane, a second tray similar to the bottom tray and supported by the upper ends of the links aforesaid in a horizontal position directly above the bottom tray, the links being pivotally connected to the upper tray in like manner to their connection with the lower tray and the spacing between the two trays being approximately equal to the width of each tray, extension pieces forming upward continuation of corresponding links at opposite ends of the stand, said extension pieces being curved in such manner that their extremities lie over the centre line of the upper tray, a cross-piece interconnecting the extremities aforesaid, and two pairs of knuckle-jointed straps operatively connected between said extension pieces and the upper ends of the adjacent unextended links.

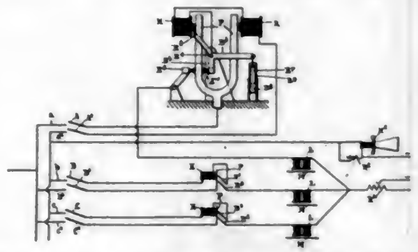


1,628,505. EXTENSION STEP. ERNEST R. LUNDQUIST, Lincoln, Nebr. Filed Sept. 24, 1926. Serial No. 137,562. 5 Claims. (Cl. 105—448.)

1. The combination with main steps, of auxiliary steps hingedly secured to the main steps, means hingedly connecting the risers and treads of the auxiliary steps to permit the said auxiliary steps to fold upward beneath the main steps, and an inclined bar extending upwardly and inwardly from each side of the lowermost auxiliary step, means at opposite sides of the main steps to slidingly receive the bars, a rock shaft extending transversely across and supported beneath the main steps, an arm

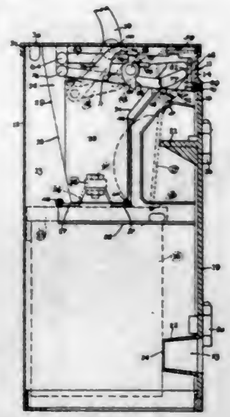
secured to one end of the rock shaft, a link connecting the arm and one of the inclined bars, whereby rocking movement of the shaft will move the bars longitudinally to fold or extend the auxiliary steps, an operating lever secured at one end of the shaft and means to hold the lever against operation.

1,628,506. APPARATUS FOR CONTROLLING THE AIR SUPPLY OF CARBURETORS. CHARLES R. LYMAN, Center Point, Iowa. Filed Sept. 16, 1926. Serial No. 135,897. 4 Claims. (Cl. 137—139.)



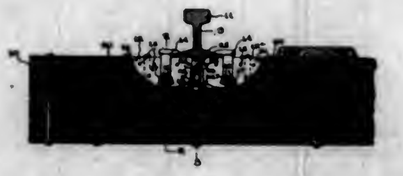
4. In combination, a carburetor, a valve positioned within the air intake passage of the carburetor, a member connected to the valve, a spring connected to the member, and an adjustably mounted rod slidably supporting said member and connected to the spring.

1,628,507. KEYBOARD MUSICAL INSTRUMENT WITH ELECTROMAGNETIC OPERATION. ALCIDE HECTOR MAITRE and VICTOR HENRI GASTON MARTIN, Rouen, France. Filed Sept. 20, 1923, Serial No. 663,806, and in France Sept. 21, 1922. 3 Claims. (Cl. 84—409.)



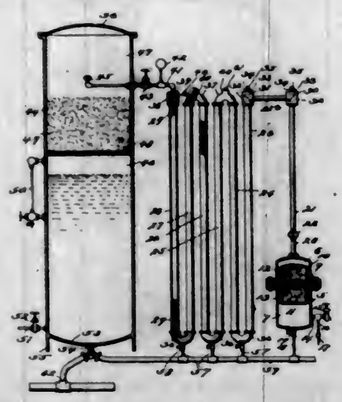
1. A keyboard musical instrument with electromagnetic operation, comprising a circuit common to all the notes of the instrument and a key for each note, contacts actuated by said key, a branch circuit, an interrupter device controlled by said contacts and adapted to interrupt the flow of current in this branch circuit at the desired frequency corresponding to this note, a part of circuit common to a group of notes, sound reproducing devices mounted in said common part of circuit, and

a first contact member adapted to cooperate with the interrupter device in a part of each branch circuit corresponding to a note and to distribute pulsations of current to said sound reproducing devices, together with a vibrating sonorous body tuned in unison with the cor-



responding note in a second part of each branch circuit, electromagnetic means for vibrating said sonorous body in said branch circuit, and a second contact member adapted to cooperate with the interrupter device and to distribute pulsations of current to said electromagnetic means in each branch circuit, for the purpose described.

1,628,508. FARE BOX. MICHAEL C. MCELLIGOTT, Preston, Ontario, Canada, assignor to The Cleveland Fare Box Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 10, 1923. Serial No. 661,889. 5 Claims. (Cl. 232—15.)

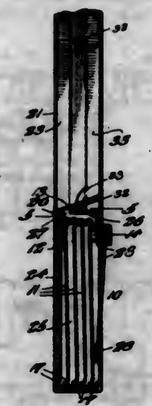


1. In a fare box, the combination with a rectangular casing and a receptacle insertable therein, said receptacle and casing being formed with interfitting projections whereby the receptacle is guided in its movement, of a cover hinged to said receptacle upon a transverse axis, laterally projecting ears carried by said cover, guideways formed in the wall of said casing and inclined away from the path of movement of said receptacle and adapted to receive said ears on the insertion of said receptacle so as to guide the cover to an open position, a ratchet wheel pivoted to the wall of said casing at the upper end of said guideway and having teeth adapted to receive said ears upon the insertion of said receptacle, a stud carried by said casing and supporting said ratchet wheel, a pawl concealed by said ratchet wheel engaging said ratchet wheel and preventing the retrograde movement thereof, and a second guideway formed in the wall of said casing and adapted to receive said ears upon the withdrawal of said receptacle and shaped to force said cover to closed position.

1,628,509. ANCHOR BLOCK FOR RAILROAD TIES. GEORGE F. A. OCHS, Newark, N. J. Filed Aug. 18, 1926. Serial No. 130,053. 3 Claims. (Cl. 238—265.)

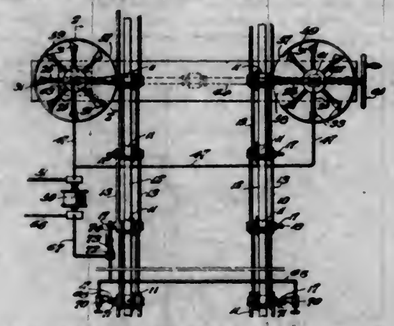
1. A railroad tie having anchor blocks embedded therein below the top face thereof, each anchor block comprising complemental sections, and a fastener interposed between said sections at their adjoining ends, said fastener being removably engaged with the tie and in bearing engagement with said sections.

1,628,510. APPARATUS FOR FILTERING AND PURIFYING WATER. CHARLES H. PERRY, Miami, Fla. Filed Dec. 26, 1922. Serial No. 609,003. 4 Claims. (Cl. 210—131.)



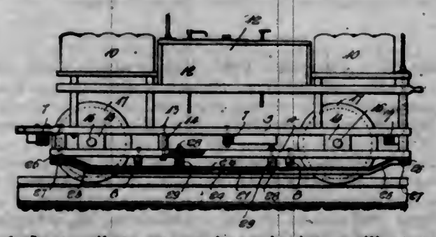
1. An apparatus for filtering and purifying water, comprising a centrally located series of upright filtering pipe conduits connected at their upper and lower extremities by connecting bends, the said pipe conduits and bends being all filled with filtering material and the pipe conduits being in parallel relation, inlet and outlet filtering mediums connected to the first and last pipe conduits of the series, the inlet medium being provided with means for admitting air under pressure and creating a uniformity of pressure within all the conduits approximating that of the water to be filtered, and the outlet medium having storage means for the filtered water.

1,628,511. COLLAPSIBLE SLIDING CLOSURE. GEORGE E. PETERSEN, Bristol, Pa. Filed June 23, 1924. Serial No. 721,849. 17 Claims. (Cl. 189—60.)



1. A collapsible closure for openings, consisting of a frame having a receptacle or magazine at one end and slots forming fixed guides respectively in two opposite sides opening into said magazine, a shutter formed of a plurality of sections arranged in collapsed condition to fit side by side in said magazine and in an extended position to lie substantially in the same plane with opposite ends of each section seating respectively in said guides, connections between adjacent shutters arranged to interlock by movement of said shutters in one direction and to release by movement of said shutters in an

opposite direction, said connections fitting said guides for free sliding movement but held against movement transverse of said guides, and spring means normally

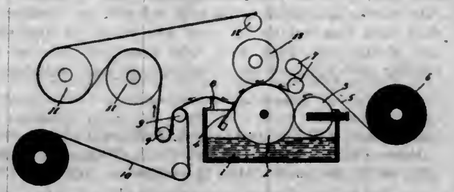


maintaining said sections pressed together whereby upon the removal of one section from said magazine another section is automatically moved to removal position.

1,628,512. CONVEYER LUBRICATOR. GEORGE E. PETERSEN, Bristol, Pa. Filed July 18, 1924. Serial No. 726,894. 7 Claims. (Cl. 184—2.)

1. In a lubricating mechanism, a head having a discharge port, a source of oil under pressure communicating with said head, a plurality of nozzle members arranged to move one at a time in communication with said port, a spring pressed follower provided with a port in each nozzle, and oil conveying means on said conveyer arranged to move said nozzles and engage the respective followers whereby the parts of said conveyer are lubricated without leakage.

1,628,513. RAILWAY MOTOR CAR. HAWKINS E. ROBERSON, Garner, Tex. Filed Jan. 18, 1926. Serial No. 82,103. 5 Claims. (Cl. 105—162.)

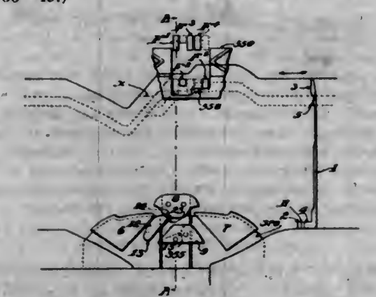


1. In a railway car, a frame having a sill at each side, flanged wheels lying outside the sills, and rails extending longitudinally beneath and terminally secured to the sills and having body portions depending from the sills throughout the distance between the front and rear wheels, said body portions of the rails lying in a plane parallel with and close to and just above the plane of the lower surfaces of the track engaging peripheries of the wheels.

1,628,514. BOILER COMPOUND. FREDERICK ROBINSON, Seaforth, Ontario, Canada. Filed Nov. 19, 1925. Serial No. 70,192. 1 Claim. (Cl. 87—27.)

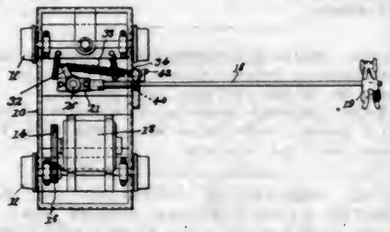
A boiler compound consisting of 8 ounces of bichromate of potash, 1 lb. lye, 6 lbs. caustic soda, 2 lbs. sal soda and 2 lbs. soda ash.

1,628,515. PROCESS OF CRINKLING AND REENFORCING PAPER. WILLIAM WALLACE ROWE, Cincinnati, Ohio, assignor to The Paper Service Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 18, 1924. Serial No. 726,709. 5 Claims. (Cl. 154—33.)



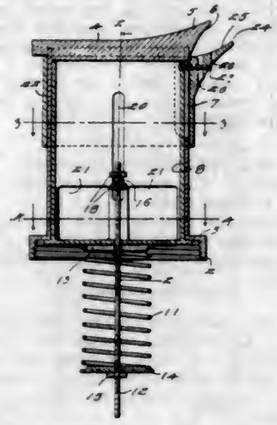
1. That process of creping dry paper, without the use of moisture or adhesive requiring drying, which consists in applying a heat plastic bituminous substance to the paper, bringing said substance to a position of adhesion of a creping roll, so as to bind the paper thereto, and removing the paper with a creping knife so as to crepe the same.

1,628,516. RIM-TREATMENT PROCESS. JOSEPH B. SCOTT, Freeport, Ill. Filed Nov. 28, 1924. Serial No. 752,800. 4 Claims. (Cl. 134—1.)



1. The process of treating motor vehicle wheel rims to prevent sticking of the tire to the metal rim which consists in applying a rim compound comprising beeswax and graphite.

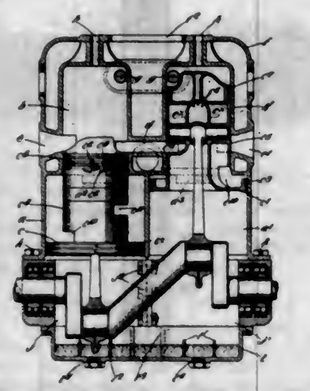
1,628,517. SECTIONAL-SPLICING MECHANISM FOR KNITTING MACHINES. ROBERT W. SCOTT, Boston, Mass., assignor, by mesne assignments, to Scott & Williams, Incorporated, a Corporation of Massachusetts. Filed May 3, 1915. Serial No. 25,492. 20 Claims. (Cl. 66—49.)



1. A knitting machine having in combination needles, a stitch cam, means for delivering a body yarn and a splicing yarn from different distances in advance of said stitch cam to said needles, whereby said needles normally take both of said yarns, and means in advance of said stitch cam for selectively moving certain of said needles only to a position in which said needles and said splicing yarn will come into contact in an inoperative relation.

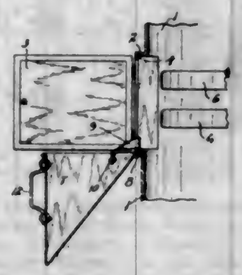
1,628,518. DISAPPEARING RABBIT FOR DOG RACES. JOHN L. SHAUGHNESSY, Harvey, Ill., assignor of one-half to James V. Mondi, Chicago, Ill. Filed July 23, 1926. Serial No. 124,474. 4 Claims. (Cl. 272—4.)

1. A device as described, comprising a carriage having a fulcrum thereon, a rabbit carrying arm having a pivotal and axial movement with respect to said fulcrum, yieldable means associated with said fulcrum for tending to shift said arm axially to cause the rabbit to disappear, and means associated with said arm and fulcrum for causing rotary movement of the arm on axial shifting.



1,628,519. SELF-CLOSING SAFETY-FILLING CAP. JOHN ALBERT SHOUP, Battle Creek, Mich. Filed May 27, 1926. Serial No. 112,174. 6 Claims. (Cl. 220—86.)

1. A cap for liquid containers, comprising a hollow body closed at its upper end and open at its lower end and provided in its side with a filling opening, a hollow valve slidably arranged within the body and closed at its lower end and provided in its side with a port, a spring normally supporting the valve within the body to permit the valve to close the filling opening and the body to close the port, and an element located outwardly of the body and connected to the valve and adapted to permit the valve to be moved downwardly against the tension of the spring to uncover said opening and port.

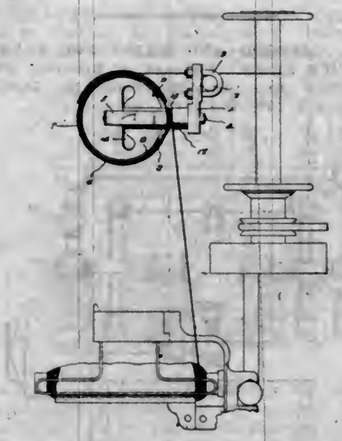


1,528,520. TWO-STROKE-CYCLE INTERNAL-COMBUSTION ENGINE. CHARLES STEWART HASTINGS SNOW, Croydon, England, assignor to N. I. C. E. Limited, London, England. Filed Dec. 12, 1924. Serial No. 755,507, and in Great Britain June 4, 1924. 5 Claims. (Cl. 123—59.)

5. In a two-stroke cycle internal combustion engine, a pair of pump cylinders, a pair of working cylinders in communication therewith and also connected together by a short transfer passage, pump pistons and working pistons working in the said cylinders respectively, mixture inlets being formed in the walls of the pump cylinders, the said pistons being recessed at their lower ends to accommodate the connecting rods and having their remaining portions made hollow in substantially U-form and completely cut off from the crank case, the said hollow portion opening

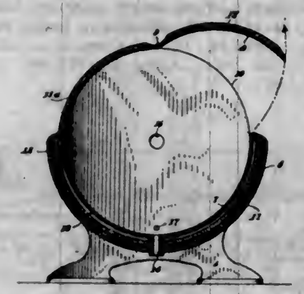
out into oppositely disposed ports which permit the compressed mixture to be transferred through the piston and through the transfer passage into the adjacent working cylinder, and a by-pass connecting the cylinders together whereby the transfer of the mixture can be controlled and whereby also the engine can be throttled.

1,628,521. SOOT RECEPTACLE. PAUL W. THAYER, Minneapolis, Minn. Filed Dec. 14, 1922. Serial No. 606,839. 5 Claims. (Cl. 126—280.)



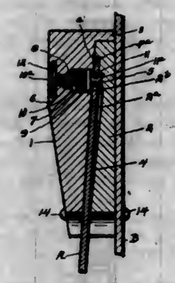
1. A device for collecting soot and dirt removed through a furnace door, comprising a comparatively deep receptacle adapted to be disposed against the front of the furnace, having means constructed and arranged to be disposed beneath and engaging the under said side of the door casing of said furnace, and having spaced means constructed and arranged to project into the door casing, said latter means projecting laterally in opposite directions to engage the interior of the door frame.

1,628,522. PROCESS FOR THE PRODUCTION OF CERAMIC PRODUCTS. WILHELM VERSHOFEN, Bamberg, Germany. Filed Sept. 26, 1923, Serial No. 665,609, and in Germany Sept. 27, 1922. 5 Claims. (Cl. 106—11.)



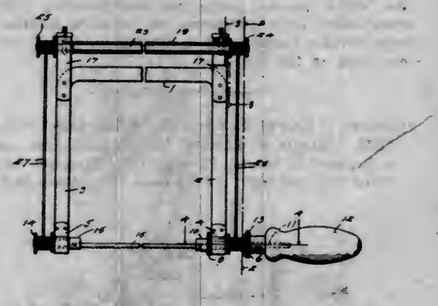
1. The process of making sintered clay articles which comprises adding a soluble fluoride to the clay, increasing the free silica which may be present in the clay to an amount sufficient to ensure the silicating or cementing action of said fluoride and thereby to act as a binder on sintering, and sintering at a lower temperature than is required for the clay alone.

1,628,523. YARN CLEANER. VINCENT WAITKUS, Baltimore, Md. Filed May 11, 1923. Serial No. 638,865. 5 Claims. (Cl. 28—67.)



1. A yarn cleaning device comprising a screen-like surface formed of spaced wires over which the yarn passes on its way to its holder, means for cleaning the surface of matter removed from the yarn, such cleaning means consisting of a fan actuated by the movement of the yarn.

1,628,524. JACKETED CASING. DEAN BROWN BECKER, Fort Atkinson, Wis. Filed Apr. 23, 1925. Serial No. 25,338. 1 Claim. (Cl. 257—208.)



A casing of the type described, comprising a stationary horizontal cylinder of heat conducting material adapted at its ends to have an article receiving drum journaled therein and provided with a top door, a heat insulating covering on the cylinder and its door, said heat insulating covering being spaced from the lower portion of the cylinder to form a pressure jacket therebetween, and inlet and outlet connections for said jacket by means of which a cooling or a heating medium may be passed therethrough, a pair of standards, and a substantially semi-cylindrical protector shell mounted at its ends on said standards and surrounding the jacket forming portion of the heat insulating cylinder covering.

1,628,525. MINE-CAR CHECK LOCK. CHARLES E. BELL, Charleroi, Pa., assignor of one-half to Thomas H. Robinson, Donora, Pa. Filed Aug. 26, 1924. Serial No. 733,168. 3 Claims. (Cl. 40—15.)

1. In a mine car check lock, a body provided with a slot for reception of a mine car check, and a spring pressed bolt normally projected across the slot, said bolt having its inner end portion beveled to permit the bolt to be forced outwardly by a check inserted into said slot, one side of the slot increasing in depth from the outer end of said slot to within a short distance of the bolt and providing a shoulder extending transversely of the slot in advance of the bolt.

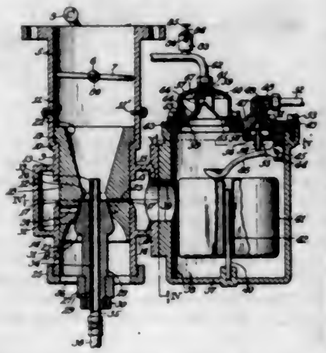
1,628,526. COMBINATION HACK AND SCROLL SAW. ELLIS J. BOYD, Oak Park, Ill. Filed Feb. 7, 1925. Serial No. 7,656. 1 Claim. (Cl. 145—33.)

A saw comprising a frame having a cross bar and parallel arms, drums journaled on the outer ends of the arms, saw clamps fixed to the drums, brackets secured to the arms adjacent the cross bar and extending outwardly beyond the cross bar, blocks, means adjustably securing the blocks to the brackets, a tube located between and secured to the blocks, a shaft journaled in the tube and projecting therefrom outwardly beyond the arms, drums fixed to the ends of the shaft in alinement with the first named drums, and cables connecting the first named drums to the second named drums, said blocks being used to raise or lower the tube thereby loosening or tightening the cables.

1,628,527. PROJECTILE FOR SMOOTH-BORE GUNS. EDGAR WILLIAM BRANDT, Paris, France. Filed Feb. 19, 1925. Serial No. 10,413, and in France Jan. 12, 1925. 11 Claims. (Cl. 102—29.)

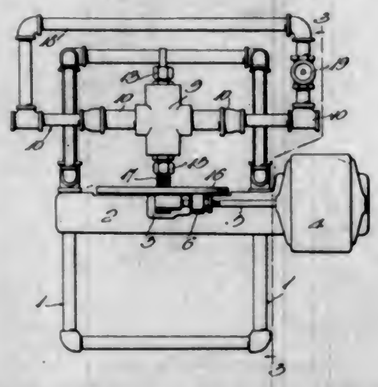
1. A projectile for smooth-bore guns comprising a body having an ogival front part and a truncated conical rear

part connected at their bases, a fuse secured to said front part and a fin carrying tail part, the total length of said projectile being comprised between 3.8 and 4 calibres



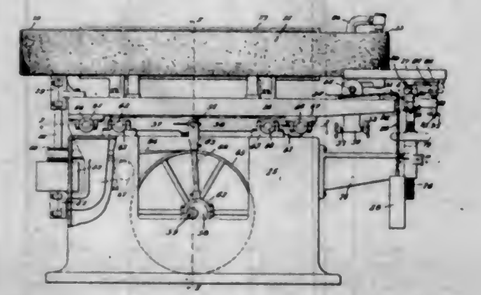
the length of the rear part of the body being comprised between 1,8 and 2 calibres and the length of the said tail part being less than 1 calibre.

1,628,528. AGE-RESISTING RUBBER COMPOUND AND PROCESS OF MAKING SAME. ERNEST R. BRIDGWATER, Wilmington, Del., and DONALD HOWARD POWERS, Penns Grove, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 3, 1926. Serial No. 120,516. 11 Claims. (Cl. 18—50.)



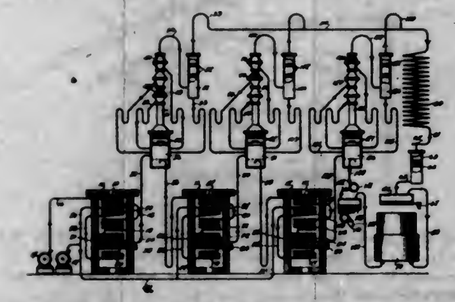
1. The process of preserving a cured rubber composition which process comprises incorporating with said composition, prior to curing, an intimate mixture of a finely divided powder and a substance adapted to retard the aging of the rubber.

1,628,529. VENTURI-VACUUM FUEL-CONTROL SYSTEM. MARTIN C. BRIGHT, Indianapolis, Ind., assignor to Bernard B. Carlin, Chicago, Ill. Filed Oct. 16, 1922. Serial No. 594,895. 11 Claims. (Cl. 158—36.1.)



1. An explosion engine fuel control system including a fuel-feed reservoir having a lateral feed-chamber, a fuel-inlet for the reservoir, means in the reservoir to automatically control the fuel-inlet, a shifting Venturi tube having a port to conduct fuel from the feed-chamber and into the tube, an atomizing device in the Venturi tube, a mixing tube, a section conduit having connection with the reservoir, an alternating vacuum conduit extending from the interior of the Venturi tube, and cooperating means for controlling the shifting Venturi tube and for alternatively connecting the suction conduit with the mixing tube and the vacuum conduit with the suction conduit.

1,628,530. METHOD AND MEANS FOR CLEANING OUT PIPE LINES. CHARLES A. BURNETT, Elkhart, Ind. Filed Apr. 16, 1925. Serial No. 23,627. 4 Claims. (Cl. 137—70.)



1. A method of cleaning a partly clogged liquid pipe of a liquid conducting system without removing said pipe from the system and using only the pressure of the system-contained liquid supplied to said pipe, said method consisting in repeatedly opening and closing the pipe in quick succession to passage of said liquid, the latter being free to enter the pipe under its normal pressure when the pipe is opened to discharge loosened scale and sediment.

1,628,531. OSCILLATING BELT SANDER. GEORGE H. CARLSON, Rockford, Ill., assignor to Redin, Ekstrom & Company, Rockford, Ill., a Corporation of Illinois. Filed Mar. 26, 1924. Serial No. 701,929. 6 Claims. (Cl. 51—142.)

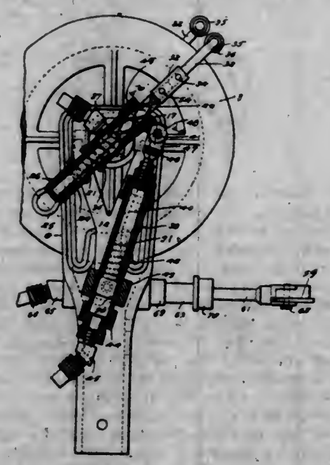
4. A sander comprising, in combination, a driving and an idler roll, an endless flexible band of abrading material trained on said rolls, a bed upon which said rolls are supported, a platen mounted on said bed behind said band, a table for supporting work in operative relation to the periphery of said band, means for revolving the driving roll, a base, a pair of levers supported on said base and connected with the bed and adapted to be operated in a rocking motion to reciprocate it and thereby impart bodily transverse reciprocation to the traveling-band, and springs operative between the base and bed for counterbalancing the latter and the parts thereon.

1,628,532. TREATING HYDROCARBON OILS. WILLIAM L. COULTAS, Jr., Sanford, N. Y. Filed July 12, 1920. Serial No. 395,468. 2 Claims. (Cl. 196—62.)

1. A method of treating hydrocarbon oils, which comprises providing a plurality of furnaces each containing oil-heating coils for the purpose of subjecting the oil passing therethrough to gradually increasing exterior temperatures whereby the oil is treated progressively to the temperature of vaporization, introducing free hydrogen into the oil in the coils of each furnace at the point where the oil has reached the vaporization state, said hydrogen being of a temperature of approximately 1400° F., whereby vapors of new hydrocarbons are thus formed, passing the vapors thus produced from each furnace into separate distillation columns, condensing the vapors of high boiling point, fractionating out the vapors of low boiling point in each column, and passing the condensate of high boiling point from each column to a second furnace for repeating the above steps.

1,628,533. COMBINED COLLAR BUSTER AND CASING SPEAR. PAUL DIETRICH, Apperson, Okla. Filed Sept. 16, 1924. Serial No. 738,099. 1 Claim. (Cl. 166—1.)

A well tool of the character specified comprising an eccentric bore to slip over the inner pipe and having a relatively thick side portion, a shank attachable to a jarring rod and extending from said side portion and disposable between the inner pipe and well casing, said body having a side portion being cut away and the bottom of the cut away portion inclined and provided with a groove having an end portion enlarged and a portion with its opposite walls under cut, a dog having a rib to enter the enlarged portion of said groove and engage the under cut portion thereof, and a keeper applied to the body to prevent registering of the rib of the dog with the enlarged portion of the said groove to prevent casual displacement of the dog.



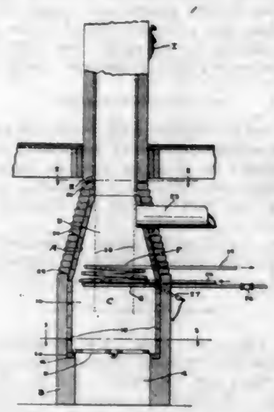
1,628,534. INDOPHENOL AND PROCESS OF PRODUCING THE SAME. JOSEPH G. DINWIDDIE, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 18, 1924. Serial No. 700,166. 8 Claims. (Cl. 260—55.)

2. The process of producing an indophenol which comprises condensing carbazole with a nitrosophenol at a temperature at all times substantially below —4° C.

1,628,535. PROCESS FOR THE PURIFICATION OF ABIETIC ACID. GEORGES HONORÉ DUPONT, Bordeaux, France. Filed Apr. 23, 1925, Serial No. 25,434, and in France Apr. 28, 1924. 2 Claims. (Cl. 260—122.)

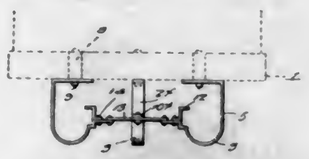
1. A process for purifying abietic acid, consisting in dissolving raw abietic acid in a solvent thereof, adding to the solution a quantity of an alkali sufficient to neutralize exactly one fourth of the raw abietic acid contained in the solution and in separating from the solution the acid abietate thus formed.

1,628,536. AUTOMATIC SAFETY TROLLEY. PATSY FASSON, Mount Pleasant, Pa., and DANIEL FASSON, Rochester, N. Y. Filed Apr. 30, 1925. Serial No. 26,975. 14 Claims. (Cl. 191—79.)



1. A trolley wheel guard comprising retaining arms, shafts to which the arms are secured, and means for supporting the shafts for endwise and rotative movements.

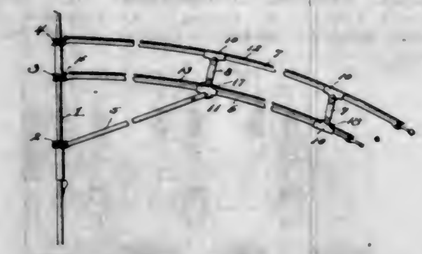
1,628,537. DWELLING INCINERATOR. HARRY F. FISHER, St. Paul, Minn. Filed July 26, 1924. Serial No. 728,442. 1 Claim. (Cl. 110—18.)



An incinerator including a combustion chamber, a chimney connected to said combustion chamber adapted to receive refuse therethrough and to carry off the gases from said combustion chamber, an opening in said chim-

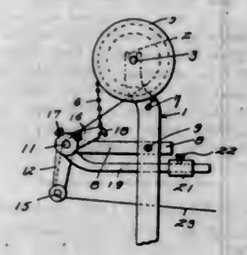
ney to receive refuse into said incinerator combustion chamber, and a coil fuel oil burner extending into said combustion chamber in a manner to allow the refuse

to pass therethrough and to spray fuel oil over the refuse introduced therein to consume entirely the refuse in said incinerator.



1,628,538. TIRE CARRIER. RALPH F. FREEMAN, Ashland, Kans., assignor of one-half to Robert D. Smith, Ashland, Kans. Filed Apr. 14, 1926. Serial No. 101,996. 3 Claims. (Cl. 224—29.)

1. In combination, a vehicle body or frame, cradles disposed under the body or frame and spaced apart, each of said cradles having a longitudinally slotted arm opposed and adjustably connected to the underside of the body or frame and also having a pendent arm and a concavo-convex portion at the lower end of the pendent arm and a right angle seat at the opposite end of said concavo-convex portion and a longitudinally slotted arm extending inwardly from said seat, angular retainers arranged above the seat of said cradles and connected to the inwardly extending arms thereof, a tie bar adjustably connected to the inwardly extending arms of the said cradles, and an auxiliary cradle disposed at an angle to the first-named cradles and the said tie bar and having an upper bar adjustably connected with the body or frame and a pendent arm on said bar and a concavo-convex portion at the lower end of said pendent arm, and an angular seat at the opposite end of the concavo-convex portion and an arm into which said seat is merged, said arm adjustably connected with the said tie bar.

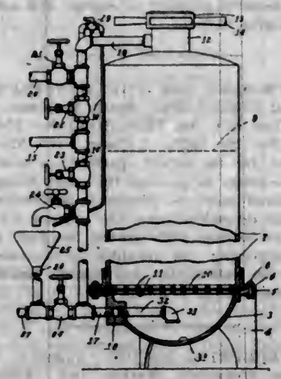


1,628,539. DUPLEX UMBRELLA. WILLIAM GEORGE GREY, Baltimore, Md. Filed Feb. 24, 1925. Serial No. 11,286. 3 Claims. (Cl. 135—20.).

3. In an umbrella a staff, inner and outer sets of ribs foldable relatively to said staff and normally spaced apart when unfolded, means connecting adjacent ribs of said sets for maintaining them in substantial parallelism throughout all positions of said ribs, said means being disconnectable from the ribs of one set to permit the outer set of ribs to be folded upwardly independently

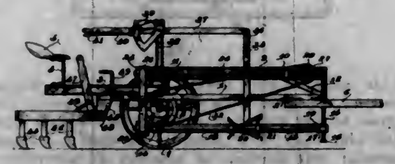
of the inner set of ribs, and independent covers for said sets of ribs, the inner cover being replaceable by passing it over the upper set of ribs when the latter are upwardly folded.

1,628,540. LET-OFF MECHANISM FOR LOOMS. ROLAND M. HUGHES, Clinton, S. C., assignor of one-half to Richard E. Ferguson, Clinton, S. C. Filed Oct. 24, 1925. Serial No. 64,638. 1 Claim. (Cl. 139—109.)



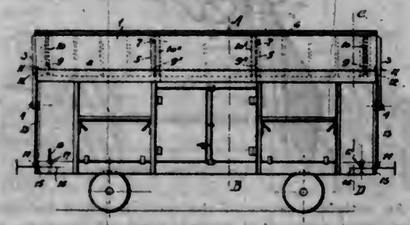
A let-off mechanism for looms comprising, in combination with a warp beam, supports therefor and a friction pulley fixed to the warp beam, of horizontal brackets fixed to and extending rearwardly from the supports immediately below the warp beam, a rod journaled in the rear ends of the brackets, a lever fixed to and extending upwardly and forwardly from the rod and provided at its upper end with a hook, a friction chain passing about the pulley and secured at one end to one of the supports and having its other end engaged with the hook of the lever, a weighted lever fixed to and extending downwardly and thence forwardly from the rod, levers fixed to and extending down from the rod, and a rod journaled in the lower ends of the last named levers for contact with the warp threads.

1,628,541. WATER SOFTENER. OSCAR W. JOHNSON, Rockford, Ill., assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Oct. 1, 1926. Serial No. 138,830. 6 Claims. (Cl. 210—24.)



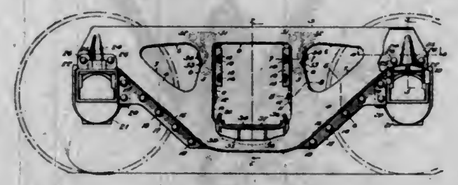
1. The method of operating a base-exchange water softener which consists, first, in passing hard water through a zeolite material bed for softening, second, passing brine or other reagent with hard water through the bed of material in one direction for regenerating the same, and third, passing hard water in the opposite

direction through the bed to wash the same, the hard water being accompanied with a certain amount of brine or reagent sufficient to regenerate whatever amount



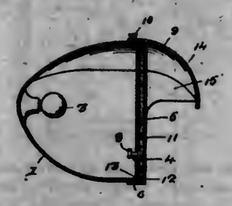
of material in the bed was exhausted in whole or part by the passage of the hard water with the brine through the material during regeneration.

1,628,542. COTTON CULTIVATOR. CHARLIE JONES, White Plains, N. Y. Filed Dec. 3, 1925. Serial No. 73,007. 2 Claims. (Cl. 97—15.)



1. In a cotton cultivator, a pair of wheels, an axle connecting said wheels, a main frame mounted on said axle, a drive shaft journalled in said main frame, driving means connecting said shaft with one of the wheels, a cutter frame pivotally mounted on said axle, a cutter shaft supported solely by said cutter frame, means arranged in proximity to said axle and cooperating with said drive shaft to rotate said cutter shaft, cutter blades mounted on said cutter shaft and a vertically adjustable cross bar having downwardly depending extensions in pivotal attachment to the second frame to effect vertical adjustment thereof.

1,628,543. TRANSPORT WAGON FOR RAILWAYS. JONAS JONSSON, Vansbro, Sweden. Filed Dec. 6, 1926. Serial No. 152,964, and in Sweden Dec. 7, 1925. 2 Claims. (Cl. 105—377.)

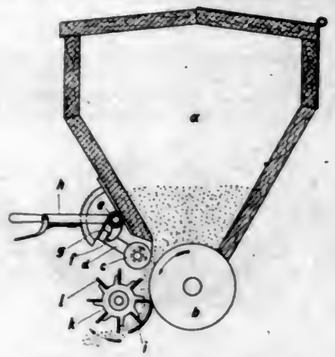


1. In a transport wagon for railways the provision of shutters extending longitudinally of the wagon and constituting the roof of the same, and of arms carrying the said shutters and swingable on trunnions in such manner that the shutters, when moved laterally outwards, do not extend in any essential degree outside the profile of the wagon.

1,628,544. SIDE FRAME. BYERS W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Sept. 28, 1923. Serial No. 665,445. 48 Claims. (Cl. 105—205.)

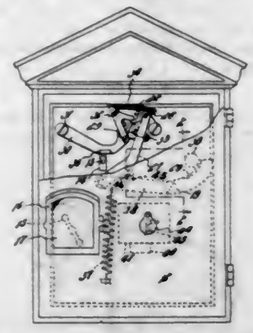
1. A car truck side frame involving inner and outer walls arranged in spaced relation, each of said walls having a plurality of truck column portions, a plurality of top arch bar portions, and a plurality of bottom arch bar portions, said bottom arch bar portions being provided with flanges having portions thereof projecting inwardly of the side walls and downwardly therefrom, and means including a plurality of rivets uniting the downwardly extending portions of said flanges, the lowermost of said rivets being located at a point relatively remote from the critical points of the side frame at the junctions of the truck column portions with the bottom arch bar portions.

1,628,545. HEADLIGHT. FOWLER M. KINKEAD, Boston, Mass. Filed Oct. 28, 1925. Serial No. 65,432. 1 Claim. (Cl. 240—48.4.)



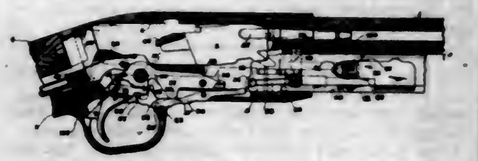
In a head lamp, a body having its sides gradually rounded upwardly from its lower center to its top and having its top arched, a light deflector having its inner portion shaped to correspond with that of the outer face of the body, a continuous flange thereon designed to overlap the outer edges of the body, T-shaped lugs formed on the rounded lower side of the deflector, said body having T-shaped slots for receiving therein said lugs, said reflector having an arched top rounded outwardly and downwardly, a binding element carried by said flange for engagement with the top of the body and a lamp bulb carried by said body as and for the purpose specified.

1,628,546. FERTILIZER-DISTRIBUTING MACHINE. AUGUST WILHELM KOCH, Hannover-Kleefeld, Germany. Filed Feb. 24, 1925, Serial No. 11,294, and in Germany Mar. 1, 1924. 6 Claims. (Cl. 275—2.)



1. In a fertilizer strewing machine and the like the combination with a container and a pair of spacedly disposed, parallel, rotatable feeding and crushing rollers of different diameter at the open bottom of the container,

of rotatable delivery and ejecting means below the axial plane of the rollers and opposite the space between the same, and a shield adjacently surrounding part of the

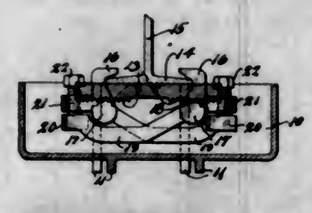


bottom portion of the delivery and ejecting means and extending within close proximity of the larger rotatable feeding and crushing roller.

1,628,547. FIRE-ALARM APPARATUS. CHARLES E. KOONTZ, Baltimore, Md. Filed Mar. 3, 1923. Serial No. 622,614. 6 Claims. (Cl. 177—368.)

1. A fire alarm box including an alarm control element, a door closing said box, means whereby the control element is actuated to sound the alarm incident to the opening of the door, means whereby the door may be opened without operating the control element and means carried by said door and arranged to engage a part of one of said means to prevent the closing of said door when the second mentioned means is disposed in operative position.

1,628,548. FIREARM. CRAWFORD C. LOOMIS, Ilion, N. Y., assignor to Remington Arms Company, Inc., a Corporation of Delaware. Filed July 29, 1922. Serial No. 578,436. 94 Claims. (Cl. 42—17.)



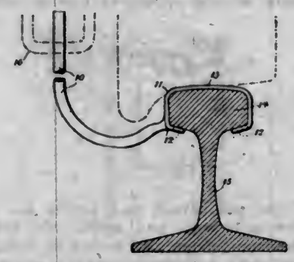
1. In a firearm, the combination of an action bar, a hammer, a member for locking said hammer pivoted concentric therewith, and an element for locking said action bar, and cooperating with said member for controlling the unlocking of said hammer.

21. In a firearm, an action bar, a hammer, a pivoted action bar locking element, and a separate pivoted hammer locking member adapted to engage and actuate said action bar locking element.

1,628,549. PROCESS FOR THE MANUFACTURE OF GRANULAR CELLULOSE. ROGER MAGONDEAUX, Paris, France. Filed Nov. 18, 1924, Serial No. 750,716, and in France Nov. 20, 1923. 1 Claim. (Cl. 92—3.)

The process, for the object specified, of treating sawdust, which consists in passing the same through sieves of predetermined mesh to obtain a particular uniform size of granule depending upon the purpose for which it is desired, and sifting such graded sawdust to remove dust, then subjecting the granules to treatment in an alkaline solution, and finally centrifuging and drying the granular product lastly obtained.

1,628,550. ANCHORING DEVICE. JAMES O. MEREDITH and GROVER MEREDITH, Marion, Ind. Filed Dec. 3, 1926. Serial No. 152,488. 12 Claims. (Cl. 238—166.)

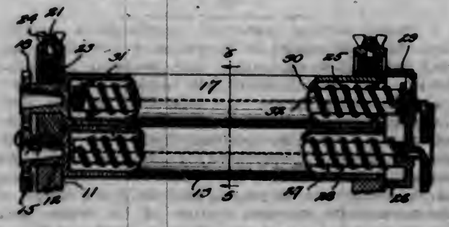


12. In an anchoring device, a fixed casing having a support for a member to be anchored, and opposite clamping jaws having fulcrums adjustable upon said support toward and from each other to provide for clamping engagement with portions of members of materially different width.

1,628,551. ANTIGLARE DEVICE. BENJAMIN LAKE NOYES, Stonington, Me. Filed Mar. 29, 1926. Serial No. 98,359. 8 Claims. (Cl. 2—12.)

1. An antiglare device of the class described including a glare plate adapted to project forwardly between the eyes of a wearer, means for supporting said plate upon a wearer's head, and a universal connection between the plate and its supporting means.

1,628,552. RAIL OBSTACLE. JOHN B. O'CONNOR, Brooklyn, N. Y. Filed Oct. 22, 1926. Serial No. 143,476. 4 Claims. (Cl. 246—207.)

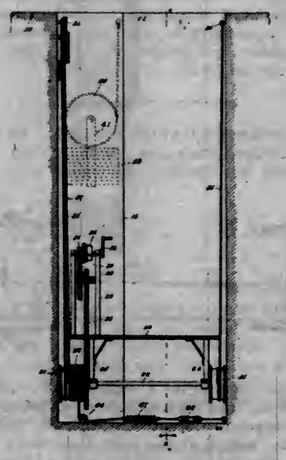


1. An obstacle comprising a trip member, and means for effecting the attachment of the trip member on the traction portion of a track element, the trip member connected with said means below the uppermost surface thereof, the trip member disposed substantially vertically at one side of the track element.

1,628,553. ANGLE SCREW DRIVER AND ATTACHMENT. DARNEY P. OWENS, Lake Worth, Fla. Filed Nov. 20, 1925. Serial No. 70,348. 1 Claim. (Cl. 145—66.)

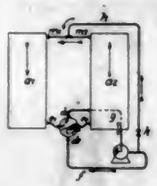
A tool of the class described including a handle, a shank arranged angularly with respect to the handle, and both shank and handle having their confronting ends rounded to provide eyes which interengage, a ball housing receiving the interengaging eyes therein and having sleeve extensions for the shank and handle and bearing means between the shank, handle and such sleeves which prevent the longitudinal movement of either the shank or the handle.

1,628,554. CLOTHES WRINGER. GAETANO PAGANO, Brooklyn, N. Y., assignor of one-fourth to Salvatore Benfonti and one-fourth to Gaetano Sofia, Brooklyn, N. Y. Filed Mar. 29, 1926. Serial No. 98,279. 1 Claim. (Cl. 68—32.)



A laundry device comprising a pair of tubular rollers, one of which has rotative and bodily movement, a heating unit for said rollers comprising a pair of heating cores, one each extending into said rollers, a bracket carried by one of said heating cores, and means for slidably mounting the other of said heating cores on said bracket for bodily movement with said bodily moveable roller.

1,628,555. BOTTLE-STOPPER SEAL. HENRY G. PEPINO, New York, N. Y. Filed Oct. 6, 1925. Serial No. 60,849. 2 Claims. (Cl. 215—82.)



1. A bottle stopper seal, including in its construction a wire extending across the top and looped around the stopper circumferentially at the juncture of the stopper and bottle and with the ends extending from the stopper to a point adjacent to the bottom end of the bottle, and a wrapper secured to the bottle and substantially covering the same and also the stopper, said wrapper being held in place by adhesive whereby the wrapper must be materially ripped before the stopper can be removed.

1,628,556. COUNTERWEIGHTED SIDEWALK ELEVATOR. AXEL J. ROSELL, Brooklyn, N. Y. Filed June 17, 1926. Serial No. 116,666. 2 Claims. (Cl. 187—62.)

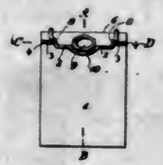
1. In a side walk elevator, the combination with a shaftway, and platform guided for vertical sliding movement in the shaftway, of a drum shaft hung from and journalled below the platform, drums on the ends of the shaft, lifting cables wound on the drums and anchored near the top of the shaftway, a counterweight, a counterweight cable wound on one of the drums, a frame mounted on the platform, a train of driving gears supported by the frame and connected to the drum shaft, and a tensioning cable anchored in the bottom of the shaft and wound on one of the drums.

1,628,557. APPARATUS FOR TREATING VEGETABLE, ANIMAL, OR ARTIFICIAL FIBERS WITH DYES OR OTHER LIQUIDS. JACQUES SCHLUMPF, Oberwinterthur, Switzerland. Filed Mar. 24, 1926, Serial No. 96,972, and in Great Britain Mar. 14, 1925. 1 Claim. (Cl. 8—18.)

A dyeing machine of the type described, comprising a circulating pump, a circulating pipe system, two chambers adapted to receive the goods to be treated, said chambers being connected to the circuit of said circulating pump, a reversing valve adapted to enable the direction of flow to be reversed at will in both chambers, and the system being provided with a single by-pass allowing the rate of flow of the dye in whichever chamber the flow is upwards to be moderated at will.

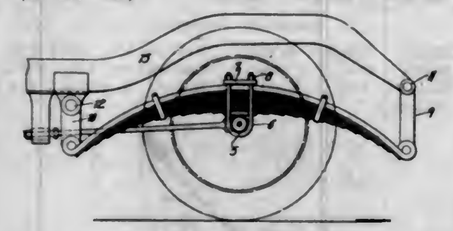
1,628,558. SHEET-METAL CASING FOR PHOTOGRAPHIC FILMS. JOSEF SCHULZ, Barmen, Germany. Filed Apr. 15, 1926, Serial No. 102,243, and in Germany Feb. 2, 1926. 5 Claims. (Cl. 95—22.)

1. A multipartite sheet-metal casing for photographic films and film-packs, comprising in combination, a back-member (4), a mid-member (5), and a closing cap (6), said three parts constituting the film casing proper, substantially as set forth.



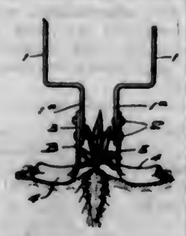
1,628,559. COASTER-WAGON BRAKE. ERNEST SINCLAIR SHOWERS, Champion, Mich. Filed Apr. 29, 1926. Serial No. 105,569. 8 Claims. (Cl. 188—20.)

1. In a coaster wagon a hollow axle, disk wheels mounted thereon, and braking means comprising annular brake disks disposed concentric to the axle and exterior to the wheels, means urging said disks away from the wheels, and manually controllable means for simultaneously applying said brake disks, said means including elements passing longitudinally through the hollow axle and connected to the brake disks.



1,628,560. PIN TICKET. WILHELM SIEGFRIED, Erfurt, Germany. Filed Nov. 14, 1924, Serial No. 749,968, and in Germany Apr. 7, 1924. 2 Claims. (Cl. 40—25.)

1. In a pin-ticket, the combination of a ticket, a pair of pins extending through the ticket and having a common connecting portion forming a base arranged on the same side of the ticket as the pins, said connecting portion having bent portions forming abutments arranged against and embracing portions of the peripheries of the pins, the length of said connecting portion being such

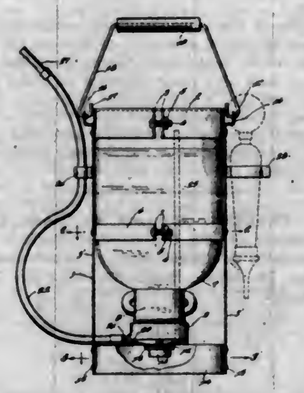


as to space the pins apart and permit the bending thereof toward each other and across said abutments, and said connecting portion also having an intermediate curved portion which extends downwardly on the ticket below the common plane of the said pins.

1,628,561. SPRING. FRANCIS JOSEPH SMITH, Gary, Ind. Filed Apr. 2, 1925. Serial No. 20,210. 3 Claims. (Cl. 267—44.)

1. A suspension spring comprising a main leaf of substantially heavy material, and a graduated group of leaves of light material, the said heavy main leaf being given the same shape as would be assumed by the group of light leaves after they alone had been placed under a weight substantially equal to the sprung weight of the vehicle for which it is designed, and means for assembling these leaves in cooperation with each other.

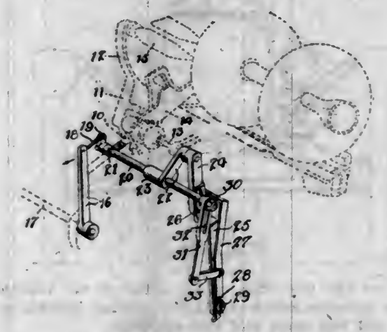
1,628,562. EARTH-WORKING IMPLEMENT. JOHN B. SMITH, Mountain Home, Ark., assignor of one-half to Ben F. Love, Mountain Home, Ark. Filed Sept. 28, 1926. Serial No. 138,308. 1 Claim. (Cl. 97—207.)



A ground working implement comprising, in combination, a bar adapted to be supported in a vertical position, and a blade engageable with the lower portion of the bar, said blade comprising a vertical portion and a lower horizontal portion, said horizontal portion being disposed lengthwise on a predetermined curvature, the side faces of the lower portion of the blade being disposed on an angle of approximately forty-five degrees with respect to the horizontal, the lower part of the forward margin of the vertical portion and the lower margin of the horizontally disposed portion of the blade being formed into a continuous knife edge, said margins of the vertical portion and horizontal portion at their junction being disposed on a curvature of approximately one-quarter of a circle.

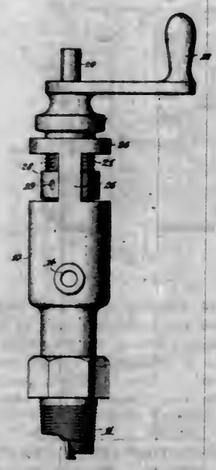
1,628,563. BATTERY-PLATE PULLER. JOHN TAYLOR, Chicago, Ill. Filed July 20, 1925. Serial No. 44,936. 2 Claims. (Cl. 294—119.)

1. As a new article of manufacture, a battery plate puller comprising a handle of insulating material, two sets of pivoted jaw members, links for each set of jaw members, a pin for pivotally connecting one set of links to one end of said handle and a second pin mounted in the other end of the handle pivotally supporting the other set of links for relative movements and for longitudinal movements along the shank of the pin.



1,628,564. BATTERY FILLER. JOHN TAYLOR, Chicago, Ill. Filed Dec. 19, 1925. Serial No. 76,532. 6 Claims. (Cl. 221—25.)

1. In a battery filler, a supporting frame, a container secured in said frame, a closure cap secured on the lower end of the container and provided with an outlet member, a flexible tube secured on said outlet member, the cap being provided with a filling opening to one side and independent of said outlet member, and a removable closure plug secured in said opening and effecting a fluid tight closure thereof.

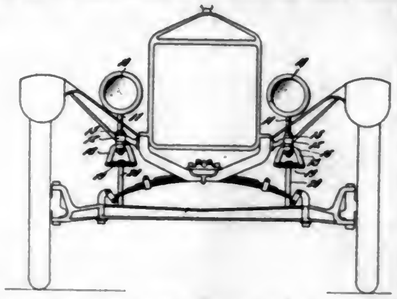


1,628,565. FILLING-END CLEARER. WILLIAM MONROE TYSON, Lanett, Ala., assignor of one-fourth to R. J. Jennings, West Point, Ga. Filed Oct. 21, 1926. Serial No. 143,223. 3 Claims. (Cl. 139—261.)

1. The combination with a loom having filling replenishing mechanism including a starting rod, of a filling end withdrawing member, a rock shaft, a crank lever on said shaft, said crank lever having a slot to receive the shaft and permitting transverse movement of the lever relative to the shaft, a link connecting the crank lever and the withdrawing member, a crank arm on said rock shaft, a lever rigidly secured to the starting rod of the filling replenishing mechanism and having connection with the crank arm on the rock shaft, whereby rotation of the starting rod will lower the withdrawing member into the path of the falling quill, and whereby the return movement of the starting rod at the com-

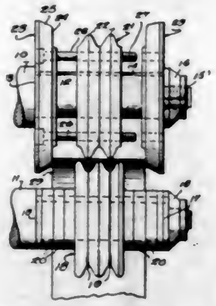
pletion of the filling operation will return the withdrawing member to its normal position and withdraw the filling end.

1,628,566. TRY COCK. WILLIAM E. WILLIAMS, Brooklyn, N. Y. Filed Oct. 27, 1926. Serial No. 144,569. 1 Claim. (Cl. 251—139.)



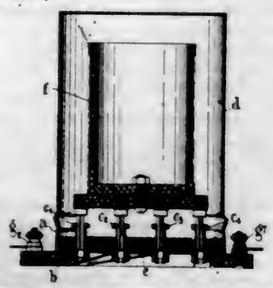
A try cock including a casing having an inlet, an outlet and a seat between the inlet and outlet; a stem, a valve member on the stem, a sleeve surrounding the stem and adjustably associated with said casing, said sleeve having a seat, said valve member adapted to be moved into and out of engagement with said seats, and means limiting the adjustment of said sleeve.

1,628,567. LIGHT CONTROL. WILLIAM HARROLD WILLIAMS, Marlin, Tex. Filed June 11, 1926. Serial No. 115,321. 1 Claim. (Cl. 240—62.)



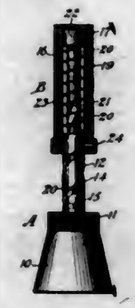
A dirigible headlight for automobiles comprising a vertically disposed rotatably mounted post, a lamp at the upper end of the post, a bearing bracket for supporting the post, a squared extension upon the lower end of the post, an inverted substantially U-shaped member having a squared socket therein for receiving the squared extension of the post, and providing downwardly extending spaced integral arms, a vertically disposed arm having

its lower end connected to the steering knuckle connecting rod and springs, each having one of their ends secured to the upper end of said rod and their other ends



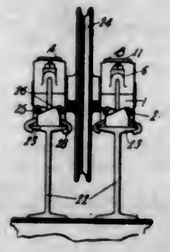
secured to the free ends of the arms of the U-shaped member, whereby movement of the steering knuckle connecting rod will move said post pivotally.

1,628,568. METHOD AND APPARATUS FOR GROOVING AND FLANGING TUG RIMS. DELL H. WOLFE, Parkersburg, W. Va., assignor to The Parkersburg Rig & Reel Company, Parkersburg, W. Va., a Corporation of West Virginia. Filed July 14, 1926. Serial No. 122,448. 8 Claims. (Cl. 153—2.)



1. The method of forming metal rims which consists in arranging a blank rim between a pair of grooving rolls with its edges between a pair of flanging rolls to be guided thereby, moving the grooving rolls toward each other and revolving at least one of them to form a peripheral groove in the rim, then forming flanges at the edge portions of the rim with said flanging rolls.

1,628,569. SCREENING OF COILS CARRYING HIGH-FREQUENCY CURRENT. WALTER SCOTT WORTHINGTON, London, England. Filed July 27, 1926, Serial No. 125,280, and in Great Britain Mar. 11, 1926. 3 Claims. (Cl. 175—356.)

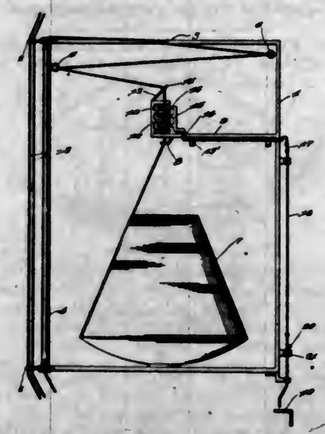


1. A screen for coils carrying high frequency currents comprising in combination a metal casing having a fixed and a detachable part and a base of insulating material serving as a coil holder and having a number of contacts capable of engaging with the usual contacts provided on a detachable coil, said base being secured to the fixed part of the metal casing, said fixed metal part having a number of holes corresponding to the number of contacts on the base for the passage of electric conductors to be connected to the said contacts on the base and the said detachable part of the metal casing being such as to allow, when removed, a replacing of the coil on the base serving as coil holder.

1,628,570. CIGAR CUTTER. THOMAS H. ANDERSON, New York, N. Y., assignor to Max E. Bernhardt, New York, N. Y. Filed Oct. 22, 1925. Serial No. 64,238. 3 Claims. (Cl. 131—20.)

3. A device of the class described, comprising a cigar end receiver having a sleeve, a drill mounted to move within said sleeve, said sleeve having a helical slot, the lower end of said slot being disposed at right angles to the axis of said slot, a drill carrier secured to said drill, a pin carried by said carrier and projecting into said slot, means tending normally to withdraw said drill from said sleeve, and a grip sleeve surrounding and loosely mounted upon said carrier.

1,628,571. BEARING. RICHARD R. BLOSS, Columbus, Ohio, assignor to The International Derrick & Equipment Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,612. 7 Claims. (Cl. 308—58.)



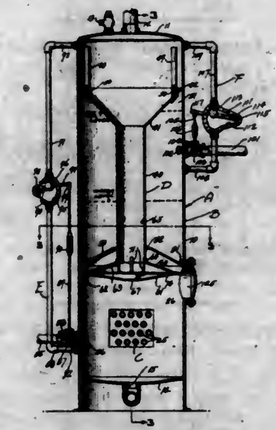
1. In a journal bearing, a bearing base, comprising horizontally flanging portions at its bottom, integral and angularly disposed bosses carried by said flanging portions and angularly opposed openings in said bosses for carrying clamping means for securing said base to a supporting member.

1,628,572. RIBBER-MACHINE ATTACHMENT. FELIX BOLINSKI, Pinckneyville, Ill. Filed Apr. 25, 1925. Serial No. 25,858. 1 Claim. (Cl. 66—158.)

A device of the class described including a substantially rectangular frame, one of the members of said frame being in the form of a tube, guide members carried by opposite corresponding frame members of said frame through which a plurality of strands of yarn is adapted to pass, a

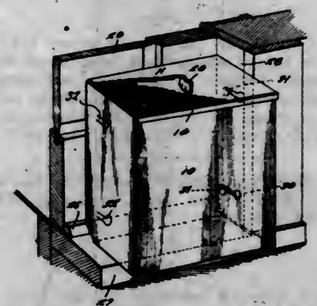
bifurcated guide member carried by one of said corresponding frame members, guide loops carried by the other opposite corresponding frame members, a rack providing a plurality of spaced fingers, a movable member providing a rack having a plurality of fingers interposed between said first mentioned fingers, and means coacting

with the movable member for actuating a trip upon movement of said movable member in a certain direction, the combination with a strand of yarn adapted for passage between the fingers for supporting the movable member against said movement in said certain direction and extending through the loops and the bifurcated member to a downward course through the tube.



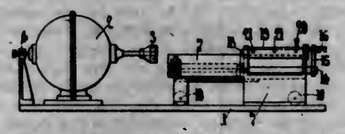
1,628,573. METHOD AND MOLD FOR CASTING TYPE BARS. WILLIAM MORRIS BOWER, CHARLES SAMBROOK BURDON, and CARL LOUIS STERN, London, England, assignors to Linotype and Machinery Limited, London, England, a British Company. Filed Oct. 20, 1924, Serial No. 744,566, and in Great Britain Oct. 22, 1923. 3 Claims. (Cl. 199—57.)

1. The method of casting slugs or type bars of hollow formation, which consists in providing a cored mold presenting two sections in which the side walls of the slugs are cast, and injecting molten metal into both of said sections simultaneously.



1,628,574. APPARATUS FOR THE TREATMENT OF IMPURE PETROLEUM OILS. JOHN D. BRADY, El Dorado, Ark., assignor to Brady Process Company, El Dorado, Ark., a Corporation of Delaware. Filed Aug. 29, 1925. Serial No. 53,372. 13 Claims. (Cl. 196—5.)

4. In apparatus of the class described a substantially vertical tank, heater means in the lower portion of the tank, a conductor tube extending substantially vertically thru the tank in spaced relation therewith, a funnel head supported at the upper portion of said conductor tube, means for inlet of emulsified petroleum into the funnel head, means for venting gas from below the funnel head to the upper portion of the tank, means for venting gas from the tank, baffle means supported by the lower end of the conductor tube for retarded flow of petroleum emulsions therefrom to said heater means, baffle means carried by the tank about said conductor tube and above the first baffle means, liquid level controlled valve means for withdrawal of liquid from the tank below said baffle means and adjacent said heater means, liquid lever controlled valve means for withdrawal of oil from the tank



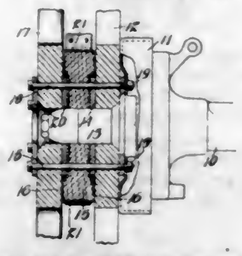
between the baffle means and funnel head of the conductor tube, and means for proportionately regulating the withdrawal of liquid from the tank thru said first and second mentioned valve means.

1,628,575. MILK-BOTTLE RECEPTACLE. FERDINAND H. BRANCKLEIN, Baltimore, Md. Filed Aug. 14, 1925. Serial No. 50,340. 2 Claims. (Cl. 232—42.)

1. In combination with a receptacle having an open back and a hinged cover, a locking element carried by the cover, means at the upper edge of the receptacle adjacent the free edge of the cover for engagement by the locking element to hold the cover in closed position, an operating member upon the outside of the cover and an actuating member associated with and controlled by the operating member to force the locking element into locking position and out of the path of movement of said actuating member.

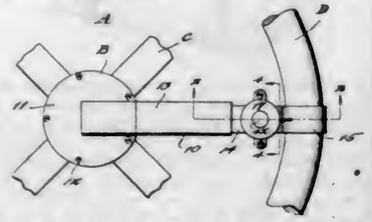
1,628,576. COIN-WRAPPING MACHINE. CHARLES LAURENCE BURDICK, London, England. Filed Mar. 5, 1926, Serial No. 92,625, and in Great Britain Mar. 10, 1925. 10 Claims. (Cl. 93—5.)

1. In a machine for making and closing coin packets the combination of a holder arranged for the reception of the packets, a rotary head adapted to close down the ends



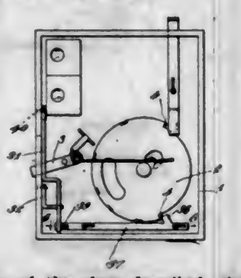
of the packet and guiding means enabling the holder to be advanced relatively to the rotary head to bring an end of the packet into operative engagement with the rotary head.

1,628,577. BARBER'S COMB. JOHN W. BURKE, Del Rio, Tex. Filed Aug. 25, 1925. Serial No. 52,441. 4 Claims. (Cl. 132—18.)



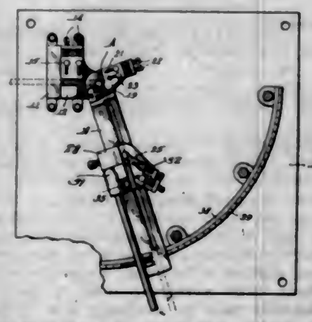
1. A comb comprising a rib portion having teeth projecting in opposite angular relation from each edge thereof.

1,628,578. VEHICLE WHEEL. CLAUDE W. CLARK, West Palm Beach, Fla. Filed July 2, 1926. Serial No. 120,232. 2 Claims. (Cl. 301—36.)



1. A dual wheel for vehicles comprising the normal wheel and its hub, a spacing block mounted on said hub, a second wheel mounted on said hub, perforated disks between said wheels and said spacing block, and bolts passing through said perforated disks, wheels and spacer to form a unit thereof, substantially as set forth.

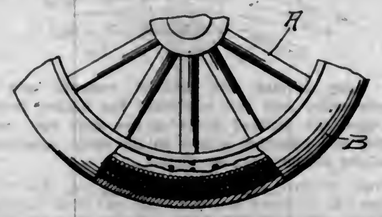
1,628,579. CIRCUIT CLOSER. JOSHUA W. DAVIS, Sumter, S. C. Filed Oct. 12, 1925. Serial No. 62,137. 1 Claim. (Cl. 200—59.)



In a circuit closer, a support, a casing carried by said support, a stationary member of insulating material disposed in said casing, a circumferential series of contacts carried by said stationary insulating member and countersunk therein in a manner to be spaced below the surface thereof, a rotatable disk member of insulating material mounted within the casing, an operating handle laterally extending therefrom and through a slot in the side of said casing, a metallic ring secured on the underside of said rotatable disk member and having downwardly extending projections adapted to be brought into engagement with selected ones of said contacts, said casing having its top formed with an opening, said rotatable disk member being provided with a recess with the edge of the casing at the opening overhanging the recess, a central contact secured to said rotatable disk member and arranged in said recess, an inwardly projecting extension formed on the metallic ring, an additional binding post carried by the extension and arranged in spaced relation to the central contact, a spring contact secured to said additional binding post and arranged within the recess, a flanged push button slidably mounted in the recess with its flange engageable with the overhanging portion of the casing, and said flange push button being engageable with the spring contact for the purpose specified.

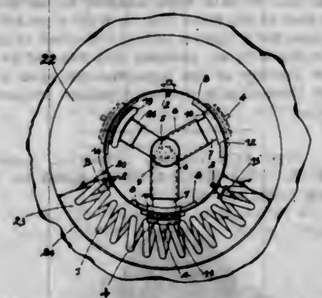
1,628,580. FILM-SHIFTING MECHANISM. JEROME DE HAAS, Chicago, Ill. Filed Feb. 13, 1925. Serial No. 9,040. 2 Claims. (Cl. 95—31.)

1. A camera of the class described, the combination with a non-rotatable shaft defining at one end portion opposite shoulders, a film roller associated with the shaft for relative movement, a spring member operatively connecting the roller to the shaft, a shutter, and a pair of cooperating pawls pivotally carried by the roller and adapted for engagement with the shoulders for retaining said roller against relative movement with respect to the shaft by action of the spring member, of means for permitting intermittent movement of the roller relative to the shaft by action of said spring member, said means including a disc having a plurality of lugs formed thereon, a movable arm having an end portion defining a catch adapted for engagement successively with the lugs, means operably connecting the disc to the roller, a rocker arm having an end portion adapted for engagement with the opposite end portion of the movable arm, an operating member carried by the body of the camera and defining portions movable into engagement with the pawls for disengaging the pawls from the shoulders and movable into engagement with the rocker arm for urging the rocker arm to operate upon said opposite end portion of the movable member to move said catch from engagement with one of the lugs disposed adjacent the catch member, means for operating said operating member, and means operable by the shutter for operating upon said movable member to permit intermittent movement of said disc independently of the operating member.



1,628,581. MULTIPLE BENDING APPARATUS. FRANK J. L. DINKEL, North Bergen, N. J. Filed June 1, 1926. Serial No. 113,057. 6 Claims. (Cl. 153—16.)

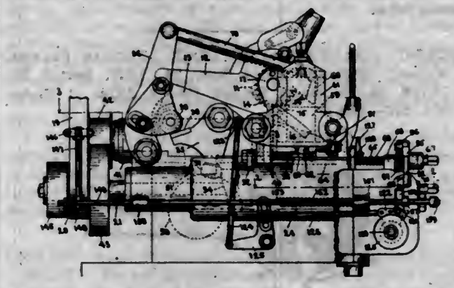
1. A bending apparatus, including a fixed work-clamping device, a swingable non-adjustable work-clamping device pivoted adjacent the fixed work-clamping device,



and an adjustable work-clamping device carried by and swingable with respect to the swingable non-adjustable clamping device.

1,628,582. TIRE LINER. MAX A. DOELCKNER and ANTHONY P. FANELLI, Louisville, Ky. Filed Jan. 24, 1925. Serial No. 4,606. 1 Claim. (Cl. 152—18.)

A tire liner comprising a continuous member of fabric curved longitudinally and transversely and adapted to be engaged within a pneumatic tire between the casing and inner tube, a plurality of metallic rivets having substantially flat circular partially spherical heads and sharp edges around the heads, said edges being normally arranged in contacting relation throughout the tread portion of the liner, and a plurality of similar rivets similarly located in the spaces between the first named rivets and in overlapping relation thereto with their edges in contacting relation, each of said rivets having a split shank passing through the fabric with its ends clinched at the inner side thereof.



1,628,583. ELASTIC WHEEL. JEAN ISIDORE DUCHÂTEAU, St. Omer, France. Filed June 30, 1925, Serial No. 40,642, and in France July 15, 1924. 9 Claims. (Cl. 152—28.)

8. In an elastic wheel, the combination of an elastic spring ring, an annular housing for the same, pins secured to the housing and provided with a double hook to engage contiguous turns of said spring ring, a seat on said pins for the ring, accommodating the shape of the tore constituted by the latter, circular slides on the inner wall of the housing, radial pins carried by said slides and engaging turns of the spring ring between the first mentioned fastening pins, a hub member, hollow spokes on the same, rods telescoped and reciprocatable within said hollow spokes and pivotal connections between said circular slides and said rods, substantially as set forth.

1,628,584. AUTOMATIC GEAR-GENERATING MACHINE. EDWIN R. FELLOWS, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Oct. 18, 1922. Serial No. 595,304. 45 Claims. (Cl. 51—52.)

1. A machine adapted to cut forms in a work piece with generating motion corresponding to rack and pinion travel and including, in combination with a cutting tool, a work holder and driving mechanism for producing relative motions of generation and cutting between said cutting tool and a work piece held by said work holder, and an automatic feeding mechanism operative so to

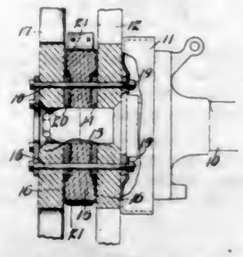
change the relation between the work piece and the cutting tool as to cause a further cutting of the same part of the work piece previously cut.

1,628,585. CLEANING DEVICE. WILLIAM H. FLIEHMANN, St. Charles, Mo. Filed Sept. 30, 1925. Serial No. 59,633. 2 Claims. (Cl. 15—141.)

1. A device of the character described comprising a single length of wire bent intermediate its ends and having its free end portions extending in spaced parallel relation, the side portions being formed with a plurality of alternately arranged open loops, and correspondingly shaped suction members received within said loops.

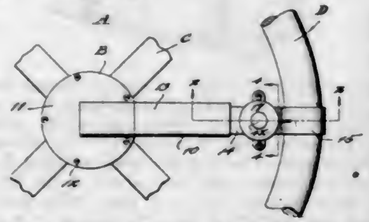
1,628,586. METHOD OF MAKING OPHTHALMIC MOUNTINGS. OSCAR HARRY FLODIN, Rochester, N. Y., assignor to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 17, 1925. Serial No. 50,544. 8 Claims. (Cl. 88—47.)

1. A method of making an article of the class described that comprises extending a xylonite member through and beyond two xylonite members to secure the said two,



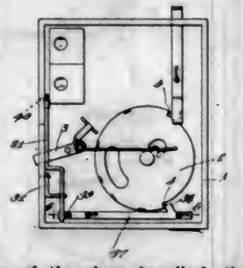
of the packet and guiding means enabling the holder to be advanced relatively to the rotary head to bring an end of the packet into operative engagement with the rotary head.

1,628,577. BARBER'S COMB. JOHN W. BURKE, Del Rio, Tex. Filed Aug. 25, 1925. Serial No. 52,441. 4 Claims. (Cl. 132—18.)



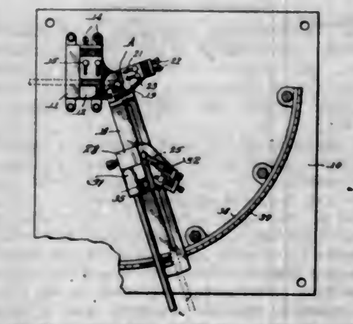
1. A comb comprising a rib portion having teeth projecting in opposite angular relation from each edge thereof.

1,628,578. VEHICLE WHEEL. CLAUDE W. CLARK, West Palm Beach, Fla. Filed July 2, 1926. Serial No. 120,232. 2 Claims. (Cl. 301—36.)



1. A dual wheel for vehicles comprising the normal wheel and its hub, a spacing block mounted on said hub, a second wheel mounted on said hub, perforated disks between said wheels and said spacing block, and bolts passing through said perforated disks, wheels and spacer to form a unit thereof, substantially as set forth.

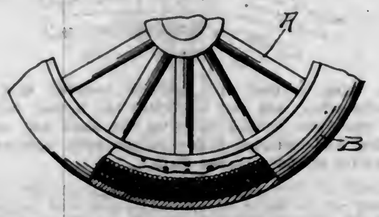
1,628,579. CIRCUIT CLOSER. JOSHUA W. DAVIS, Sumter, S. C. Filed Oct. 12, 1925. Serial No. 62,137. 1 Claim. (Cl. 200—59.)



In a circuit closer, a support, a casing carried by said support, a stationary member of insulating material disposed in said casing, a circumferential series of contacts carried by said stationary insulating member and countersunk therein in a manner to be spaced below the surface thereof, a rotatable disk member of insulating material mounted within the casing, an operating handle laterally extending therefrom and through a slot in the side of said casing, a metallic ring secured on the underside of said rotatable disk member and having downwardly extending projections adapted to be brought into engagement with selected ones of said contacts, said casing having its top formed with an opening, said rotatable disk member being provided with a recess with the edge of the casing at the opening overhanging the recess, a central contact secured to said rotatable disk member and arranged in said recess, an inwardly projecting extension formed on the metallic ring, an additional binding post carried by the extension and arranged in spaced relation to the central contact, a spring contact secured to said additional binding post and arranged within the recess, a flanged push button slidably mounted in the recess with its flange engageable with the overhanging portion of the casing, and said flange push button being engageable with the spring contact for the purpose specified.

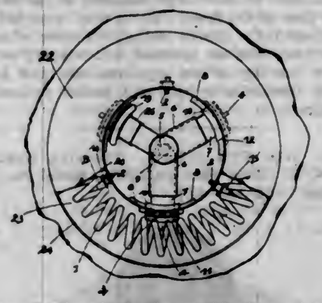
1,628,580. FILM-SHIFTING MECHANISM. JEROME DE HAAS, Chicago, Ill. Filed Feb. 13, 1925. Serial No. 9,040. 2 Claims. (Cl. 95—31.)

1. A camera of the class described, the combination with a non-rotatable shaft defining at one end portion opposite shoulders, a film roller associated with the shaft for relative movement, a spring member operatively connecting the roller to the shaft, a shutter, and a pair of cooperating pawls pivotally carried by the roller and adapted for engagement with the shoulders for retaining said roller against relative movement with respect to the shaft by action of the spring member, of means for permitting intermittent movement of the roller relative to the shaft by action of said spring member, said means including a disc having a plurality of lugs formed thereon, a movable arm having an end portion defining a catch adapted for engagement successively with the lugs, means operably connecting the disc to the roller, a rocker arm having an end portion adapted for engagement with the opposite end portion of the movable arm, an operating member carried by the body of the camera and defining portions movable into engagement with the pawls for disengaging the pawls from the shoulders and movable into engagement with the rocker arm for urging the rocker arm to operate upon said opposite end portion of the movable member to move said catch from engagement with one of the lugs disposed adjacent the catch member, means for operating said operating member, and means operable by the shutter for operating upon said movable member to permit intermittent movement of said disc independently of the operating member.



1,628,581. MULTIPLE BENDING APPARATUS. FRANK J. L. DINKEL, North Bergen, N. J. Filed June 1, 1926. Serial No. 113,057. 6 Claims. (Cl. 153—16.)

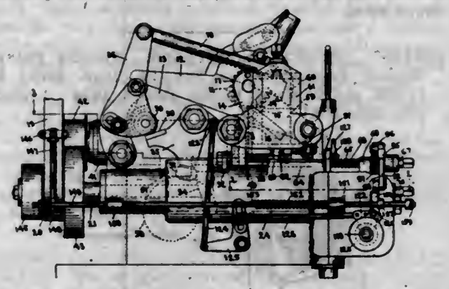
1. A bending apparatus, including a fixed work-clamping device, a swingable non-adjustable work-clamping device pivoted adjacent the fixed work-clamping device,



and an adjustable work-clamping device carried by and swingable with respect to the swingable non-adjustable clamping device.

1,628,582. TIRE LINER. MAX A. DOELCKNER and ANTHONY P. FANELLI, Louisville, Ky. Filed Jan. 24, 1925. Serial No. 4,606. 1 Claim. (Cl. 152—18.)

A tire liner comprising a continuous member of fabric curved longitudinally and transversely and adapted to be engaged within a pneumatic tire between the casing and inner tube, a plurality of metallic rivets having substantially flat circular partially spherical heads and sharp edges around the heads, said edges being normally arranged in contacting relation throughout the tread portion of the liner, and a plurality of similar rivets similarly located in the spaces between the first named rivets and in overlapping relation thereto with their edges in contacting relation, each of said rivets having a split shank passing through the fabric with its ends clinched at the inner side thereof.

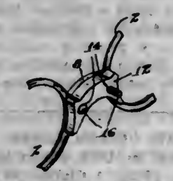


1,628,583. ELASTIC WHEEL. JEAN ISIDORE DUCHÂTEAU, St. Omer, France. Filed June 30, 1925, Serial No. 40,642, and in France July 15, 1924. 9 Claims. (Cl. 152—28.)

8. In an elastic wheel, the combination of an elastic spring ring, an annular housing for the same, pins secured to the housing and provided with a double hook to engage contiguous turns of said spring ring, a seat on said pins for the ring, accommodating the shape of the tore constituted by the latter, circular slides on the inner wall of the housing, radial pins carried by said slides and engaging turns of the spring ring between the first mentioned fastening pins, a hub member, hollow spokes on the same, rods telescoped and reciprocatable within said hollow spokes and pivotal connections between said circular slides and said rods, substantially as set forth.

1,628,584. AUTOMATIC GEAR-GENERATING MACHINE. EDWIN R. FELLOWS, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed Oct. 18, 1922. Serial No. 595,304. 45 Claims. (Cl. 51—52.)

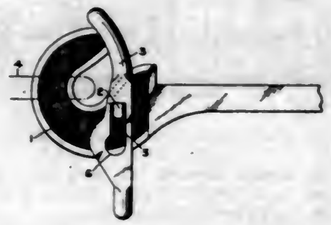
1. A machine adapted to cut forms in a work piece with generating motion corresponding to rack and pinion travel and including, in combination with a cutting tool, a work holder and driving mechanism for producing relative motions of generation and cutting between said cutting tool and a work piece held by said work holder, and an automatic feeding mechanism operative so to



change the relation between the work piece and the cutting tool as to cause a further cutting of the same part of the work piece previously cut.

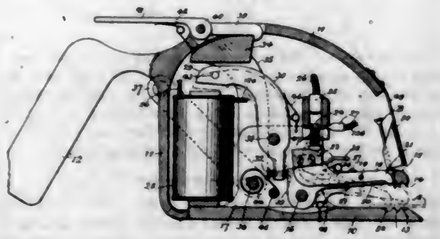
1,628,585. CLEANING DEVICE. WILLIAM H. FLIEHMANN, St. Charles, Mo. Filed Sept. 30, 1925. Serial No. 59,633. 2 Claims. (Cl. 15—141.)

1. A device of the character described comprising a single length of wire bent intermediate its ends and having its free end portions extending in spaced parallel relation, the side portions being formed with a plurality of alternately arranged open loops, and correspondingly shaped suction members received within said loops.



1,628,586. METHOD OF MAKING OPHTHALMIC MOUNTINGS. OSCAR HARRY FLODIN, Rochester, N. Y., assignor to Bausch and Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 17, 1925. Serial No. 50,544. 8 Claims. (Cl. 88—47.)

1. A method of making an article of the class described that comprises extending a zylonite member through and beyond two zylonite members to secure the said two,



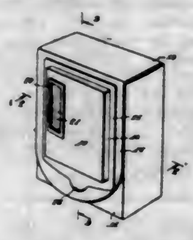
members together, removing the portion of the first-named member that projects beyond said two members, and shaping the secured-together members into predetermined form.

1,628,587. DRAWBAR COUPLING. THOMAS FRANKS, Walsall, England. Filed Nov. 24, 1925, Serial No. 71,196, and in Great Britain Dec. 1, 1924. 1 Claim. (Cl. 213—178.)

In combination with a draw bar having an upstanding hook, a locking member forming a loop through which the hook end of the draw bar passes, said locking member having longitudinal slots in its side portions intermediate its ends and each provided at the lower end with an enlargement, the sides of said slots being substantially parallel, said draw bar being provided with outstanding pins extending into said slots of the locking member and forming pivots on which said locking member may turn, the width of said pins being less than that of said slots and said pins having parallel vertical sides and said slots being of such length that when said locking member is in substantially vertical position the narrow ends of the slots bear on the upper sides of the pins and said locking member by gravity maintains such vertical position extending across the throat of the hook and so that the locking member is prevented from turning casually to released position and said locking member when moved upwardly to cause the pins to engage in the enlarged lower ends of the slots being then adapted to be swung rearwardly to open the throat of the hook.

1,628,588. FUR STRETCHING AND NAILING DEVICE. SAMUEL FRIEDMAN, Brooklyn, N. Y. Filed Mar. 5, 1926. Serial No. 92,499. 10 Claims. (Cl. 1—47.)

9. In a stretching and nailing device, a base, a gripping jaw having slots through which fur fastening means may be passed, means to hold a fur fastener device, a hammer adapted to drive a fastener held by said holding means, an electromagnetic responsive means adapted to actuate said jaw to a gripping position, and means associated with said jaw and adapted to bring said electromagnetic responsive means into action.



1,628,589. SCYTHE. IGNATZ GONTK, Ljubljana, Yugoslavia. Filed Aug. 20, 1924, Serial No. 733,205, and in Austria Aug. 21, 1923. 1 Claim. (Cl. 56—326.)

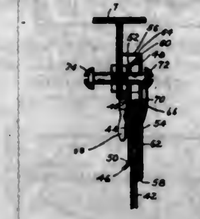
A device of the character described including a main blade, a series of headed fasteners carried thereby, a sharpened strip engageable with the fasteners, a covering rail provided with a series of holes for receiving the corresponding headed fasteners and with a series of longitudinal slots, each of said slots having one end communicating with the adjacent hole the walls of the

slots being beveled and inclined towards said hole, whereby when said rail is shifted the headed fasteners ride upon the inclined walls of the slots and exert a wedging and clamping action on the strip, substantially as and for the purposes set forth.

1,628,590. CIGARETTE CASE. DAVID W. GREENE, New York, N. Y., assignor to MAX E. Bernhardt, New York, N. Y. Filed Apr. 30, 1925. Serial No. 27,098. 3 Claims. (Cl. 206—38.)

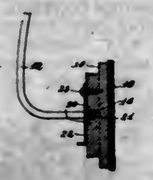
1. A cigarette case having its front and rear walls formed integrally with a flap extending from the edge of each wall, one of said flaps adapted to be bent down along the face of the front wall to form a pocket projecting therefrom for a lighter casing, the other of said flaps being provided with an aperture and adapted to be bent down over the top of the cigarette case and along the front wall thereof with the said pocket projecting into the aperture.

1,628,591. WIG FOR DOLLS. PERCIVAL HARRIS, New York, N. Y. Filed Nov. 23, 1926. Serial No. 150,351. 5 Claims. (Cl. 46—40.)



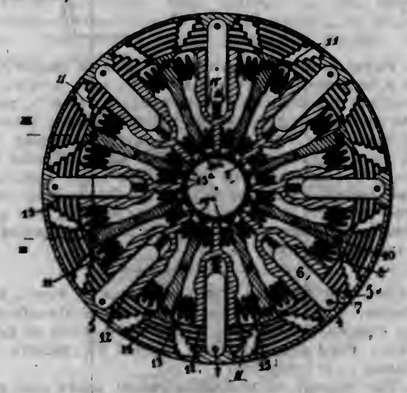
5. A doll's wig comprising a body, a plurality of members simulating platted knots of hair, and adhesive covering one face of each knot connecting said knots to the body.

1,628,592. CLAMP. CHARLES E. HATHAWAY, Providence, R. I., assignor to Cuddy-Gardner Company, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 1, 1924. Serial No. 747,188. 2 Claims. (Cl. 24—243.)



2. A clamp comprising two sheet-metal-strip jaws, one of the strips being provided with a body portion and marginal flanges disposed longitudinally of the strip and bent out of the plane of the body portion of the strip in opposite directions at an incline to the plane of the strip,

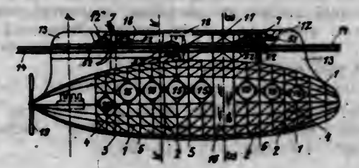
the other strip having marginal flanges bent out of the plane of the strip in the same direction, one of the last-named flanges being bent into substantial parallelism with the strip, and means for clamping the strips together with the line of bend between one of the flanges



and the body portion of the first-named strip in clamping engagement with the second-named flange of the second-named strip and with the edge of the other flange of the first-named strip in engagement with an intermediate portion of the second-named strip.

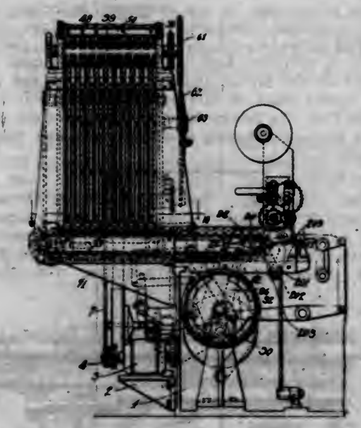
1,628,593. WINDOW-CLEANING DEVICE. MARGARET HAYES, Brooklyn, N. Y. Filed July 20, 1926. Serial No. 123,713. 3 Claims. (Cl. 15—220.)

1. A window cleaning device comprising a substantially U-shaped frame having a handle at one end, and a cross-piece at the opposite end; a cleaning element including a block, said block having a groove therein providing spaced parallel portions between which said cross-piece is adapted to be disposed, a retaining member, and means connecting the retaining member to the block for movement over said groove to detachably retain the cross-piece therein.



1,628,594. SPRING WHEEL FOR AUTOMOBILES AND OTHER VEHICLES. HERBERT HILL, Durban, Natal, South Africa. Filed July 16, 1924, Serial No. 726,395, and in Great Britain Apr. 17, 1924. 4 Claims. (Cl. 152—28.)

3. A spring wheel, comprising disc elements spaced apart and secured to a central element adapted to engage a hub on a vehicle axle, non-extensible radial members rigidly secured to the said central element and located between the disc elements, an inner rim element secured to the ends of the said radial elements connecting together the outer ends thereof, telescopic radial elements, each comprising a portion forming a lever and pivotally connected to the disc elements and a further portion slidable within the first-mentioned portion pivotally connected with the outer rim, and springs located between the inner and outer rim elements adapted to oppose the action of the load upon the wheels to displace the axes of the rim elements.

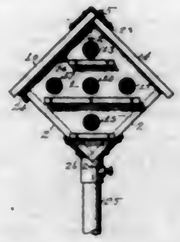


4. A spring wheel as claimed in claim 3, in which one portion of each of the pivotally mounted radial elements is formed as a lever of the first class and springs are located adjacent to either end of the lever and between the same and the fixed radial elements.

1,628,595. CAR FOR HIGH-SPEED SUSPENSION RAILWAYS. FRANZ KRUCKENBERG and FRITZ GENTZCKE, Heidelberg, Germany; said Gentzcke assignor to said Kruckenberg. Filed Jan. 24, 1925, Serial No. 4,572, and in Germany Nov. 5, 1924. 34 Claims. (Cl. 105—65.)

1. A high-speed suspension railway car body having stream-line shape in its longitudinal direction and being of elliptical shape in cross-section, the upper portion of said body being restricted in width similarly to a bottle-neck and this restricted portion forming exteriorly a longitudinally continuous fin, substantially as set forth.

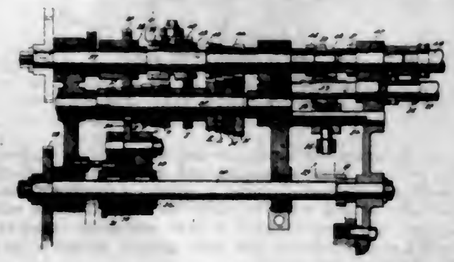
1,628,596. APPARATUS FOR ASSEMBLING ARTICLES TO BE PACKED. MICHAEL J. MILMOE, Chicago, Ill., assignor to F. B. Redington Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 22, 1924. Serial No. 751,666. 82 Claims. (Cl. 226—14.)



1. In hopper discharging mechanism, a roller for feeding articles from a hopper, said roller having spaced abutments thereon forming a groove extending longitudinally of said roller for agitating the articles in said hopper, the outer surfaces of said abutments being extended peripherally of said roller greater distances than the width of said groove.

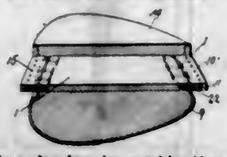
77. The combination with a conveyor having receptacles thereon provided with channels extending transversely of the direction of movement of said conveyor, of

retainers disposed adjacent the path of movement of said conveyor to close the ends of said channels, a pair of transfer fingers disposed adjacent the path of said receptacles and arranged to register with the channels in the said receptacles, yielding means for urging said transfer fingers toward one another to cause them to grip the articles in said channels, wrapping mechanism, means for shifting said transfer fingers to cause them to slide the articles from said channels and to present said articles to said wrapping mechanism, and a stop for arresting said yielding means when said transfer fingers are in position to register with the channels in said receptacles to permit said receptacles to pass between said transfer fingers.



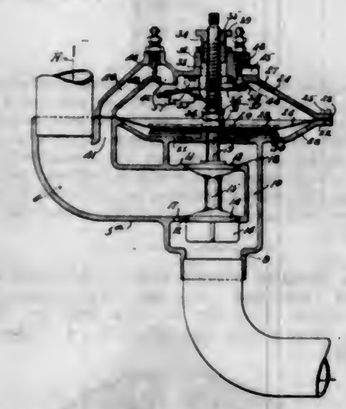
82. The combination with a hopper, of a roller for controlling the discharge of articles from said hopper, said roller having the periphery thereof disposed adjacent the wall portion of said hopper, there being peripheral grooves in said roller for receiving articles to be fed from said hopper and a longitudinal groove in said roller for agitating articles in said hopper, the surface of said roller having a peripheral groove therein of less width than said article receiving grooves and intersecting said longitudinal groove, and a tongue projecting into said peripheral groove to dislodge articles from said longitudinal groove to prevent said articles from jamming against said wall portion.

1,628,597. BIRD HOUSE. ROLLAND W. TISCH, Grand Rapids, Mich. Filed June 5, 1926. Serial No. 113,880. 4 Claims. (Cl. 119—23.)



1. In a structure of the character described; a box having a bottom comprising relatively inclined portions extending outwardly-upwardly, opposite ends, and a top closure; a partition held in horizontal position in the box between the bottom and the shut closure and resting at its lateral edges on said portions respectively and removable from the box in the open position of the closure, an end of the box having openings above and below the partition.

1,628,598. LATHE. EDWARD STOCKTON BIRD and FRANCIS B. COCKBURN, Cincinnati, Ohio, assignors to The Lodge & Shipley Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 2, 1924. Serial No. 753,514. 12 Claims. (Cl. 74—57.)

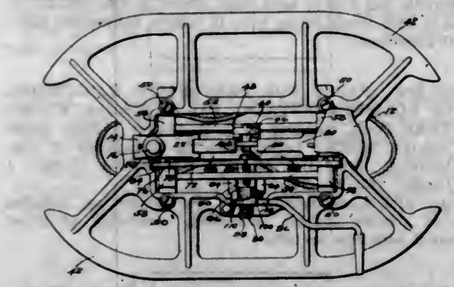


11. In a device of the class described, a driving shaft, driven shafts equally spaced therefrom, adapting the same to be driven from said driving shaft by a single gear transposable from one shaft to the other, and an intermediate shaft transmittably connected with said driven shafts, whereby said driven shafts can be alternately transmittingly connected with said driving shaft, and said intermediate shaft caused to act alternately as a driving or driven member for the other driven shaft.

1,628,599. METALLIC FASTENING INSEAM. CHARLES C. BLAKE, Brookline, Mass. Filed Feb. 18, 1918. Serial No. 217,770. 45 Claims. (Cl. 36—17.)

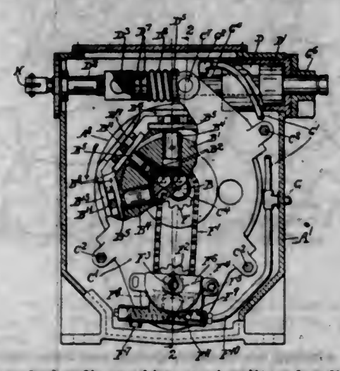
45. A welt shoe, having in combination, an upper, a welt slit along one longitudinal edge to provide an interior shoulder, an insole provided with an interior shoulder, and means for securing the upper, welt and insole together comprising an inseam engaged with the interior shoulders on the welt and insole and arranged in a plane parallel and intermediate the top and bottom faces of the insole.

1,628,600. PRESSURE-CONTROL MECHANISM FOR PNEUMATIC-DISPATCH SYSTEMS. JAMES T. COWLEY, Syracuse, N. Y., assignor to The Lamson Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 3, 1922. Serial No. 598,877. 17 Claims. (Cl. 243—12.)



5. Power control apparatus comprising in combination with a transmission tube and a suction tube, a valve for controlling communication between said tubes, a pneumatic motor having a chamber provided with a movable wall connected with the valve, ports connecting the said chamber with the transmission tube and with the outer air, means normally closing the latter port, and means operative upon movement of the movable wall of the chamber in one direction for opening the port leading to the outer air and closing the port leading to the transmission tube.

1,628,601. DUST COLLECTOR. ROBERT F. FEIND, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 20, 1923. Serial No. 652,679. 3 Claims. (Cl. 183—54.)

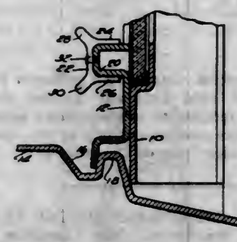


1. The method of separating mixed solids and gas, which comprises, establishing different pressures on opposite sides of a filter to produce a flow through the filtering medium in one direction, equalizing the pressures on opposite sides of the medium and repeatedly shaking the medium to remove accumulated solids while the pressures are equalized, and subsequently producing a flow through the medium in the opposite direction and repeatedly shaking the medium to further remove accumulated solids during the period of reverse flow.

1,628,602. AUTOMATIC SHOE MACHINE. MARK E. FERNALD, Southboro, Mass., assignor to C. C. Blake, Incorporated, Boston, Mass., a Corporation of New York. Filed Sept. 13, 1922. Serial No. 587,941. 22 Claims. (Cl. 12—127.)

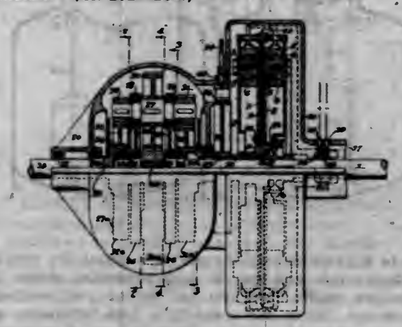
1. Shoe making apparatus of the character described having, in combination, a frame for supporting a separate leader and a separate jack, means on the frame and the jack adapted to co-operatively engage to locate the jack in a definite position on the frame relative to the leader, and means for clamping the jack in such position.

1,628,603. HYDRAULIC TRANSMISSION. WALTER FERRIS, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 9, 1921. Serial No. 483,468. 102 Claims. (Cl. 103—38.)



2. In a hydraulic machine, a plurality of radially disposed working members and a plurality of reaction plates associated with them and mounted for lateral withdrawal in a plane perpendicular to the axial line of the working members.

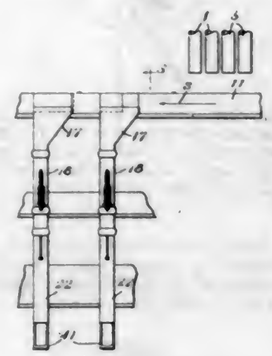
1,628,604. NECKTIE FASTENING. RICHARD HOLLUNDER, White Plains, N. Y. Filed July 24, 1926. Serial No. 124,709. 3 Claims. (Cl. 24—49.)



1. Necktie holder or hanger comprising a base, a tongue stamped from the material of said base and projecting out of the plane thereof, a means hinged to said base and adapted to grip over the upper edge of a collar, and a means for facilitating its removal therefrom.

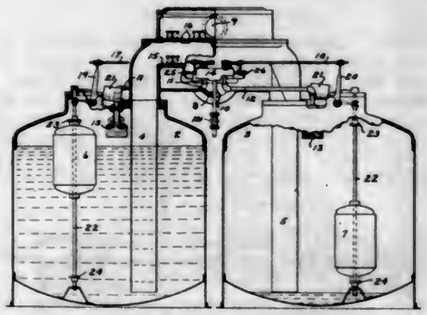
1,628,605. SASH LIFT. AMSON G. ILLICH, New York, N. Y., assignor to Campbell Metal Window Corporation, Baltimore, Md., a Corporation of Maryland. Filed Aug. 6, 1926. Serial No. 127,581. 1 Claim. (Cl. 16—124.)

In combination, a sash having an inwardly extending projection formed on the lift rail, and a substantially symmetrical lift handle embracing said projection and attached to it, provided with flanges adapted to be engaged while raising and lowering the sash.



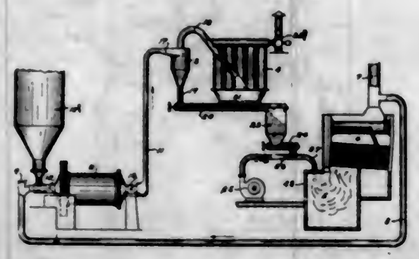
1,628,606. SPEED CONTROL. FRANZ KUEHNEL, Detroit, Mich., assignor of one-half to Hans Huenert, Detroit, Mich. Filed June 15, 1925. Serial No. 37,354. 9 Claims. (Cl. 172—239.)

1. A speed change transmission gearing of the type in which a drive shaft supporting a dynamo-electric machine is associated with a driven shaft, the relative speed of which is controlled by a movable induction element of



the dynamo-electric machine, including a brake fixedly connected with the induction element of the dynamo-electric machine, conductors carrying the current generated by said machine, and means for varying said current and for applying said brake respectively.

1,628,607. CARRIER DISTRIBUTING AND SELECTING APPARATUS. JAMES G. MACLAREN, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Feb. 21, 1925. Serial No. 10,831. 16 Claims. (Cl. 243—16.)

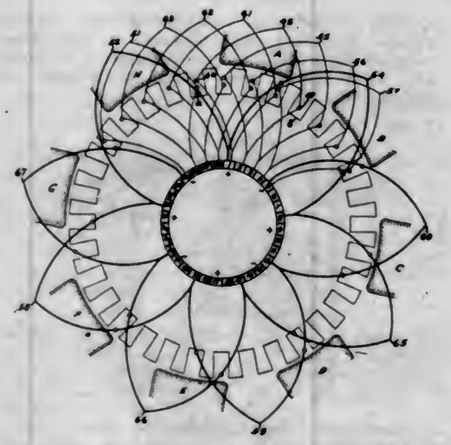


1. A conveyor system comprising a guideway for articles to be transported, said guideway having spaced side walls, and means tending to cause articles moving along the guideway to take positions at one or the other side of the longitudinal center line of the guideway.

1,628,608. FLUID-PRESSURE-ACTUATED PUMP. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 25, 1921. Serial No. 464,415. 10 Claims. (Cl. 103—238.)

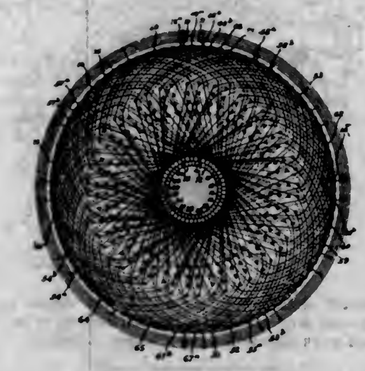
1. In a pump, a pair of reservoirs, means for conducting liquid into and out of said reservoirs, means for conducting elastic fluid into and out of said reservoirs, independent valves for controlling both admission and discharge of elastic fluid to and from each of said reservoirs, means operable by movement of one of said valves for locking the other against movement, and means for positively preventing delivery of liquid from said reservoirs to said elastic fluid admission means.

1,628,609. PROCESS OF TREATING COMBUSTIBLE MATERIAL. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 17, 1922. Serial No. 554,285. 4 Claims. (Cl. 110—106).



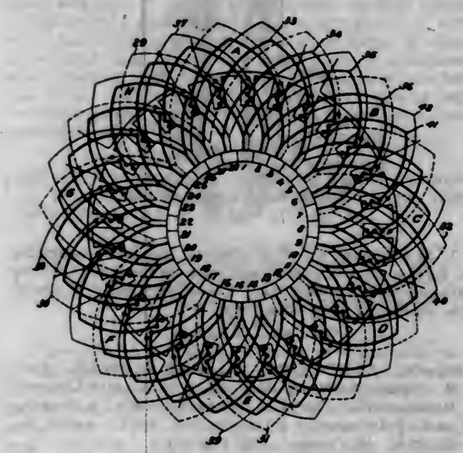
1. The process of treating and utilizing combustible material, which comprises, comminuting the material within a confined zone, passing a blast of non-combustible gas through said zone to remove fine material therefrom, separating the removed material from the gas, delivering the removed material to a heated zone, burning the material in said heated zone, and returning non-combustible gas to said comminuting zone to remove subsequent material therefrom.

1,628,610. PAPER FOR PREVENTING TARNISHING OF POLISHED METALS. FAY H. OSBORNE, Windsor Locks, Conn., assignor to C. H. Dexter & Sons, Incorporated, Windsor Locks, Conn., a Corporation of Connecticut. Filed Dec. 15, 1925. Serial No. 75,656. 1 Claim. (Cl. 23—241.)



An article of manufacture for protecting polished metal articles against tarnishing, consisting of paper treated with zinc acetate.

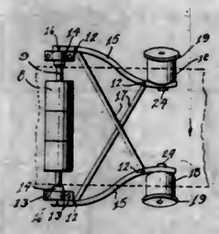
1,628,611. DYNAMO-ELECTRIC MACHINE AND WINDING THEREFOR. WILLIAM H. POWELL, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed May 16, 1924. Serial No. 713,723. 35 Claims. (Cl. 171—206.)



16. A winding for dynamo-electric machines including a plurality of independent lap windings and a simplex wave winding interconnecting said lap windings.

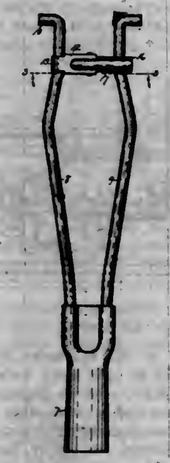
1,628,612. DYNAMO-ELECTRIC MACHINE AND WINDING THEREFOR. WILLIAM H. POWELL, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 21, 1926. Serial No. 117,215. 22 Claims. (Cl. 171—206.)

3. A multipolar type armature winding having lap wound coils adapted to be disposed under different pairs of poles and two wave wound coils in parallel connecting them in series.



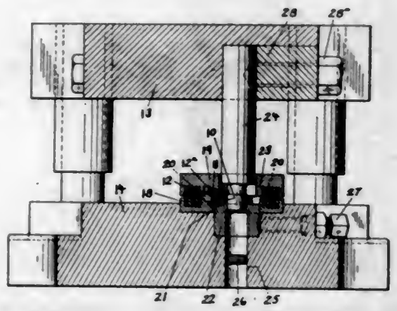
1,628,613. DYNAMO-ELECTRIC MACHINE AND WINDING THEREFOR. WILLIAM H. POWELL, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Original application filed May 16, 1924, Serial No. 713,723. Divided and this application filed July 29, 1926. Serial No. 125,665. 8 Claims. (Cl. 171—206.)

1. A winding for dynamo electric machines including a plurality of independent wave windings, and a simplex lap winding interconnecting said wave windings.



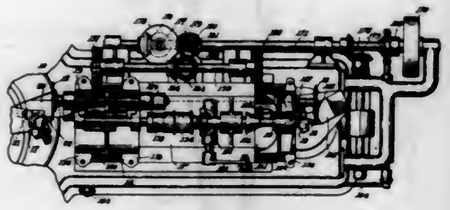
1,628,614. AUTOMATIC BELT GUIDE. BARTON ROSS, Chicago, Ill. Filed Nov. 17, 1924. Serial No. 750,424. 2 Claims. (Cl. 74—51.)

1. A belt guide comprising separated stationary frames, said stationary frames having inwardly extending flanges, a pulley-carrying frame having grooves for receiving said flanges, bearings operatively connecting said pulley-carrying frame with said flanges for permitting the oscillation of the pulley-carrying frame about a common center with respect to the stationary frames, a belt-supporting pulley carried by said pulley-carrying frame, inclined



guide rollers for engaging with the belt in advance of said belt-supporting pulley for forming a trough in the belt, and braces connecting said inclined rollers to said pulley-carrying frame, said braces permitting the inclined rollers to be swung on either side of said belt-carrying pulley.

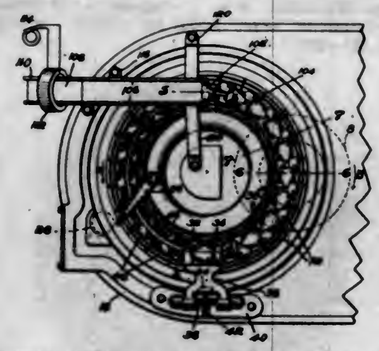
1,628,615. TOGGLE SPREADER. EDMUND S. SARGENT, Windsor, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed June 11, 1925. Serial No. 36,559. 5 Claims. (Cl. 306—19.)



1. A cleaning implement support comprising two spring arms normally in disengaged condition with respect to the implement and adapted to be moved apart to engage the implement, a spreader comprising two members each pivotally attached at one end to one of said arms and at their opposite ends pivotally connected to each other to separate said arms and retain them in spaced relation, said members being arranged to permit the pivot connecting them to pass to opposite sides of a line passing through the pivotal connections of the members to said arms, and means for limiting the movement of said members after the pivot has passed to one side of said line, whereby said arms are retained in spaced apart relation.

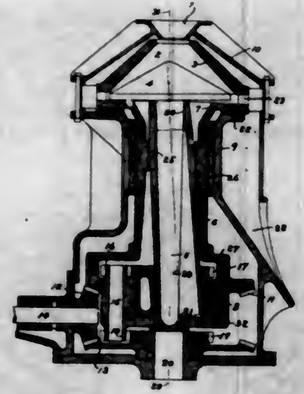
1,628,616. LUG-MAKING PRESS. JOHN J. SENGLAR, Tallmadge, Ohio, assignor to The Firestone Steel Products Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 24, 1925. Serial No. 25,592. 5 Claims. (Cl. 164—14.)

1. In a punch press including relatively movable platens, work clamping means including a pair of plates carried by one platen, means between the plates for yieldingly holding them apart, one of said plates being adapted to be clamped onto the other by the other platen, and yielding means including a resilient pad between the last mentioned plate and said other platen.



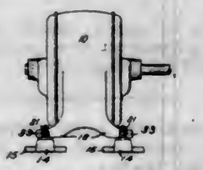
1,628,617. MANUFACTURE OF TOBACCO PIPES. CHARLES F. SMITH, New York, N. Y., assignor, by mesne assignments, to John J. Halpin, H. A. Rich, Ernest A. Bickell, and George H. Frew, jr. Filed Nov. 28, 1924. Serial No. 752,668. 34 Claims. (Cl. 142—3.)

1. In a machine of the character disclosed, a rotary head, a shaft carrier by said head, rock arms on the opposite ends of said shaft, a cutter journaled in one of said arms, a tracer journaled in the other of said arms, a pattern supported for engagement by said tracer, a work holder mounted adjacent the cutter, means for effecting relative axial travel between the tracer and the pattern and between the cutter and the work, means for turning the pattern about an axis substantially transverse to the direction of axial travel to present different portions of the same to the tracer and connections from said pattern for simultaneously and correspondingly turning the work holder.



1,628,618. MEANS FOR HANDLING ARTICLES. HENRY K. SPENCER, Watertown, Mass., assignor to The Blanchard Machine Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Oct. 6, 1922. Serial No. 592,739. 10 Claims. (Cl. 51—237.)

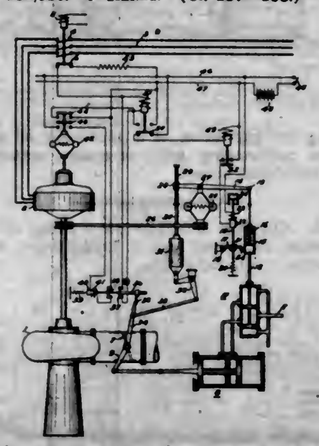
1. In a work-handling mechanism, the combination of a generally horizontal, rotary work-support presenting an annular groove, means for causing work-pieces to be deposited in a row upon said work-support over said groove which travels horizontally, means to cause said work-pieces to be held against upward and horizontal



displacement while being worked on, and means extending into said groove to cause the work-pieces to be lifted from said work-support and discharged therefrom.

1,628,619. CRUSHER. CARL G. SPRADO, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 9, 1926. Serial No. 128,076. 15 Claims. (Cl. 83—10.)

1. In a crusher, a pair of crushing members cooperating to form a crushing chamber, and means for relatively gyrating said members, said means comprising a revolvable compound lever structure.



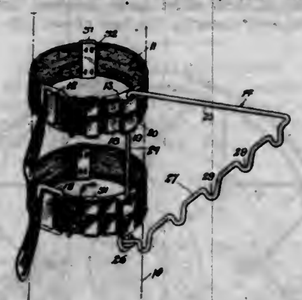
1,628,620. ADJUSTABLE MACHINE SUPPORT. CARL W. STEEN, Norwood, Ohio, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Oct. 31, 1921. Serial No. 511,719. 15 Claims. (Cl. 308—11.)

1. In combination, a chambered support, the wall of said support at one side thereof being provided with a through aperture and having a shouldered portion about

the aperture, and an abutment detachably mounted on said shouldered portion to operatively position the abutment, said abutment having a portion insertible through the aperture in the wall of said support, said insertible portion being adapted to lie within the chamber and to bear outwardly on the wall of said support when the abutment is in operative position thereon.

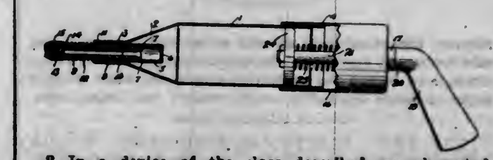
1,628,621. PRIME-MOVER CONTROL SYSTEM. CHARLES B. TAYLOR, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 13, 1926. Serial No. 154,886. 9 Claims. (Cl. 137—153.)

1. In a control system for a prime mover having a gate for admitting operating fluid thereto, means for operating said gate, means for controlling said operating means to cause said gate to open a predetermined amount, means responsive to a predetermined degree of rotation of said prime mover for causing said controlling means to effect movement of said gate toward closed position a predetermined amount, and means effective when said gate has been moved said predetermined amount for causing said controlling means to effect movement of said gate toward open position.



1,628,622. AUTOMATIC RETURN GATE. EDWARD A. DOHMANN, Weesatche, Tex. Filed July 18, 1925. Serial No. 43,095. 1 Claim. (Cl. 39—22.)

A swinging gate adapted to swing in either direction, pivotal supports at one end of said gate, a post on which said pivotal supports are secured, a roller carried at the bottom of said gate to move concentric with the pivots, a metal strip secured at its ends on opposite sides of said post, said strip having a concave upper edge to form a track-way for said roller, and a pair of rollers disposed oppositely on each side of said gate on the end opposite the pivots, the last named rollers extending outwardly beyond the gate structure.



1,628,623. SUPPORT FOR GARMENT HANGERS OR THE LIKE. LLOYD JONNES, Circleville, Ohio. Filed Aug. 18, 1926. Serial No. 130,008. 3 Claims. (Cl. 211—17.)

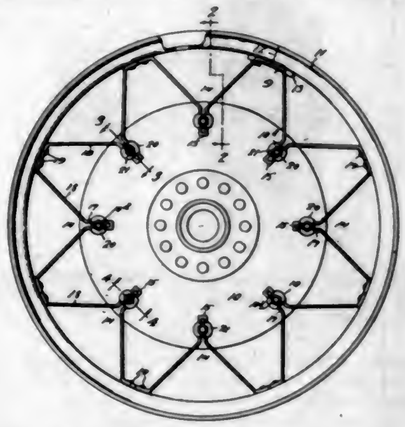
1. A device of the class described including a pair of flexible straps adapted to encircle an upright support at spaced points, aligned channelled brackets receiving and carried by the straps, a clothes hanger supporting bracket mounted in the channelled brackets, said channelled

brackets including a plurality of sections bendable relative to each other to conform to the surface shape of the upright support.

1,628,624. GREASE GUN. FRANK E. LIVERANCE, Jr., Grand Rapids, Mich. Filed Oct. 27, 1924. Serial No. 746,152. 4 Claims. (Cl. 221—47.4.)

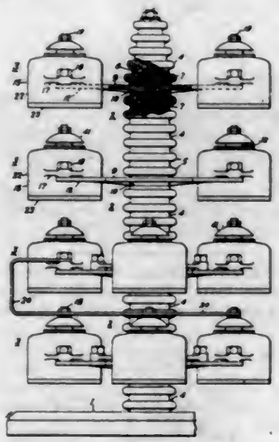
2. In a device of the class described, an elongated container for holding a quantity of lubricant, a cylinder of reduced diameter having a closed inner end, an open outer end secured in one end of the container and extending thereinto in longitudinal alignment with said container, said cylinder having an opening in its side adjacent its inner end, a piston shorter than the length of the cylinder mounted in said cylinder and provided with an outwardly extending stem of reduced diameter, said piston and stem having a longitudinal passage therethrough, a cap connected to the outer end of the cylinder through which said stem passes, a head attached to the outer end of the stem, said head having a passage therethrough, a check valve carried by said head and adjacent end of the stem normally closing said passage, and a coiled spring under compression disposed between the head and cap and around the stem.

1,628,625. WING STRUCTURE FOR AIRCRAFT. ALDO TAMMEO, Genoa, Italy. Filed May 26, 1926, Serial No. 111,850, and in Italy May 28, 1925. 2 Claims. (Cl. 244—29.)



1. In aircraft, the combination with an upper main wing surface and a lower main wing surface of a smaller depth and section than the upper wing surface, of additional wing surfaces of the same depth and section as the lower wing surface, and means for varying the angle of incidence of the lower main wing surface and the additional wing surfaces.

1,628,626. VEHICLE WHEEL. JAMES H. WAGENHORST, Jackson, Mich. Filed July 17, 1924. Serial No. 726,529. 10 Claims. (Cl. 301—6.)



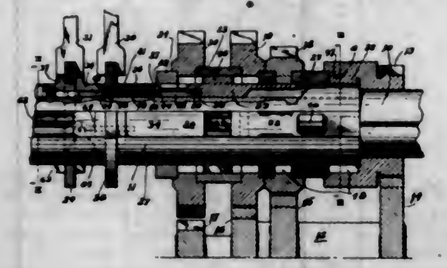
9. A wheel comprising the combination of a brake drum having a plurality of protuberances formed thereon, a plurality of threaded studs carried by and projecting

through the side wall of said brake drum said studs being located adjacent said protuberances, a tire carrying rim, a plurality of strip metal spoke members having feet at their outer ends engaging the base of said rim and riveted

thereto, the inner ends of said spoke members engaging said studs and seating on the protuberances of said brake drum, and means for clamping said inner ends of said spoke members against the side wall of the brake drum.

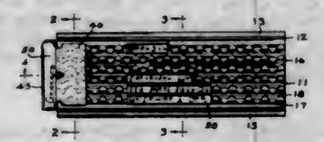
1,628,627. ELECTRICAL STRUCTURE. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Filed June 30, 1923. Serial No. 648,848. 25 Claims. (Cl. 175—41.)

1. An electrical structure built up to constitute a supporting rack or standard and comprising a plurality of superposed spaced apart sections, each including a condenser connected to a condenser of another of said sections, and insulating members between the sections to separate and support same and render the structure a single high-voltage condenser unit.



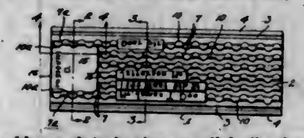
1,628,628. MECHANICAL MINIATURE THEATRICAL. CLARENCE T. HUNT, New Haven, Conn., assignor to William C. Beers, Danbury, Conn. Filed Dec. 13, 1922. Serial No. 606,567. 42 Claims. (Cl. 46—40.)

7. The combination with a plurality of mechanically operable figures representing actors, of a plurality of clock mechanisms, actuating connections between the respective clock mechanisms and the respective figures, and means for successively starting the operation of the clocks



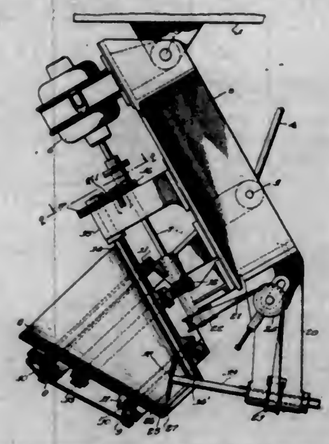
imparting the impression of a succession of parts of a theatrical performance with successive actions of the various individual actors.

1,628,629. CLUTCH MECHANISM. HARRY H. KESSLER, Bethlehem, Pa. Filed Mar. 5, 1926. Serial No. 92,396. 12 Claims. (Cl. 192—67.)



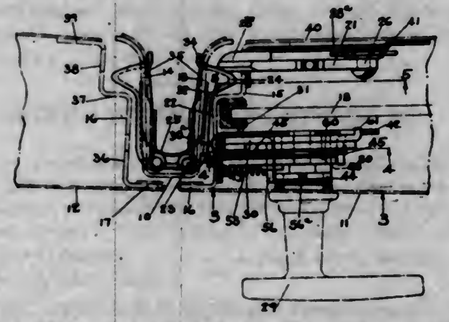
1. In apparatus of the class described, the combination of a rotatable shaft, a member co-axially related to said shaft and having spaced projections provided with working faces extending substantially parallel to the shaft axis, a plurality of independent yieldable key devices having key portions provided with working faces extending substantially parallel to the shaft axis, said key devices being mounted on the shaft and movable relatively thereto to engage in the spaces between projections and said key devices and projections being disposed in odd-even relationship, whereby, a key device may at all times be moved into a space between projections, and means for shifting the key devices with respect to the shaft.

1,628,630. ADDRESS PLATE. HENRY C. OSBORN, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 5, 1926. Serial No. 106,792. 20 Claims. (Cl. 101—369.)



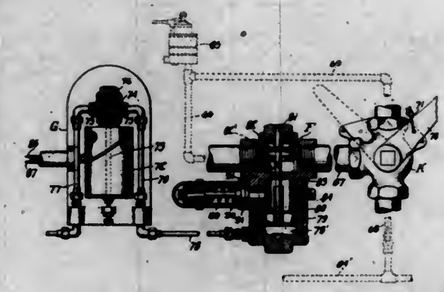
10. In combination an address plate holder, a plurality of parallel printing lines carried thereby and a removable tab secured to the holder across the ends of said lines and extending beyond the end of the holder and provided with an index visible beyond such end.

1,628,631. IDENTIFICATION MEANS FOR ADDRESS PLATES. HENRY C. OSBORN, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 12, 1926. Serial No. 128,760. 14 Claims. (Cl. 101—369.)



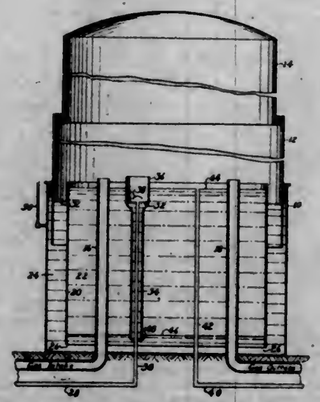
1. An address plate having parallel ribs for supporting individual printing character bearing members, and a removable tab positioned between certain of the ribs and in alignment with others and lying flat against the body of the plate in a plane below the tops of said ribs.

1,628,632. CONTINUOUS SELF-CLEANING MIXER. CALEB PAYNE, Chicago, Ill., assignor to Gypsum Engineering & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 10, 1926. Serial No. 107,856. 17 Claims. (Cl. 259—3.)



1. A continuous mixer comprising a revoluble mixing receptacle having a discharge opening, and a disk mounted to revolve in said receptacle adjacent the discharge opening and in a plane at an angle to the axis of the receptacle.

1,628,633. LATCH MECHANISM. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1924. Serial No. 738,344. 30 Claims. (Cl. 292—220.)

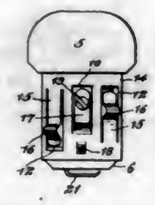


1. A latch mechanism comprising a horizontally swinging bolt adapted to be mounted on a door jamb, a latching member coacting with said bolt adapted to be mounted on and extend longitudinally of the door and means for operating said bolt also adapted to be mounted on the door.

1,628,634. AUTOMATIC TRAIN-CONTROL SYSTEM. EARL C. STAFFORD, Philadelphia, Pa., assignor to The United States Train Signal Company, Portland, Me., a Corporation of Maine. Filed Oct. 2, 1922. Serial No. 591,989. 33 Claims. (Cl. 246—178.)

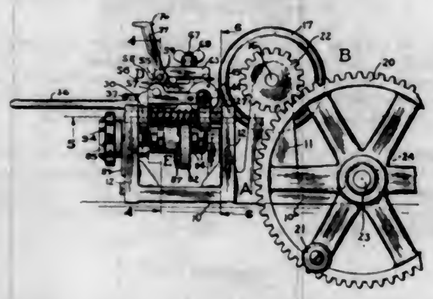
1. A block control system for railway trains comprising train stopping means, a normally closed electric circuit restraining operation thereof, and auxiliary circuit adapted to restrain operation of the train stopping means, a circuit closer common to both circuits, a ramp for each block, a block-signal-controlled circuit for each ramp, a shoe on the train adapted to be actuated by a ramp for operating the circuit closer to open the main circuit at one point and close the other circuit at one point, a detent to hold the circuit closer in the actuated position, and an electromagnet in circuit with said ramp to inhibit the action of the detent when a clear track is indicated, substantially as set forth.

1,628,635. STORAGE APPARATUS. WILBUR G. LAIRD, New York, N. Y. Filed Mar. 31, 1923. Serial No. 628,960. 20 Claims. (Cl. 221—67.)



1. Apparatus of the type described which comprises, a tank, an inner wall in said tank spaced from the side wall of said tank to form an inner liquid storage compartment and an outer liquid seal compartment, said inner and outer compartments communicating at one edge of said inner wall, a bell extending over said inner wall and having its lower edge immersed in the liquid in said outer compartment, and means to maintain a

sufficient depth of liquid in said outer compartment to provide a seal for said bell in its normal rise and fall during the introduction and withdrawal of gas.



16. A method of storing liquids which comprises, surrounding the liquid with a sealing liquid, enclosing the atmosphere above said liquid in a bell sealed in said surrounding sealing liquid, and displacing stored liquid with sealing liquid when withdrawing stored liquid and displacing sealing liquid with stored liquid when filling to maintain the total volume of liquids approximately constant.

1,628,636. ELECTRIC-CIRCUIT-CLOSING PLUG. FRANKLIN DOMINICK, New York, N. Y. Filed Apr. 23, 1921. Serial No. 463,766. 6 Claims. (Cl. 173—360.)

1. A circuit closing plug having conductor receiving apertures and side and end recesses, a contact sleeve surrounding one end of said plug and provided with an offset finger extending into the side recess, and a folded spring band within the end recess having an arm disposed at a right angle to the plane of said band.

1,628,637. KEY-CUTTING DEVICE. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Filed Apr. 4, 1921. Serial No. 458,185. 63 Claims. (Cl. 90—18.)

1. A key cutting machine, comprising a cutter and a carriage slidably movable relatively thereto, a plurality of stops selectively movable into position to contact with the carriage to variably limit such movement, and a key holder mounted on the carriage.

Patents Nos. 1,628,638 to 1,629,464.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 358—No. 3. TUESDAY, MAY 17, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

ADJUDICATED PATENTS.

(C. C. A. N. J.) The Sarason patent, No. 1,000,298, for a preparation for slowly liberating oxygen, claims 1 and 2 *Held* invalid for inadequate disclosure. *R. H. Comey Co.* v. *Monte Christi Corporation*, 17 F. (2d) 910.

(D. C. Pa.) The Speer and Foster patent, No. 1,071,364, for alloy of iron, claim 1 *Held* not infringed. *American Adamite Co.* v. *Mesta Machine Co.*, 17 F. (2d) 945.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,566,468, S. De Orlo, Hood catch, decided April 8, 1927, claim 1.

Pat. 1,568,198, S. P. Tschappat, Combination tubing spider and support, decided March 24, 1927, claims 1, 2, 3, 5, 6, and 7.

Final decisions have been rendered against the following trade-marks:

T. M. 115,285, Butter, eggs, and cheese, Beyer Bros. Commission Co., New York, N. Y. Registered February 6, 1917. Decided April 9, 1927.

T. M. 153,469, Mattresses, pillows, and box springs, International Bedding Co., Baltimore, Md. Registered March 21, 1922. Decided April 8, 1927.

T. M. 153,470, Mattresses, pillows, and box springs, International Bedding Co., Baltimore, Md. Registered March 21, 1922. Decided April 8, 1927.

T. M. 194,787, Corned-beef sandwich, Deane's Coffee Shoppe, Inc., Pittsburgh, Pa. Registered February 10, 1925. Decided April 6, 1927.

T. M. 222,311, Canned vegetables, Idaho Canning Co., Ltd., Payette, Idaho. Registered December 28, 1926. Decided April 25, 1927.

Important Information.

In ordering manuscript copies much time will be saved if the order states specifically what is desired, viz:

Application as originally filed. (Petition, specification, oath, and drawings as received.) Application as amended. (Petition, specification, oath, and drawings with amendments entered.)

Application as allowed. (Petition, specification, oath, and drawings as passed by the Examiner for issue.)

Original application. (Facsimile petition, specification, oath, and drawings at present time.)

Specification as originally filed. (As received in Office.)

Specification as amended. (With amendments entered.)

Specification as allowed. (As passed by the Examiner for issue.)

Original specification. (Facsimile at present time.)

File-wrapper. (File-wrapper only.)

File-wrapper and contents. (File-wrapper, contents of record, including photoprints of any tracings or of prints within file-wrapper. In patented cases, printed copy of the specification and drawings of the patent is furnished.)

File-wrapper, contents, and drawings. (File-wrapper and all of the contents of record, including photoprints of any tracings, exhibits, or prints within the file-wrapper. In pending cases, photoprints of the pending drawings only, omitting any canceled. If patented, copy of the specification and drawings of the patent being furnished, photoprints are not made of the original drawings unless specially ordered. If canceled drawings are wanted, they must also be specially ordered.)

Assignment. (Give the liber and page of the record as well as the name of the inventor.)

Printed publications in possession of the Office. (Give title and date of publication, also page and exact portion to be copied.)

Orders for copies of any other records not mentioned above must state specifically the exact paper to be copied.

Condition of Applications Under Examination at Close of Business May 6, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 80,775; Trade-Mark Division, 1,994. Oldest new case, Oct. 1, 1926; oldest amended, Sept. 8, 1926. The dates given are 1926 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application awaiting action.	Oldest amended application awaiting action.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders	†Feb. 26	†Mar. 1	534

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE AUGUSTUS M. HERRING, BY THE ASSIGNEE OF HIS ENTIRE INTEREST, JAMES V. MARTIN.

No. 1,906. Decided February 7, 1927.

APPLICATION — ABANDONMENT — PETITION TO REVIVE — LONG DELAY IN FILING—DELAY IN PROSECUTION NOT UNAVOIDABLE.

Where the claims were finally rejected on January 4, 1898, and no response was made until July 1, 1910, when a petition to revive was filed, which petition was denied on August 22, 1910, and then no further action was taken by applicant until February 11, 1924, when another petition to revive was filed, *Held* that the application should not be revived after these long and inexcusable delays.

APPEAL from the Patent Office. Affirmed.

Mr. James V. Martin pro se.

Mr. T. A. Hostetler for Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a decision of the Patent Office denying a petition to revive an abandoned application for patent on a power-driven aeroplane.

The original application was filed December 11, 1896, and the claims were finally rejected on January 4, 1898. No further action was taken until July 1, 1910, or 12½ years later, when a petition for revival was filed. On August 22, 1910, this petition was denied, the Commissioner pointing out that for at least three years and probably longer the operativeness of heavier-than-air machines had been demonstrated, and that the applicant was guilty of laches in not moving earlier. No further action was taken by the applicant until February 11, 1924, a period of more than 13 years, when the present application was filed.

This application was refused upon the ground that no new reasons excusing the delay in filing the first application had been advanced, except that applicant had been engaged in a legal controversy in 1900 and for several years thereafter had devoted himself and his resources to that litigation. As to this additional ground, the Commissioner said:

> It appears the applicant at the time he filed his former petition was represented by able counsel and nothing is recited to show he has not or could not have had the benefit of advice from his counsel as to his rights in asking rehearing of the former petition at any time since July, 1910. No showing is made that applicant ever asked advice of his former attorneys or requested them to prepare a petition for rehearing of the decision of July, 1910.

Following this action by the Commissioner, applicant filed another petition to revive. After a hearing, this application was denied. Thereafter applicant filed a petition for "decision of final allowance or final rejection." Again the Commissioner, with painstaking care, considered applicant's contentions and held the application abandoned.

When this applicant permitted his application to become abandoned, other inventors were engaged in the development of this art, and it is common knowledge, as pointed out by the Commissioner, that within a comparatively short time their efforts were crowned with success. In these circumstances, prompt action was demanded of this applicant. To permit him now, after his long and inexcusable delay, to revive his abandoned application, might result in very serious injustice to those inventors who persevered to the goal of success. The decision of the Commissioner was right and is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

IN RE MARKEL.

No. 1,901. Decided February 7, 1927.

1. REISSUE—BROADER CLAIMS—EXCUSE FOR NEARLY FIVE YEARS' DELAY IN FILING INSUFFICIENT.

Where the reissue application was filed nearly five years after the grant of the patent and with broader claims, and applicant relied upon his employment by the American Government during the World War to excuse the delay, *Held* that the excuse is insufficient.

2. SAME—DELAY IN FILING—SECTIONS 1 AND 6 OF NOLAN ACT NOT APPLICABLE.

Where applicant urged that the provisions of sections 1 and 6 of the Nolan Act (41 Stat. 1313) are applicable to the filing of reissue applications, *Held* that section 1 relates to questions of priority while section 6 is applicable only to applications which became abandoned or forfeited during the time the applicant was serving abroad with the forces of the United States.

APPEAL from the Patent Office. Affirmed.

Mr. J. T. Basseches, Mr. Paul Carpenter, Mr. B. J. McCann, and *Mr. J. H. McCann* for Markel.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.*:

Appeal from a decision of the Commissioner of Patents refusing an application for reissue of a patent, relating to cross-heads for locomotive engines, with broader claims, the application having been filed almost five years after the grant of the patent.

Two reasons for the allowance of this application are advanced: First, that applicant's delay was due to the fact that he was employed by the American Government as chief locomotive inspector on new railway locomotives for the United States Railroad Administration, during the World War; and, second, that the provisions of the so-called Nolan Act, (41 Stat. 1313), are applicable.

As to the first reason, the Commissioner said:

> Appellant was merely a civil employee of the Government for a short time and was in this country at all times. The nature of his employment in no way interfered with his giving attention to his patent and to what it covered and discovering the reasons now presented in support of broadened claims.

This ruling constituted no abuse of discretion. *In re Loes*, 282 O. G. 742, 50 App. D. C. 163, 269 Fed. 679, and cases there cited.

[2] As to the second reason, sections 1 and 6 of the Nolan Act are relied upon. We agree with the Patent Office that the Nolan Act does not apply here. Section 1 relates to questions of priority, while section 6 is applicable only to applications which became abandoned or forfeited during the time the applicant was serving abroad with the forces of the United States.

The decision is affirmed.

Affirmed.

Re. 16,200. (See 1,133,251.)

Changes in Classification.

Order No. 3,010, April 29, 1927, directs:

In *class 103, Pumps* (Division 9), establish the following subclasses and definitions, the patents contained in these subclasses having been taken for the most part from class 162, Injectors and Ejectors, subclasses 1, Miscellaneous; 2, Injector, Fluid-level controlled; and 3, Ejector, Fluid-level controlled, abolished in this order:

258 Jet—
259 Combined types,
260 Well or vertical-lift type
261 Successive jets,
262 Hydraulic jet,
263 Pneumatic jet,
264 Steam jet
265 Live and exhaust steam,
266 Plural jets
267 Successive
268 With manual valve control,
269 With manual valve control,
270 With manual valve control,
271 Regulators
272 For nozzles,
273 For combining tubes
274 Pressure controlled,
275 Pressure-controlled overflow,
276 Float controlled,
277 Elements
278 Nozzles.

258. JET. Directed to devices embracing fluid-jet-producing means or nozzle structure adapted to discharge a motive fluid having a relatively high velocity, with means whereby the motive fluid, by its energy of motion and by frictional contact, acts to entrain and carry with it a liquid or partially liquid fluid to effect the pumping action, not falling within the scope of the indented subclasses or otherwise specifically provided for in existing classes.

Note.—Jet pumps effecting the pumping action by unbalanced liquid columns through aeration of one of the liquid columns are classified in this class, subclass 282, and the subclass indented thereunder.

Note.—For jet pumps of special application or forming an element in a combination of greater scope than a pump see the following classes:

4—BATHS, CLOSETS, SINKS, AND SPITTOONS, subclass 4, Tub and basin.

48—GAS, HEATING AND ILLUMINATING, subclass 104, Generators, Retort, Oil, Jet mixers.

51—ABRADING, subclass 11, Machines, Sand blast, Nozzles, for applying abrading materials.

91—COATING, subclass 45, Machines, Fountain, Projection, Air brush, for applying coating materials.

110—FURNACES, subclasses 150, Draft regulators, Steam injector, and 160, Draft regulators, Stack, Air jet, and the subclass indented thereunder.

122—LIQUID HEATERS AND VAPORIZERS, subclasses 384, Cleaning, Blow-off, Bottom, Internal conduit, Ejector; 390, Cleaning, Fluid jet, and the subclasses indented thereunder; and 395, Cleaning, Sand blast.

158—LIQUID AND GASEOUS FUEL BURNERS, subclasses 73, Burners, Liquid fuel, Spray, and 75, Burners, Liquid fuel, Spray, Oil and steam.

184—LUBRICATION, subclass 56, Lubricators, Force feed, Fluid operated, Steam or air, Injectors.

210—LIQUID SEPARATION OR PURIFICATION, subclass 40, Water purification, Chemical treatment, Chemical feeders, Pump or injector.

230—GAS PUMPS AND FANS, subclass 92, Fluid displacement, Jet pumps, and the subclasses indented thereunder, for air or gas jet pumps.

261—GAS AND LIQUID CONTACT APPARATUS, subclass 76, Contact devices, Injector type, and the subclass indented thereunder.

291—TRACK SANDERS, subclass 3, Fluid delivery, for sand-applying devices.

239—FLUID SPRINKLING, SPRAYING, AND DIFFUSING, subclasses 109, Nozzles, Air-supply devices for firemen, and 140, Nozzles, Multiple inlet.

302—CONVEYERS, FLUID CURRENT, subclasses 14, Hydraulic conveyers; 20, Pneumatic conveyers, Auxiliary liquid injector; and 25, Pneumatic conveyers, Combined suction and pressure, Jet, for conveying solids in fluent form, broadly.

259. JET, COMBINED TYPES. Directed to devices adapted to utilise a plurality of motive fluids having different physical properties or to devices embracing a plurality of jet pump units of different nozzle types, structurally associated to form a unitary pumping mechanism.

Note.—Where steam of different pressure is utilized as the motive fluids, see this class, subclass 265.

Search Classes—

230—GAS PUMPS AND FANS, subclass 93, Fluid displacement, Jet pumps, Combined-nozzle type.

302—CONVEYERS, FLUID CURRENT, subclass 20, Pneumatic conveyers, Auxiliary liquid injector.

260. JET, WELL OR VERTICAL-LIFT TYPE. Devices especially adapted in structure to effect a vertical pumping action, as where the source of supply is either a shallow well or a drilled well or the like, not falling within the scope of the indented subclass.

Search this class, subclass 232, and the subclass indented thereunder.

261. JET, WELL OR VERTICAL-LIFT TYPE, SUCCESSIVE JETS. Such devices in which a plurality of impelling units act in series or in succession upon the liquid to move it in steps or stages.

Search this class, subclass 233.

262. JET, HYDRAULIC JET. Such devices adapted to utilize a liquid actuating or entraining fluid as the motive force.

Search Classes—

37—EXCAVATING, subclass 61, Dredgers, Suction, With jet pump, and the subclass indented thereunder.

230—GAS PUMPS AND FANS, subclass 92, Fluid displacement, Jet pumps.

302—CONVEYERS, FLUID CURRENT, subclasses 14, Hydraulic conveyers, and the subclasses indented thereunder, and 20, Pneumatic conveyers, Auxiliary liquid injector.

263. JET, PNEUMATIC JET. Such devices adapted to utilize a gaseous actuating or entraining fluid, such as air or the like, as the motive force, not otherwise specifically provided for in this class.

Search this class, subclasses 232, and the subclass indented thereunder, and 260, and the subclass indented thereunder.

Search Class—

230—GAS PUMPS AND FANS, subclass 95, Fluid displacement, Jet pumps, Elastic motive fluid, and the subclasses indented thereunder.

264. JET, STEAM JET. Such devices adapted especially to utilize steam as the motive fluid not falling within the scope of the indented subclasses.

Search Class—

230—GAS PUMPS AND FANS, subclass 95, Fluid displacement, Jet pumps, Elastic motive fluid, and the subclasses indented thereunder.

265. JET, STEAM JET, LIVE AND EXHAUST STEAM. Such devices especially adapted to utilize low-pressure steam, such as the exhaust steam from an engine, and high-pressure steam, as the motive fluids.

Note.—The live steam may be applied through a separate nozzle to increase the pumping effect of the exhaust steam or may be mixed therewith to increase the pressure effect or the device may provide for the selective use of live and exhaust steam.

Search this class, subclass 259, for multiple motive fluids for jet pumps, broadly.

266. JET, STEAM JET, PLURAL JETS. Such devices in which a multiplicity of jet-pump units are structurally associated to form a unitary pumping mechanism or in which a unitary nozzle structure is adapted to discharge a plurality of motive-fluid jets, not falling within the scope of the indented subclasses.

Search Class—

230—GAS PUMPS AND FANS, subclasses 103, Fluid displacement, Jet pumps, Elastic motive fluid, Plural jets, and 110, Fluid displacement, Jet pumps, Plural jets.

267. JET, STEAM JET, PLURAL JETS, SUCCESSIVE. Such devices in which the impelling units of the pumping mechanism act in series or in succession upon the liquid to move it in steps or stages and in which the successive jets are provided with separate and successive combining tubes, not falling within the scope of the indented subclasses.

Note.—Plural jets discharging in successive planes of a common combining tube are classified in this class, subclass 266.

268. JET, STEAM JET, PLURAL JETS, SUCCESSIVE, WITH MANUAL VALVE CONTROL. Devices, as indicated, provided with manually-operable valve means for controlling one or more functions of the mechanism.

Note.—Compare this subclass and subclasses 269 and 270.

269. JET, STEAM JET, PLURAL JETS, WITH MANUAL VALVE CONTROL. Devices, as indicated, provided with manually-operable valve means for controlling one or more functions of the mechanism.

Note.—Compare this subclass and subclasses 268 and 270.

270. JET, STEAM JET, WITH MANUAL VALVE CONTROL. Devices, as indicated, provided with manually-operable valve means for controlling one or more functions of the mechanism.

Note.—Compare this subclass and subclasses 268 and 269.

271. JET, REGULATORS. Directed to devices for varying, controlling, or regulating the operation or effect of jet-pump apparatus, which are limited in application to pumps of such type or which embrace, in the combination claimed, structure necessarily that of a jet pump, not falling within the scope of the indented subclasses or otherwise provided for in existing classes.

Note.—Compare this class, subclasses 268, 269, and 270.

Search Class—

230—GAS PUMPS AND FANS, subclasses 98, Fluid displacement, Jet pumps, Elastic motive fluid, Flue, With spark arresters, Regulators; 99, Fluid displacement, Jet pumps, Elastic motive fluid, Flue, Regulators, and the subclass indented thereunder; and 111, Fluid displacement, Jet pumps, Regulators, and the subclass indented thereunder.

272. JET, REGULATORS, FOR NOZZLES. Directed to devices for varying or controlling the effect of or adjusting the nozzle or fluid jet producing means of such pumps.

Search Class—

230—GAS PUMPS AND FANS, subclasses 100, Fluid displacement, Jet pumps, Elastic motive fluid, Flue, Regulators, For jets, and 112, Fluid displacement, Jet pumps, Regulators, Nozzle and/or combining tubes.

273. JET, REGULATORS, FOR COMBINING TUBES. Directed to devices for varying or controlling the effect of or adjusting combining tubes of jet pumps, not falling within the scope of the indented subclasses.

Search Class—

230—GAS PUMPS AND FANS, subclass 112, Fluid displacement, Jet pumps, Regulators, Nozzle and/or combining tubes.

274. JET, REGULATORS, FOR COMBINING TUBES, PRESSURE CONTROLLED. Such devices provided with means to effect control through variations in fluid-pressure conditions, the effect of the pumping action.

275. JET, REGULATORS, PRESSURE-CONTROLLED OVERFLOW. Such devices provided with means to effect control of the fluid waste or overflow in pumps of the type indicated through variations in fluid-pressure conditions, the effect of the pumping action.

276. JET, REGULATORS, FLOAT CONTROLLED. Such devices in which control of the pumping action is effected through variations in liquid-level conditions by means of a buoyant member.

Search this class, subclasses 14, 18, 28, 32, and 34.

Search Class—

137—WATER DISTRIBUTION, subclasses 68, Tanks, Automatic, and 104, Float valves.

277. JET, ELEMENTS. Directed to elemental parts peculiarly adapted in use to pumps of the jet type or which embrace structure in the combination claimed necessarily a part of such pumps, not falling within the scope of the indented subclass or otherwise provided for in existing classes.

278. JET, ELEMENTS, NOZZLES. Directed to the structure of nozzles or fluid-jet-producing means, peculiarly adapted and limited in application to pumps of the jet type.

Note.—See list of classes enumerated in search notes under subclass 258 of this class for mechanisms embracing nozzle structure.

In *class 155, Chairs and Seats* (Division 8), subclass 42, Convertible, Stepladders, add to the definition the following note:

Search Class—

228—LADDERS, subclass 30, Propped, Stepladder type, Storage-frame prop, for stepladders in which the top platform of the ladder is described as being used as a chair or stool.

In *class 162, Injectors and Ejectors* (Division 9), abolish the class, the patents contained in the three remaining subclasses—viz, 1, Miscellaneous; 2, Injector, Fluid-level controlled; and 3, Ejector, Fluid-level controlled—having been placed for the most part in class 103, Pumps, subclass 258, Jet, and the subclasses indented thereunder, established in this order.

In *class 166, Wells* (Division 38), abolish the following subclass, with its definition, the patents formerly contained in this subclass having been placed for the most part in class 103, Pumps, subclass 260, Jet, Well or vertical-lift type, established in this order, and subclass 232, Aerated column, and in class 166, Wells, subclass 2, Flowing:

Flowing
3 Ejecting.

In *class 166, Wells* (Division 38), subclass 2, Flowing, add to the definition the following note:

Note.—Where the device for effecting liquid flow from a well is a pumping mechanism, such device is classified in appropriate subclasses in class 103, PUMPS, whether the motive fluid for producing the pumping action is from a tank, pump, or natural pressure. See especially class 103, PUMPS, subclasses 232, Aerated column, and the subclass indented thereunder, and 260, Jet, Well or vertical-lift type, and the subclass indented thereunder.

TRADE-MARKS

OFFICIAL GAZETTE, MAY 17, 1927.

[VOL. 358. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 185,729. (CLASS 15. OILS AND GREASES.) JASPER N. THOMPSON, Chicago, Ill., assignor to Ford Oil Corporation, Chicago, Ill., a Corporation of Delaware. Filed Sept. 12, 1923.

FORD OIL

The trade-mark consists of the word "Ford" above the word "Oil," with a single relatively large "O" serving for both the intermediate letter of the upper word and the initial letter of the lower word, as shown in the accompanying specimens. No claim is made for the word "Ford" nor to "Oil" except in the particular form and association shown.

Particular description of goods.—Lubricating Oils.

Claims use since about Sept. 1, 1923.

Ser. No. 196,261. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) SCHALK CHEMICAL COMPANY, Los Angeles, Calif. Filed Apr. 28, 1924.

TEX

Trade-mark consists of the word symbol "Tex."

Particular description of goods.—Cleaning Compound with Bleaching Qualities.

Claims use since Mar. 24, 1924.

Ser. No. 203,930. (CLASS 12. CONSTRUCTION MATERIALS.) THE BEAVER PRODUCTS COMPANY, INC., Buffalo, N. Y. Filed Oct. 16, 1924.

HEXAGON

Particular description of goods.—Asphalt Roofing.

Claims use since Dec. 24, 1920.

Ser. No. 207,787. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWIN A. HULL, doing business as Electrine Company, Bay City, Mich. Filed Jan. 7, 1925.

ELECTRINE

Particular description of goods.—Liniment.

Claims use since May 26, 1874.

Ser. No. 209,307. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) A. MERLINO & SONS, Seattle, Wash. Filed Feb. 9, 1925.

BUON GUSTO

Particular description of goods.—Canned Tomatoes, Tomato Sauce, Canned Peas, Canned Beans, Canned and Bottled Olives, Canned Cottonseed Salad Oil, Dried Codfish, Canned Corn, Bottled Vinegar, and Canned Artichokes.

Claims use since 1911.

Ser. No. 211,841. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) RICHARD FRANK, doing business as Richard Frank & Co., New York, N. Y. Filed Mar. 30, 1925.

SURPRISE

Particular description of goods.—Canned Crushed Fruits in Sirup.
Claims use since Feb. 2, 1925.

Ser. No. 213,427. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHAMBERLAIN AND COMPANY, INCORPORATED, Boston, Mass. Filed Apr. 28, 1925. Under 10-year proviso.

STERLING

Particular description of goods.—Corned Beef Packed in Bulk in Barrels.
Claims use since Jan. 1, 1895.

Ser. No. 215,476. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PLEE-ZING CORPORATION, New York, N. Y., and Savannah, Ga. Filed June 8, 1925.

PLEE-ZING

Particular description of goods.—Evaporated Milk, Cocoa, Conserved Fruits, and Fruit Preserves, Honey, Canned Shellfish; Canned Meats—Namely, Roast Beef and Tripe; Dried Fruits—Namely, Raisins, Currants; Canned Soups, Gelatin, Food-Flavoring Extracts, Sandwich Spread Having a Mayonnaise Base; Condiments—Namely, Catchup, Pepper; Salad Dressings, Peanut Butter, Olives, Chile Con Carne, and Chop Suey.
Claims use since February, 1925.

Ser. No. 220,911. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NORTH DAKOTA MILL AND ELEVATOR ASSOCIATION, Grand Forks, N. Dak. Filed Sept. 28, 1925.

Particular description of goods.—Wheat Products—Namely, Fancy Flour.
Claims use since Nov. 1, 1922.

Ser. No. 220,912. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NORTH DAKOTA MILL AND ELEVATOR ASSOCIATION, Grand Forks, N. Dak. Filed Sept. 28, 1925.

Particular description of goods.—Wheat Products—Namely, Fancy Patent Flour.
Claims use since Nov. 1, 1922.

Ser. No. 225,525. (CLASS 1. RAW OR PARTLY PREPARED MATERIALS.) THE SOUTH DAKOTA CROP IMPROVEMENT ASSOCIATION, Brookings, S. Dak. Filed Jan. 5, 1926.

The words "South Dakota Seeds" are disclaimed apart from the mark as shown.
Particular description of goods.—Farm Seeds Such as Alfalfa, Sweet Clover, Soy Beans, Corn, Wheat, Oats, Barley, Flax, Millets, Sorghums, and Grass Seeds.
Claims use since Jan. 1, 1925.

Ser. No. 225,804. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) GEO. D. ROPER CORPORATION, Rockford, Ill. Filed Jan. 11, 1926.

The trade-mark consists of a wavy line, strip, or band.
Particular description of goods.—Gas-Burning Water Heaters, Air and Gas Mixers for Gas-Burning Devices, Gas-Fired Steam Boilers; Furnaces—Namely, Gas-Fired Furnaces for Domestic and Industrial Purposes; and Parts or Appliances Used on the Foregoing.
Claims use since Mar. 13, 1922.

Ser. No. 226,098. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CONSERVENFABRIK LENZBURG VORM. HENCKELL & ROTH, Lenzburg, Switzerland. Filed Jan. 19, 1926.

Applicant disclaims all right to the words "Conserves" and "Lenzbourg" apart from the mark as shown.
Particular description of goods.—Conserved Fruits and Vegetables, Marmalades, and Jams.
Claims use since Oct. 21, 1916.

Ser. No. 227,376. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) UNITED STATES GUTTA PERCHA PAINT COMPANY, Providence, R. I. Filed Feb. 16, 1926.

No claim is made to the exclusive right to the use of the word "Flow-on" apart from the mark shown.
Particular description of goods.—Paints in Paste and Ready-Mixed Form.
Claims use since Jan. 7, 1910.

Ser. No. 227,578. (CLASS 37. PAPER AND STATIONERY.) THE EATON-DIKEMAN CO., Lee, Mass. Filed Feb. 20, 1926.

MOHAWK

Particular description of goods.—Blotting Paper.
Claims use since Jan. 1, 1923.

Ser. No. 227,793. (CLASS 39. CLOTHING.) HENRY SONNEBORN COMPANY, INC., Baltimore, Md. Filed Feb. 25, 1926.

No claim is made to the words "Dawn Gray" apart from the mark as shown.
Particular description of goods.—Men's and Boys' Suits and Overcoats.
Claims use since Oct. 7, 1925.

Ser. No. 227,817. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) WERNER & MERTZ AKTIENGESELLSCHAFT, Maine, Germany. Filed Feb. 25, 1926.

Erdal

Particular description of goods.—Polishing Paste for Shoes, Liquid Shoe Polish, Polishing Stone for Shoes, Leather Oil, and Grease for Boots.
Claims use since Mar. 9, 1920.

Ser. No. 228,281. (CLASS 10. FERTILIZERS.) U. S. EXPORT CHEMICAL CORPORATION, Tampa, Fla., and New York, N. Y. Filed Mar. 6, 1926.

No claim is made to the words "Florida Triple Phosphate" apart from the mark shown on drawing.
Particular description of goods.—Fertilizers.
Claims use since August, 1925.

Ser. No. 228,855. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) FLOYD KOON, Highland Park, Ill. Filed Mar. 19, 1926.

No exclusive right to the word "Brakes" apart from the mark shown being claimed.

Particular description of goods.—Fluid for Correcting the Gripping Capacity of Friction Brakes.

Claims use since Dec. 15, 1925.

Ser. No. 229,147. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHEMISCHE FABRIK "PROMONTA" GESELLSCHAFT MIT BESCHRÄNKTER HAFTUNG, Hamburg, Germany. Filed Mar. 25, 1926.

„Promonta"

Particular description of goods.—Dietetic Foods—Namely, Cereal Dietetic Foods.

Claims use since October, 1919.

Ser. No. 229,872. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) NATIONAL MINERAL HEALTH FOOD CO., Chicago, Ill. Filed Apr. 8, 1926.

No claim is made to applicant's address apart from the mark as shown.

Particular description of goods.—Mineral Health Food.

Claims use since Feb. 15, 1926.

Ser. No. 229,997. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDWARD A. ZINK, doing business as The Co-Quin-Ol Company, New York, N. Y. Filed Apr. 10, 1926.

The drawing is conventionally lined to designate the colors green, blue, and orange. The representation of a label or carton is disclaimed.

Particular description of goods.—Shampoo and Corrective for Dandruff.

Claims use since September, 1924.

Ser. No. 230,011. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BLOOD TONE ARM COMPANY, Bay City, Mich. Filed Apr. 12, 1926.

MASTERTONE

Particular description of goods.—Loud-Speaker Units.

Claims use since Jan. 1, 1925.

Ser. No. 230,247. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) LEONARD, CROSSET & RILEY, Cincinnati, Ohio, assignor to Leonard, Crosset & Riley, Inc., Cincinnati, Ohio, a Corporation of Delaware. Filed Apr. 15, 1926.

DIXIE QUEEN

The portrait shown in the drawing is merely fanciful.

Particular description of goods.—Fresh Watermelons.

Claims use since Mar. 31, 1926.

Ser. No. 230,703. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) WILSON CANNING COMPANY, Mexico, N. Y. Filed Apr. 24, 1926.

LILY

Particular description of goods.—Canned Fruits and Canned Vegetables.

Claims use since about 1888.

Ser. No. 231,937. (CLASS 20. LINOLEUM AND OILED CLOTH.) LISHER & RATTO, Napa, Calif. Filed May 20, 1926.

CLIM-ER-EGE

Particular description of goods.—Floor and Wall Coverings of Linoleum.

Claims use since Oct 9, 1925.

Ser. No. 232,331. (CLASS 15. OILS AND GREASES.) THE HICKOK PRODUCING CO., Toledo, Ohio. Filed May 27, 1926.

NOXOUT

Particular description of goods.—Gasoline.

Claims use since May 21, 1926.

Ser. No. 232,993. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) ELIZABETH H. CHEIN, Harrison, N. J. Filed June 10, 1926.

HERCULES

Particular description of goods.—Sheet-Metal Toys—Namely, Toy Wagons, Toy Carts, Toy Cars, Toy Automobiles, Toy Engines, Toy Cranes, and Toy Aeroplanes.

Claims use since Jan. 1, 1926.

Ser. No. 235,790. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THOMAS J. WEBB CO., Chicago, Ill. Filed Aug. 10, 1926.

Webb's

The mark is written in the handwriting of Thomas J. Webb, president of the applicant corporation.

Particular description of goods.—Spices—Namely, Ground and Whole White Pepper, Ground Black Pepper, Ground Red Pepper, Ground and Whole Allspice, Whole Anise Seed, Ground Cinnamon, Ground and Whole Ginger, Ground and Whole Nutmeg, Ground and Whole Mustard, Ground Celery Salt, Ground Turmeric, Whole Fennel Seed, Ground and Whole Cloves, Whole Laurel Leaves, Whole Pickling Spice, Whole Leaf Marjoram, Whole Leaf Savory, and Ground Paprika; Flavoring Extracts for Food Purposes, such as Lemon Extract and Vanilla Extract; Condiments—Namely, White Vinegar and Cider Vinegar and Prepared Edible Mustard.

Claims use since Aug. 7, 1925, on spices; July 15, 1925, on flavoring extracts for foods; Aug. 17, 1925, on vinegar; Jan. 25, 1926, on mustard.

Ser. No. 235,874. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BAYER COMPANY, INC., New York, N. Y. Filed Aug. 12, 1926.

No right to registration is claimed for the representation of the carton as distinguished from the arrangement nor to the matter in small type on the face and sides, common-law rights therein being reserved.

Particular description of goods.—Antirheumatic, Analgesic, and Antipyretic Medicines.

Claims use since Mar. 17, 1915.

Ser. No. 235,877. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BAYER COMPANY, INC., New York, N. Y. Filed Aug. 12, 1926.

No right of registration is claimed for the representation of the carton as distinguished from the arrangement nor to the matter in small type on the face and sides, common-law rights therein being reserved.

Particular description of goods.—Antirheumatic, Analgesic, and Antipyretic Medicines.

Claims use since Apr. 23, 1919.

Ser. No. 235,878. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BAYER COMPANY, INC., New York, N. Y. Filed Aug. 12, 1926.

No right of registration is claimed for the representation of the carton as distinguished from the arrangement nor to the word "Cafeina," nor to the matter in small type on the face and sides, common-law rights therein being reserved.

Particular description of goods.—Antirheumatic, Analgesic, and Antipyretic Medicines.

Claims use since Feb. 16, 1921.

Ser. No. 235,928. (CLASS 3. BAGGAGE, ANIMAL EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) JIM DANDY COLLAR COMPANY, Bradford, Ill. Filed Aug. 13, 1926.

NU-IDEA

THE COLLAR THAT VENTILATES

No claim is made to the words "The Collar that Ventilates" apart from the mark shown in the drawing.

Particular description of goods.—Horse Collars.

Claims use since July 15, 1926.

Ser. No. 236,100. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STERLING PRODUCTS (INCORPORATED), Wheeling, W. Va. Filed Aug. 17, 1926.

No right of registration is claimed for the representation of the carton as distinguished from the arrangement nor to the words "San Francisco, Cal.," nor to the matter in small type on the face and sides. Applicant is the owner of registrations Nos. 10,974, 12,118, 35,885, 35,886, 41,338, 41,339, 49,561, 54,322, and 104,087.

Particular description of goods.—Liquid Purgative Medicines.

Claims use since 1878.

Ser. No. 236,117. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) COLONIAL BEAD CO., INC., New York, N. Y. Filed Aug. 18, 1926.

Doris

Particular description of goods.—Pearl Necklaces, Brooches, Bead Necklaces, Bar Pins, Bracelets, and Earrings.

Claims use since July 20, 1926.

Ser. No. 236,339. (CLASS 39. CLOTHING.) SAM ROSENBERG & CO., Los Angeles, Calif. Filed Aug. 23, 1926.

ROSE MAID

Particular description of goods.—Women's Apparel—Namely, Lingerie, to wit, Vests, Step-Ins, Bloomers, Teddies, Slips, Nightgowns, Negligees (Lounging Robes), Brassières, and Pyjamas All Made of Crêpe de Chine, Georgette Crêpe, Satin, and Rayon Textile and Knitted Fabrics, Tea Gowns Made of Silk, and Smocks and Nurses' Uniforms Made of Cotton and Linen.

Claims use since Apr. 1, 1926.

Ser. No. 236,553. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) E. L. KARNES, doing business as The Puritol Company, Kansas City, Mo. Filed Aug. 27, 1926.

Puritol

Particular description of goods.—Salt.

Claims use since May, 1926.

Ser. No. 237,012. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) AUTOMATIC MUSICAL INSTRUMENT COMPANY, Grand Rapids, Mich. Filed Sept. 9, 1926.

The ARISTOCRAT

Particular description of goods.—Pianos, Organs, Player Pianos, Player Organs, and Automatic Player Mechanism Therefor.

Claims use since Jan. 27, 1926.

Ser. No. 237,062. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) MARIE A. BILLINGTON, New York, N. Y. Filed Sept. 10, 1926.

The word "Gifts" is disclaimed apart from the mark as shown.

Particular description of goods.—Gift Articles Comprising Brass Ware and Pewter Ware, Including Platters, Plates, Bowls, Porringers, Dishes, Trays, Pots, Jugs in the Nature of Pitchers, and Ewers, Tureens, and Mugs.

Claims use since Feb. 15, 1926.

Ser. No. 237,130. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PARKER RUST-PROOF COMPANY, Detroit, Mich. Filed Sept. 11, 1926.

PARCOLAC

Particular description of goods.—Liquid Coating Composition in the Nature of a Chemical for Rustproofing Material.

Claims use since Jan. 1, 1918.

Ser. No. 237,426. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) THE U. S. ASEPTIC SUPPLY SERVICE, INC., New York, N. Y. Filed Sept. 18, 1926.

No claim is made to the words "Quality Guarantee" apart from the trade-mark as shown.

Particular description of goods.—Absorbent Cotton, Absorbent Gauze, and Sanitary Napkins.

Claims use since July 7, 1926.

Ser. No. 238,151. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARY ELIZABETH BAKER, Philadelphia, Pa. Filed Oct. 5, 1926.

MME. M. E. BAKER'S
Beautiful
Hair Grower

The words "Hair Grower" have been disclaimed apart from the mark as shown on the drawing, being descriptive and not capable of exclusive appropriation.

Particular description of goods.—Hair Grower.

Claims use since Jan. 10, 1924.

Ser. No. 239,030. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BENJAMIN GELLMAN, Philadelphia, Pa. Filed Oct. 22, 1926.

The Sheik

Particular description of goods.—Toilet Preparations—Namely, Hairdressing.

Claims use since Sept. 15, 1926.

Ser. No. 239,491. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THARINGER MACARONI COMPANY, Milwaukee, Wis. Filed Oct. 30, 1926.

TASTY BENDS

Particular description of goods.—Alimentary Paste Products.

Claims use since Feb. 20, 1917.

Ser. No. 239,492. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THARINGER MACARONI COMPANY, Milwaukee, Wis. Filed Oct. 30, 1926.

WHITE PEARL

The lining in the drawing is for the color blue.

Particular description of goods.—Alimentary Paste Products, and Particularly for Soup Alphabets and Shells, and also for Macaroni, Spaghetti, Vermicelli, Noodles, and Egg Noodles, the Latter Two Both Dry and Wet Prepared for Immediate Use.

Claims use since Jan. 1, 1906.

Ser. No. 239,493. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THARINGER MACARONI COMPANY, Milwaukee, Wis. Filed Oct. 30, 1926.

WHITE PEARL

Particular description of goods.—Alimentary Paste Products of All Kinds, Dry and Wet, and Prepared for Immediate Use; Also for Alimentary Pastes in the Form of Alphabets and Shells and Adapted to be Used as Cereal Breakfast Foods; Macaroni, Spaghetti, Vermicelli, Noodles, Egg Noodles, the Latter Two Both Dry and Wet, Prepared for Immediate Use.

Claims use since Jan. 1, 1906.

Ser. No. 239,495. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THARINGER MACARONI COMPANY, Milwaukee, Wis. Filed Oct. 30, 1926.

"The Goodness of White is Sealed in" is disclaimed apart from the mark as shown in the drawing. The drawing is lined for blue color.

Particular description of goods.—Alimentary Paste Products, and More Particularly for Macaroni, Spaghetti, Vermicelli, Noodles, and Egg Noodles, the Latter Two Both Dry and Wet and Prepared for Immediate Use.

Claims use since Jan. 1, 1906.

Ser. No. 239,536. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CHARLES F. MATTLAGE & SONS, INC., New York, N. Y. Filed Nov. 1, 1926.

No claim is made to the representation of a label apart from the mark shown in the drawing. The drawing is lined to indicate red and gold on a blue field.

Particular description of goods.—Salad Dressing.

Claims use since Apr. 21, 1926.

Ser. No. 239,840. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AMERICAN IMPORTING COMPANY, New York, N. Y. Filed Nov. 9, 1926.

BONDED

Trade-mark consists of the word "Bonded."

Particular description of goods.—Ticking.

Claims use since Sept. 1, 1926.

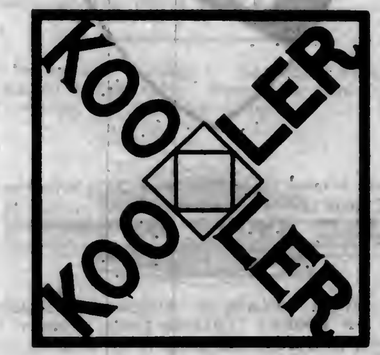
Ser. No. 240,025. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MARCEL GUERLAIN, Suresnes, Paris, France. Filed Nov. 13, 1926.

KADOUR

Particular description of goods.—Perfumes, Cologne, Beauty Cream, and Skin Lotions.

Claims use since Nov. 1, 1923.

Ser. No. 240,057. (CLASS 37. PAPER AND STATIONERY.) BANKERS PRINTING COMPANY, San Francisco, Calif. Filed Nov. 15, 1926.



The words "The Fastest Printers on Earth," also the geographical term "San Francisco," are disclaimed except as used in connection with the balance of the mark.

Particular description of goods.—Printed Forms Consisting of Letterheads, Envelopes, Binders, Blotters, Partially-Printed Folders, Order Sheets, Invoices, Purchase Orders, Statements, Reorder Sheets, Checks, Tags, Desk Calendars, Memo Pads, Outgoing Office Forms, Return-Check Memos, Note-Due Notices, Overdraft Notices, Collection-Report Requests, Informal Notes, Note-Past-Due Notices, Phone-Call Notices, Customers' Drafts, Figuring Tabs, Return-Check Debits, Partially-Printed Acknowledgment Cards, Certified-Check Charges, Monthly-Service-Charge Memos, Call Notices, Loan-Payment Receipts, Remittance Advices, Receipts, Trade Acceptances, Collection Notices, Notes, Calculation of Reserves, Remittance Sheets, Merchandise Certificates, Application for Loans, Telegraphic-Transfer Receipts, Liability Forms.

Claims use since Oct. 4, 1926.

Ser. No. 240,080. (CLASS 45. BEVERAGES, NONALCOHOLIC.) THE KOOLER CO., Washington, D. C. Filed Nov. 15, 1926.

Particular description of goods.—Nonalcoholic, Maltless Beverage Sold as a Soft Drink.

Claims use since Sept. 28, 1926.

Ser. No. 240,119. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) YORK MANUFACTURING CO., Saco, Me., and Boston, Mass. Filed Nov. 15, 1926.

The trade-mark consists of a heart-shaped device shown in red and containing the word "Trump" as indicated on the drawing upon which the trade-mark is shown.

Particular description of goods.—Card-Table Covers, a Textile Creation of Cotton and Rayon, So-Called Artificial Silk.

Claims use since Feb. 1, 1926.

Ser. No. 240,418. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) GEORGE T. GILLETTE, Los Angeles, Calif. Filed Nov. 22, 1926.

Itt

Particular description of goods.—Polishes for Furniture and Automobile Body Finishes.

Claims use since Nov. 9, 1926.

Ser. No. 240,559. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MAYFAIR PRODUCTS, INC., New York, N. Y. Filed Nov. 24, 1926.

Mayfair

Particular description of goods.—Beverages Containing Clam Juice and Packed in Containers.

Claims use since Nov. 15, 1926.

Ser. No. 241,286. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) INDIANA LAMP CORPORATION, Connersville, Ind. Filed Dec. 10, 1926. The words "Ryan-Lite" are hereby disclaimed apart from the mark as shown.

ILCO RYAN-LITE

Particular description of goods.—Electric Headlights and Reflectors Therefor.

Claims use since Sept. 9, 1926.

Ser. No. 241,388. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) E. BONZI, Monticello, Calif. Filed Dec. 13, 1926.

The surname "Bonzi" is disclaimed apart from the other features of the mark as shown.

Particular description of goods.—Fresh Pears and Fresh Grapes.

Claims use since July 10, 1926.

Ser. No. 241,404. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FIDALGO SALES CORPORATION, Bellingham, Wash. Filed Dec. 13, 1926.

PACIFIC COAST
Fidalgo
SHREDDED SULFHITE

Applicant disclaims all wording appearing on the mark except the word "Fidalgo" apart from the mark shown in the drawing.

Particular description of goods.—Shredded Sulphite.

Claims use since Nov. 1, 1925.

Ser. No. 241,439. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) REDLANDS ORANGE GROWERS' ASSOCIATION, Redlands, Calif. Filed Dec. 13, 1926. Under 10-year proviso.

ROSE

Particular description of goods.—Fresh Oranges.

Claims use since December, 1890.

Ser. No. 241,554. (CLASS 31. FILTERS AND REFRIGERATORS.) JOHN ASTROM, doing business as Progress Technical Company, Fort Wayne, Ind. Filed Dec. 16, 1926.

"PROGRESS"

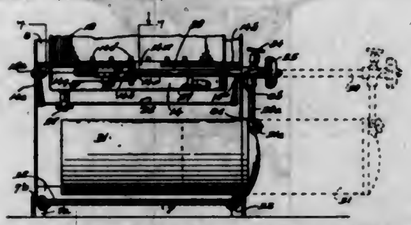
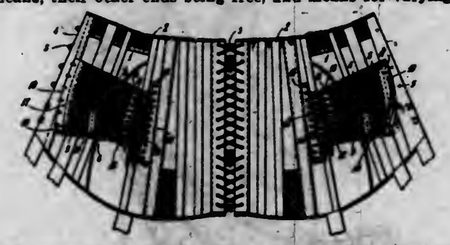
REISSUES



MAY 17, 1927.

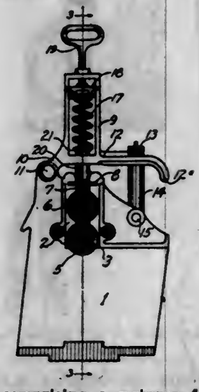
16,624. GRADER. EDWARD C. GLEDHILL, Galion, Ohio. Filed Apr. 30, 1926. Serial No. 105,878. Original No. 1,528,325, dated Mar. 3, 1925, Serial No. 659,768, filed Aug. 28, 1923. 13 Claims. (Cl. 37—156.)

1. A road grader comprising a vehicle, a frame loosely connected at its front end to said vehicle, a blade carried by said frame, vertically adjustable members mounted on said vehicle, links connecting said members and the rear end of said frame and means for moving the rear end of said frame laterally of said vehicle and pivotally supporting said frame when laterally moved whereby opposite adjustment of said members is effective to present said blade laterally of said vehicle in an inclined position for use in grading a slope.



16,625. HEATING STOVE USING LIQUID VAPORIZING FUEL. HANS C. HANSON, Albert Lea, Minn., assignor to American Gas Machine Company, Albert Lea, Minn., a Corporation of Minnesota. Filed Apr. 9, 1927. Serial No. 182,522. Original No. 1,615,378, dated Jan. 25, 1927, Serial No. 22,586, filed Apr. 13, 1925. 7 Claims. (Cl. 126—92.)

1. A heating stove having in combination, a rigid frame comprising an upright casing, said casing being open at the bottom, a detachable fuel tank in said casing, a support for said tank on which it is longitudinally slidable, one end wall of said casing having an aperture therethrough, through which said tank passes when being detached from said stove, a vaporising tube connected to said tank and projecting through said end wall, a manifold supported in said casing above said tank comprising a mixing chamber, said vaporizing tube communicating with said mixing chamber, burners carried by said manifold, the upper portion of said casing in front of said burners being open.



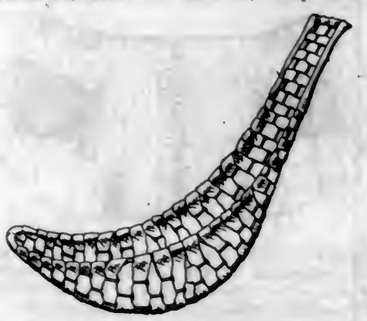
16,626. CORSET. MILLARD VON HALLS, Palisades Park, N. J., assignor to The Standard Corset Company, New York, N. Y., a Corporation of Massachusetts. Filed Sept. 1, 1925. Serial No. 53,954. Original No. 1,507,403, dated Sept. 2, 1924, Serial No. 703,054, filed Mar. 31, 1924. 8 Claims. (Cl. 2—27.)

5. An article of manufacture to be placed around the body of the wearer consisting of: carrying means, and cup-shape abdominal lifting and supporting means adjustably attached to the carrying means including: two connected members, one member on each side of the longitudinal center of said lifting and supporting means and each member consisting of a plurality of bands of resilient material fastened together in overlapped angular relation with respect to each other at their ends nearest the longitudinal center of the lifting and supporting means, their other ends being free, and means for varying,

with respect to each other, the angular relation and extent of overlapping of the bands of each member to thereby vary at will the curvature or the pull or pressure of the cup-shape lifting and supporting means.

16,627. WRINGER. WILLIAM GEORGE BEATTY, Fergus, Ontario, Canada, assignor to Haag Brothers Company, a Copartnership composed of George A. Haag and Albert R. Haag, East Peoria, Ill. Filed Apr. 3, 1925. Serial No. 20,573. Original No. 1,456,529, dated May 29, 1923, Serial No. 527,025, filed Jan. 4, 1922. 8 Claims. (Cl. 68—32.)

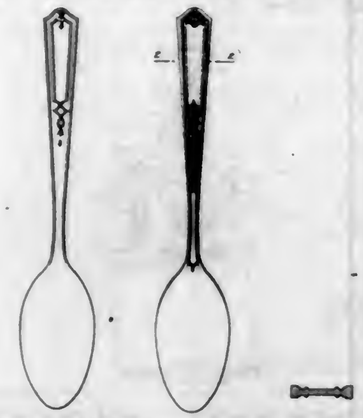
6. A wringer comprising a wringer frame, a pair of rollers mounted therein, a second frame hinged to said wringer frame, pressure-applying means carried by said second frame and engaging one of said rollers, a cam member carried by said second frame, and a member pivoted to said wringer frame and releasably engaging said cam member to hold said second frame in operative position.



7. A wringer comprising a wringer frame, a pair of rollers mounted therein, a second frame hinged to said wringer frame, pressure-applying means carried by said second frame and normally engaging one of said rollers, a cam member carried by said second frame, and a member pivoted to said wringer frame and adapted to frictionally engage said cam member to hold said second frame in operative position, said pivoted member being releasable from said cam member by outward movement thereof.

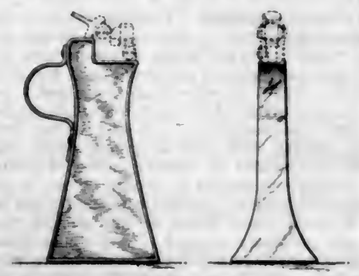
8. A wringer comprising a wringer frame, a pair of rollers mounted therein, movable bearings for one of said rollers, a second frame hinged to said wringer frame, a pair of pins yieldingly mounted in said second frame and engaging said bearings, and quick-release means including a cam member fixed to said second frame and a member pivoted to said wringer frame and frictionally engaging said cam member.

DESIGNS



MAY 17, 1927.

72,656. HI-LI BASKET. DAVID I. ABRAHAMS, Muncie, Ind. Filed Sept. 20, 1926. Serial No. 19,124. Term of patent 7 years.



The ornamental design for a Hi-Li basket as shown.

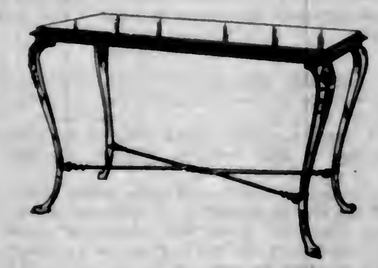
72,657. SPOON OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y. Filed June 9, 1926. Serial No. 17,990. Term of patent 14 years.

The ornamental design for a spoon or similar article, as shown.

72,658. CASING FOR CIGARETTE LIGHTERS. LOUIS V. ARONSON, Newark, N. J. Filed Feb. 2, 1927. Serial No. 20,577. Term of patent 3½ years.

The ornamental design for a casing for cigarette lighters, as shown.

72,659. TABLE. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,342. Term of patent 3½ years.



The ornamental design for a table, as shown.

72,660. TABLE. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,343. Term of patent 3½ years.

The ornamental design for a table, as shown.

72,661. TABLE. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,345. Term of patent 3½ years.

The ornamental design for a table, as shown.

72,662. TABLE. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,347. Term of patent 3½ years.

The ornamental design for a table, as shown.

72,663. PORTABLE CABINET. CLINTON BATEHOLTS, Hoosick Falls, N. Y. Filed Aug. 27, 1926. Serial No. 18,887. Term of patent 14 years.

The ornamental design for a portable cabinet, as shown.

72,664. TARGET TOY. SAMUEL I. BERGER, Newark, N. J. Filed Jan. 17, 1927. Serial No. 20,409. Term of patent 7 years.

The ornamental design for a target toy as shown.

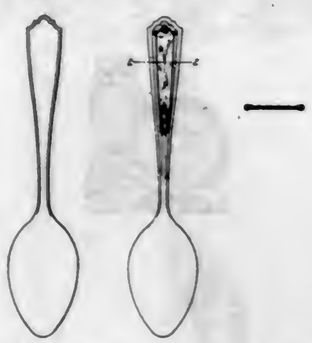
72,665. CHILD'S APRON. CHATHAM E. BOWMAN, New York, N. Y., assignor to Samstag & Hilder Bros., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 3, 1926. Serial No. 16,759. Term of patent 3½ years.

The ornamental design for a child's apron as shown.

72,666. CLOCK CASING. GEORGE SIEGFRIED BRUSH, Zanesville, Ohio. Filed Jan. 5, 1927. Serial No. 20,284. Term of patent 3½ years.

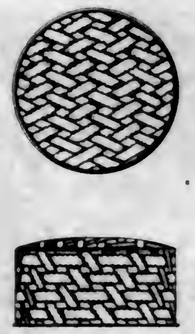
The ornamental design for a clock casing as shown.

72,667. TEXTILE FABRIC OR SIMILAR ARTICLE. MARJORIE COLE, Quincy, Mass. Filed Dec. 11, 1926. Serial No. 20,028. Term of patent 7 years.



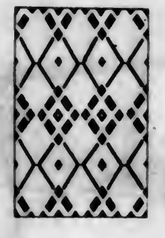
The ornamental design for a textile fabric or similar article as shown.

72,668. BRACKET BACK. LE ROY A. CRUMLEY, New York, N. Y., assignor to J. H. White Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 8, 1927. Serial No. 21,059. Term of patent 3½ years.



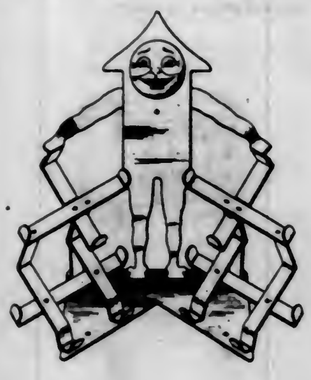
The ornamental design for a bracket back as shown.

72,669. SPOON OR SIMILAR ARTICLE. ROY L. DANKS and MAX L. BAKER, New Haven, Conn., assignors to The Regal Silver Mfg. Co., New Haven, Conn., a Corporation. Filed Feb. 2, 1927. Serial No. 20,589. Term of patent 14 years.



The ornamental design for a spoon or similar article as shown.

72,670. BOX OR SIMILAR CONTAINER. PAUL C. DELAIZE, New York, N. Y. Filed Jan. 26, 1927. Serial No. 20,493. Term of patent 7 years.



The ornamental design for a box or similar container as shown.

72,671. TEXTILE FABRIC. JULIUS A. FOX, New York, N. Y., assignor to H. Mendes & Company, New York, N. Y., a Corporation of New York. Filed Feb. 16, 1927. Serial No. 20,782. Term of patent 14 years.

The ornamental design for a textile fabric as shown.

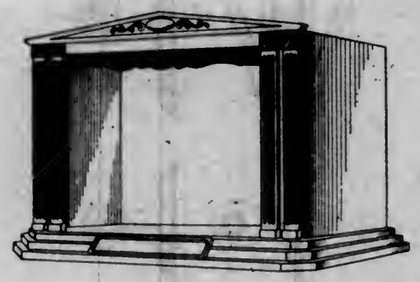
72,672. DISPLAY STAND. AUGIE L. HANSEN, Chicago, Ill., assignor to The A. L. Hansen Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 24, 1927. Serial No. 20,474. Term of patent 14 years.

The ornamental design for a display stand, substantially as shown.

72,673. LAMP SHADE. JOHN JACOBY and BRONO WIECZORKIEWICZ, Cleveland, Ohio. Filed Dec. 20, 1926. Serial No. 20,103. Term of patent 14 years.

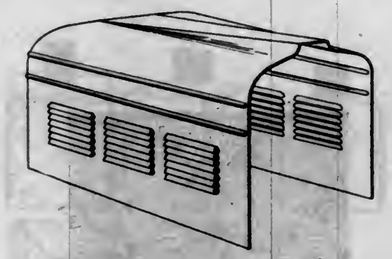
The ornamental design for a lamp shade substantially as shown.

72,674. TEXTILE FABRIC. ERNEST KIRCHHOFF, Great Rills, N. Y., assignor to Elias Reiss and Company, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1927. Serial No. 21,062. Term of patent 3½ years.



The ornamental design for textile fabric, as shown.

72,675. PILE FABRIC. JOHN LEIPER, New York Mills, N. Y., assignor to New York Mills Corporation, New York Mills, N. Y., a Corporation of New York. Filed Mar. 11, 1926. Serial No. 16,877. Term of patent 7 years.



The ornamental design for a pile fabric as shown.

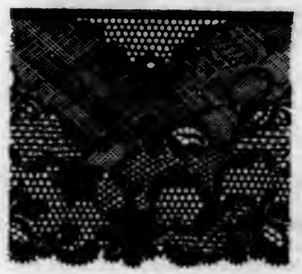
72,676. DISPLAY CASE FOR ADVERTISEMENTS. HUGH I. MCCANN, Southgate, Ky. Filed Jan. 3, 1927. Serial No. 20,261. Term of patent 7 years.

The ornamental design for a display case for advertisements, as shown.

72,677. ENGINE HOOD. FREDRIC E. MOSKOVICS, Indianapolis, Ind. Filed Feb. 13, 1926. Serial No. 16,518. Term of patent 7 years.

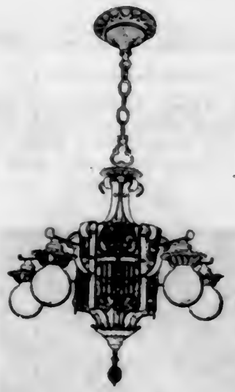
The ornamental design for an engine hood, as shown.

72,678. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Mar. 11, 1927. Serial No. 21,094. Term of patent 3½ years.



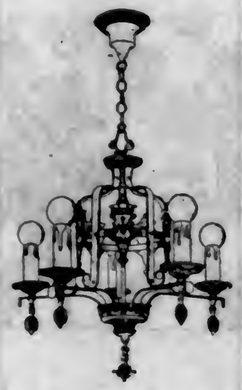
The ornamental design for lace substantially as shown.

72,679. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Mar. 14, 1927. Serial No. 21,146. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

72,680. LACE. ALBERT E. NEWTON, Providence, R. I., assignor to Rhode Island Lace Works, Inc., West Barrington, R. I., a Corporation of Rhode Island. Filed Mar. 15, 1927. Serial No. 21,148. Term of patent 3½ years.

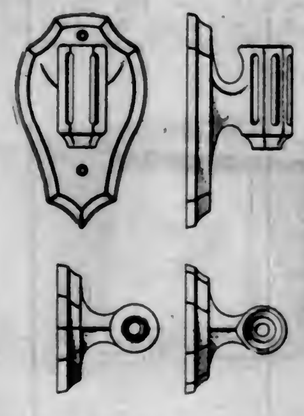


The ornamental design for lace substantially as shown.

72,681. CHANDELIER OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Mar. 10, 1927. Serial No. 21,087. Term of patent 3½ years.

The ornamental design for a chandelier or article of similar nature as shown.

72,682. CHANDELIER OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Mar. 10, 1927. Serial No. 21,088. Term of patent 3½ years.



The ornamental design for a chandelier or article of similar nature as shown.

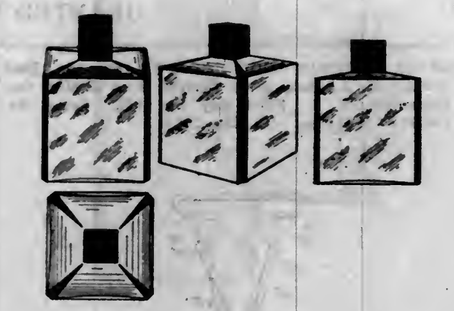
72,683. EMBROIDERED LACE. HENRY SCHWARBER, Weehawken, N. J. Filed Apr. 4, 1927. Serial No. 21,452. Term of patent 3½ years.

The ornamental design for embroidered lace, as shown.

72,684. SIDE-WALL LIGHTING FIXTURE. ROY W. SCHWEIKER, Lansdale, Pa. Filed Aug. 2, 1926. Serial No. 18,568. Term of patent 14 years.

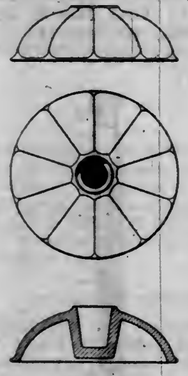
The ornamental design for a side wall lighting fixture, as shown and described.

72,685. SHOE. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1927. Serial No. 20,458. Term of patent 3½ years.



The ornamental design for a shoe, substantially as shown.

72,686. ELECTRIC-LIGHT BRACKET. WILMER S. SNOW, Oak Park, Ill., assignor to Unique Lamp & Casting Company, a Copartnership consisting of Henry Goodfriend, William Christensen, and Alfred E. Larsen, Chicago, Ill. Filed Dec. 6, 1926. Serial No. 19,937 Term of patent 3½ years.



The ornamental design for an electric light bracket, as shown.

72,687. BOTTLE OR SIMILAR CONTAINER. MADELEINE VIONNET, Paris, France. Filed Aug. 20, 1926, Serial No. 18,783, and in France July 27, 1926. Term of patent 14 years.

The ornamental design for a bottle or similar container, substantially as shown.

72,688. CANDLESTICK. CHARLES H. WEST, Pittsburgh, Pa., assignor to Westmoreland Glass Company, Grapeville, Pa., a Corporation of Pennsylvania. Filed Mar. 1, 1926. Serial No. 16,705. Term of patent 7 years.

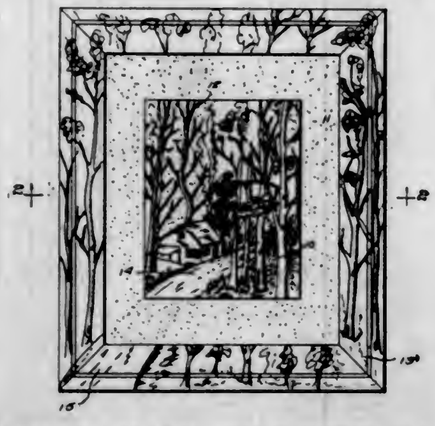
The ornamental design for a candlestick as shown.

PATENTS

GRANTED MAY 17, 1927.

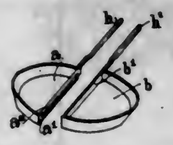
1,628,638. BUTTON LOOP. CARL E. ANDERSON, East Orange, N. J., assignor to Eastern Tool & Mfg. Co., Bloomfield, N. J. Filed May 20, 1926. Serial No. 110,324. 2 Claims. (Cl. 24—224.)

1. A button loop made of a single piece of wire bent to form a strap receiving loop at the top and having depending arms returned to form a button holding loop with a restricted entrance, the arms each having its end secured in limited movable contact with the other beyond the button receiving loop.



1,628,639. MECHANICAL PENCIL. BAGDASAR AVAKIAN, Arlington, R. I. Filed June 8, 1926. Serial No. 114,463. 4 Claims. (Cl. 120—18.)

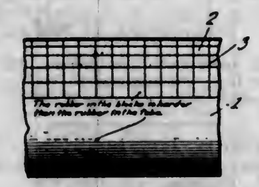
1. In a mechanical pencil, the combination with the barrel thereof, of a tubular member within said barrel, and means for expanding said tubular member to adapt it to grip the interior walls of the barrel to secure it rotatively therewith.



1,628,640. PICTURE. CARTER BALDWIN, Wilmington, Del. Filed July 24, 1926. Serial No. 124,749. 2 Claims. (Cl. 41—10.)

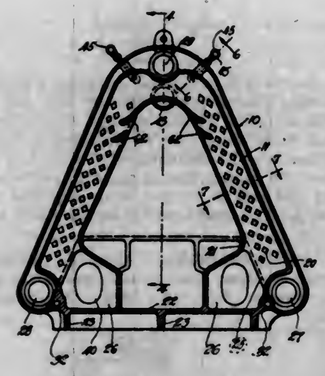
1. An article of the class described comprising a colored picture, a frame surrounding but spaced from the picture, said frame being pictorially decorated to represent a continuation of the picture, a mat between the picture and

the frame, said mat being colored to correspond with a dominant color appearing in a portion of the picture contiguous thereto.



1,628,641. FRYING PAN AND SAUCEPAN AND SUCH LIKE VESSEL. EDITH MARY BOLTON, Gerrards Cross, England. Filed July 14, 1925, Serial No. 43,454, and in Great Britain July 18, 1924. 1 Claim. (Cl. 53.—7.)

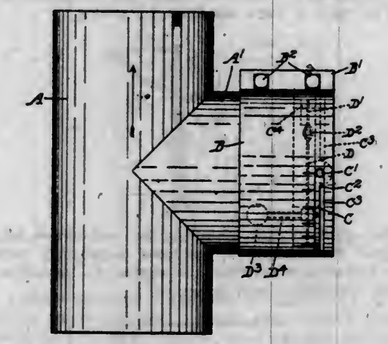
A composite cooking utensil comprising in combination a pair of complementary vessels each having a straight side, the straight side of one being turned over at its top edge to form a hook for engaging the upper edge of the companion vessel, a handle secured to each of said vessels adjacent to the straight side thereof, each of said handles being laterally offset from the point of connection with its vessel and one of said handles being of channel formation and adapted to embrace the other at its side edges and one face thereof whereby when the vessels are hooked together the handles nest one within the other thereby to form substantially a unitary structure.



1,628,642. INNER TUBE. WILLIAM J. BOWMAN, Smith Center, Kans. Filed Aug. 18, 1924. Serial No. 732,861. 1 Claim. (Cl. 152—13.)

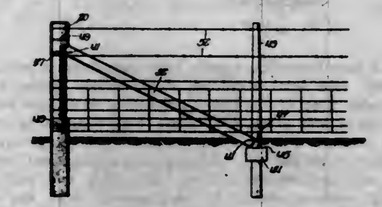
In a device of the class described, an inner tube of rubber, for use in a vehicle tire, and a puncture-resisting armor for the tube, the armor comprising a plurality of rubber blocks, the rubber of which is harder than the constituent rubber of the tube, and hard enough to resist puncture, and adhesive material on the inner surfaces of all of the blocks and securing them to the outer surface of the tube, the blocks being located so closely together, about their entire peripheries, that they present a practically continuous anti-puncturing surface: every one of the blocks being free about its entire periphery, the peripheral surfaces of each of the blocks being disposed at right angles to the outer surface of the tube, through-

out the entire periphery of each block, and the blocks being spaced far enough apart, about the periphery of every one of them, so that, when secured to the tube as aforesaid, each block may move with the tube, and radially of the tube, without engaging an adjoining block in overlapped relation thereto.



1,628,643. MEANS FOR REMOVING SOOT. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1923. Serial No. 676,960. 4 Claims. (Cl. 122—379.)

1. In a boiler including a combustion chamber and flue passage downwardly extending from the upper portion thereof, means for cleaning the interior wall of said flue passages, comprising means for flowing water across said surfaces, and means for clearing from said passages the water so admitted, and means for excluding the water so admitted from access to the combustion chamber.



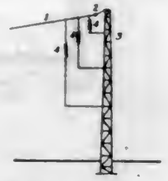
1,628,644. AUTOMATIC DRAFT REGULATOR. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 26, 1926. Serial No. 131,577. 14 Claims. (Cl. 236—45.)

1. An automatic draft regulator, adapted for application to a stub pipe, including a clamping ring adapted to surround the end of said pipe, a holding ring positioned within said clamping ring, a damper plate pivoted in said

holding ring and means for rotating said holding ring and damper plate.

1,628,645. FENCEPOST AND BRACING MEANS THEREFOR. ADEN W. ANDREWS, Lincoln, Nebr. Filed July 20, 1925. Serial No. 44,694. 5 Claims. (Cl. 72—82.)

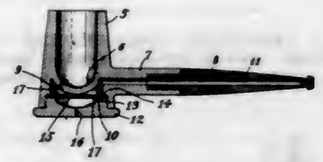
3. A fence post including a longitudinal recess extending a portion of the length thereof, an arcuate surface extending lengthwise of said recess, a shoulder adjacent each end of said recess, said shoulders and recess being adapted to help lock in place and receive the thrust from a diagonal brace extending from said post at any one of a plurality of angles.



1,628,646. LUBRICANT AND PROCESS OF MAKING THE SAME. ARMAN E. BECKER, Elizabeth, N. J., assignor to Standard Development Company, a Corporation of Delaware. Filed Nov. 21, 1924. Serial No. 751,401. 9 Claims. (Cl. 87—9.)

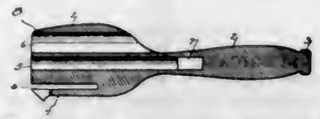
1. In a process of making a lubricating oil composition, the steps of adding to a hydrocarbon oil, having lubricating properties, an effective amount of soap, less than ½% by weight of the oil, and heating the mixture to a temperature above 350° F. but not above the boiling point of the oil.

1,628,647. METHOD OF LUBRICATING INTERNAL-COMBUSTION ENGINES. ARMAN E. BECKER, Elizabeth, N. J., assignor to Standard Development Company, a Corporation of Delaware. Filed Oct. 29, 1925. Serial No. 65,697. 6 Claims. (Cl. 87—9.)



1. Method of lubricating internal-combustion engines and associated parts, comprising supplying to surfaces tending to become fouled with carbonaceous or gummy deposits, a liquid composition consisting essentially of lubricating oil containing an alkali metal soap of a fatty acid in an effective amount less than 0.5% by weight of the oil.

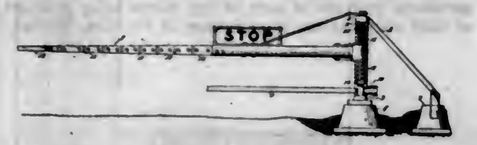
1,628,648. RADIOTELEGRAPHIC STATION. JOSEPH BETHENOD, Paris, France. Filed Aug. 2, 1921, Serial No. 489,302, and in France Feb. 23, 1918. 5 Claims. (Cl. 250—33.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In a radio telegraph station, the combination with an energized antenna of a grounded supporting metallic tower insulated therefrom and means to neutralize induction currents in said tower.

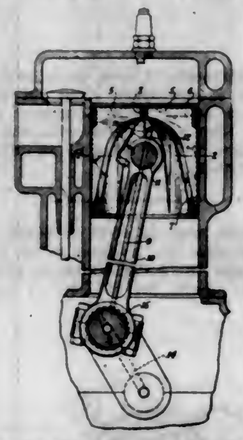
1,628,649. PIPE. ANDREW F. BITTNER, New York, N. Y. Filed June 11, 1925. Serial No. 36,329. 4 Claims. (Cl. 131—12.)

4. A pipe including a body part comprising a bowl, and a stem, said bowl including a transverse grate, and a removable plug at the lower portion of said pipe beneath said grate and stem, said grate and plug being spaced apart to form a condensing chamber, said plug being removable to permit the insertion of an absorbent element into said condensing chamber, said plug and body part having coacting means for engagement with the edges of said element whereby the latter may extend entirely across said chamber and be secured in position by said means.



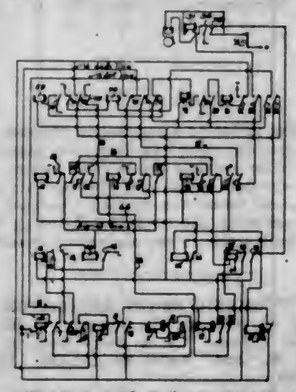
1,628,650. SPREADER TOOL. JAMES LEE BUCHANAN, Waco, Tex. Filed Oct. 27, 1925. Serial No. 65,234. 2 Claims. (Cl. 81—3.)

1. A spreader tool for cotter-pins, split keys and the like, embodying a body having a head and a handle, said head having a longitudinal bore extending through one end thereof and of a diameter to receive either leg of a cotter-pin or the like, whereby to effect bending of the leg about the object to which the pin is secured by a turning of the body with its head as a fulcrum, said body having a tapering edge one wall of which is formed by a part of the wall defining said bore so as to provide a wedge-like part engageable between the legs of the pin to initially spread the same.



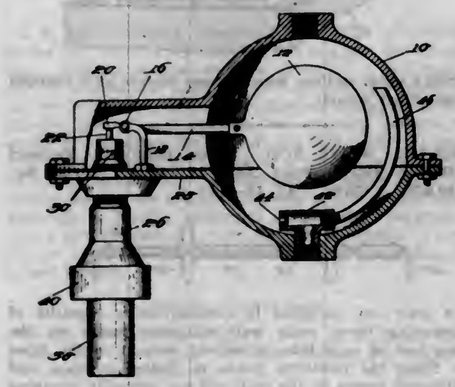
1,628,651. YIELDABLE BARRIER FOR AUTOMATIC RAILWAY-CROSSING GATES. JOHN R. BURRESS, Arlington, Tex. Filed Jan. 26, 1926. Serial No. 83,809. 10 Claims. (Cl. 39—87.)

1. In an automatic railway crossing gate; a barrier therefor including a mounting and a post rotatably journaled in said mounting; a sectional bar movably mounted on said post having a yieldable outer end of longitudinally alined segments, and a nonresilient inner end; means on the extremity of said outer end to repel the effect of a colliding object, and means surrounding said post and ar-



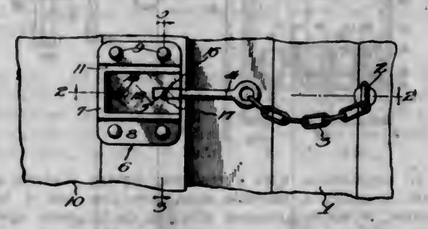
ranged to bear against said nonresilient inner end to impart torsional force thereagainst to yieldingly maintain normal horizontal disposition of said bar.

1,628,652. PISTON CONSTRUCTION. CHARLES A. CARLSON, Ridley Park, Pa. Filed Jan. 28, 1921. Serial No. 440,703. 6 Claims. (Cl. 123—176.)



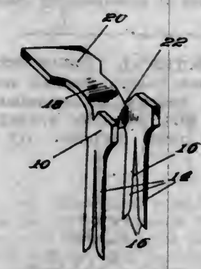
1. In an engine of the character described, a piston body having thermal characteristics of cast iron and a heat radiating fin or fins of greater thermal conductivity than the material of the piston body incorporated in said piston body in intimate heat conducting relation thereto and extending from the central toward the edge portions of the piston body and said fin or fins being embedded at their edges in the head and skirt portion of the piston body.

1,628,653. CALL SELECTOR. LOUIS L. E. CHAUVEAU, Paris, France. Filed June 27, 1923, Serial No. 647,992, and in France July 13, 1922. 5 Claims. Cl. 177—353.)



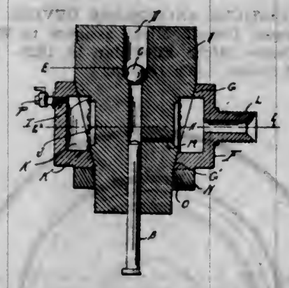
1. In a call selector adapted to respond to the distress signal, the combination of impulse responsive means, timing means cooperating therewith for determining the length of an impulse, a plurality of relays cooperating with said timing means, and connections between the relays whereby they respond in predetermined sequence to the impulses of the first letter of the distress signal, switching means cooperating therewith for resetting said relays to respond to the second letter of the distress signal, and for resetting said relays to cause them to respond to the third letter of the distress signal and means for causing the energization of an alarm upon the completion of the third letter of the distress signal.

1,628,654. INLET VALVE FOR BOILERS. WILLIAM M. CISSELL, Louisville, Ky. Filed Mar. 4, 1926. Serial No. 92,219. 2 Claims. (Cl. 137—101.)



1. A float valve for water feeders, comprising a spherical float chamber, a spherical float in the chamber, a pivoted lever upon one end of which the float is mounted, an overhanging pivotal support for the lever, a valve rod co-operating with the short end of the float lever, a housing for the valve rod, said housing forming a portion of the cold water supply inlet, and a combined equalizing and overflow tube in the chamber.

1,628,655. SEAL FOR CAR DOORS. WALTER J. COLVIN and LOUIS KIRSCHBRAUN, Omaha, Nebr. Filed Mar. 6, 1925. Serial No. 13,443. 2 Claims. (Cl. 292—282.)



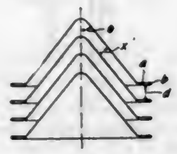
1. In a car door seal, the combination with a retaining case having a plaque retaining means on its exposed surface and adapted to be attached to a car, a slot in said exposed surface, a pin projecting from the surface of the slot, a separate spring tensioned locking stud mounted in and projecting from the surface of said case, an apertured locking bolt adapted to be placed in said slot, the aperture registering with said pin, a breakable closure plaque having an interior recess inserted in said plaque retaining means, said interior recess being adapted to register with said spring tensioned locking stud to hold the plaque in locked position.

1,628,656. SPIKE RETAINER. HERBERT O. CRIPPEN, Chicago, Ill. Filed July 18, 1925. Serial No. 44,438. 2 Claims. (Cl. 85—28.)

1. A spike retainer, comprising in combination, a band formed to embrace a spike on three sides thereof, material gripping spurs integral with the band and extending downwardly therefrom, and a spike head retaining means also integral with the body, said retaining means comprising an upwardly and outwardly extending projection, the line of juncture of said projection with the body being lower than the upper edge of the said body.

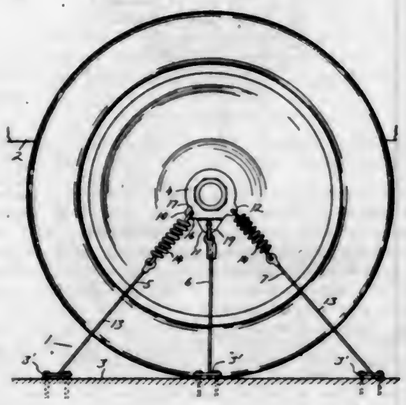
1,628,657. HIGH-PRESSURE PUMP FOR DIESEL ENGINES. HERMANN I. A. DORNER, Hanover, Germany. Filed Feb. 15, 1926. Serial No. 88,410. 5 Claims. (Cl. 103—153.)

1. The combination with a pump barrel and a reciprocating plunger or piston engaging the same, of an annular screen or strainer longitudinally engageable with the outer surface of the barrel, bearings or seats on said outer surface of the barrel for receiving said strainer and spaced at opposite sides of a central annular recess having a port connection with the interior of the barrel, and an annular housing detachably engageable with the outer surface of said barrel and surrounding said screen, said housing communicating with the fluid inlet.



1,628,658. TALKING-MACHINE RECORD. FRANK L. DYER, Montclair, N. J. Original application filed May 7, 1923, Serial No. 637,198. Divided and this application filed Feb. 12, 1924. Serial No. 692,293. 10 Claims. (Cl. 274—42.)

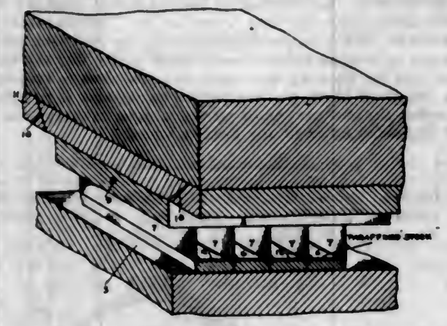
8. An improved talking machine record having a sound groove approximately .001 inch in width and representing sounds recorded at a surface speed of



approximately eight inches per second, said groove being in the form of a spiral the pitch of which is approximately .002 inch and the recorded sounds being of a maximum amplitude of approximately .0002 inch.

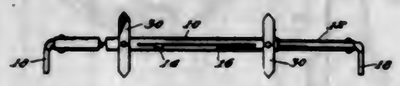
1,628,659. ELECTRICAL CONDENSER. CHARLES SAMUEL FRANKLIN, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed June 21, 1921, Serial No. 479,362, and in Great Britain Jan. 11, 1916. 2 Claims. (Cl. 175—41.)

1. A condenser comprising a plurality of nested conical plates of conducting material, variably spaced, the angles between the apexes of the cones and their sides being selectively varied in accordance with the nature of the dielectric used, each plate being provided with a flange extending substantially at right angles to the axis of the cone and having its outer edges rounded off to form a bead.



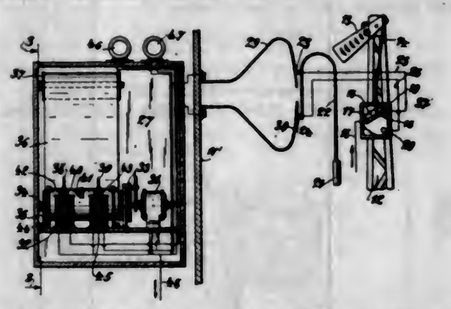
1,628,660. VEHICLE ANCHORAGE DEVICE. CHARLES A. GOODSPEED, Detroit, Mich., assignor to William W. Blakely, Dexter, Mich. Filed Mar. 18, 1925. Serial No. 16,535. 6 Claims. (Cl. 188—32.)

1. In an anchorage device of the class described, the combination with an anchorage member and an adapter member, of a tie member including a non-stretchable element and a stretchable element arranged end to end between said members.



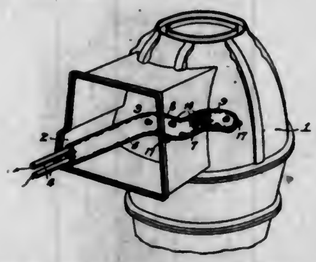
1,628,661. MATCH BOOK. LEO GREENBAUM, Far Rockaway, and EDWARD VAN HOOFSTADT, Oceanside, N. Y., assignors to Lion Match Company, Inc., a Corporation of New York. Filed Feb. 10, 1925. Serial No. 8,129. 1 Claim. (Cl. 144—51.)

A method of forming match splints comprising the waxing a sheet of the stock and forming cuts through said stock by supporting the stock on a bed and pressing knives toward the bed and through the stock, thereby



forming splint sections which on one surface have rounded longitudinal corners.

1,628,662. STAIR ROD. JAKOB GRÖNROOS, Fairport Harbor, Ohio. Filed Aug. 17, 1925. Serial No. 50,571. 1 Claim. (Cl. 16—14.)

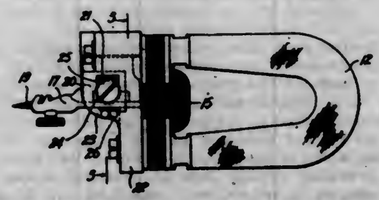


A stair rod, including in combination, a plurality of telescoping tubes, stair wall attaching means on the outer end of each tube, a resilient element in the tubes for fixing the retaining means in desired position, and additional means on the stair rod for vertically retaining the stair cover in position against the face of a step, said means including rotatable cover gripping supports pivotally mounted on the retaining elements.

1,628,663. AUTOMATIC RAILWAY SIGNAL. RALPH GROSS, Buffalo, N. Y. Filed Jan. 14, 1926. Serial No. 81,138. 1 Claim. (Cl. 246—74.)

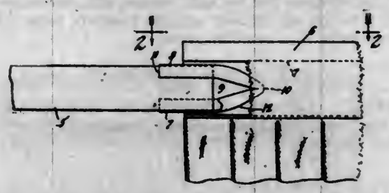
In combination with a trackway having roadside signals including a movable semaphore arm and a locomotive, of masts arranged adjacent the roadside, spring arms on said masts, rods insulated from said spring arms and extending contiguous to the path of the locomotive, contactors carried by said locomotive to engage with said rods respectively, a casing on the locomotive, lamps respectively red and green carried on said casing, an electric motor in said casing, a drum driven by said motor, a rolled strip of material capable of receiving marks actuated by said drum, a pair of electromagnets in the casing, a stylus controlled by each magnet to mark selectively on said strip, and means controlled by the position of said semaphore arm to energize said motor and selectively actuate the styli, said means also causing selective illumination of said lamps.

1,628,664. WATER-HEATING APPARATUS. OTTO C. GRUTTER, Creston, Ill. Filed Feb. 28, 1922. Serial No. 538,482. 6 Claims. (Cl. 122—20.)



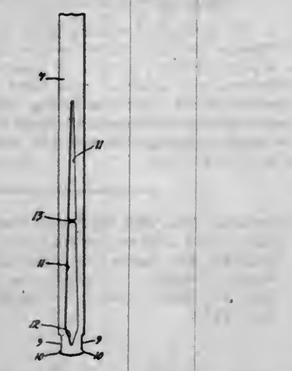
1. A water heating apparatus comprising a conduit having two ports at one end thereof, one port for receiving a cold water pipe and the other for a hot water pipe, a longitudinal partition in said conduit separating the two ports and forming two channels extending to the opposite end of said conduit, the channels being connected at a position remote from the said ports, the conduit being downwardly curved in a portion intermediate its ends and having a corresponding reverse curve to thereby dispose the two end portions of the conduit substantially in parallel horizontal planes, the downwardly curved portion having a clean-out port positioned to permit the insertion of a clean-out implement longitudinally of said portion.

1,628,665. WEATHER STRIP. JOHN G. S. HALL, Chicago, Ill. Filed July 19, 1926. Serial No. 123,300. 4 Claims. (Cl. 20—69.)



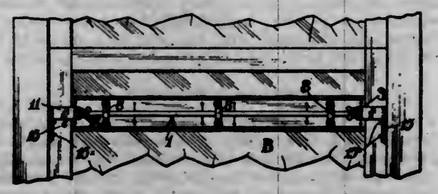
1. A weather strip adapted for edge contact in use comprising a flexible pliable ribbon of fibrous material, a fabric strip folded around said fibrous ribbon and protecting the portion thereof that is exposed in use, the longitudinal edges of said strip lying flat against and parallel to said ribbon, and at least one of the longitudinal edges of the fabric strip adapted to receive attaching devices that are passed through the ribbon to mount the weather-strip, the relative disposition being such that a longitudinal edge of the ribbon is adapted to be engaged and compressed transversely against a structure opposing the member upon which the strip is mounted.

1,628,666. ELECTROMAGNETIC DEVICE. HENRY C. HARRISON, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 24, 1926. Serial No. 111,209. 8 Claims. (Cl. 175—345.)



1. In an electromagnetic device, a vibrating armature, a spring member firmly attached thereto, and screw means having a threaded portion which cooperates with the surface of the spring for adjusting the free length thereof.

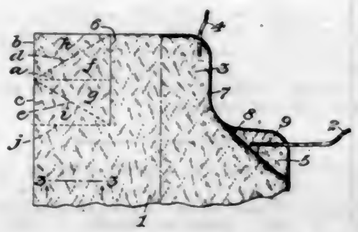
1,628,667. CURTAIN-ROD-THREADING DEVICE. CLYDE N. HATHAWAY, Detroit, Mich. Filed Apr. 15, 1926. Serial No. 102,129. 2 Claims. (Cl. 223—38.)



1. A curtain rod attachment comprising a member formed with top and bottom channels, spaced apart and facing each other, said channels being jointed at one end to form a curved end for said member, said channels being movable toward and away from each other from the point of said end joinder.

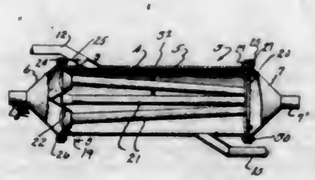
1,628,668. FLAT-SPIRAL POWER SPRING. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 12, 1925. Serial No. 75,008. 2 Claims. (Cl. 185—37.)

1. As an article of manufacture a flat spiral power spring having an inner portion thereof apertured longitudinally thereof, said aperture being disposed centrally of the spring and gradually increasing in width toward the inner end of the spring, the spring having a cross tie integral therewith and disposed intermediate the length of said aperture and connecting the portions of the spring formed by the aperture.



1,628,669. WINDOW-CLEANING DEVICE. GEORGE HASHIM HUNTER and FRANCES HASHIM HUNTER, New York, N. Y. Filed Mar. 6, 1926. Serial No. 92,674. 2 Claims. (Cl. 15—250.)

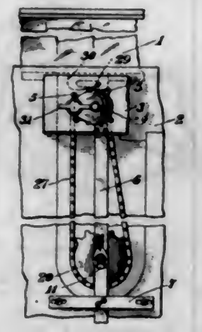
1. As a new article of manufacture, a window glass cleaning device comprising a plate having a relatively broad flat surface, a body of felt having a surface of the same general form as the plate and connected there-



to, telescopic rods affording a support for the plate, the plate being mounted for movement along said rods, a carrier arm secured at the exposed end of each telescopic rod and brackets one for each carrier arm, each arm being adjustable on its bracket and the brackets being adapted for securing to a window frame.

1,628,670. APRON. MORRIS KATZ, New York, N. Y. Filed Apr. 28, 1925. Serial No. 26,327. 3 Claims. (Cl. 2—48.)

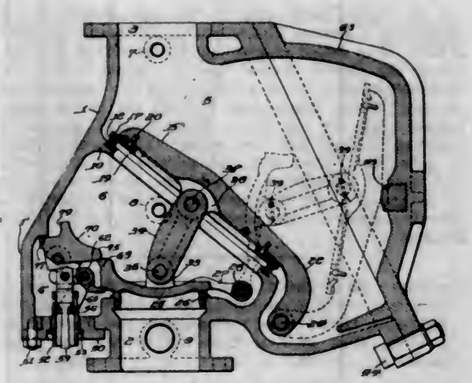
1. The method of making paper aprons, which consists in slitting the stock to define the side edges of a bib and a depending skirt portion of greater width, folding the remaining cut material upon itself and upon the upper corners of the skirt portion to reinforce said corners, and thereafter securing tie strings to the folded material by means passing through the string, folded material and skirt portion.



1,628,671. HEATER FOR AUTOMOBILES. JAMES W. KELCH and JAMES J. SUNDAY, Detroit, Mich., assignors, by direct and mesne assignments, to Kelch Ventilating Heater Company, a Corporation of Michigan. Filed July 27, 1925. Serial No. 46,411. 7 Claims. (Cl. 257—241.)

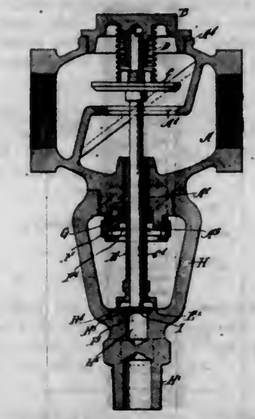
1. A heater for motor vehicles including a shell having inlet and outlet ports for the exhaust gases of the motor, a plurality of tubes extending longitudinally of the shell between said inlet and outlet ports, and means for directing the exhaust gases into said tubes, said means including a plate having frusto-conical portions connected to the inlet ends of said tubes and having a projection in alignment with the inlet port aforesaid for deflecting said gases into said frusto-conical portions.

1,628,672. CLUTCH FOR WINDOW REGULATORS. PETER JOHN KURSCHEIDT, Woodhaven, and HARRY E. NORWOOD, Brooklyn, N. Y. Original application filed Apr. 29, 1922, Serial No. 557,470. Divided and this application filed Apr. 28, 1926. Serial No. 105,061. 19 Claims. (Cl. 192—8.)



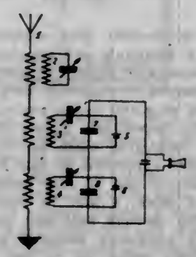
1. In a window regulator, a rotatable member, an actuator for said rotatable member including a manual handle and an actuating shaft, a non-rotatable clutch member, and a slidable locking member adapted for engagement with said clutch member, said locking member being automatically moved to clutching position and being moved to non-clutching position by movement of said handle.

1,628,673. SILVER ALLOY. ROBERT H. LEACH, Bridgeport, Conn., assignor to Handy & Harmen, a Corporation of New York. Filed Aug. 25, 1923. Serial No. 659,394. 3 Claims. (Cl. 75—1.)



1. An alloy containing a preponderating amount of silver about 7.5% of cadmium and antimony, the cadmium ranging from about 1% to 7% and the antimony from about 6.5% to 0.5%.

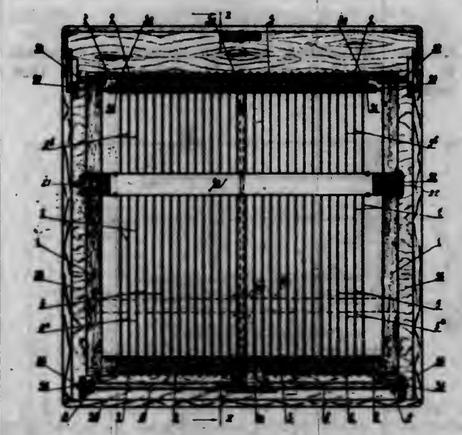
1,628,674. DRY-PIPE VALVE. LEROY M. LEWIS, Merion, Pa. Filed Apr. 11, 1922. Serial No. 551,599. 7 Claims. (Cl. 169—22.)



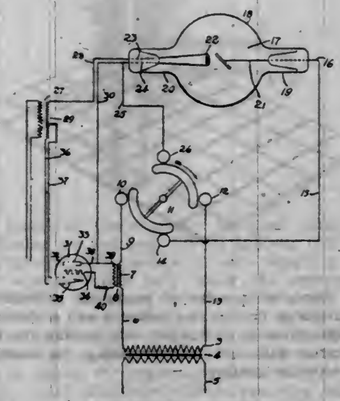
1. A dry pipe valve comprising a casing having a chamber, a water inlet communicating with said chamber, a hinged valve clapper controlling said inlet, a drain valve communicating with said chamber and having a vertically movable poppet, a trip member extending into the path of movement of said clapper and movable thereby, a dog horizontally pivoted above the poppet and also extending into the path of movement of said clapper, adapted to be positively moved by the clapper in one direction and operative to limit the movement of the clapper in the other direction, and means connecting said trip and said poppet and adapted to contact said dog whereby said dog may be moved out of the path of said valve clapper by lifting the poppet.

1,628,675. AUTOMATIC SHUT-OFF VALVE. LUTHER D. LOVEKIN, Wynnewood, Pa. Filed July 21, 1925. Serial No. 44,994. 3 Claims. (Cl. 137—162.)

1. In combination with a valve casing adapted to be located in a conduit for fluid fuel, a valve, means tending to seat said valve, a plunger extending from the valve through the wall of the casing, a guide tube for the plunger screwing into the wall of the casing and extending beyond the same, said tube having an annular seat formed at its outer end, a support for a fusible stop and an abutment against which the annular seat on the tube can be screwed, and a fusible stop for the plunger located to hold the valve open.



1,628,676. RECEIVING ARRANGEMENT FOR WIRELESS TELEGRAPHY. ALEXANDER MEISSNER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Sept. 3, 1921, Serial No. 498,417, and in Germany Mar. 6, 1917. 5 Claims. (Cl. 250—20.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

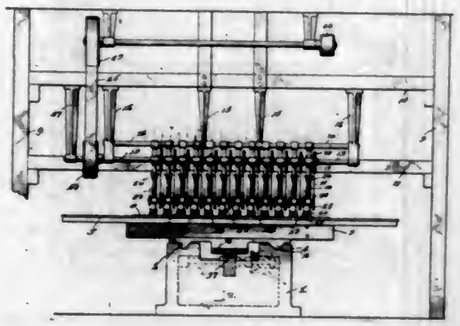


2. In combination, a plurality of detectors, means for impressing a signal frequency on one of said detectors and undesired electrical energy on said plurality of detectors, an indicator, means whereby the rectified energies from said detectors affect said indicator in opposite sense, means whereby said undesired energy is neutralized during a signalling interval but increases the effect of the signal frequency during a signalling period.

1,628,677. DEVICE FOR GRAPHICALLY INDICATING INFORMATION ON PLANS, MAPS, CHARTS, OR THE LIKE. JEAN HENRI ADRIEN MORICHARD, Amsterdam, Netherlands. Filed Nov. 4, 1924, Serial No. 747,872, and in Netherlands May 19, 1923. 3 Claims. (Cl. 35—12.)

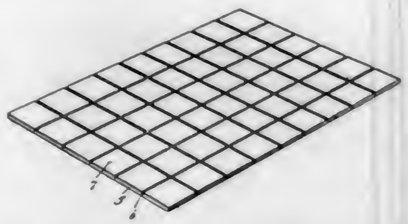
1. In a device for graphically indicating information on plans, maps, or charts containing a supporting plate with grooved discs at the upper and lower edges, cords guided by said discs, the same being strained by coiled springs at the back side of the plate, an adjusting ball being attached to each cord to cooperate with a toothed guide-piece slidably mounted at the back side of the supporting plate the space between the teeth being so chosen that the said ball cannot pass.

1,628,678. CURRENT-REGULATING APPARATUS. MONTFORD MORRISON, New York, N. Y. Filed Jan. 2, 1922. Serial No. 526,453. 11 Claims. (Cl. 250—34.)



1. In combination with an X-ray tube having a hot cathode and an anode across which a high potential is impressed subject to variations in voltage which causes erratic current flow, means for increasing or decreasing the current flow in said tube comprising a three-electrode vacuum electron tube, means whereby the grid of which is caused to fluctuate in potential corresponding to the changes in potential impressed on said tube circuit.

1,628,679. CONSTRUCTION OF TENNIS COURTS. JEPHTHAH NEATH, Staines, England. Filed Sept. 9, 1925, Serial No. 55,412, and in Great Britain Nov. 3, 1924. 2 Claims. (Cl. 94—20.)



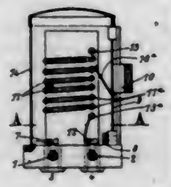
1. The construction of a tennis court of a mixture of boiled water-gas tar and spent oxide from gas purifiers.

1,628,680. MULTIPLE SCORING MACHINE. NATHAN E. NEWMAN, Bronxville, N. Y. Filed Feb. 10, 1926. Serial No. 87,333. 10 Claims. (Cl. 144—136.)

1. In a slab scoring machine, a travelling slab supporting element having in its supporting surface two recesses intersecting at a right angle, and each adapted to serve, selectively, as a seat for accurately locating and presenting a slab or sheet of material, whereby the slab may be presented successively to the scoring instrumentality in right angularly related positions.

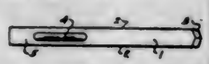
1,628,681. PLASTIC SHEET OR SLAB. NATHAN E. NEWMAN, Bronxville, N. Y. Filed Mar. 5, 1926. Serial No. 92,440. 4 Claims. (Cl. 18—60.)

1. The improved process of producing artificial slabs which consists in first mixing asbestos and a binder, then molding therefrom an indurated slab, scoring the face of the indurated slab, and then providing the scored face with a protective coating.



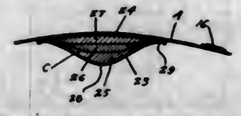
1,628,682. METHOD OF CONSTRUCTING CONCRETE WALLS IN DEEP TRENCHES. FRANK P. NOE and SETH M. GOODEN, Chicago, Ill. Filed Jan. 13, 1926. Serial No. 80,905. 2 Claims. (Cl. 25—131.)

2. The method of producing a wall in a trench, which consists in lagging the trench at opposite sides, placing across the trench screw jacks having body members made of long thin pipes filled at one end with concrete and having jack screws at the other and, erecting in the trench a wall form forming with the lagging adjacent to the filled ends of the pipes a space for the wall to be poured, pouring concrete into said space, removing the



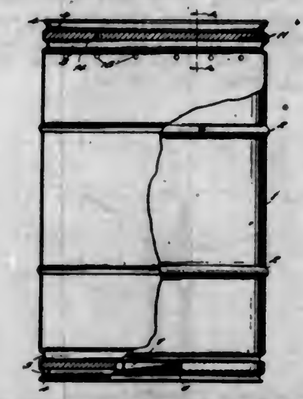
wall form after the concrete has set, cutting off the projecting ends of the pipes, and filling the free space within the pipes with concrete.

1,628,683. ELECTRIC CONTACT PLUG. EMILE CHRISTIAN PÉNIN, Joinville-le-Pont, France, assignor to Pathé Cinéma, Anciens Établissements Pathé Freres, Paris, France. Filed Nov. 8, 1924, Serial No. 748,563, and in France Dec. 1, 1923. 3 Claims. (Cl. 201—62.)



3. An electric contact plug comprising an insulating base, two main terminals and two branch terminals carried by said base, said main and branch terminals being respectively adapted to cooperate with the socket and the plug of a usual plug and socket connection and said main terminals being respectively connected with said branch terminals, an insulating block carried by said base, resistance elements supported by said block and connected to one terminal of one of said groups of terminals, a cover for said block, a slot in said cover, a movable slide protruding through said slot and adapted to contact with said resistance elements and two conducting wires respectively connected to the other terminals of said group and to said slide.

1,628,684. METHOD OF MANUFACTURING THIN DRILL BLADES. HENRY W. PLEISTER, Westfield, N. J., assignor to Henry B. Newhall. Original application filed Nov. 7, 1925, Serial No. 67,501. Divided and this application filed Mar. 27, 1926. Serial No. 97,835. 3 Claims. (Cl. 76—108.)

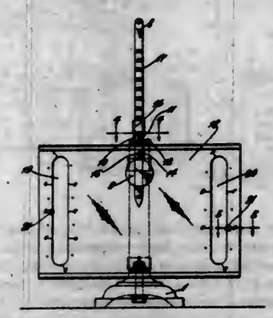


3. The method of cheaply manufacturing drill blades in large quantities at such a small cost that it is cheaper to throw a dull blade away than the sharpen it, consisting in cutting the blades from a continuous strip of a thin flat cold soft steel bar rectangular in cross-section at the same time pressing or embossing the metal of the shank to form a strengthening rib on one side and a groove on the other to permit nesting of the blades sharpening the blades and then tempering them, the completed drill blades being of the same rectangular contour as the continuous steel bar from which they are cut.

1,628,685. SACRO-ILIAC BELT. CLARA A. PRATT, St. Paul, Minn., assignor of one-half to Edith M. Scanlan, Minneapolis, Minn. Filed May 11, 1922. Serial No. 560,121. 2 Claims. (Cl. 128—96.)

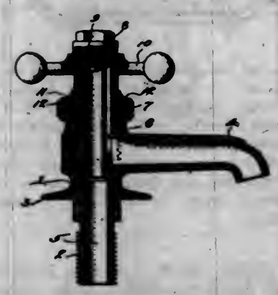
1. A sacro iliac belt comprising a supporting member, having a rear body portion, a pad secured to the center of said body portion formed with a ridge positioned vertically along the same.

1,628,686. SHEET-METAL KEG. JOHN R. RAIBLE, Lakewood, Ohio, assignor to The Greif Brothers Cooperage Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 18, 1922. Serial No. 582,599. 4 Claims. (Cl. 220—66.)



1. A keg comprising a sheet metal body having a continuous internal head receiving groove adjacent one end formed by circumferential internal ribs, said body having a tongue struck up therefrom between said ribs forming an elongated transverse aperture when said tongue is bent outwardly, and a head fitting in said groove and consisting of a pair of side segments and a central wedge shaped section adapted to be inserted through said aperture and to be held in place by said tongue.

1,628,687. CLAMPING MEMBER FOR AWNINGS. EDWARD H. SCHANE, Cleveland, Ohio, assignor to The Fanner Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 18, 1925. Serial No. 57,239. 3 Claims. (Cl. 156—15.)

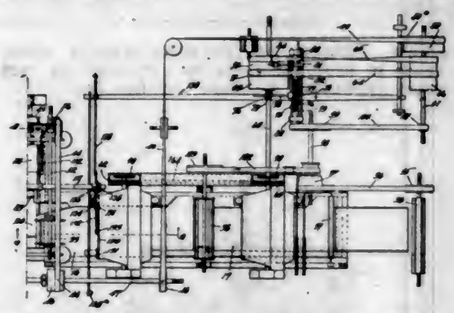


1. A clamping member comprising a part having an opening and an extending lip, a clamping member having a screw threaded shank which extends through said opening and also provided with an extension which normally lies beneath said lip, said lip and extension being adapted to receive a rod between them, and a nut engaging said screw threaded shank for the purpose described.

1,628,688. DEVICE FOR TEACHING TIME IN MUSIC. LEWIS W. SCUTT, St. Louis, Mo. Filed Oct. 24, 1925. Serial No. 64,488. 3 Claims. (Cl. 84—484)

2. A device for teaching time in music including a plate having an elongated slot formed therein to indicate the time values, said slot being provided with graduations for subdividing it into time values, adjustable devices settable on said graduations for indicating the subdivisions, and a metronome device for synchronizing the time value with the time value indicated by the slot.

1,628,689. COMPRESSION FAUCET. WILLIAM G. STEWART, Cleveland, Ohio. Filed Oct. 26, 1926. Serial No. 144,368. 10 Claims. (Cl. 251—43.)

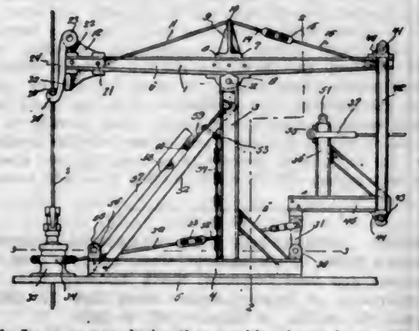


1. A faucet of the character described comprising a casing having one end open and its opposite end adapted to be connected with a source of water supply, a tubular member secured within said casing and extending upwardly through the upper end thereof, a sleeve slidably secured within said casing, a valve carried by said sleeve and movable to a position to close the upper end of said tubular member, said sleeve being movable to a position to expose the upper end of said tubular member above the top of said sleeve without removing said sleeve from said casing, and an outlet leading from said casing.

1,628,690. APPARATUS FOR CLEANING CLOTH. GEORGE STONE, North Andover, Mass., assignor to M. T. Stevens and Sons Company, North Andover, Mass., a Corporation of Massachusetts. Filed July 27, 1925. Serial No. 46,272. 5 Claims. (Cl. 8—19.)

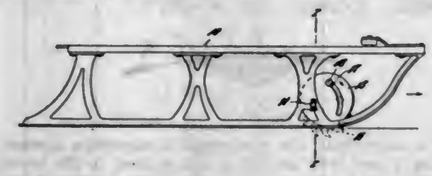
1. In a web-cleaning apparatus, a rinsing tank having a partition subdividing the tank into two communicating compartments, a driven guide pulley arranged to deliver

a web to the first compartment, and a pair of driven feed rolls located one above the other above said partition, and arranged to withdraw the web from the first compartment and deliver it to the second compartment, the



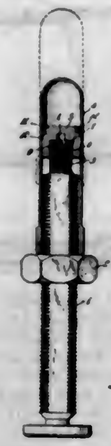
web passing in substantially parallel stretches from the first compartment to the feed rolls, and from the feed rolls to the second compartment, mechanism being provided for driving the feed rolls alternately forward and backward to reciprocate the web lengthwise.

1,628,691. HEATER FOR AUTOMOBILES. JAMES J. SUNDAY, Detroit, Mich., assignor, by mesne assignments, to Kelch Ventilating Heater Company, a Corporation of Michigan. Filed Jan. 25, 1926. Serial No. 83,733. 4 Claims. (Cl. 257—241.)



1. In a heater for automobiles, a muffler having peripheral flanges, an air heating jacket including complementary sections adapted to surround said muffler in spaced relation thereto, said jacket having an internal diameter substantially equal to the diameter of the peripheral flanges and having enlarged channel-shaped portions surrounding said flanges, and metal strips bridging said channel-shaped portions and engaging said peripheral flanges.

1,628,692. PUMP JACK. ELMER R. THOMAS and PEARLEY E. LANGFITT, Shidler, Okla. Filed Nov. 17, 1925. Serial No. 69,661. 4 Claims. (Cl. 74—5.)

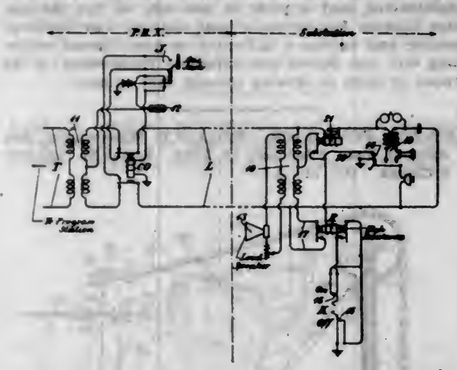


1. In a pump jack, the combination of spaced supporting means, a walking beam having spaced bars above said supporting means, a body fixed between the bars of the walking beam and having portions above and below said bars and against the same and also having a pendent portion disposed between the pivotally connected to the supports, and further having an upstanding portion above the spaced bars, and a truss extending over said upstanding portion and connected with the end portions of the bars.

1,628,693. SLED BRAKE. JOSEPH V. TOBIN, Jr., Wissahickon, Pa. Filed May 10, 1926. Serial No. 108,098. 2 Claims. (Cl. 188—8.)

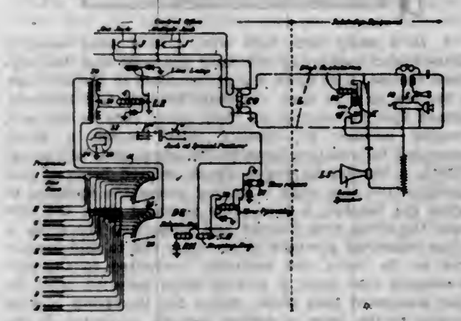
1. A sled brake, a shaft carried by the sled, a drum eccentrically mounted upon the shaft, a disk members fixed upon the shaft, an operating handle carried by the drum for shifting the latter to an operative position, and means carried by one of the disks and connected with the drum to normally hold the latter in an inoperative position.

1,628,694. DUST CAP. EWALD F. TOBOLD, Cleveland, Ohio, assignor to The Dill Manufacturing Company, a Corporation of Ohio. Filed Aug. 11, 1920. Serial No. 402,845. 2 Claims. (Cl. 152—12.)



1. A cap comprising a shell portion, a member within the shell portion and having means by which it may be attached to a stem, an expansible element associated with said member, said expansible element and the said member co-operating to cause expansion of the expansible member when the two are relatively turned.

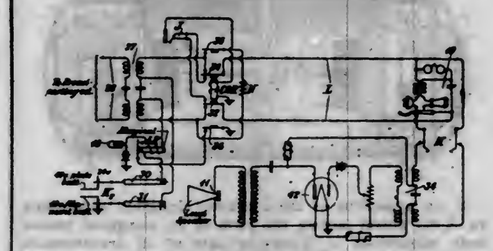
1,628,695. SUBSCRIBER'S EQUIPMENT FOR PROGRAM TRANSMISSION. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 1, 1923. Serial No. 677,993. 4 Claims. (Cl. 179—2.)



1. In a program system, a subscriber's telephone line, means to connect said telephone line to a program station, switching terminals for said line, a line signal

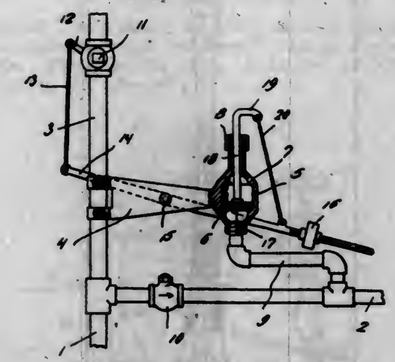
associated therewith, a low impedance program receiver for said line adapted to be bridged across the line, means to establish a circuit over the two sides of said line in

parallel to operate said line signal, a relay controlling the connection of said program receiver to the line, and means to establish a circuit for said relay over the two sides of the line in parallel.



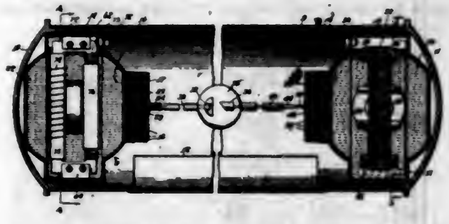
1,628,696. PROGRAM-SELECTING CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,788. 7 Claims. (Cl. 179—2.)

1. In a wired program system, a subscriber's telephone line terminating in a subscriber's telephone apparatus at the subscriber's station, switching means at the central office whereby a connection may be established between said subscriber's line and another subscriber's line, a plurality of trunks at the central office upon which programs may be impressed, selective switching means independent of said first mentioned switching means at the central office for establishing a connection between said line and any desired trunk, and controlling means at the central office whereby the operator may control the operation of said selective switching means.



1,628,697. PROGRAM TRANSMISSION OVER WIRES. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Nov. 11, 1922, Serial No. 600,357, Patent No. 1,591,108. Divided and this application filed Jan. 18, 1924. Serial No. 687,100. 7 Claims. (Cl. 179—2.)

1. In a telephone system, a telephone line terminating at a subscriber's station at one end and a central office at the other end, a line relay associated with said line at the central office, a telephone set at said subscriber's station, means to supply the energizing current for the transmitter of said set from the central office through said line relay, switching means at the central office for interconnecting said line with other telephone lines for ordinary telephonic intercommunication, a special receiving arrangement at said subscriber's station for receiving program transmission, a program transmitting station, means to connect said special receiving arrangement and

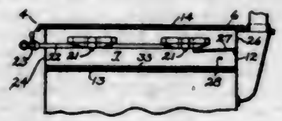


said program station with the line when it is not being used for ordinary telephone purposes, said special receiving arrangement including an amplifier, and means for supplying an energizing current for said amplifier over said telephone line and through said line relay from the central office without operating said line relay.

1,628,698. AUTOMATIC WATER-DISTRIBUTION CONTROL. EARL WALKER, Daykin, Nebr. Filed Apr. 6, 1926. Serial No. 100,122. 1 Claim. (Cl. 137—78.)

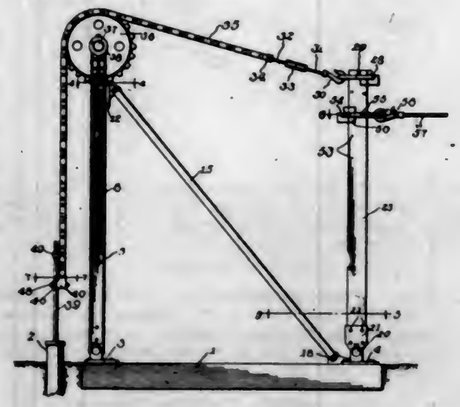
Automatic water distribution control means comprising a pipe adapted to be connected with means for supplying water under pressure, a turnable cut out valve in said pipe and having a crank, a pipe connected with the first named pipe at a point between the source of supply and the cut off valve, a non-return valve in said second named pipe and arranged to open in a direction away from the first named pipe, a bracket on and extending laterally from the first named pipe, a piston cylinder carried by said bracket and disposed at right angles thereto and connected at one end to a pipe in connection with the second named pipe at the opposite side of the non-return valve, with reference to the first named pipe, the second named pipe being adapted to lead water under pressure to a pressure tank, a piston in said piston cylinder and having a rod extending through the opposite end thereof, a lever pivotally connected at an intermediate point in its length to the said bracket and arranged alongside the same, a rod connecting one arm of said lever and the crank of the turnable cut off valve, a rod connecting the other arm of said lever and the piston rod, and a weight adjustable on the last named arm of the lever in the direction of the length of the lever.

1,628,699. X-RAY APPARATUS. FREDERICK H. WAPPLER and CHARLES FAYER, Flushing, N. Y., assignors to Wappler Electric Company, Inc., a Corporation of New York. Filed Dec. 7, 1923. Serial No. 679,081. 17 Claims. (Cl. 250—34.)



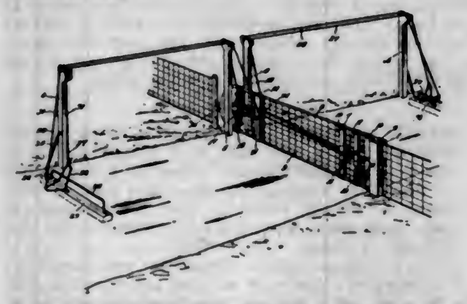
1. An apparatus of the character described comprising an X-ray shield having the form of an elongated hollow body impervious to X-rays, a pair of oil transformers mounted independently of each other within the ends of said X-ray shield and supported thereby, and supporting mechanism connected with said transformers and energized thereby for supporting an X-ray tube in a position intermediate said transformers and within said X-ray shield, said suporting mechanism being in two parts, each carried by one of said transformers.

1,628,700. NECKTIE. HARRY F. WATERS, St. Louis, Mo. Filed Nov. 18, 1925. Serial No. 69,841. 5 Claims. (Cl. 2—146.)



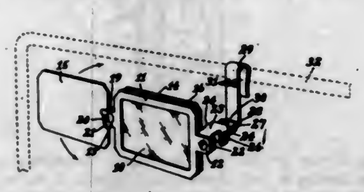
1. A necktie comprising an outer casing, and a liner within said outer casing, said liner comprising layers of fabric of approximately corresponding softness between which layers and amount of elastic material is present to resist wrinkling of the liner.

1,628,701. AIR-DEFLECTING MEANS FOR CLOSED-TOP BURNER CHAMBERS OF GAS STOVES. JOHN C. WEISMAN, Oakland, Calif., assignor to Hammer-Bray Company, Oakland, Calif., a Corporation of California. Filed Sept. 22, 1924. Serial No. 739,008. 4 Claims. (Cl. 126—214.)



1. In a gas-stove provided with a closed top-burner chamber having a fresh air inlet opening adjacent the front and bottom thereof and a discharge opening adjacent the top and rear thereof, front and rear burners in said chamber spaced from the top and bottom thereof, the front major portion of the chamber being entirely unobstructed, and a plate at the rear of the chamber lying between the bottom of said chamber and discharge opening and having a deflecting portion thereof underlying said rear burner and extending transversely of the stream of fresh air flowing through said chamber.

1,628,702. PUMP JACK. WILLIAM E. WENTWORTH, San Antonio, Tex. Filed July 13, 1926. Serial No. 122,223. 4 Claims. (Cl. 74—5.)



1. In a pump jack, base sills, a base plate mounted thereon and connecting the same near one end, bearings upon the said base plate, a shaft mounted in the bearings, a bearing member upon the shaft between said bearings, spaced uprights secured at their lower ends to the said bearing member at opposite sides thereof, a wheel journaled for rotation between the upper ends of the uprights, a bracket having a shank secured between said uprights and side arms extending across the uprights to brace the bracket, a base plate mounted upon the sills near the other ends thereof and connecting the same, a brace connected pivotally at its upper end to said bracket and at its lower end separably connected to the last mentioned base plate, a rocking beam mounted upon the last mentioned base plate, means for imparting rocking motion to the beam, a flexible element connected to the beam and passed over the said wheel, and means carried by the flexible element for connection to a pump rod.

1,628,703. GATE. CHARLES G. WHITE, Sault Ste. Marie, Mich. Filed Dec. 4, 1925. Serial No. 73,230. 1 Claim. (Cl. 39—44.)

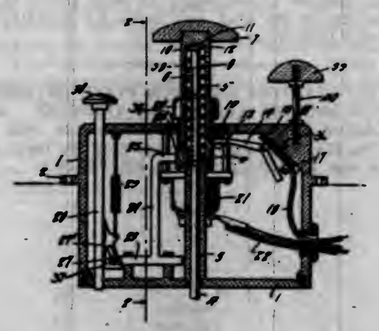
The combination of a pair of supporting posts, a gate having one end arranged between and extending rearwardly beyond said posts supporting bodies secured to the sides of the gate and pivotally supported by said posts, a counterbalance secured about the extended end of the gate and about portions of the supporting bodies, and operating cables attached to the gate and the said supporting bodies in right angular relation to the bodies and extending upwardly and over the posts and provided beyond the posts with operating means.

1,628,704. SIGHT REFLECTOR AND GLARESHIELD. CHARLES ZARTMAN, Los Angeles, Calif. Filed Oct. 31, 1925. Serial No. 65,950. 1 Claim. (Cl. 296—97.)

A combined sight reflector and glare shield comprising a mirror fixed in a frame having opposite end lugs thereon and a slot in the back thereof; a translucent plate pivotally attached to one of said end lugs so that it may be swung into said slot or may be extended and fixed at any desired angle to said mirror; a jointed bracket pivotally attached to the other of said end lugs, and a suspending hook pivotally attached to said bracket, said hook being adapted to slip over the top rail of a windshield and said bracket forming a universal joint between said mirror frame and said hook, whereby said mirror may be swung about one horizontal axis to either side of the hook, may be tipped about another horisontal axis to adjust for vertical reflection or may be turned about a vertical axis to adjust for lateral reflection.

1,628,705. METHOD OF GLAZING AND GLAZING STRIP. SAMUEL B. ZIMMER, Los Angles, Calif., assignor, by direct and mesne assignments, of ten per cent to Edward C. Eddie, Los Angeles, Calif., and ninety per cent to Paul B. Tichenor, Salt Lake City, Utah. Filed July 22, 1925. Serial No. 45,216. 9 Claims. (Cl. 189—78.)

1. The method of glazing, comprising partially filling channel-shaped glazing strips with a soft glazing composition, pressing said strips slightly on the peripheral edges of a pane of glass, positioning the pane with the strips on a sash to be glazed, firmly pressing the strips towards the glass to force the glazing composition from the base of the strips around the sides of the glass and clamping the strips and hence the glass to the sash.

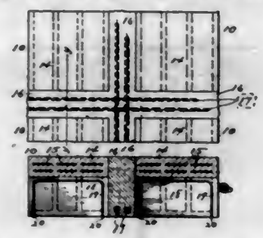


1,628,706. TRAFFIC SIGNAL. LIONEL FREDERICK BARNES, Windsor, Canada. Filed June 21, 1926. Serial No. 117,567. 7 Claims. (Cl. 116—63.)

6. A traffic signal comprising a casing located at the street intersection and having a central opening in the top thereof, a tubular standard extending upward from around such opening, a vertical shaft mounted in vertical bearings and extending upward from the aforesaid casing through the tubular standard, traffic indicating arms carried by the upper end of the shaft and carrying alternating "Go" and "Stop" signs, means for imparting a vertical upward movement to the shaft adapted to release the shaft at the end of its upward movement to drop by gravity, means for cushioning the fall of the shaft, and

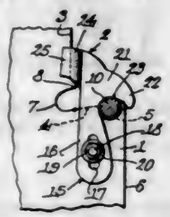
means for imparting a step by step circumferential movement to the arms carried by the shaft by such up and down movement of the shaft.

1,628,707. UNIVERSAL TRAFFIC MOTOR CONTROL. CLARENCE L. BEVAN and JESSE R. CULLEN, Platteville, Wis. Filed Apr. 22, 1926. Serial No. 103,989. 9 Claims. (Cl. 123—198.)



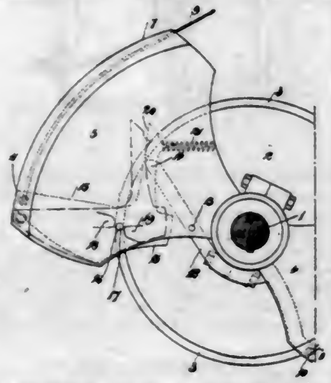
1. A universal traffic motor control, comprising a casing, a hollow plunger slidably mounted in the casing, a throttle rod having its upper end spaced from but engageable by the plunger rod when the latter is operated, an ignition switch operatively connected with the plunger rod, automatic means for holding the plunger in operative position after it has been operated, a plunger operated device operatively connected with said means for withdrawing same from engagement with the plunger, and a foot rest.

1,628,708. COMBINED TILE AND CONCRETE FLOOR CONSTRUCTION. GEORGE H. BUGENHAGEN. Minot, N. Dak. Filed Dec. 12, 1924. Serial No. 755,461. 2 Claims. (Cl. 72—66.)



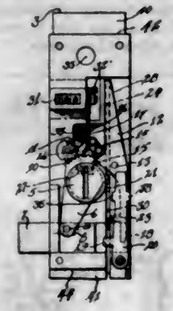
2. A combined tile and concrete floor construction comprising a plurality of hollow tiles arranged in spaced relation, closures for the ends of the tiles, and clips for holding said closure members in position comprising wires

bent U shape for engaging the closure members and having portions adapted to engage the under surfaces of said blocks for exerting pressure on said closure members,



and concrete filling the spaces between the tiles and engaging the ends of the top portions of the tiles above said closures.

1,628,709. LOOM-BEAM LOCK. OLIVER N. DAWSON, Rock Hill, S. C. Filed Jan. 7, 1927. Serial No. 159,668. 3 Claims. (Cl. 308—24.)



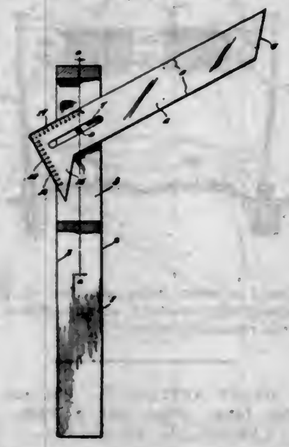
1. In a beam lock for looms, a keeper including a shank provided with an arm and with a wing that projects from the shank in opposite directions, the shank having a shoulder disposed approximately at right angles to the inner surface of the wing, and means for mounting the shank on a loom frame.

1,628,710. STARTING GEAR FOR FIXED EXPLOSIVE MOTOR ENGINES AND MOTOR VEHICLES. AIMÉ DE CHANOY, Epinay, France. Filed July 24, 1923, Serial No. 653,599½, and in France July 25, 1922. Renewed Apr. 5, 1927. 2 Claims. (Cl. 74—53.)

1. In a mechanical starter for explosive engines, having a shaft, a flanged hub plate carried on the shaft, a lever mounted on the hub plate and having a concentric portion and an eccentric portion, a feeder pivotally supported on the eccentric portion and having lugs to bear on the opposite sides of the flange of the hub plate and to grip said flange in the operation of the feeder, and a releasing finger to release the feeder at will.

1,628,711. COIN-CONTROLLED LOCK. WILLIAM J. DORKIN, Chicago, Ill. Filed Dec. 21, 1925. Serial No. 76,859. 5 Claims. (Cl. 194—92.)

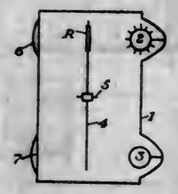
1. A device of the type described comprising a body portion having a coin passageway therein, a key-actuated cylinder, means for stopping the movement of said cylinder when no coin is inserted in the device, and means operatively connecting said cylinder with said stop means for causing said stop to engage said cylinder when said cylinder is turned without inserting a coin, said connecting means being arranged to close the coin entrance when the key has been removed.



1,628,712. PERMUTATION LOCK. FRANK DE CURTIS, Medford, Mass. Filed Oct. 23, 1925. Serial No. 64,344. 3 Claims. (Cl. 70—18.)

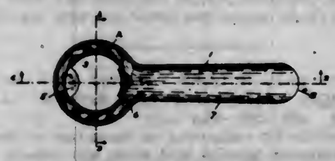
1. A permutation lock comprising a casing, a slide movable in a predetermined path in the casing, and composed of spaced apart arms and a connecting neck, one of said arms having a plurality of studs, and the other an elongated ear, a bolt fixed to said neck and movable in a slot in the casing, an internally threaded sleeve journaled in a bearing on the casing, an externally threaded spindle engaged with said sleeve, and having oppositely projecting tappet arms, one adapted to cooperate with said studs in retracting the bolt, and the other adapted to engage said elongated ear and project the bolt, said spindle being longitudinally adjustable by the sleeve, and a stop within the casing against which one of said tappet arms is yieldingly held, the arrangement being such that one of the tappet arms is adapted to engage said studs successively, to retract the bolt step-by-step when the spindle is turned in one direction, the other tappet arm being engageable with said elongated ear by a reverse turning of the spindle, to project the bolt, the lock comprising also registering means, including a click spring on said casing, and a stud on said sleeve adapted to cooperate with said spring in giving an audible signal.

1,628,713. BEVEL. WILLIAM H. EBERT and ALBERT G. EBERT, Buffalo, N. Y. Filed Dec. 29, 1924. Serial No. 758,737. 1 Claim. (Cl. 33—94.)



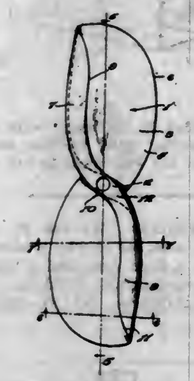
A tool of the character described comprising a stock having one end portion formed with a slot closed at its ends and opening through opposite side edges of the stock, a blade having an end portion extending transversely through the slot of the stock and formed with a

longitudinally extending slot, the said end portion of the blade having a side extension projecting transversely therefrom with one edge forming a continuation of the end edge of the blade, there being calibrations along the blade adjacent the side edge thereof opposite its side ex-



tension and other calibrations across the adjacent end of the blade and a portion of the side extension, and an adjustable fastener passing through the slots of the stock and blade and adapted to releasably secure the blade in an angularly adjusted position.

1,628,714. ILLUMINATED RAILWAY SIGNAL. COURTENAY HAROLD WISH EDMONDS, London, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1925, Serial No. 11,050, and in Great Britain Mar. 13, 1924. 5 Claims. (Cl. 246—484.)



4. A railway light signal comprising primary and secondary light producing means, and a movable spectacle having two series of color screens co-operating with said light producing means to produce single or double light signal indications.

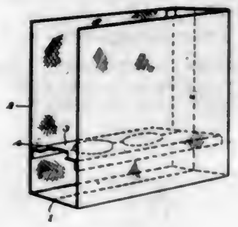
1,628,715. BOTTLE-CAP REMOVER. FREDERICK S. ENKLER and GEORGE W. BAIRD, Poughkeepsie, N. Y. Filed Sept. 27, 1926. Serial No. 138,090. 1 Claim. (Cl. 65—46.)

A bottle cap remover of the class described, comprising in combination with a handle member U-shaped in cross section, of a ring portion also U-shaped in cross section and integral with said handle member, and adapted to embrace the periphery of the cap, a pressing lug formed on the upper part of said ring portion and adapted to engage the top edge of the cap, and a lifting lug formed on the lower part of said ring and adapted to engage the lower edge of the cap at a point opposite the pressing lug for the purpose of lifting said cap when said handle is pressed upward.

1,628,716. AERIAL PROPELLER. JOSEPH FISCHER, Faith, S. Dak. Filed Aug. 28, 1925. Serial No. 53,155. 3 Claims. (Cl. 170—159.)

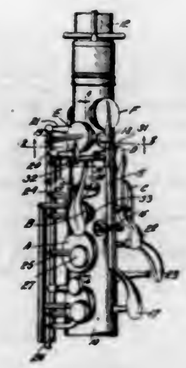
1. An aerial propeller comprising oppositely extending blades and an intermediate hub portion, each blade having an air-compacting pocket extending the full length of the trailing edge portion thereof and including a wall confronting the forward face of the blade, the said wall, from a point near the outer end of the pocket being gradually decreased in depth in the direction of the said end of the pocket.

1,628,717. RUBBER BALL. JOHN B. FLOWERS, Brooklawn, N. J. Filed Jan. 17, 1924. Serial No. 686,711. 3 Claims. (Cl. 46—46.)



1. A toy comprising a ball of sponge rubber having a recess extending partway to its center, a metal plate of greater diameter than the recess embedded in the ball and forming the bottom of the recess, and a bell disposed in the recess and secured to the plate.

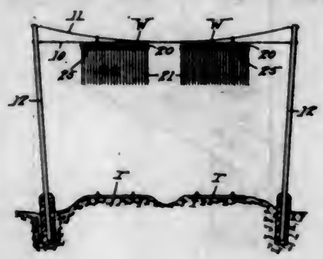
1,628,718. ICE-CREAM-CONE WRAPPER AND CARRIER. CARL E. FRITZSCHE, Fort Fairfield, Me. Filed Aug. 4, 1926. Serial No. 127,071. 1 Claim. (Cl. 229—6.)



A combined wrapper and carrier for ice cream cones, the same consisting of an elongated flat bottom, and enclosing walls, the bottom being foldable upwardly and the end walls foldable inwardly, and a partition having

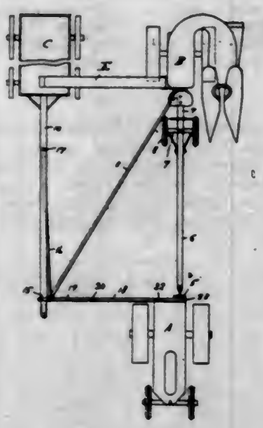
its ends terminating short of the end walls of the wrapper to provide for the inward folding of said walls and attached along its marginal edges to the side walls of the

wrapper, and provided in its length with cone receiving openings, said partition being foldable intermediate its edges to lie between the side walls of the wrapper.



1,628,719. SAXOPHONE. WALTER F. GEMEINHARDT, New York, N. Y., assignor to The Woodwind Company, New York, N. Y., a Firm composed of Eugene Bercieux and Walter F. Gemeinhardt. Filed Oct. 16, 1925. Serial No. 62,795. 2 Claims. (Cl. 84—385.)

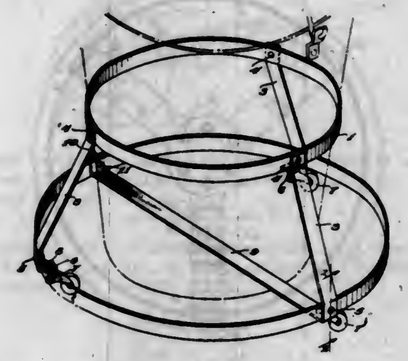
2. In a saxophone, in combination, a horn, a pair of normally closed valves in laterally offset relationship, a pair of normally open valves, extension lugs carried by each of the normally closed valves, means for operating each of the valves independently, and additional means for operating said valves simultaneously, said additional means comprising a lever pivotally mounted on the horn between the two pairs of valves, said lever having a transverse arm at one of its ends underlying the extension lugs of both of the normally closed valves, the opposite end of the lever being widened to form a finger-key, and the inner surface of said finger-key being provided with a cushioning member for engaging both of the normally open valves.



1,628,720. BRIDGE-WARNING DEVICE. FRANK H. Gilligan, Worcester, Mass. Filed Jan. 18, 1927. Serial No. 161,907. 5 Claims. (Cl. 246—486.)

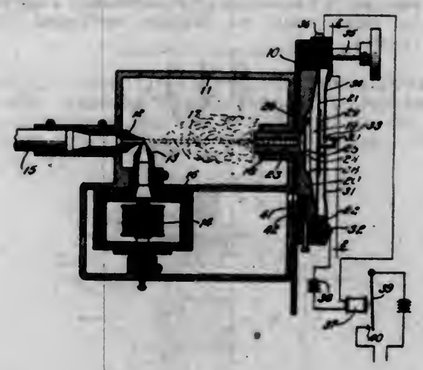
2. A bridge warning device comprising a supporting bar, a plurality of depending tickler wires pivotally secured to said bar, each of said wires having an eye formed therein and spaced below its point of pivotal connection, and a positioning member extending through all of said eyes and held from longitudinal displacement

therefrom, said member being effective to prevent substantial angular displacement of any tickler wire with respect to the remaining wires.



1,628,721. DRAFT APPLIANCE. WILLIAM HAGEDORN, Sutherland, Iowa. Filed July 9, 1926. Serial No. 121,389. 2 Claims. (Cl. 280—33.44.)

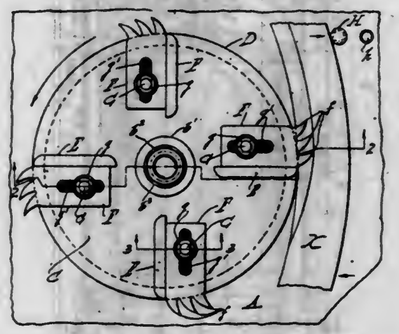
1. A draft appliance of the class described; wherein a tractor is utilized for pulling a corn picker and a wagon for receiving corn therefrom; comprising a bracket attached to the stub tongue of the corn picker, a bar engaged with the bracket and extending forwardly to one side, a guide rod formed in pivotally associated sections, one section being rigidly engaged with the tractor, a rod engaged at one end with an intermediate portion of the tongue of the wagon, a clamp on the tongue of the wagon, means for pivotally engaging the other section of the guide rod, the other end of the push bar, and the forward end of the second mentioned rod with the clamp.



1,628,722. PAIL HOLDER. WALTER W. HAERTEL, Detroit, Mich. Filed Dec. 1, 1925. Serial No. 72,612. 2 Claims. (Cl. 280—61.)

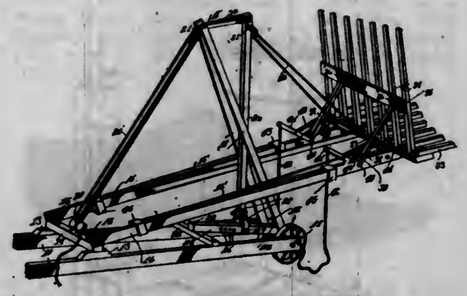
1. A pail holder comprising an upper ring, a lower ring, struts extending between said rings and secured against the outer faces thereof and serving to support the upper ring, said struts having their lower end portions extending beneath said lower ring in engagement with its lower edge and projecting inwardly therefrom, and casters carried by the inwardly extending ends of said struts, the inwardly extending lower end portion of one of said struts being of a length to extend beneath said upper ring

and braced from the lower ring against downward movement and adapted to engage the bottom of a pail inserted through the upper ring and support the pail.



1,628,723. RELAY. RAY E. HALL, Rock Island, Ill., assignor to Hall Research Corporation, Chicago, Ill., a Corporation of Delaware. Filed May 31, 1922. Serial No. 564,981. 12 Claims. (Cl. 200—81.)

1. The combination of means to produce a jet of fluid, means to impress vibrations on said jet to make it assume varying phases, a resilient medium adapted to move it one direction when acted upon by the jet and to react in the opposite direction when the action of the jet is abated, and fluid vent means to adjust the reaction of said resilient medium.

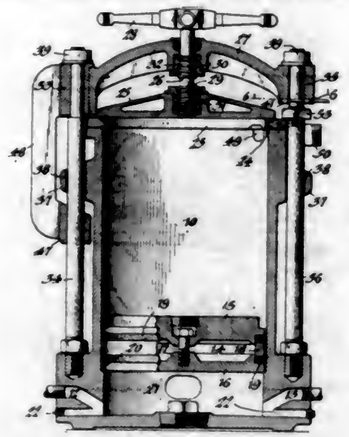


1,628,724. WOODWORKING MACHINE. FRANK HOFFMAN, Buffalo, N. Y. Filed Sept. 23, 1925. Serial No. 58,078. 2 Claims. (Cl. 144—235.)

1. A cutter head for shaper machines having a radially extending face portion, an annular peripheral flange extending around said face portion, a plurality of ribs extending upwardly from said face portion and forming stops, saw toothed cutters adapted to be secured to said face portion and arranged against said stops with their saw toothed portions projecting beyond said flange, and adjustable securing means for holding said cutters against said stops and for positioning said cutters for

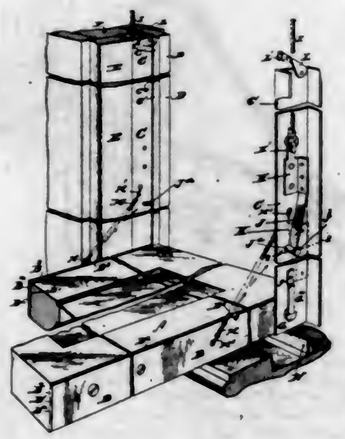
determining the depth of the cut to be made by the extent to which said cutters project beyond said flange, said flange forming a smooth, continuous guiding surface against which the work to be cut is pressed.

1,628,725. STACKER. PETER B. JOHNSON, Fremont, Nebr. Filed Sept. 10, 1925. Serial No. 55,514. Renewed Dec. 3, 1926. 6 Claims. (Cl. 214—140.)



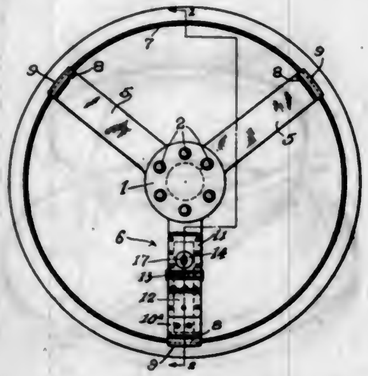
1. A stacker including a supporting frame, a swingable frame on the supporting frame having a movable load gathering and dumping portion, means between the dumping portion and the swingable frame for retaining said portion in load supporting position, and connections between said means and the supporting frame whereby to release said means and permit said portion to dump its load upon movement of the swingable frame to predetermined position.

1,628,726. SAUSAGE STUFFER. EUGENE W. KNOWLTON, Buffalo, N. Y., assignor to John E. Smith's Sons Company, Buffalo, N. Y., a Corporation of New York. Filed Aug. 10, 1925. Serial No. 49,223. 8 Claims. (Cl. 17—39.)



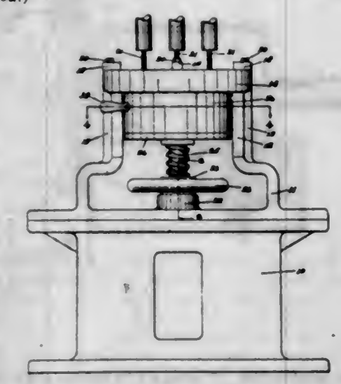
1. A sausage stuffer, comprising a cylinder open at its upper end, a cover for said end, a piston in the cylinder, safety-rods rising from the base of the cylinder, a yoke

carrying said cover and connected to the upper ends of said rods, said yoke being mounted to swing laterally on



one of said rods and its pivotal end having upper and lower hubs journaled on the corresponding safety-rod, and a brace connecting said hubs.

1,628,727. VERTICALLY-SLIDABLE INWARDLY-SWINGING WINDOW. JOHN G. KRAMER, Detroit, Mich., assignor to Carnahan-Byrne Machinery Company, Inc., Detroit, Mich., a Corporation of Michigan. Filed Sept. 29, 1926. Serial No. 138,382. 7 Claims. (Cl. 20—40.)

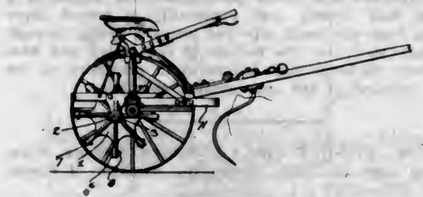


1. In a device of the class described, a pair of vertically movable channel members; a vertically slidable sash; a pair of metal strips secured to the edges of the sash respectively provided with an aperture at the lower end to receive the ends of pivot pins supported in the walls of the channel members; springs secured to the channel members adapted to bear upon the pivot pins to yieldingly maintain them in engagement with the strips secured to the sash, whereby the sash may be removed upon manually forcing the pins out of engagement with the strips attached to the sash.

1,628,728. SPARE-TIRE CARRIER. EDWARD J. LATTIN, Canton, Ohio. Filed July 9, 1926. Serial No. 121,335. 2 Claims. (Cl. 224—29.)

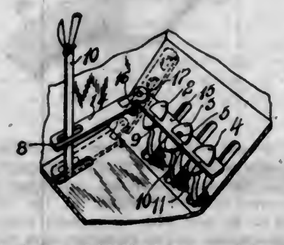
1. In a spare tire carrier, a central hub, a plurality of radial arms connected to the hub and adapted to support a tire and rim, one of said arms having its intermediate portion offset rearwardly and this arm being formed of sections hinged together at the offset portion of the arm, an extension on one of said sections overlying the other section, a lock casing carried by one arm section, and a latch pin to be received therein, carried by the other section.

1,628,729. WORK-HOLDING DEVICE FOR MULTIPLE-SPINDLE DRILLS. HERBERT V. LUDWICK, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1922. Serial No. 542,535. 12 Claims. (Cl. 77—62.)



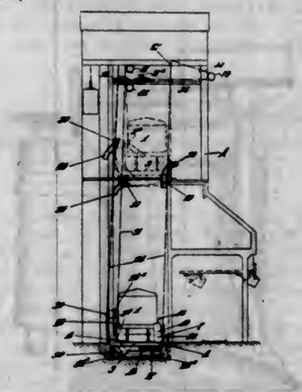
10. In a device of the class described, in combination, a fixed support, a work-holder movably mounted on said support, a gate forming part of said work-holder for securing the work therein, and means for preventing opening movement of said gate, said means being rendered operative and inoperative through relative movement of the work holder and the support.

1,628,730. STALK CUTTER. JOHN A. MCKAY and PATRICK H. LYNCH, Dunn, N. C., assignors to The John A. McKay Manufacturing Company, Inc., Dunn, N. C., a Corporation of North Carolina. Filed Mar. 1, 1926. Serial No. 91,414. 2 Claims. (Cl. 55—61.)



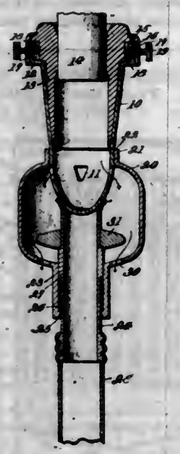
1. A cutting reel for stalk cutters including supporting means having oppositely disposed spiders, said spiders

having grooves on the inner faces thereof, a partition held in said grooves and extending across between the spiders, and cutting blades carried by the spiders, at



least two of said cutting blades being located in alignment with the partition and removably holding said partition in place.

1,628,731. LEVER LOCK. ALEXANDER MEEK, Spokane, Wash. Filed Apr. 8, 1924. Serial No. 705,049. 1 Claim. (Cl. 70—126.)



In a lever lock a foldable bar comprising two slotted arms to embrace a lever and pedals, said arms being connected by a pair of hinge joints, the axis of each being perpendicular to the plane of the other, and means in connection with one of said arms for preventing removal of the device from the pedals.

1,628,732. UNLOADING APPARATUS FOR RAILWAY CARS. FREDERICK GILBERT MITCHELL, London, England. Filed Oct. 21, 1926, Serial No. 143,246, and in Great Britain Apr. 23, 1925. 12 Claims. (Cl. 214—123.)

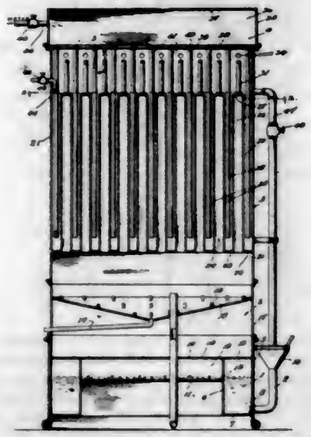
1. An apparatus for unloading railway cars comprising in combination, a platform on which a car is carried, a support for said platform, disengageable bearings arranged between said platform and said support at angles oblique to the axis of the former and means whereby said platform with the car thereon may be hoisted at either end selectively to tilt about the axis of one of said bearings in release from the other.

1,628,733. FAUCET-BULB CONNECTION. CALLIE E. MORRIS, Brooklyn, N. Y. Filed Jan. 28, 1927. Serial No. 164,287. 4 Claims. (Cl. 137—111.)

1. The combination of a housing for connection with a spigot having a closed lower end and lateral discharge openings, a receiving chamber mounted upon the housing and provided with outlet openings in the base thereof, a pipe slidably mounted within the receiving chamber through which liquid in the receiving chamber may be discharged, a valve carried by said pipe for closing the outlet openings of the receiving chamber, said pipe adapted to be projected into the receiving chamber and into engagement with the lower end of the housing for preventing the ingress of liquid to the pipe and for unseating the valve carried thereby.

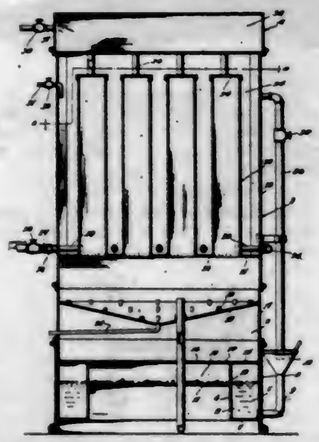
1,628,734. SHOE-DISPLAY FORM. WALTER L. C. NILES, Saugus, Mass., assignor to Excel Shoe Form Company, Lynn, Mass., a Corporation of Massachusetts. Filed Sept. 12, 1925. Serial No. 55,926. 3 Claims. (Cl. 12—128.)

1. A shoe form comprising a base or body of proper shape, and a covering of textile material permanently attached to the exterior surface of said base or body, said textile material having a thin outer coating of a solidified waterproof substance.



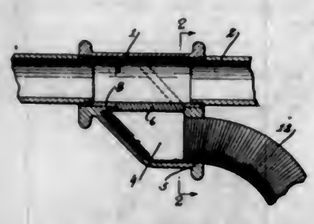
1,628,735. SEPARABLE CUFF BUTTON. MORRIS O. NORSE, Newark, N. J. Filed Sept. 24, 1926. Serial No. 137,429. 3 Claims. (Cl. 24—110.)

1. A separable cuff button comprising a pair of inwardly converging members having level fixed and movable flat faces respectively, means for retaining said



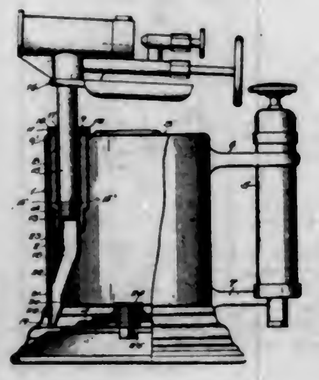
movable face normally extending uniformly with the fixed face, cooperative resilient finger means to cause positive interengagement of said members whereby they are held inseparable, and means actuated by depression of said movable face to release said engaging means.

1,628,736. CONDENSER FOR STILLS. ERNON V. OLIVER, Portland, Oreg. Filed Mar. 5, 1925. Serial No. 13,282. 5 Claims. (Cl. 257—30.)



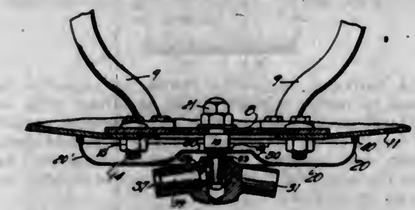
1. In distilling apparatus, a casing having a bottom provided with inlet passages for vapors from a generator, a horizontal wall in the casing, a plurality of spaced condensation chambers having open lower ends supported upon and opening through the partition wall within the casing, to receive said vapors, the spaces between the said chambers constituting cooling-water chambers open at their tops, a reservoir at the upper portion of the casing having a bottom closing the top of the casing, a plurality of distributing pipes extending downwardly from the bottom of the reservoir and into the cooling-water chambers, and an overflow leading from the casing at a level above the open tops of the said cooling-water chambers.

1,628,737. CONDENSER FOR STILLS. ERNON V. OLIVER, Portland, Oreg. Filed Mar. 5, 1925. Serial No. 13,283. 4 Claims. (Cl. 257—30.)



1. In a distilling apparatus, a condenser casing having a body wall and a bottom, the latter provided with openings, a plurality of upright condensation chambers arranged within the casing upon the bottom thereof within said openings, the said chambers being closed at their tops and open at their bottoms to receive the vapors to be condensed, a trunk pipe, means for supplying a cooling fluid thereto, and a plurality of branch pipes leading from the trunk pipe and into the casing through the body wall near the bottom of the casing and having their discharge ends presented in proximity to the lower portions of the condensation chambers.

1,628,738. CUT-OUT. IRVIN J. OLNESS, Kragnes, Minn. Filed Aug. 23, 1923. Serial No. 658,876. 1 Claim. (Cl. 251—10.)

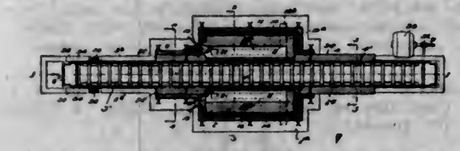


A muffler cut-out valve structure comprising a chamber forming part of the exhaust pipe and provided at its sides with an opening, a cut-out extension casing detachably secured to said chamber at the side thereof and provided at its side with an opening which registers with the side opening of the chamber, said chamber and extension casing being of the same length, a pivoted valve mounted in bearings formed partially in the chamber and partially in the extension, said valve being of a transverse thickness equal to the combined transverse thickness of the opposed walls of the chamber and the extension and adapted to fit in both of said openings and completely fill both of them.

1,628,739. PLUMBER'S BLOWTORCH. WILLIAM F. PAGEL, Sycamore, Ill. Filed Aug. 4, 1923. Serial No. 655,625. 7 Claims. (Cl. 158—33.)

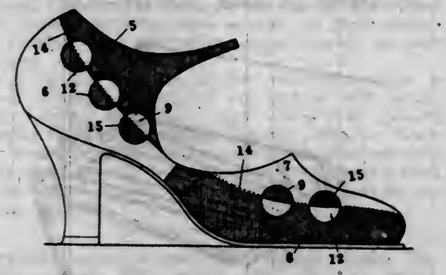
1. In a plumber's blow torch a sheet metal reservoir, a burner arranged above the reservoir, a support tube having its upper end secured in the top wall of the reservoir and projecting down into the reservoir, a fuel feed tube having its lower end mounted in the lower end of the support tube and the feed tube extending freely up through the support tube to the burner.

1,628,740. LOCKING DEVICE. JAMES F. RALEIGH, Chicago, Ill., assignor to Pines Winterfront Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 9, 1925. Serial No. 1,444. 16 Claims. (Cl. 70—90.)



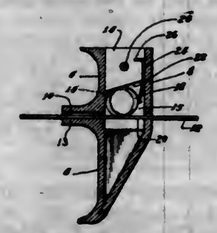
12. In a locking device of the class described, the combination of a mounting member having a thread thereon, a retaining member screwing over said mounting member, and locking mechanism limiting the longitudinal separating motion between said members.

1,628,741. ADJUSTABLE PIN GAUGE. PARK D. RITCHEY, Poughkeepsie, and ROYAL A. HOLT, Wappingers Falls, N. Y., assignors to Standard Gage Company, Inc., Poughkeepsie, N. Y., a Corporation of New York. Filed Oct. 4, 1926. Serial No. 139,566. 2 Claims. (Cl. 33—163.)



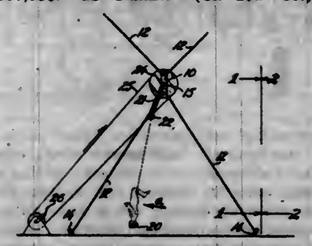
1. In a pin gauge of the class described, comprising tubular metallic body portion having internal threads at one end, a pair of metallic end pieces, formed with hardened, ground and lapped contact surfaces, each of said end pieces formed with a collar and a shank, one of said shanks formed with threads coacting with said internal threads, a threaded locking ring mounted on said shank and adapted to act as a jam nut against the end of said body portion, the abutting edges of said locking ring and said body portion formed with cut out portions adapted to register with each other to form a recess for the purpose of receiving a sealing compound.

1,628,742. APPARATUS FOR TREATING ARTICLES. HARRY M. ROBERTSON, Lakewood, Ohio. Filed May 2, 1925. Serial No. 27,616. 11 Claims. (Cl. 263—42.)



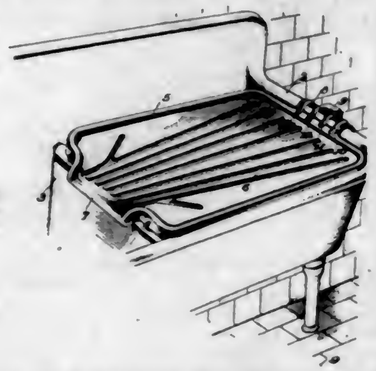
8. In apparatus of the class described, the combination with a bed and outer walls, of a pair of inner walls on said bed spaced to form a passage between them, a horizontal wall between each outer wall and the adjacent inner wall to form a main combustion chamber extending from end to end of said passage, a roof member extending between said inner walls and co-operating therewith to form a closed passage, a roof member extending between said outer walls and forming with said first mentioned roof member a separate combustion chamber common to both said combustion chambers and superposed above said treating passage, each said horizontal wall being formed near one end with an opening through which the products of combustion pass to said separate combustion chamber and the latter being formed with a discharge port, a heating means at the end of each main combustion chamber opposite to the outlet opening therefrom, and means for conveying bodies to be treated through said passage.

1,628,743. SHOE. ARTHUR M. ROHRER Kirkwood, Mo., assignor to The Moore Shoe Company, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 25, 1926. Serial No. 90,436. 4 Claims. (Cl. 41—10.)



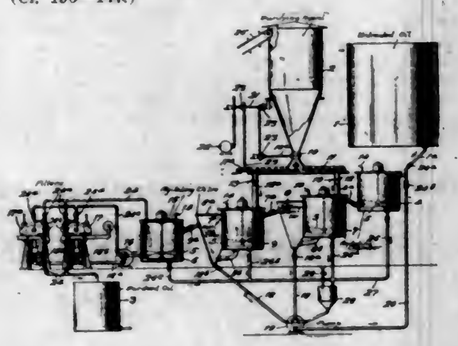
1. A shoe having an upper comprising two adjacent parts, one of said parts being provided with a tab overlapping the other part, a slit in said tab, a tab on said second named part passing upwardly through said slit and overlapping said first named part whereby said tabs cooperate to form an ornamental design on the shoe, a row of stitching securing said parts together, and a second row of stitching holding said tabs in position.

1,628,744. FISH-TAPE PULLER. WILLIAM ROSE, Chicago, Ill., assignor to Mathias Klein & Sons, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 21, 1927. Serial No. 169,810. 3 Claims. (Cl. 24—136.)



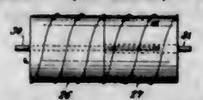
1. In a device of the class described, the combination of a hollow body member, said member being transversely slotted, a block fitting within said body member and having a transverse slot with converging sides, one edge of said slot being in register with the transverse slot of said body, a disc having its cylindrical surface serrated and being freely movable within said last named slot, and resilient means tending to hold said disc in the narrower portion thereof.

1,628,745. AMUSEMENT APPARATUS. GEORGE H. RUMER, Denver, Colo. Filed Dec. 18, 1922. Serial No. 607,533. 13 Claims. (Cl. 272—60.)



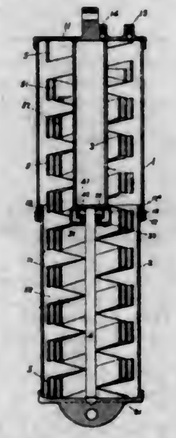
1. Amusement apparatus having an axle, a trapeze having a bar adapted to swing about said axle, a propelling device rotatable about said axle to propel the trapeze over said axle, and an obstruction adapted to be automatically disposed in the path of the trapeze to stop a performer on the trapeze.

1,628,746. COMBINATION DRAIN BOARD AND COVER. JOHN W. RUSSEL, Columbia, Pa., assignor of one-half to Marietta Hollow Ware and Enameling Company, Marietta, Pa. Filed June 22, 1926. Serial No. 117,795. 2 Claims. (Cl. 141—11.)



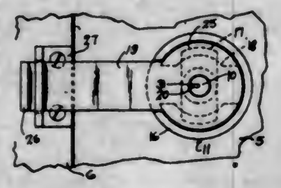
1. A combination drain board and cover for use with a combination laundry tray and sink comprising a one piece metal body having one end adapted to engage a partition of the combination laundry tray and sink and having an upwardly and outwardly curved extension defining a hanger at its opposite end designed to snugly engage the rounded outside wall of the combination laundry tray and sink for the major portion of the extent of the hanger, the central portion of the hanger being struck-up providing a pocket between the hanger and the rounded upper edge of the outside wall of the combination laundry tray and sink permitting the fingers to be introduced under the hanger, the upwardly struck central section of the hanger constituting a hand grip, facilitating application and removal of the combination, cover and drain board.

1,628,747. CONTINUOUS PROCESS OF TREATING OILS. ORANGE J. SALISBURY, Salt Lake City, Utah. Filed Apr. 11, 1924. Serial No. 705,763. 6 Claims. (Cl. 196—147.)



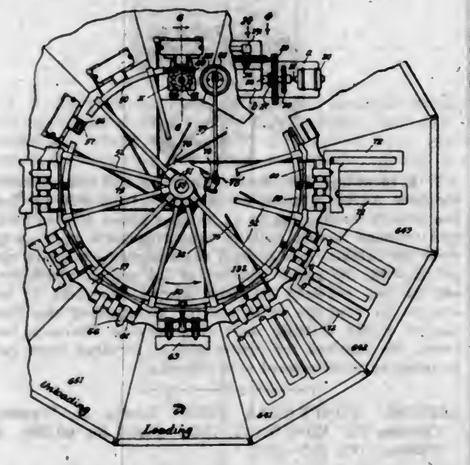
1. The process of treating oil or other liquid for the purpose of bleaching or refining the same, which comprises flowing the liquid into a chamber, adding partially spent treating material thereto and mixing the liquid and treating material, flowing the mixture into another chamber, adding fresh treating material, agitating the mixture and continuously circulating a portion of the mixture between said chamber and another chamber where a portion of the treating material is separated from the liquid and returned to the initial treating chamber, while the remaining mixture is passed on to a filtering means and filtered to separate the liquid from the impurities and remaining treating material.

1,628,748. CULTIVATOR. FREDRIK B. SALVESEN, Brooklyn, N. Y. Filed Mar. 8, 1926. Serial No. 93,085. 2 Claims. (Cl. 55—6.)



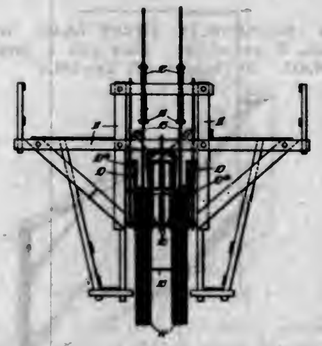
1. A cultivator, as described, having an extensible axle adapted to receive a plurality of cylindrical drum sections, said sections having their outer surfaces provided with deeply cut spiral ridges wound in a screw-threaded manner, and adapted to be reversely connected, and means for combining said sections into one integral unit mounted on said axle.

1,628,749. SPRING AND RECOIL CHECK. ALFRED S. SAMUELS, Saugus, Mass. Filed June 10, 1925. Serial No. 36,224. 5 Claims. (Cl. 267—34.)



1. In a compound vehicle spring, a telescoping casing, having an air-tight packing at the telescope joint; a plurality of nested coiled springs of differing lengths secured within the casing, to give a successively increasing resistance to telescoping of the casing; an outwardly opening check valve in the walls of the casing; an inner air pump chamber secured to a head of one of the telescoping elements; a piston and rod secured to the other head, the piston working in the pump chamber; an inlet valve at the free end of the pump chamber; an outlet valve at the other end of the pump chamber.

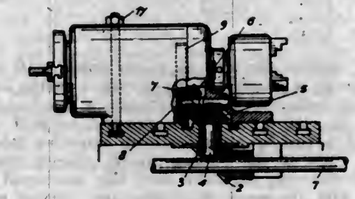
1,628,750. LOCK. MORRIS SHEINMAN, New York, N. Y. Filed July 16, 1925. Serial No. 43,922. 4 Claims. (Cl. 70—46.)



1. A lock arrangement for doors consisting of a latch lock adapted to be positioned on one side of the door, and a bar lock at the opposite side of the door, said bar lock comprising a receptacle, a lock lever therein, a separable bar adapted at one end to engage said lock lever and at its other end to engage a keeper plate, and means for locking said lock lever, said means being also operable to lock the latch on the opposite side of the door.

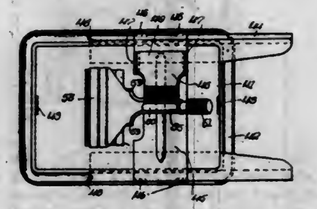
1,628,751. APPARATUS FOR FORMING METAL ELEMENTS. REUBEN STANLEY SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Nov. 15, 1921. Serial No. 515,877. 8 Claims. (Cl. 29—33.)

1. In a mechanism for operating upon metal elements, a receiving station, a discharging station, a revolving turret provided with devices operating in planes transverse to that of the rotation of the turret and adapted to hold a succession of blanks, automatic means for operating the said devices in succession to receive and clamp the blanks at the receiving station and hold them during the rotation of the turret, and automatic means for operating the said devices to release the blanks at the discharging station in like succession upon completion of such rotation, in combination with means for rotating the turret, and a plurality of machines grouped about the turret and adapted to perform different operations successively upon the blanks as presented thereto by the turret.



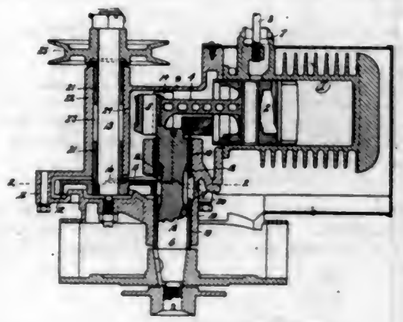
1,628,752. FORM FOR CONCRETE WALL CONSTRUCTION. WILFORD R. SPROUL, Chicago, and HUGO LAYER, Winnetka, Ill., assignors to E. W. Sproul Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 16, 1926. Serial No. 155,128. 4 Claims. (Cl. 25—131.)

3. In slip forms for concrete wall construction, in combination, form sections arranged end to end in spaced relation and having opposite mold surfaces for shaping the inner surfaces of opposite concrete wall portions, means for elevating the form sections, and a shield member having portions overlapping said mold surfaces of the adjacent form sections to close the space between them, said portions having slots at their lower ends aligning with the space between the form sections for reception of a tie rod extending between the wall portions.



4. In a slip form for concrete wall construction, a shield member comprising a web portion with lateral flange portions extending at right angles from opposite margins thereof, said flange portions extending below the lower margin of the web portion and provided with downwardly opening slots and means at the upper portion of said shield member whereby it may be engaged for lifting movement.

1,628,753. GRINDING DEVICE. WALTER STOECK, Berlin, Germany. Filed June 2, 1925, Serial No. 34,352, and in Germany Sept. 25, 1924. 3 Claims. (Cl. 51—259.)



1. In a machine tool, a headstock comprising a rotatable casing mounted on the frame of the tool, a fixed shaft mounted on the casing and carrying a dead centre, a rotatable shaft mounted on the casing and carrying a chuck, and means permitting rotation of said casing on the frame of the tool for presenting either the dead center shaft or the chuck carrying shaft to the work.

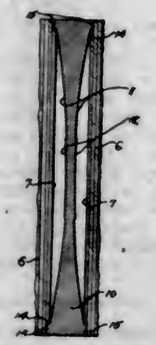
1,628,754. BLADE-SHARPENING MECHANISM. CHARLES A. STRAND, Chicago, Ill. Filed Mar. 14, 1921. Serial No. 452,186. 2 Claims. (Cl. 51—158.)

1. In a blade-sharpening device of the class described, the combination of a hone, a reciprocating carriage operatively connected with and movable longitudinally of said hone, a clamp-supporting arm pivotally connected with and supported on said carriage and adapted to swing in a plane transverse to the path of movement of the carriage, a pair of inclined invertible blade-clamping jaws having their lower blade-engaging margins transverse to the hone and in transverse relation to the path of movement of said carriage, and provided with an inclined axle in supporting engagement with said clamping jaws and rockingly mounted in normally inclined position in said pivoted clamp-supporting arm, and means for securing said clamping jaws in clamping engagement with a blade to be sharpened.

1,628,755. LUBRICATING MEANS FOR INTERNAL-COMBUSTION ENGINES. PHILIP A. TANNER and FINN T. IRGENS, South Bend, Ind., assignors to Cushman Motor Works, Lincoln, Nebr., a Corporation. Filed Feb. 12, 1925. Serial No. 8,845. 5 Claims. (Cl. 184—13.)

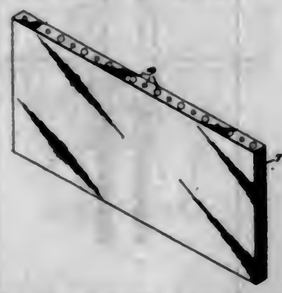
1. The combination with an engine crank shaft rotatably mounted in spaced bearing sleeves, a casing having a lubricant collecting chamber therein, a gear rotatably mounted in said casing, a gear carried by said crank shaft and formed by elongated teeth extending into the adjacent ends of the bearing sleeves thereby forming lubricant collecting chambers, said first mentioned gear meshing with the crank shaft gear and forming means whereby lubricant will be conveyed from the lubricant chamber to the crank shaft bearings.

1,628,756. SIGNALING DEVICE. CHASE TAYLOR, Washington, D. C. Filed Jan. 12, 1923. Serial No. 612,165. 6 Claims. (Cl. 177—329.)



1. A traffic signal comprising a casing having a plurality of faces, a light source in said casing, a pair of lenses for producing from said source a series of substantially parallel bands of light extending transversely to the direction in which the said light is projected, means mounting said lenses in the faces of said casing, the length of the bands of one series extending at such an angle to those of another as to differentiate the signals produced thereby, and means selectively permitting one only of said series of bands to be viewed at one time from a given point of observation.

1,628,757. RATCHET THREADING TOOL. WILLIAM W. VOSPER, Toledo, Ohio, assignor to The Toledo Pipe Threading Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 28, 1925. Serial No. 59,056. 3 Claims. (Cl. 10—124.)

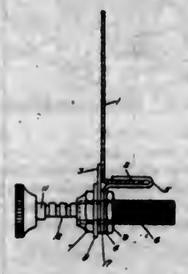


3. A threading tool embodying a ratchet, an annular series of spaced columns rising axially from said ratchet and axially terminating in an annular series of shoulders, said columns having radially extending seats open away from the ratchet, dies in said seats having shoulders approximating the radial position of the column shoulders, and a ring centered by said column shoulders to be abutted by said die shoulders for maintaining the dies against radial shifting, said ring leaving clearance between the columns for ready spill of turnings from the material outward toward said columns.

1,628,758. DRAFT-GEAR UNIT. JAMES M. WAUGH, Chicago, Ill. Filed Oct. 5, 1925. Serial No. 60,370. 6 Claims. (Cl. 213—30.)

2. The combination with a draft gear unit of the plate spring type of a separator forming a part thereof, and comprising a block having stop flanges formed on the ends thereof with the sides of said block being concaved and terminating in friction plate receiving recesses.

1,628,759. REENFORCED SHEET LEAD. GEORGE H WORRALL, Kirkwood, Mo. Filed July 5, 1924. Serial No. 724,411. 20 Claims. (Cl. 29—181.)

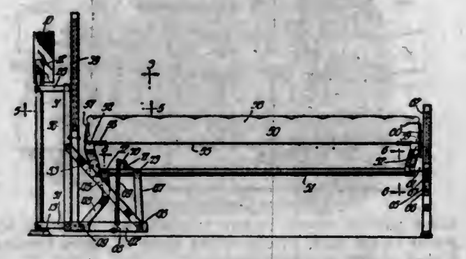


7. A composite article having a body of lead and an enveloped reenforcement of a metal having substantially the same elongation as the lead and having a greater tensile strength than the lead at high temperatures.

1,628,760. CHEMICAL-RESISTANT LINING. GEORGE H. WORRALL, Kirkwood, Mo. Filed July 5, 1924. Serial No. 724,412. 7 Claims. (Cl. 206—2.)

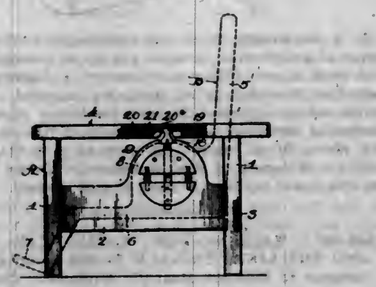
1. A container for chemicals having a lining of chemical or unalloyed lead provided with alloyed lead reinforcements which are embedded in the lead body, and means for attaching said lining, said reinforcements extending along the lining in order to support the lead body at the points of attachment against sagging or pulling.

1,628,761. ATTACHMENT MEANS FOR CONTROLLING APPARATUS. WILLIAM A. ALLEN, New York, N. Y. Filed Nov. 9, 1926. Serial No. 147,298. 10 Claims. (Cl. 74—39.)



1. An attachment device of the class described, comprising a pair of clamping members extending on opposite sides of a support, an externally threaded hollow sleeve passing through said clamping members and entirely supported thereby, a pair of nuts on the sleeve for drawing the clamping members toward each other to grip the support, a control rod slidably carried by the sleeve, and means associated with one of said nuts comprising an integral part thereof and said rod for holding the rod in different operative positions.

1,628,762. WEIGHING DEVICE. HARVEY ALLISON, New York, N. Y. Filed Jan. 16, 1922. Serial No. 529,459. 2 Claims. (Cl. 116—129.)

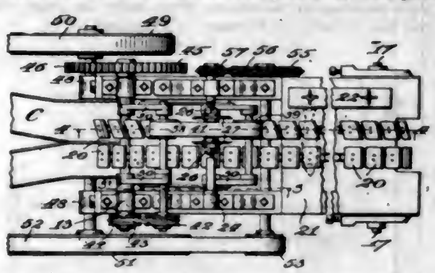


2. In a device of the class described, a mirror having a clear glass portion, a second mirror behind and substantially parallel to said clear glass portion, said second mirror being of approximately the same size and shape as said clear glass portion, and a scale and pointer located between said clear glass portion and said second mirror.

1,628,763. WALL BED. MATTHEW F. BAYER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Sept. 15, 1924. Serial No. 737,661. 3 Claims. (Cl. 5—142.)

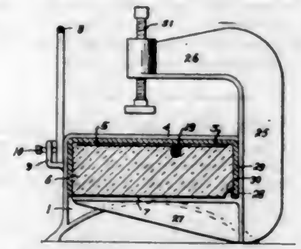
1. An up-ending bedstead construction comprising a supporting frame, a bedstead tiltable on said frame, an inner and outer swinging link pivotally mounted on said frame with axes of rotation at substantially the same height, and spaced horizontally, the swinging ends of said links being pivotally connected to said bedstead at points above said axes, and spaced apart a distance less than the spacing of the axes, an assisting tension spring, one end of which is connected to said support intermediate said axes, the other end of said spring being connected to the bedstead intermediate the link pivots.

1,628,764. ADJUSTABLE ARMCHAIR. ALEXANDER C. BEECH, Chicago, Ill., assignor to Kroehler Mfg. Co., Naperville, Ill., a Corporation of Illinois. Filed May 14, 1924. Serial No. 713,115. 8 Claims. (Cl. 155—77.)



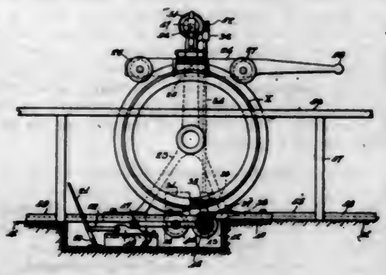
1. In a chair of the character described, the combination of a frame and a seat tiltably suspended in said frame by means of trunnions located at the sides of said frame above the center of gravity of said seat and comprising annular bearing blocks mounted on said frame and annular bearing surfaces on said seat and trunnions, and friction members yieldingly engaging said bearing surfaces and acting to increase the frictional resistance of said trunnions to the tilting of the seat as the weight supported therein is shifted.

1,628,765. FISH-CUTTING MACHINE. HAROLD E. BROEN, San Pedro, Calif. Filed Feb. 11, 1926. Serial No. 87,517. 7 Claims. (Cl. 17—4.)



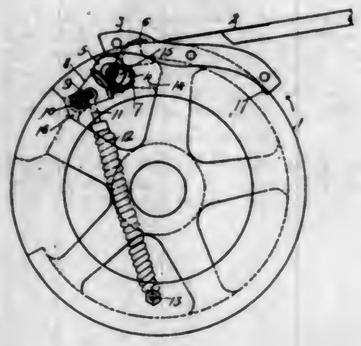
1. In a fish cutting machine, a conveyor formed in two parts, each part including a series of substantially L-shaped plates, the two series of plates being spaced apart the up-standing flanges on one series of the plates being inclined with respect to the flanges on the other series of

plates for engaging and supporting the tapered portions of the bodies of the fish that are placed on said plates



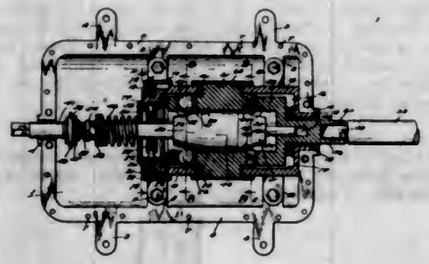
and a pair of rotary cutters arranged for operation adjacent to the edges of one of the series of plates forming a part of said endless conveyor.

1,628,766. AUTOMATICALLY-CONTROLLED, ELECTRICALLY-HEATED VULCANIZING APPARATUS. Roscoe A. Baooks, Chicago, Ill., assignor to Edward George Mumford and Henry B. Kruse. Filed Aug. 8, 1923, Serial No. 656,354. Renewed Mar. 26, 1927. 5 Claims. (Cl. 18—18.)



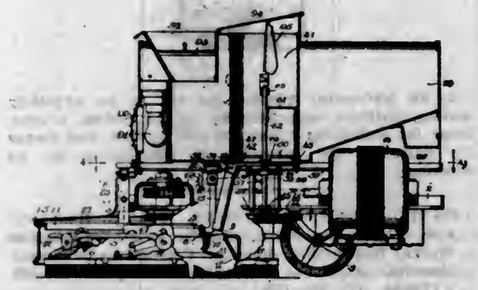
1. A vulcanizing apparatus comprising a plate in the shape of an inverted channel, a body of insulating material fixed in and filling said channel, a heating element embodied in said body of insulating material, a thermostatic device embodied in said insulating material and projecting therefrom at opposite ends of the channel, two end plates fitted against the ends of said channel, and nuts on the ends of said thermostatic device clamping the end plates against the ends of said channel.

1,628,767. MACHINE FOR TESTING CAR WHEELS AND THE LIKE. Thomas R. Brown, Jersey City, N. J., assignor to Burrows Magnetic Equipment Corporation, Jersey City, N. J., a Corporation of Delaware. Filed June 4, 1925. Serial No. 34,888. 17 Claims. (Cl. 175—183.)



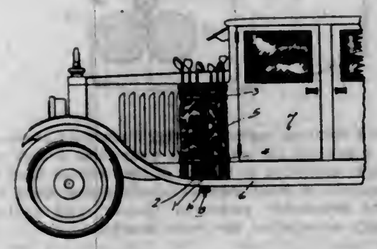
17. In a machine for testing car wheels, an incoming track, an outgoing track, a pair of rollers between and alined with said tracks for supporting the wheel to be tested, a lever at the top of the machine, idler rollers mounted on the lever on opposite sides of the fulcrum thereof, said idlers being adapted to engage the upper part of the wheel, and means for oscillating said lever.

1,628,768. GRIPPER-TENSIONING MECHANISM FOR PRESSES. Fred S. English, New London, Conn. Filed May 6, 1925, Serial No. 28,354. 5 Claims. (Cl. 101—409.)



1. In a press the combination of a cylinder adapted to carry a sheet, a shaft, grippers thereon, a lever arm on said shaft and a stationary cam for operating said lever arm to press the grippers on the sheet at the moment the latter is taken and adapted to release said pressure immediately after the sheet has been taken.

1,628,769. AUTOMATIC VARIABLE-SPEED TRANSMISSION APPARATUS. Robert Z. Farmer, Portland, Oreg. Filed June 11, 1925. Serial No. 36,339. 16 Claims. (Cl. 74—34.)



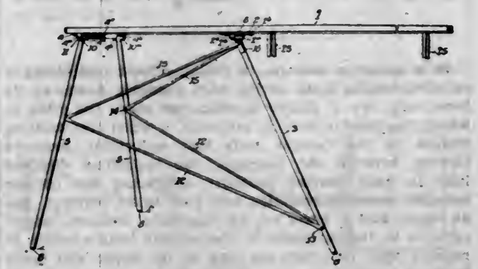
1. Variable speed transmission apparatus, consisting in a housing, an annular bearing-strap rigidly mounted interiorly of said housing, a cylinder rotatively journaled in said bearing-strap having an interior, axially cylindrical chamber therein, a fixed casing mounted in axial alignment with said cylinder formed with an interior, axially cylindrical chamber oppositely disposed to said cylinder-chamber, a clutch-device associated with said cylinder and engageable with said bearing-strap to prevent reverse rotation of the cylinder, a rotatable frame mounted in said chambers and operatively connected with a driven shaft, a plurality of balls rotatably supported in said frame in engagement with the walls of said cylinder-chamber, a plurality of pairs of balls supported in said frame and engageable with the walls of said casing-chamber, said pairs of balls being arranged in radial, superposed relation, a driving-member journaled in said housing and slidably connected to a power-driven shaft and including a pair of cones in integral opposed relation disposed axially of said chambers, respectively, and slidable to selectively engage either of said sets of balls, means to resiliently engage said driving-member with the balls in said cylinder-chamber, and means to shift said driving-member to engage the balls in said casing-chamber.

1,628,770. FLOOR-SCRUBBING MACHINE. Walter S Finnell, Hannibal, Mo., assignor to American Scrubbing Equipment Company, Hannibal, Mo., a Corporation of Delaware. Filed May 11, 1923. Serial No. 638,166. 12 Claims. (Cl. 15—50.)

1. In a floor scrubbing machine, the combination of a horizontal rotary brush ring, means for driving the same, means for delivering water interiorly of the brush ring, with provisions for distributing the water centrifugally to the brushes, and means for delivering a detergent in powdered form in the path of the centrifugally discharged water.

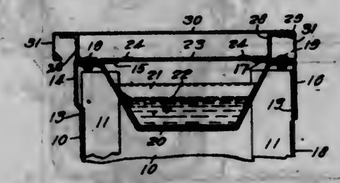
1,628,771. GOLF-BAG CARRIER. Frederick Frisk, San Francisco, Calif. Filed Apr. 6, 1925. Serial No. 21,043. 1 Claim. (Cl. 224—29.)

An automobile golf bag carrier comprising a base member, a standard extending from the base member, means for clamping the base to the running board of an automobile, curved fixed arms on opposite sides of the standard and fixed thereto at points adjacent upper and lower ends thereof, said arms being adapted to extend partly around golf bags which are placed on opposite sides of the stand with the lower ends of the bags resting on the base member and straps attached to extremities of the arms and engaging and holding the bags within the arms.



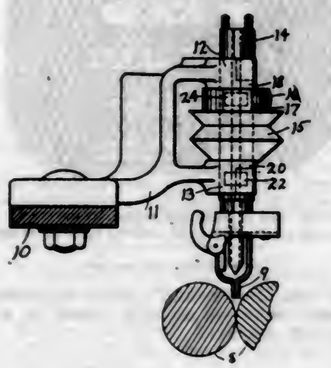
1,628,772. WASHBOARD. Henry J. Gilbert, Saginaw, Mich. Filed July 21, 1924. Serial No. 727,159. 2 Claims. (Cl. 68—29.)

1. The herein described wash board formed of a single piece of sheet metal having a crimped rubbing surface B, and a surrounding marginal bead A, the outer wall of said bead forming a marginal flange about the rear face



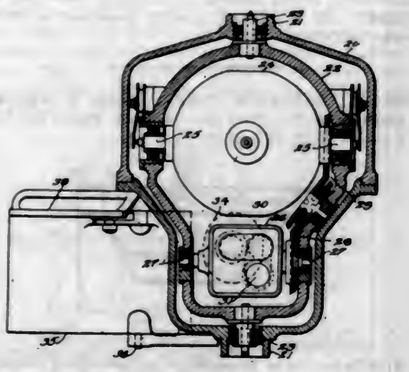
of the board, and a ball extending transversely of said rear face and having its ends secured to said flange.

1,628,773. FOLDING TABLE. Henry J. Gilbert, Saginaw, Mich. Filed Feb. 16, 1925. Serial No. 9,434. 5 Claims. (Cl. 68—10.)



1. In a folding ironing table or the like, a front bearing member secured to the table top and having broadly spaced bearing lugs, a front leg member consisting of a centrally arranged leg portion and a transverse hub portion pivotally supported by said bearing lugs, a pair of rear legs pivotally connected to said table top, a pair of connecting rods pivoted to said front leg near its foot and also pivotally connected with said rear legs at intermediate points thereon, and a pair of locking truss rods severally pivotally connected with said rear legs at intermediate points thereon, said locking truss rods being equipped with a common member arranged to slidingly engage said front leg.

1,628,774. RADIATOR COVER. Louis A. Guillemet, Flushing, N. Y. Filed Nov 13, 1925 Serial No. 68,857. 1 Claim. (Cl. 257—138.)

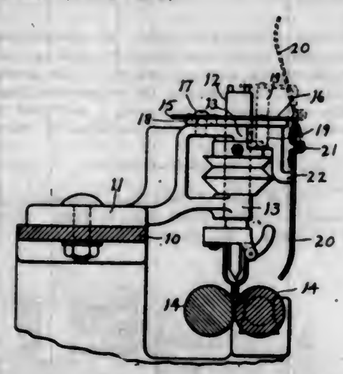


A radiator cover comprising a reticulated framework adapted to be placed over a radiator, a humidifier supported in the top of said framework, a plate closing the top of said framework and disposed over said humidifier, said plate being apertured above said humidifier, and a top piece hingedly supported on said framework in spaced relation from the top and sides thereof.

1,628,775. TWISTING HEAD FOR SPINNING MACHINES. SIGURD H. HELLAND, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Dec. 11, 1926. Serial No. 154,211. 1 Claim. (Cl. 19—154.)

In a spinning machine, a twisting head comprising a rotative tubular body having yarn engaging means at its lower end, two U shaped bearings one above the other in which the tubular body is rotatable, a whirl transmitting motion to the tubular body and adjustably mounted thereon between the bearings, two oppositely disposed lugs on each bearing partially embracing the tubular body for normally retaining said body in its bearings, and an upper and a lower set of oppositely disposed lateral cut-outs in the periphery of the tubular body adapted to register with the retaining lugs of the upper and lower bearings respectively thus facilitating the removal of the tubular body from its bearings.

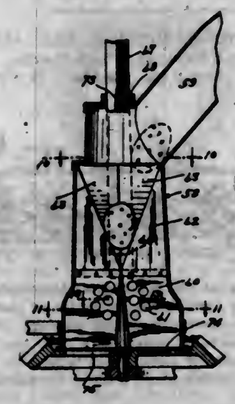
1,628,776. SIGHTING DEVICE. JAMES BLACKLOCK HENDERSON, Lee, England. Filed July 26, 1919, Serial No. 313,535, and in Great Britain May 10, 1915. 23 Claims. (Cl. 88—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



21. An optical system comprising a plurality of optical parts arranged to nullify the effect thereon of extraneous oscillatory movement and a gyroscope controlling a part of said optical system.

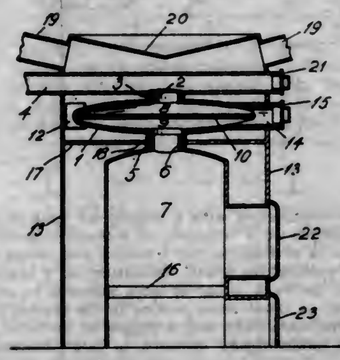
1,628,777. TELESCOPIC APPARATUS. JAMES BLACKLOCK HENDERSON, Lee, England. Original application filed July 26, 1919, Serial No. 313,533, and in Great Britain Mar. 8, 1915. Divided and this application filed May 19, 1920. Serial No. 382,678. 12 Claims. (Cl. 88—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

2. An instrument adapted for use on an angularly moving platform comprising an optical system, a gyroscope for stabilising a part of said system, and means for adjusting the gyroscope to compensate for its straying.



1,628,778. SPINNING MACHINE. FRED K. HENDRICKSON, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Dec. 27, 1926. Serial No. 157,109. 3 Claims. (Cl. 19—154.)

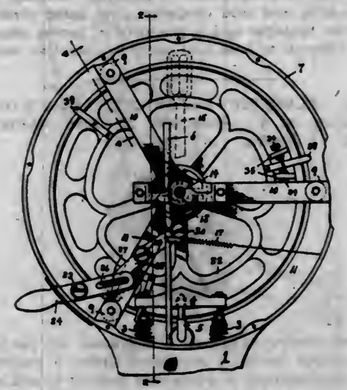
1. In a spinning machine having a plurality of twisting heads, a housing for said heads comprising a back member fixedly connected to the top of the twisting head bearing supports, a front member abutting said back member and detachably supported thereby, and a shutter swingably mounted on the front member.



1,628,779. POTATO CUTTER AND PLANTER. PEDER ISRAELSON, Hillman, Minn. Filed June 23, 1923. Serial No. 647,256. 2 Claims. (Cl. 146—59.)

1. A potato cutter comprising an upright fixed casing having an open bottom and a plurality of radial partitions dividing said casing into circumferentially spaced compartments, a plurality of knives forming top extensions on said partitions, the inner edges of said knives being sharp and in upwardly diverging relation in respect to the axis of the casing, V-shaped depending centering plates having their tops hinged at the top of the casing for horizontal swinging movement between the knives, yielding means normally holding the centering plates pressed inward in downwardly converging relation normally closing said compartments, said casing having a contracted top extension opening into the casing inward of the hinged upper ends of the centering plates, a spout arranged to deliver potatoes through the side of the casing extension onto the centering plates, a reciprocating plunger working in a passageway in the top of the casing extension and held thereby against rotation and axially aligned with the casing for forcing a

potato held by the centering plates onto the knives, and a rotatable bottom member for the casing having an escape passageway arranged to be successively brought into registration with the open bottoms of the compartments.

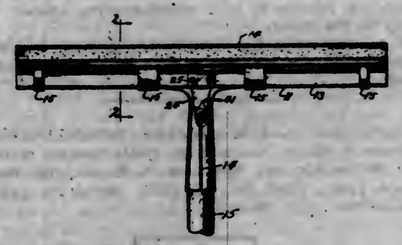


1,628,780. WARM-AIR-FURNACE RADIATOR. HEINRICH JAEGLER, Salem, Oreg. Filed Dec. 15, 1926. Serial No. 154,908. 2 Claims. (Cl. 126—99.)

1. In combination a warm air furnace having a fire box and a smoke pipe, with a radiator, circular in plan view and elliptical in cross section, said radiator comprising a casing communicating at the bottom with the fire box and at the top with the smoke pipe, said casing having a horizontal baffle plate dividing the interior of the casing into an upper and lower chamber, openings traversing said baffle plate at the periphery and establishing communication between the upper and lower chamber, and a plurality of vertical fins radiating from the outer circumference toward the shell of the furnace.

1,628,781. SCALE. LOUIS JAENICHEN, Springfield Township, Oakland County, Mich., assignor to The Standard Computing Scale Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 21, 1925. Serial No. 76,666. 3 Claims. (Cl. 265—68.)

1. In an indicating mechanism for scales, a shaft which turns according to the load on the scale, a pointer on the shaft, a stationary dial ring having graduations to indicate gross weight, a rotatable dial disc within the dial ring having graduations to indicate net weights, a



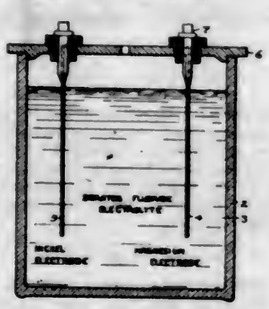
case for said mechanism, and manually operable means embodying a lever projecting out of the case for turning said dial disc.

1,628,782. SNOW SHOVEL. GEORGE J. JANOSKO, Anaconda, Mont. Filed Apr. 15, 1926. Serial No. 102,270. 2 Claims. (Cl. 294—50.)

1. A snow shovel comprising a handle and a slotted blade, a transverse blade slidable longitudinally on the upper face of the blade and arranged to scrape the said face of the shovel blade beneath a load thereon, a ferrule slidable on the handle, and connections between the ferrule and said transverse blade operating through said slot of the shovel blade.

1,628,783. WINDOW-CLEANING DEVICE. ADOLPH C. JENSEN, WILLIAM MOLONEY, and GEORGE BILTGEN, Chicago, Ill. Filed Oct. 23, 1924. Serial No. 745,290. 12 Claims. (Cl. 15—245.)

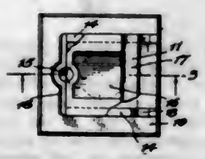
1. A window cleaning device, comprising, a tapered tubular handle formed to embrace a handle extension, a base strip having a plurality of arcuate grooves and a concavo-convex flange on one edge thereof transversely secured intermediate its ends to the handle, a clamping strip having a plurality of arcuate grooves, a depending flange adapted to engage in the concavo-convex flange of the base strip and an arm secured thereto intermediate the ends thereof adapted to project within the open end



of the tapered handle, and means operable to secure the parts in fixed relation, a squeegee strip having a central body portion and outwardly extending cleaning webs, said base strip and said clamping strip being formed to embrace the squeegee and a plurality of spring clamping members adapted to hold said parts in operative relation.

1,628,784. ELECTRIC VAPORIZER. MAX KATZMAN, Ogdensburg, N. Y. Filed May 25, 1926. Serial No. 111,534. 3 Claims. (Cl. 219—41.)

1. In an electric vaporizer, a container for the liquid to be vaporized having a restricted outlet, a supporting base for the container, a spring arm secured to and rising from the base and having its upper end overhanging the container to hold the latter on the base, an electric heater within the container, and cooperative contacts of the heater circuit mounted on the container and spring arm respectively.

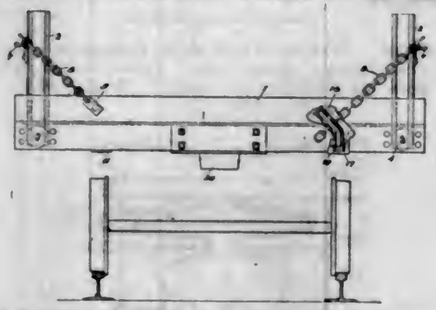


1,628,785. ELECTROLYTIC RECTIFIER. LEWIS JAMES KEELER, Cleveland, Ohio, assignor, by direct and mesne assignments of one-half to Le Rue P. Bensing, Cleveland, Ohio, and one-half to George P. Koelliker, Cleveland Heights, Ohio. Filed Jan. 18, 1926. Serial No. 81,987. 10 Claims. (Cl. 175—318.)

1. A permanent electrolytic rectifier, comprising an anode, a cathode, and a borated fluoride electrolyte in which the fluoride is in a preponderating amount relatively to the borate.

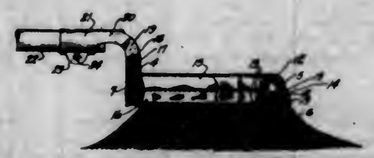
8. An electrolyte for electrolytic rectifiers, comprising a fluoride and a borate, the fluoride being in excess of the borate.

1,628,786. AUTOMATICALLY-CLOSING INKWELL. ORSON N. KELLY, Los Angeles, Calif., assignor to Frank A. Weeks Mfg. Co., New York, N. Y., a Corporation of New York. Filed Nov. 13, 1926. Serial No. 148,196. 4 Claims. (Cl. 120—68.)



1. An automatically closing ink-well consisting of but two parts, a base or body portion and a flat slidable cover, one of said parts being provided with an incline to lift one end of the cover in its limited movement incident to the insertion of a pen into the well and to cause the return of the cover to closed position upon withdrawal of the pen from the well.

1,628,787. LEACHING METHOD AND APPARATUS. ANGUS BERESFORD KENNEDY, Charlottesville, Va. Filed Feb. 21, 1922. Serial No. 538,376. 14 Claims. (Cl. 23—267.)

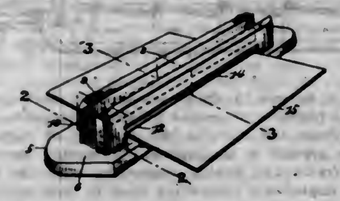


9. In apparatus of the character described having a tank with leaching fluid therein, a series of paddle wheels having blades for moving material through the fluid in the tank, the blades being provided in their free end edges with a series of narrow slots which when the blades are immersed are wholly below the level of the material in the tank.

1,628,788. TRIPPING DEVICE FOR CAR STANCHIONS. JOHN C. KNAPP, Atlanta, Ga. Filed Apr. 24, 1925. Serial No. 25,611. 2 Claims. (Cl. 105—388.)

1. The combination with a logging car bunk of a stanchion mounted on a trunnion, of a chain supporting the stanchion in position on the trunnion and means for releasably holding the chain, consisting of a bracket attached to the bunk, a bar or latch mounted to swing on the bracket, a countersunk portion in the bracket adapted to hold the chain links, and a trigger on the latch adapted to be automatically operated to lock or release the links.

1,628,789. WASH MOP. ARTHUR C. KOOTZ, Milwaukee, Wis., assignor to Gem Hammock & Fly Net Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 12, 1926. Serial No. 121,881. 3 Claims. (Cl. 15—128.)

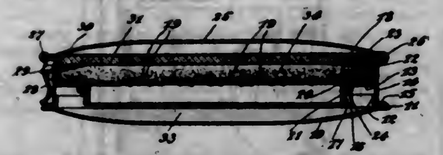


1. In a wash mop, the combination of a hose coupling provided with branch conduits, a helically coiled flexible metal distributor conduit in the form of a loop secured at its ends to said branch conduits, and a mop element having parts surrounding said conduit and securing it thereto.

1,628,790. AUTOMOBILE TIRE. PAUL P. KOSTOCK, Chicago, Ill. Filed Oct. 19, 1925. Serial No. 63,215. 2 Claims. (Cl. 152—17.)

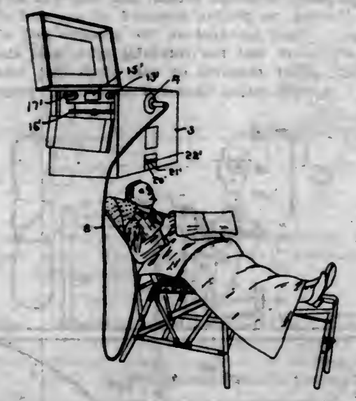
1. An automobile tire characterized by having a circumferential recess extending inwardly into the body of the tire about the tread region thereof; a pair of interfitting rings arranged in said recess and having rolled edges contacting the walls of said recess; and a tread body removably seated in said recess, substantially as described.

1,628,791. PLANING TOOL. CARL G. KNOOK, Kingman, Ariz., assignor of one-half to Henry L. McCarn, Chloride, Ariz. Filed Apr. 28, 1924. Serial No. 709,467. 2 Claims. (Cl. 51—187.)



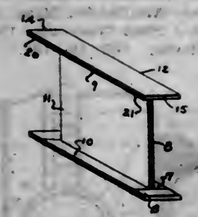
2. A dressing tool comprising a bearing member, slotted guide-members spaced thereon, an insert in the space between the members substantially conforming with the work and having a flange in a slot of one of the guide-members, and an abradant element passing through slots of the guide members and engaging with the insert.

1,628,792. PROCESS OF MAKING MONOAMMONIUM PHOSPHATE. ELDON L. LARISON, FREDERICK F. FRICK, and RAYMOND J. CARO, Anaconda, Mont., assignors to Anaconda Copper Mining Company, Anaconda, Mont. Filed May 3, 1926. Serial No. 106,546. 7 Claims. (Cl. 23—107.)



2. Process of making mono-ammonium phosphate which comprises scrubbing a gas containing ammonia with a solution of phosphoric acid until the ratio of NH_3 to P_2O_5 in the scrubbing liquid is about 1 to 2.8 by weight.

1,628,793. CONTAINER. JAMES M. MACDONALD, East Orange, N. J. Filed Mar. 20, 1926. Serial No. 96,149. 8 Claims. (Cl. 132—83.)

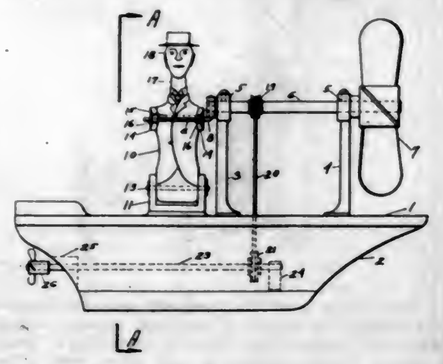


1. In a loose powder container, in combination, a bottom powder receptacle, a grid top attached to said receptacle, an upper member spaced from the grid and revoluble thereabove and a hinged cover carried by the revoluble member.

1,628,794. THERAPEUTICAL APPARATUS. LUIGI MARTIGNONI, Genoa, Italy. Filed Jan. 18, 1924. Serial No. 687,136. 4 Claims. (Cl. 174—177.)

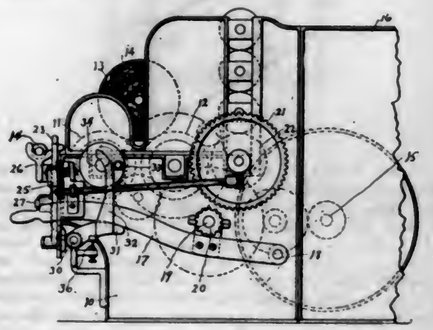
1. An apparatus of the character described adapted for supplying low frequency and high tension electrical currents for therapeutical purposes comprising a casing, an electric circuit arranged in said casing, said circuit including a current connector, independently operable switches adapted to separately control said circuit and arranged on opposite sides of the casing, a transformer includign primary and secondary windings, said primary winding being interposed in said circuit, one end of each winding being grounded on the core of said transformer, and the other end of the secondary winding being adapted for connection with a conductor for applying electrical currents to a patient.

1,628,795. RIBBON REEL. JOSEPH S. MAY, Jersey City, N. J. Filed May 1, 1923. Serial No. 635,870. 1 Claim. (Cl. 206—51.)



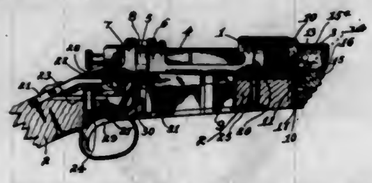
A reel formed of sheet material comprising two substantially rectangular parts each scored parallel to opposite edges, portions between said scorings being secured to each other, flange portions bent outwardly and side pieces secured to said flange portions extending beyond both ends thereof and having integral portions bent inwardly upon the inner sides of the side portions and secured thereto beyond the ends of the first two mentioned parts whereby the flange portions and the side pieces extending beyond the ends of the last mentioned portions are made substantially flush upon the inside of the reel to prevent catching of the ribbon or other wound material upon the reel.

1,628,796. AIR-PROPELLED NOVELTY DEVICE. LONNIE M. MAYO, Detroit, Mich. Filed Dec. 26, 1925. Serial No. 77,749. 1 Claim. (Cl. 46—40.)



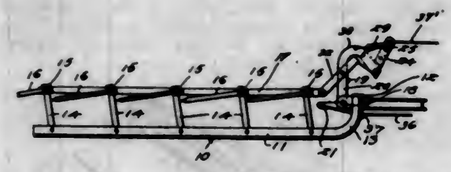
A wind propelled toy comprising a toy vehicle, a propelling mechanism therefor, a horizontal supporting frame attached to the top of said vehicle, vertical bear-

ing posts mounted on the top of said frame, said posts having bearings formed near the top ends thereof and arranged in horizontal alinement with each other, a horizontal shaft mounted within said bearings and free to turn therein, an air fan mounted on one end of said shaft and a crank mounted on the opposite end of said shaft, both crank and fan rotatable with said shaft, a cord power pulley mounted on said shaft also rotatable therewith, a cord pulley mounted on the toy propelling



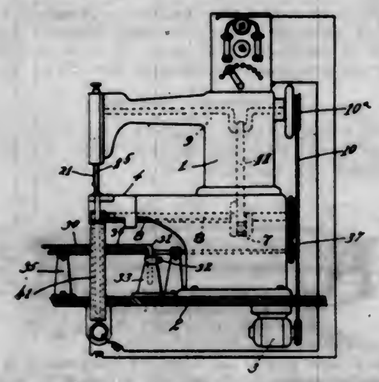
mechanism, a cord belt engaging said power cord pulley and connecting with the propelling cord pulley, an image pivotally mounted on the supporting frame positioned directly opposite the crank, said image having pivoted arm members attached thereto, said arms having holes formed in the outer ends thereof for engageing the crank, free to turn thereon, and in such a manner as to cause the image to sway as if at work, when said crank and shaft rotates under the action of the fan if subjected to wind pressure.

1,628,797. ATTACHMENT FOR COTTON LAPPERS. EDWARD MILLS, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Jan. 22, 1927. Serial No. 162,907. 3 Claims. (Cl. 19—164.)



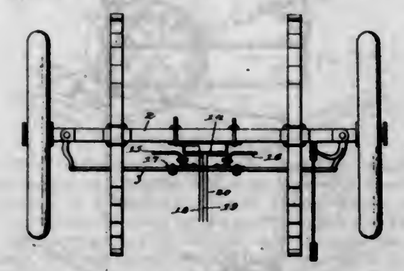
1. In a machine of the character specified, the combination of a drop-lever, a fulcrum on which said lever is swingable, a driving pinion supported by said lever, a calender roll, a driven gear attached to the calender roll adapted to mesh with the driving pinion, a trip-lever coacting with the drop-lever normally maintaining the operative gears in mesh, means when the lap is full for automatically releasing the trip-lever thus disengaging the operative gearing and means whereby said drop-lever is automatically raised thus bringing the operative gears again into engagement.

1,628,798. FIREARM. CHARLES A. NELSON, Utica, N. Y., assignor to Savage Arms Corporation, Utica, N. Y., a Corporation of Delaware. Filed Feb. 4, 1921. Serial No. 442,387. 13 Claims. (Cl. 42—75.)



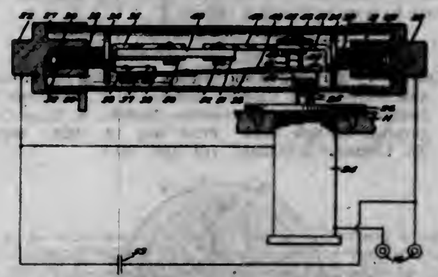
9. A firearm comprising a stock, a frame thereon having a curved bottom, and a separately made mechanism-supporting fixture having its upper face curved to correspond to the curve of said bottom and affixed thereto.

1,628,799. HARROW. JOHN NORDSTOG, Crosby, N. Dak. Filed Oct. 7, 1926. Serial No. 140,140. 6 Claims. (Cl. 55—103.)



5. In a harrow, a frame adapted to move over the ground, a plurality of ground working implements carried by the frame and movable into and out of engagement with the ground, a longitudinally extending bar carried by the frame and having connection with the ground working implements controlling them in their movements, a lever pivoted intermediate its ends to the frame, a second lever pivoted at one end to the longitudinally extending bar and intermediate its ends to one end of the first named lever and a latch limiting relative rotation of said levers about the pivotal connection thereof at a point positioning the longitudinal bar to retain the ground working implements out of engagement with the ground and a connection between the opposite end of the first named lever and a draft element.

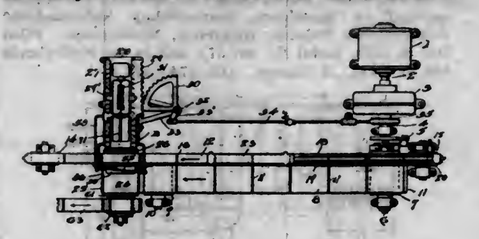
1,628,800. TAPING MACHINE. PHILIP L. O'DONNELL, Cincinnati, Ohio. Filed Sept. 11, 1923. Serial No. 662,134. 6 Claims. (Cl. 154—42.)



1. A mechanism for the purpose described, comprising a tape mounting device, a rotary feed element, over which the tape must pass, a heater with relation to which the tape is guided, and a work feeding device comprising a feed plate arranged to come in contact with the work during a portion of a cycle of movement, and a walking foot and presser foot adapted to contact with the feed plate, and means for guiding said tape from the heater to the said work feeding device.

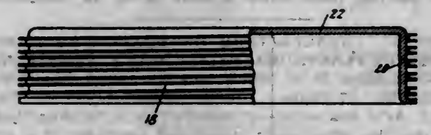
1,628,801. CIRCUIT CLOSER FOR VEHICLE SIGNALS. EDWIN ALBERT OFFET, Toledo, Ohio. Filed Oct. 6, 1920. Serial No. 415,043. 1 Claim. (Cl. 200—59.)

In a circuit closer for closing the circuits to directional signals, the combination of the usual axle and steering rod of an automobile, with a fixed contact on said axle and a pair of flexible contacts on the steering rod arranged to selectively and positively engagae said fixed contact upon movement of the steering rod, said last mentioned contacts extending forwardly from the steering rod and then bent outwardly in opposite directions and parallel to the rod whereby contact is made upon a predetermined minimum movement of the steering rod and positively maintained irrespective of the amount of movement thereof, substantially as described.



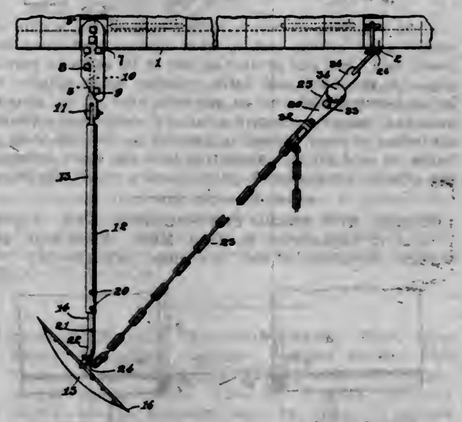
1,628,802. ELECTRICAL VIBRATOR. FREDERICK C. PEARSON, Blackrock, Ireland. Filed June 2, 1925. Serial No. 34,349. 4 Claims. (Cl. 200—90.)

1. In an electrical vibrator, a casing, an electromagnet in said casing having a pole piece projecting outside of the casing, an enclosed vessel, vibratory contacts in said vessel, an armature mechanically connected to one of said contacts and also enclosed in the vessel, said armature coacting with the projecting pole piece, and means for holding the vessel on the casing in such position that the electromagnet can influence the armature, said means also serving as a connection to the contacts in the tube.



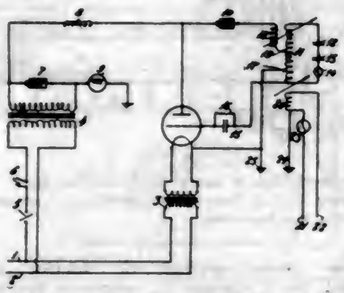
1,628,803. PACKAGING MACHINE. JOHN C. PINTER, Chicago, Ill. Filed Mar. 27, 1926. Serial No. 97,885. 7 Claims. (Cl. 226—14.)

1. The combination with a charge-carrying cracker-carrier and a complementary carton-conveyer, and means for simultaneously and intermittently moving said carrier and conveyer, and a transversely arranged drop table adapted to receive successive cartons, of means for



bodily transferring a charge from the carrier to a complementary carton between intermittent movements of the carrier and conveyer.

1,628,804. MANUFACTURE OF BRAKE DRUMS. JACOB L. PRICE, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 27, 1925. Serial No. 46,505. 3 Claims. (Cl. 29—159.)

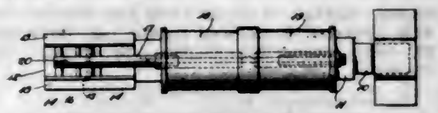


1. That method of making a brake drum which comprises the steps of (a) forming a substantially cylindrical braking flange, (b) winding a helix of material angular in cross-section and having outwardly-extending flange material and inner bore of substantially the same diameter as the flange, (c) cutting a section from the helix, and (d) mounting said section on the braking flange with its flange material serving as heat-radiating fins for the drums.

1,628,805. RAILROAD GRASS-LINE AND DITCH CUTTER. WILLIAM H. REDNOUR, Dugger, Ind. Filed Nov. 27, 1926. Serial No. 151,180. 10 Claims. (Cl. 37—105.)

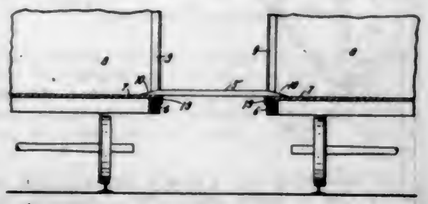
5. The combination with a railway car, of a grass line cutter, an arm on which said cutter is mounted, and means for detachably connecting the inner end of said arm with the car, said means including a plurality of pins between which the inner end of said arm is situated.

1,628,806. DIATHERMY DEVICE. FRANCISCUS HENRICUS REIJNDERS, Soesterberg, Netherlands, assignor of one-half to Naamloose Vennootschap Nederlandsche Seintoestellen Fabriek, Hilversum, Netherlands. Filed Oct. 8, 1923, Serial No. 667,371, and in the Netherlands Oct. 6, 1922. 7 Claims. (Cl. 174—177.)



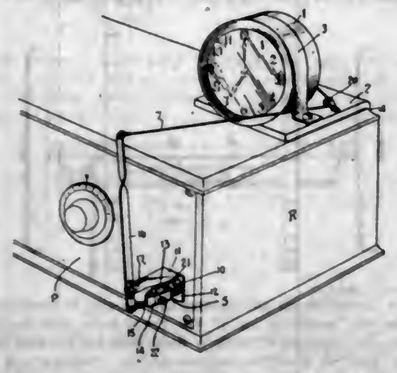
1. A device for diathermy comprising in combination means for generating high frequency currents of constant intensity including a triode and means for maintaining the electrode temperature constant during the treatment.

1,628,807. MANUFACTURE OF SHAPED ARTICLES OF SET PLASTIC MATERIAL. OVID E. ROBERTS, Jr., Washington, D. C. Filed July 26, 1923. Serial No. 654,035. 17 Claims. (Cl. 18—47.5.)



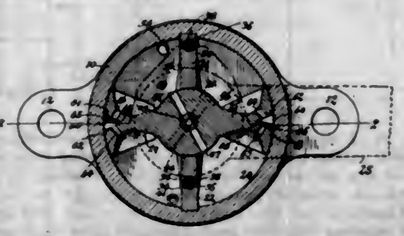
11. As a new article of manufacture, a building block or the like, structurally strong and consisting of a set water-resistant composition comprising hydrated lime and filler material comprising comminuted metallurgical slag and corncobs intimately commingled and incorporated therewith, said hydrated lime constituting from one-third to two-thirds of the composition.

1,628,808. AUTOMATIC RECIPROCATING BOLT. EDWARD RUFF and ELMER C. L. BAILEY, Newark, N. J. Filed July 8, 1926. Serial No. 121,228. 5 Claims. (Cl. 70—50.)



1. In a locking device, a sliding bolt having a pair of spaced arms at one end, a latch member positioned between said arms and pivoted at one of its edges to points adjacent the bolt, said latch member being tiltable to swing between positions on opposite sides of its pivotal axis and engage respective arms, an electro-magnetically controlled plunger extending parallel to the bolt, and a finger on said plunger projecting into the space between the arms and engaging the latch member to tilt the same.

1,628,809. RUN BOARD FOR FREIGHT CARS. FERDINAND E. SANDSTROM, St. Paul, Minn. Filed Sept. 18, 1925. Serial No. 57,197. 2 Claims. (Cl. 14—72.)

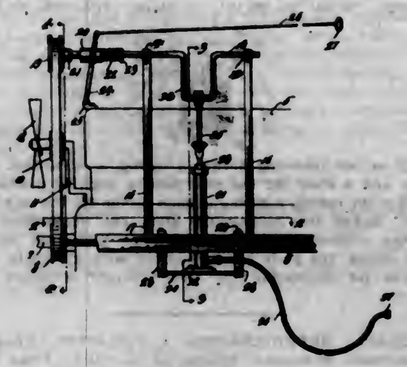


1. A run board of the class described having a longitudinal slot, a metal bar narrower than the slot secured in the said slot and having a series of inverted U-shaped notches across its top and sides, and a staple shaped pin adapted to straddle the bar and be dropped into either one of said notches and engage with both of its legs simultaneously the outer edge of the sill of a side door of a railway car.

1,628,810. TIME-CONTROL MECHANISM FOR RADIO-RECEIVERS. ROBERT B. SCHULTHEIS, Brooklyn, N. Y. Filed Aug. 31, 1926. Serial No. 132,798. 1 Claim. (Cl. 161—1.)

Time control mechanism readily applicable to and removable from a cabinet containing electrical apparatus, said cabinet having a movable switch element on its front wall, said mechanism comprising clock mechanism having alarm means including an alarm winder, a base for said clock mechanism adapted to rest upon the top of said cabinet, a depending flange connected to the base and adapted to engage against the rear of said cabinet and resist forward displacement of the base and the clock mechanism thereon, and a pulley on the alarm winder, a cord connected to the pulley, a lever arranged for connection to said switch element and also connected to the cord, and cord guides, whereby rotation of the alarm winder winds the cord upon the pulley and operates the lever to move said switch element.

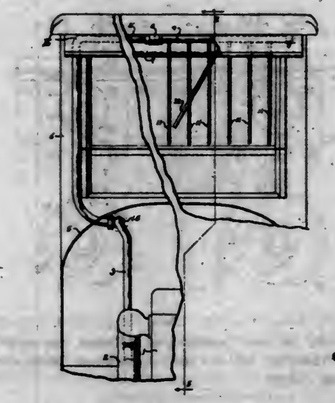
1,628,811. SHOCK ABSORBER. ALBERT B. SHULTZ and ANTHONY B. CASPER, Buffalo, N. Y., assignors to Houde Engineering Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 19, 1926. Serial No. 110,101. 2 Claims. (Cl. 188—89.)



1. A shock absorber comprising a pressure chamber adapted to contain a resistant fluid, a piston reciprocable in said pressure chamber and having a passage therethrough which opens into said chamber on opposite sides of said piston, and which has a central valve chamber and ports leading from opposite sides of said valve chamber to opposite sides of said piston, and a plate valve which is movably arranged in said valve chamber and which in its central position uncovers both of said ports and permits the flow of resistant fluid through said passage, but which at either end of its movement, closes one of said ports and prevents such flow.

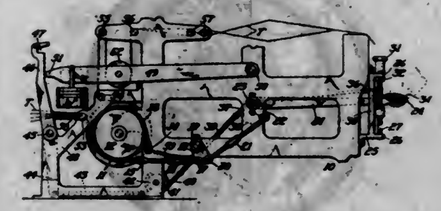
1,628,812. TRAVELING BAG. BENJAMIN H. SHWAYDER, Denver, Colo. Filed July 5, 1924. Serial No. 724,330. 2 Claims. (Cl. 190—51.)

1. The combination with a traveling bag having a fixed bottom and flexible side walls extending upwardly therefrom, of a reenforcing frame in engagement with and riveted to the lower portions of the side walls, whereby the lower portion of the bag is held rigidly in conformity with the frame, and a liftable lid resting on the frame.



1,628,813. TIRE-INFLATING APPARATUS. WILLIAM C. STEPP, Penelope, Tex. Filed Dec. 4, 1925. Serial No. 73,282. 3 Claims. (Cl. 180—53.)

1. An attachment for motor vehicles comprising a pair of standards having base portions adapted for securing to the frame of a motor vehicle, said standards having their upper ends provided with alined bearings, a crank shaft journalled in said bearings and having a crank between the bearings adapted for connection to a pump, said crank shaft being provided on its forward end with a belt pulley adapted to receive the belt of a motor vehicle.

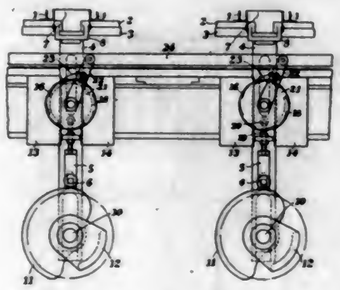


1,628,814. FROST-EXTERMINATING MEANS FOR WINDSHIELDS. ALPHA D. UPDEGRAFF, Valley Center, Kans. Filed Dec. 23, 1926. Serial No. 156,636. 3 Claims. (Cl. 20—40.5.)

1. In a frost exterminating means for wind shields, a pipe connecting with the exhaust manifold of the engine, extending to and horizontally across the top of the wind shield, a swivel joint in the horizontal portion of the pipes so that the outer end thereof will rotate, a plurality of pipes laterally extending from the rotatable portion of the first said pipes, the last said pipes extending across the wind shield, the lower end of which is curved toward the wind shield, flexible stoppers to close the ends of last said pipes and simultaneously function as a

cushion, a plurality of apertures distributed longitudinally along said pipes as ejecting means for the heated air or gas against the wind shield.

1,628,815. BALANCED LET-OFF FOR LOOMS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1925. Serial No. 63,175. 3 Claims. (Cl. 139—104.)



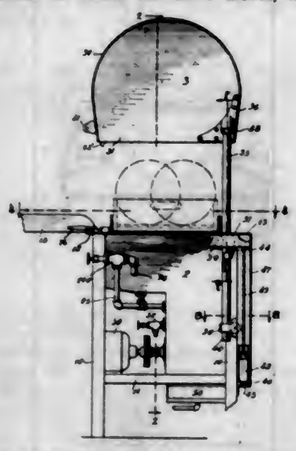
1. In a let-off mechanism for looms, two independent tensioning devices each adjustable and each capable of exerting the same tension on the warp threads, one of said devices being normally operative to tension the warp and the other being normally idle, means to adjust the tension of the normally operative device, said means being movable from any adjusted position to increase the tension of the normally operative device when the normally idle device is operative, and manually controlled means mounted on the first named means to render said normally idle device operative.

1,628,816. PLATEN PRINTING PRESS. PAUL WIEGHARDT, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Dec. 5, 1925, Serial No. 73,362, and in Germany Dec. 24, 1924. 3 Claims. (Cl. 101—198.)

1. A platen printing press with vertically reciprocating printing couples for printing materials fed intermittently through the press with variably composed printing patterns, characterized by rotatable circular discs (16, 17) provided at their circumference with axially projecting rims (18) which according to the position of

the discs engage below members (19, 20) secured on the printing couple (1 to 9) and thereby hold the print-

ing couple in its top position or release the said members and thereby allow the downward movement of the printing couple.

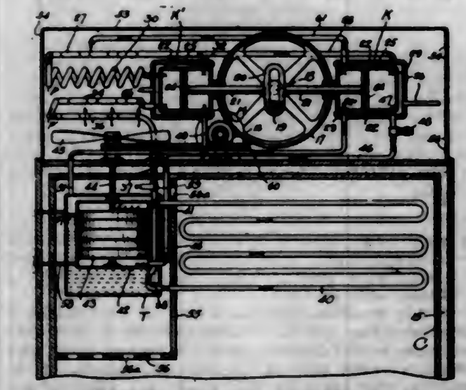


1,628,817. TIRE-TRIMMING MACHINE. GEORGE F. WILSON and CHARLES W. LEGUILLON, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1925. Serial No. 9,139. 19 Claims. (Cl. 164—38.)

3. A tire-trimming machine comprising three tire-supporting and guiding rollers adapted to engage the inner periphery of the tire at respective positions in an arc of not less than 180°, means for driving one of said rollers to drive the tire, and a trimming device in the orbit of the tire adapted to trim the same as it is so driven.

1,628,818. WASHING MACHINE. ERICH R. ZADEMACH, New Rochelle, N. Y., assignor, by mesne assignments, to Hobart Manufacturing Company, Troy, Ohio, a Corporation of Ohio. Filed Aug. 26, 1925. Serial No. 52,521. 18 Claims. (Cl. 141—9.)

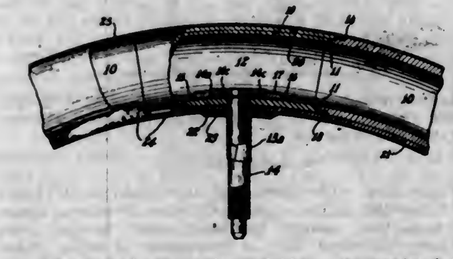
3. In a washing machine, the combination of a tank having a movable cover, a liquid distributor, a valve controlling the supply of liquid thereto, a control lever for said valve, movable in a direction transverse to that in which the cover moves, a movable member, movable in the direction in which the cover moves, and yieldable



means for normally positioning said member in the path of the control lever and in the path of the closing movement of the cover.

1,628,819. AIR VALVE. HAROLD BROWN, Kansas City, and GEORGE R. UHL Tonganoxie, Kans. Filed Feb. 23, 1926. Serial No. 90,181. 1 Claim. (Cl. 303—80.)

In an air releasing device, a casing, a valve seat portion and a stem for the seat portion slidably positioned within the casing, a spring tension means for the seat portion, means for guiding the stem and supporting the spring, consisting of a plate suitably positioned within the casing, the plate being provided with air ports, and means for depressing the stem, thereby releasing the valve.



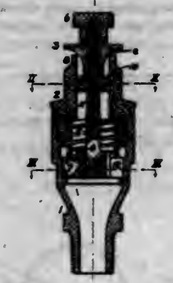
1,628,820. REFRIGERATING APPARATUS. CHARLES RICHARD BURHNELL, Beverly Hills, Calif. Filed May 15, 1924. Serial No. 713,537. 2 Claims. (Cl. 62—98.)

1. A refrigerating apparatus comprising an air compressor, an abstractor in communication with the compressor and comprising a water jacketed duct, the jacket

of which is porous to permit evaporation of the water whereby the air from the compressor is cooled by the latent heat of evaporation of the water, a turbine for creating a forced circulation of air over the abstractor, said turbine receiving the cooled air from the abstractor so as to be operated thereby, a tank confining a refrigerant in surrounding relation to the turbine, means by which the air delivered to the turbine from the abstractor is returned to the compressor, and means for operatively connecting the turbine to the compressor for aiding the latter in compressing the air.

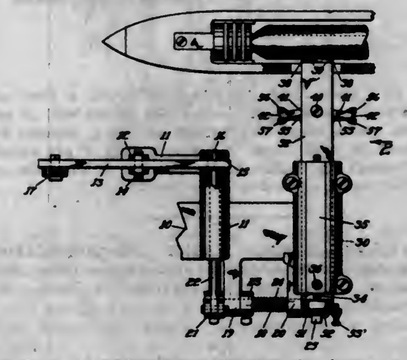
1,628,821. METHOD OF MAKING HOLLOW ANNULAR ARTICLES. JOHN J. CALLAHAN and FRANCIS C. ROGERS, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Oct. 25, 1923. Serial No. 670,760. 6 Claims. (Cl. 154—14.)

1. The method of inserting a fluid-passage member into the wall of a tubular, annular, rubber article which comprises forming a short tubular structure, building thereinto a fluid-passage member during such formation, forming a relatively long tubular structure, and connecting the ends of the latter structure to form a tubular annulus by inserting between and joining to said ends the short tubular structure.



1,628,822. PHOTO-ELECTRIC DEVICE. THEODORE WILLARD CASE, Scipio, N. Y., assignor to CASE Research Laboratory Incorporated, Auburn, N. Y., a Corporation of New York. Filed Dec. 19, 1921. Serial No. 523,603. 3 Claims. (Cl. 250—35.)

1. A thermo-electric device comprising a bulb, a pair of spaced electrodes within the bulb, means for maintaining one of the electrodes heated, means for causing a thermo-electric current to flow between the electrodes, and a substance that emits electrons in substantial accordance with the intensity of the light to which it is subjected disposed in such a position with respect to the path of the thermo-electric current between the electrodes that the emitted electrons affect the conductivity of such path, and thereby vary the thermo-electric current in substantial accordance with the intensity of the light to which the substance is subjected.



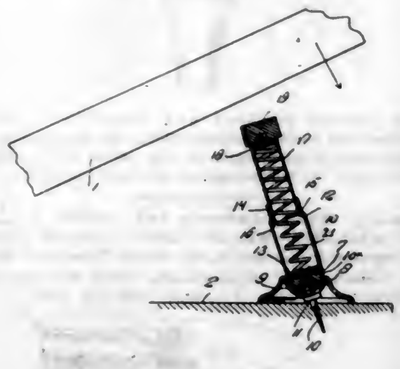
1,628,823. SELF-FLUSHING ATOMIZING NOZZLE. THOMAS CHESTER, Detroit, Mich., and WILLIAM MACMICHAEL, Wadsworth, Ohio. Filed Sept. 29, 1924. Serial No. 740,618. 2 Claims. (Cl. 299—125.)

1. In a fluid diffusing device, an inlet member, an outlet member detachably secured to the inlet member, a diffuser cooperating with the outlet member to regulate the fluid egress, an annular recess within the outlet member, a guide member secured to the diffuser and co-acting with the inlet member to maintain said dif-

fuser centrally positioned with respect to the outlet member, and a spring between the guide member and the outlet member and seated in the recess for yieldingly maintaining the diffuser against the outlet member.

1,628,824. WEFT DETECTOR FOR LOOMS. AUGUSTIN J. CHEVRETTE, Worcester, Mass., assignor to The Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1925. Serial No. 70,161. 2 Claims. (Cl. 139—286.)

1. In a weft detector mechanism for looms, a support, a slide movably mounted thereon, a yarn penetrating detector fixed to the slide, a yarn impinging detector mounted on the slide for lateral movement, an arm extending from the movable detector and terminating at a point outside the slide, means to hold the slide yieldingly in rearward position, a transmitter located entirely outside the slide and having a forked end spaced from said slide to receive the arm of the movable detector, yielding means to hold the transmitter in rearward position, and an indicating mechanism effective to indicate exhaustion of weft when the movable detector moves laterally with respect to the slide upon forward movement of the latter.



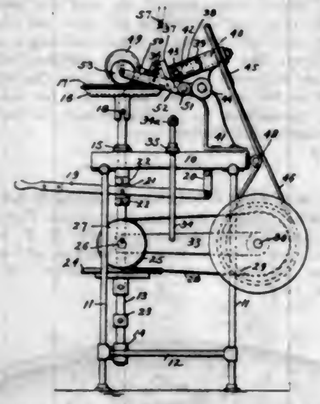
1,628,825. SPARK PLUG. WILLIAM GEORGE CLAYTON, St. Kilda, near Melbourne, Victoria, Australia. Filed July 12, 1926, Serial No. 122,004, and in Australia Feb. 26, 1925. 1 Claim. (Cl. 123—169.)

In a spark plug, a grounded electrode, an insulator, and a plurality of electrodes carried by said insulator the sparking points of which are arranged in chords of arcs

of a circle concentric to the axis of said insulator, the circumference of which circle lies within sparking distance on said grounded electrode, said plurality of electrodes forming a series of spark gaps, and said insulator being adjustable by rotation so as to bring the terminal electrodes of any of said chords into sparking relation with said grounded electrode for the selective production of different numbers of sparks, in series.

1,628,826. DOOR BUMPER. LEON COVALENCE, Linden, N. J. Filed Mar. 11, 1926. Serial No. 94,078. 4 Claims. (Cl. 16—85.)

4. In a door bumper and in combination, a base having a semi-globular socket and a slot in the wall of said socket, and a cushioning portion having a rounded end disposed in said socket and also having a pin extending through and adjustable in the slot of the base and terminating in a wooden screw portion.

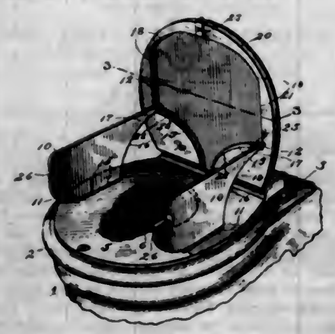


1,628,827. AERIAL CABLE TRANSPORTATION MEANS. LEVITT LUZERN CUSTER, Dayton, Ohio. Filed Dec. 20, 1924. Serial No. 757,285. 1 Claim. (Cl. 191—34.)

A device of the type described, comprising aerial supports, cables secured to said supports, and being electrically charged, a group of spaced pulleys on said cables, a lining of friction and insulating material upon the grooved periphery of each pulley, a carriage to which said pulleys are secured, an electric motor within the carriage between the pulleys, and electric brushes on said carriage in circuit with the motor, to collect current from said cables.

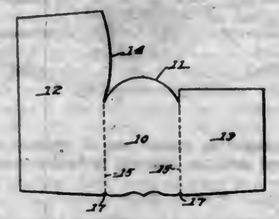
1,628,828. PIE-ROLLING MACHINE. JOHN W. DENMEAD, Akron, Ohio, assignor of one-half to William A. Johnston, Akron, Ohio. Filed May 19, 1926. Serial No. 110,243. 16 Claims. (Cl. 107—10.)

1. A machine for shaping material, such as dough, comprising two coacting rotary members, each having its rotating means, and a movable support for one of such members for bringing them together in working relation and separating them, one of such members having a material-engaging surface that extends substantially from the center of rotation of the other rotary



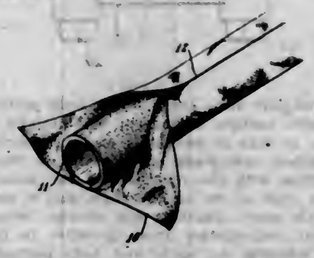
member radially outward and is adapted to have contact with the material as the two members rotate, whereby a thin disc is formed.

1,628,829. PROCESS OF DISTILLING HYDROCHLORIC ACID. LOUIS CHARLES DREFAHL, Lakewood, Ohio, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 5, 1923. Serial No. 630,144. 1 Claim. (Cl. 23—154.)



Process of distilling hydrochloric acid solutions which comprises flowing a crude solution of hydrochloric acid of greater concentration than constant boiling acid continuously in one direction in the form of a thin layer onto, over and off of a heating surface and withdrawing and condensing the vapors generated while regulating the rate of flow relative to the rate of vaporization to produce a condensate of greater concentration than constant boiling acid.

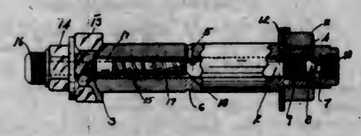
1,628,830. WATER-CLOSET SEAT. SAMUEL L. EASTBURN, Sloatsburg, N. Y. Filed June 8, 1925. Serial No. 35,541. 3 Claims. (Cl. 4—239.)



1. In a closet seat structure, the combination of a seat, side arms hinged thereto to fold down on the seat when not in use, said arms being cut out at their rear ends and forming rearward extensions thereon, a lid hinged to the seat and adapted to be engaged by said extensions when the arms are in an upright active position, said lid being formed with a recess adapted when the lid is closed down on the folded arms to receive and house said arms, and the end of said recess being formed to follow the contour of the cut-away portions of the arms.

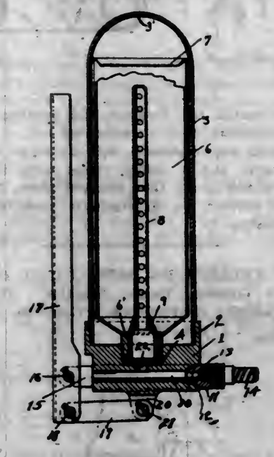
1,628,831. REPAIR PIECE FOR BOOTS AND SHOES. ROBERT M. ELMSTROM, Malden, Mass., assignor to Standard Manufacturing Co., Malden, Mass., a Corporation of Massachusetts. Filed Jan. 22, 1926. Serial No. 83,123. 1 Claim. (Cl. 36—55.5.)

As an article of manufacture, a repair piece for a boot or shoe comprising a piece of leather having the shape of the bottom of the heel and provided with a pair of side pieces integrally connected therewith along its sides and bent up at right angles along the sides of the bottom piece and then curved around the back and connected together at one side, one of them being longer than the other.



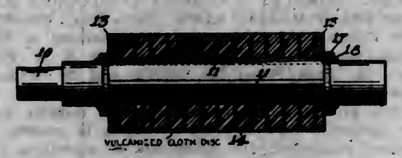
1,628,832. FABRIC-COVERED STRIP MATERIAL AND METHOD OF MAKING THE SAME. ABRAM E. FALOR, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 700,580. 5 Claims. (Cl. 154—8.)

1. In combination, flexible cylindrical tubing, and square-woven, bias-cut fabric snugly covering said tubing and adhered thereto, one set of threads of said fabric being disposed at an angle of 35 to 40 degrees to an element of the said tube.



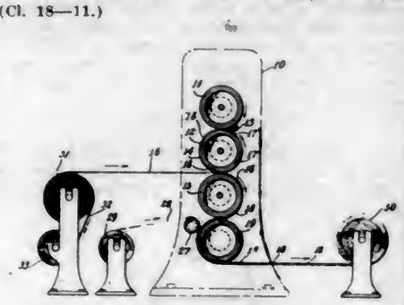
5. The method of covering tubing with rubberized fabric which comprises cutting a strip of square-woven rubberized fabric of sufficient width to circumscribe the tubing, so that the lines of cut intercept either the warp or weft threads of the fabric at an angle materially less than 45 degrees, and applying the said strip longitudinally to and wrapping it laterally about the tubing.

1,628,833. BEARING-PIN LUBRICATOR AND OBSTRUCTION EJECTOR. MILTON A. FRANK, San Francisco, Calif. Filed Mar. 7, 1925. Serial No. 13,747. 1 Claim. (Cl. 308—120.)



A bearing pin obstruction ejector comprising a member having a hole therethrough, a threaded nipple containing a ball check valve threaded into said member, a threaded plunger retainer, a plunger pin smaller than the bore of said member extending thereinto through the plunger retainer, said plunger having a striking head on its outer end, a spring adapted to hold said plunger at its innermost position under pressure normally sufficient to force grease through the bearing but capable of being pushed out if the grease passage is obstructed, said plunger being adapted to be driven to its innermost position by striking it a sharp blow to increase the pressure acting to clear the passage of the obstruction.

1,628,834. HIGH-PRESSURE VACUUM GREASE GUN. MILTON A. FRANK, San Francisco, Calif. Filed Jan. 25, 1926. Serial No. 83,490. 2 Claims. (Cl. 221—47.3.)



1. A high pressure grease gun comprising a base, means to expel successive charges of grease therefrom at high pressure, an upwardly projecting rigid cover detachably secured to said base, a passage in said base leading from said expelling means to the interior of said cover, a socket about said passage for supporting a grease receptacle.

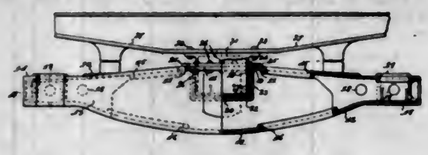
1,628,835. PRESS ROLL FOR WOOL WASHERS AND THE LIKE. FRANK L. FURBUSH, Westford, Mass., assignor to C. G. Sargent's Sons Corporation, Graniteville, Mass., a Corporation of Massachusetts. Filed Jan. 11, 1926. Serial No. 80,480. 1 Claim. (Cl. 68—33.)

In a press roll for the purpose described, the combination with the shaft and a key, of a series of vulcanized rubber and cloth discs located on the shaft and having their surfaces in contact so as to provide a continuous outside cylindrical surface of vulcanized rubber and cloth, and a series of metallic discs alternating with the cloth discs and positively keyed to the shaft and having projections on both sides entering the cloth discs for holding them positively to the shaft.

1,628,836. APPARATUS FOR FORMING AND CUTTING PLASTIC MATERIAL. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 17, 1923. Serial No. 619,598. 7 Claims. (Cl. 18—11.)

1. In apparatus for forming and cutting plastic material the combination of an embossed roll, a roll adapted to coact with the embossed roll to form an embossed sheet of stock, and a cutter timed with the embossed roll and mounted to cut the embossed sheet, from the embossed side thereof, on determinate lines with relation to the embossing.

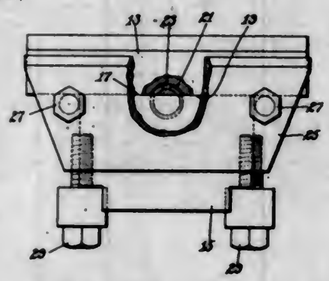
1,628,837. PROPELLING MECHANISM FOR SHIPS. FRIEDRICH GEBERS, Vienna, Austria. Filed July 3, 1924. Serial No. 724,143, and in Germany July 6, 1923. 2 Claims. (Cl. 115—37.)



1. In a drive mechanism for ships, the combination of propellers, immersing during travel with only a portion of the propeller circuit, and propellers completely submerged, each type of propeller being driven by separate machines, the submerged propeller cooperating with the semi-submerged propellers for high speed but operating alone at low speeds, the semi-submerged propellers at low speeds remaining stationary.

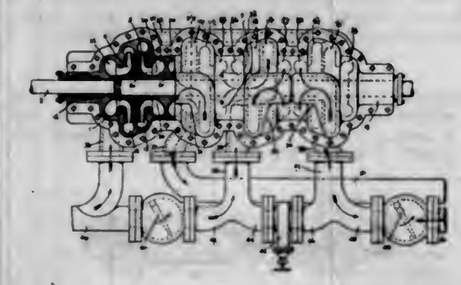
1,628,838. COMPLEX ANTIMONY COMPOUNDS AND PROCESS OF MAKING SAME. HANS HAHL, Elberfeld, near Cologne-on-the-Rhine, Germany, assignor to Winthrop Chemical Company, Inc., New York, N. Y. Filed Mar. 29, 1926. Serial No. 98,272, and in Germany June 6, 1925. 3 Claims. (Cl. 260—11.)

1. The process for the manufacture of complex antimony compounds, which process consists in causing an antimonyl compound of a polyphenol as containing two hydroxyl groups in ortho-position to each other to interact with a neutral salt of a carboxylic acid containing in the molecule easily migratory hydrogen atoms.



1,628,839. TRUCK BOLSTER. BRODERICK HASKELL, Franklin, Pa. Filed June 8, 1926. Serial No. 114,521. 6 Claims. (Cl. 105—230.)

1. A truck bolster comprising a body section having a top, bottom and ends, said top having an opening between said ends, a female member of a bearing within the body section and consisting of a hollow seat having a bottom at one end and an open top provided with an



outwardly projecting flange seated on and attached to the surface of said top adjacent to said opening.

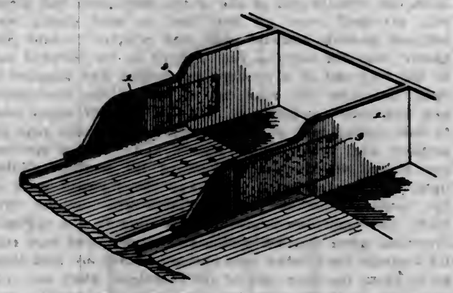
1,628,840. KNIFE FOR SPLITTING MACHINES. JOHN J. HEYS, Lynn, and ALBERT R. BRADEN, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 30, 1924. Serial No. 689,471. 13 Claims. (Cl. 69—11.)

1. A two-part knife comprising a body portion having a flat under surface, a blade of substantially the same thickness as that of the knife and also having a flat under surface, said blade being located in front of the body portion with the rear edge of the blade abutting the front edge of the body portion, and a member for holding the parts together, said member being capable of manual manipulation from operative to inoperative position whereby the blade and body portion may be readily detached from each other at any time.

1,628,841. MULTISTAGE CENTRIFUGAL PUMP. ALADAR HOLLANDER, Berkeley, Calif., assignor to Byron Jackson Pump Mfg. Co., Berkeley, Calif., a Corporation of California. Filed June 2, 1926. Serial No. 113,171. 3 Claims. (Cl. 103—106.)

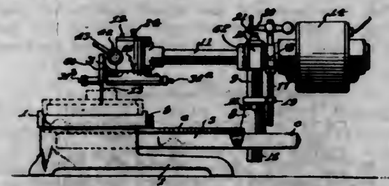
1. In a multi-stage centrifugal pump a group comprising a plurality of pairs of similar impellers, the impellers of each pair mounted back to back with their discharge compartments adjacent and their suction compartments remote, the pair of impellers representing the lowest stage being located at one end of said group, and the pair of impellers representing the next higher stage, located at the other end of said group, and impellers of the highest stage intermediate said end positioned pairs, all of said impellers fixed on a shaft and inclosed within a casing and fluid ducts between the discharge compartment of each impeller and the suction compartment of the impeller of the next higher stage in combination with pipe connections comprising a suction pipe adapted to supply fluid to be pumped to the suction compartment of the first stage, a one way valve and a branch adapted to supply fluid to be pumped to the suction inlet of an intermediate stage, a delivery pipe adapted to receive pumped fluid from the highest stage, a branch adapted to receive pumped fluid from another intermediate stage and a one way valve between said branch and said delivery pipe and a main gate interposed between said branches.

1,628,842. WRENCH. JOHN H. HORSBURGH, Cleveland, Ohio. Filed Jan. 17, 1923. Serial No. 613,084. 11 Claims. (Cl. 81—127.)



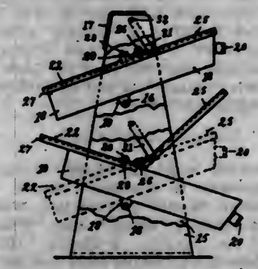
1. A wrench comprising fixed and movable jaws, a handle having spaced yoke arms integral therewith, a web integral with said arms, a fulcrum element on said web, and locking means for the movable jaw adapted to be actuated by said arms.

1,628,843. POWDER-APPLYING DEVICE FOR MEDICINAL PURPOSES. DANIEL T. HORTON, East Cleveland, Ohio, assignor to The Thyogen Company, East Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 20, 1921. Serial No. 493,844. 2 Claims. (Cl. 128—266.)



1. A powder-applying device for medicinal purposes comprising a stem and a tip or nozzle attached to the stem, said tip having rearwardly of the point of attachment, a rearwardly facing open ended cavity, and forwardly of the point of attachment having a front cavity, the stem having openings communicating with the rear cavity and the forward cavity having divergent forwardly directed discharge openings leading therefrom.

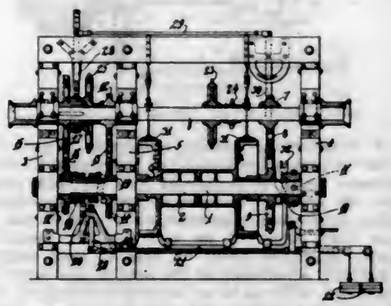
1,628,844. DIVISION BOARD FOR BOWLING ALLEYS. CHARLES B. HOUSER, Detroit, Mich. Filed July 21, 1925. Serial No. 45,062. 4 Claims. (Cl. 273—57.)



1. A division board for bowling alleys having strike plates of soft, tough material not liable to sliver or crack imbedded therein and extending over the entire impact area of the division board.

1,628,845. WOODWORKING MACHINE. CLARENCE W. JACKSON, Seattle, Wash., assignor of one-half to Charles Bilderback, Seattle, Wash. Filed Mar. 13, 1925. Serial No. 15,316. 16 Claims. (Cl. 144—134.)

1. A woodworking machine comprising a vertical adjustable support, a horizontal arm mounted for rotatable adjustment about a horizontal axis on said support, means for holding the arm in adjusted positions, a coupling means fixedly mounted on an end of said arm, a tool head supported by said coupling means and rotatably adjustable about an axis at right angles to the rotatable adjustment of the arm, a tool arbor journalled in the tool-head at an angle to the rotation of the head, means for holding said tool-head parts in adjusted positions, and means for actuating said arbor in its journals.



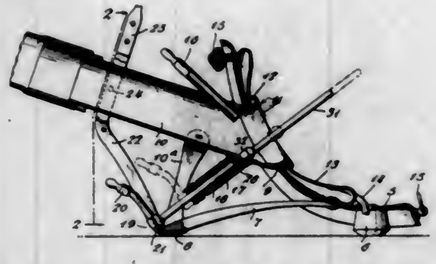
1,628,846. DISPLAY AND VENDING APPARATUS. CLARENCE E. KARST, Cincinnati, Ohio, assignor to The Brunhoff Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 23, 1926. Serial No. 124,529. 4 Claims. (Cl. 211—14.)

1. A display and vending apparatus comprising a supporting casing, a plurality of containers pivotally mounted with a limited pivotal movement and spaced

apart one above the other upon said casing and normally inclined with their forward ends depressed and their rear ends elevated, forward lid sections to close the forward ends of said containers each resting loosely upon the forward end of one of the containers and pivotally attached near its rear end to said casing and adapted to slide endwise upon and relative to said container, rear lid sections each hinged at its forward end to the rear end of a forward lid section and adapted to open and close the rear end of one of the containers, and link members pivotally attached at their upper ends to said casing and at their lower ends to said rear lid sections near where said forward and rear lid sections are hinged together, said forward lid sections sliding upon said containers to overhang the forward ends of the containers when the containers are inclined with their rear ends downwardly and sliding in the opposite direction when the inclination is reversed, and said rear lid sections each being automatically lifted by said links away from the rear end of its container when the container is inclined with its rear end downwardly, and automatically closed upon the rear end of its container when its container is inclined with its rear end upwardly.

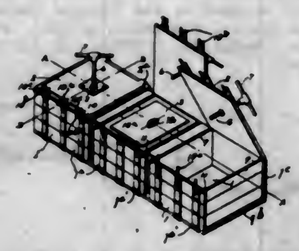
1,628,847. ROTARY DRAW WORKS. LESTER H. KEIM, Pasadena, and RICHARD E. KLINE, Alhambra, Calif., assignors to Oil Well Supply Company, Los Angeles, Calif., a Corporation of California. Filed June 29, 1925. Serial No. 40,415. 3 Claims. (Cl. 254—187.)

1. In a three-speed rotary drawworks, the combination of a frame having end posts and an intermediate post and mounting a drive shaft, a drum shaft on the opposite side of the posts, the drum shaft carrying a drum, and a low-speed drive connection between the drum and adjacent end post, and intermediate and high speed drive connections located between the intermediate post and the other end post, one of said last named drive connections including a sprocket wheel provided with a hub mounting a clutch, and a drive sprocket mounted on the line shaft between the high and intermediate speed drive connections and adapted to be driven by said last mentioned clutch.



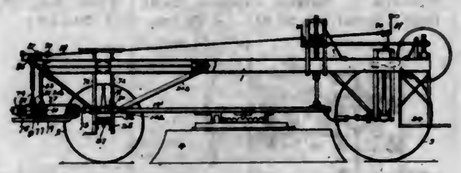
1,628,848. MEANS FOR STAPLING TAGS TO ARTICLES. RUSSELL B. KINGMAN, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Filed Nov. 19, 1926. Serial No. 149,333. 3 Claims. (Cl. 1—2.)

1. In a machine for attaching label tags to penetrable articles, the combination with a wire staple forming mechanism and a driver, of stationary bending means beneath said driver, said bending means having chamfered bending noses beneath which the article may be held, and means to support and position a tag over said bending means whereby operation of said driver thrusts the



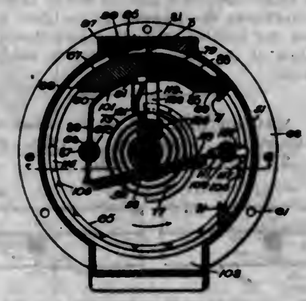
prongs of a formed staple through said tag into engagement with said bending noses which turn said prongs into penetrating engagement with the article.

1,628,849. MEDICAL APPARATUS FOR THE TREATMENT OF THE INTESTINES. ALBERT KLAIBER, Ridgewood, N. Y. Filed Apr. 12, 1926. Serial No. 101,297. 10 Claims. (Cl. 128—227.)



1. In a medical apparatus of the class described, a saddle including a body portion having a discharge opening, a feed tube, an anal tube connected to said feed tube and projecting through said opening, means for adjusting said feed and anal tubes in a longitudinal direction to vary the effective length of the latter tube, and means for yieldably supporting said anal tube in longitudinal alignment with said feed tube.

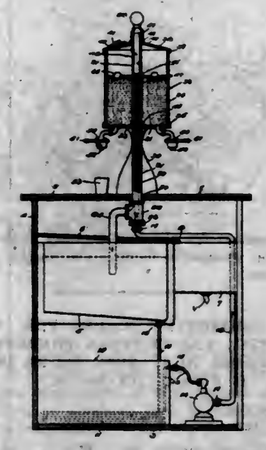
1,628,850. APPARATUS FOR TREATING FOOD-CONTAINING MATERIALS. ALFRED M. KLEIN, Wellington, Ohio, assignor, by mesne assignments, to The Piercy Company, Dover, Del., a Corporation of Delaware. Original application filed Jan. 2, 1925, Serial No. 147. Divided and this application filed July 11, 1925. Serial No. 43,038. 3 Claims. (Cl. 99—2.)



An apparatus for use in converting food materials comprising a container open at its top, a front wall comprising a plurality of horizontally hinged sections, means to attach the sections in closed relation to the container, a piston, a cover for the container, and means carried by the container to depress the piston.

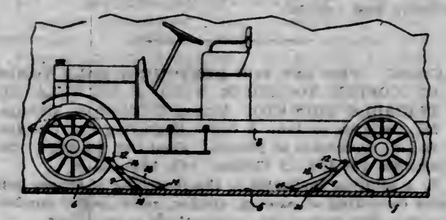
1,628,851. ROAD-VEHICLE STEERING MECHANISM. JOHN M. LARSH, Indianapolis, Ind., assignor by direct and mesne assignments, of one-fourth to William Mode Taylor and one-fourth to Ulysses Grant Smith, Indianapolis, Ind. Filed Mar. 17, 1926. Serial No. 95,227. 23 Claims. (Cl. 280—33.6.)

1. The combination, with a road making machine having a body portion, of a front axle supporting the front end of the machine body; wheels supporting the axle at its ends; a tongue swingingly connected with the front axle; and means for changing the planes of the front wheels relative to the axle for steering the machine without changing the position of the tongue relative to the axle nor the position of the axle relative to the machine body.



1,628,852. COIN-CONTROLLED APPARATUS. CHARLES LEA, Boston, Mass., assignor to The Automatic Merchandiser, Inc., Boston, Mass., a Corporation of Delaware. Filed June 15, 1921. Serial No. 477,819. 14 Claims. (Cl. 194—63.)

2. Coin-controlled apparatus having, in combination, a movable element, locking means for said element comprising a locking member and a part for engaging said locking member, said part connected to said element for relative movement, means permitting limited movement of said part relative to said element to permit limited movement of said element when said part is engaged by said locking member, and means rendered operative by the presence of a coin for causing said limited movement of said element to effect disengagement of said part and locking member.

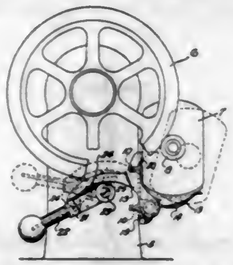


1,628,853. LIQUID DISPENSER. FRANK B. LOMAX, Chicago, Ill. Filed Mar. 6, 1926. Serial No. 92,759. 21 Claims. (Cl. 225—28.)

1. In combination, in a liquid dispensing system, means for cooling the liquid, a transparent receptacle for containing a predetermined amount of liquid for purposes of display, and impelling means for circulating the fluid

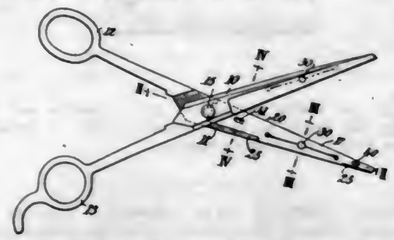
through the cooling means and the receptacle and for putting the liquid in the receptacle under a pressure greater than atmospheric pressure.

1,628,854. VEHICLE STAY BLOCK. CHARLES L. MICHOD, Chicago, Ill., assignor, by mesne assignments, to E. S. Evans & Company, Incorporated, Detroit, Mich., a Corporation of Delaware. Filed Jan. 15, 1924. Serial No. 686,297. 4 Claims. (Cl. 188—4.)



1. In a device of the class described, a frame comprising a pair of legs pivotally fastened together near their upper ends and diverging downwardly, means adapted to fasten the lower ends of the legs to a floor, and means on one of said legs adapted to engage a vehicle tire and prevent movement of the vehicle towards the device, comprising a bolt, a pair of bearings in which the bolt is pivotally mounted, the said bolt being curved outwardly between said bearings to fit the outer periphery of the tire.

1,628,855. MOTOR BRACKET. EDWARD MROSS and WILLIAM ERNST, Racine, Wis., assignors to Hamilton Beach Mfg. Co., Racine, Wis., a Corporation of Wisconsin. Filed Apr. 30, 1926. Serial No. 105,767. 4 Claims. (Cl. 74—26.)

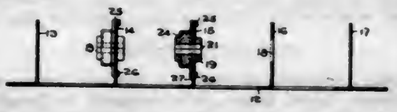


1. The combination with a sewing machine head having a hand wheel, of a motor bracket, comprising a bearing member secured to the side of the head, a saddle member pivotally carried by said bearing member, spring

means engaging the saddle member for yieldingly holding it in a normal position, a handle member connected with

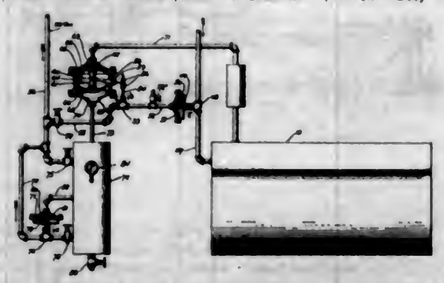
said saddle member for pivoting it away from said head, and means for releasable locking the saddle member in pivoted position.

1,628,856. COMPOSITE BLADE FOR SCISSORS, SHEARS, ETC., AND CUTTERS THEREFOR. ISAAC PATRICK, Jamaica, N. Y. Filed May 23, 1925. Serial No. 32,316. 15 Claims. (Cl. 30—13.)



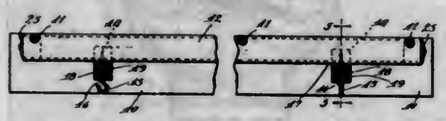
1. A composite blade comprising a cutter and a supporting part, and means for removably fastening said parts together, said means comprising a pin and slot connection between said cutter and supporting part, said connection being resilient whereby said parts may be resiliently held together.

1,628,857. PROCESS FOR REETCHING HALF TONES ON COPPER TOGETHER WITH A FORMULA APPLICABLE THERETO. VICTOR C. RONNING, Chicago, Ill., assignor to Jahn & Oliver Engraving Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1924. Serial No. 744,496. 2 Claims. (Cl. 134—1.)



1. A solution applicable to the re-etching of copper half tones consisting of alcohol, shellac, rosin, borax powder, camphor, and aniline dye, substantially as described.

1,628,858. RESISTOR-SUPPORTING MEANS. GUY E. SHAWK, Mansfield, Ohio, assignor, by mesne assignments, to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 21, 1924. Serial No. 707,861. 5 Claims. (Cl. 201—63.)

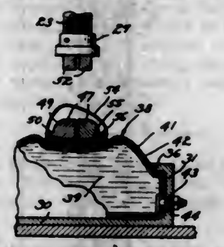


5. In an electrical heating unit, the combination with a metal plate having a plurality of punched-out, laterally-extending integral flange portions, each having a plurality of spaced openings therethrough, of a plurality of perforated thimbles, of refractory electric-insulationg material, each having a reduced end portion extending through an opening in said flange portions, members, of substantially cup-shape, surrounding a portion of said thimbles and having turned-over lugs for clamping said thimbles against the respective flange portions, and a resistor member extending through and between said perforated thimbles.

1,628,859. PRESSURE-REGULATING APPARATUS. WILLIAM C. SHIELD, Crockett, Calif. Filed Jan. 26, 1926. Serial No. 83,941. 4 Claims. (Cl. 50—10.)

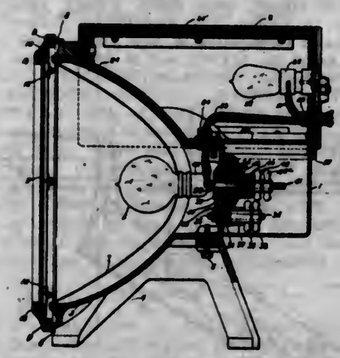
1. A fluid regulating device, comprising in combination an apparatus for receiving said fluid at a fixed or gradually progressing pressure, a fluid supply line adapted to deliver fluid at a constant pressure to the apparatus, a valve interposed in the path of said fluid and between the source of supply and the apparatus, a control tank adapted to receive fluid from said source of supply, means for regulating the inflow of said fluid from the source of supply to the control tank whereby a desired pressure may be gradually established within the tank, a diaphragm valve controlling the main valve between the source of fluid supply and apparatus, means connecting said diaphragm valve with the source of supply whereby pressure on said diaphragm will act to open the valve and permit fluid to flow into the apparatus; a valve interposed between said diaphragm valve and the source of supply, and means controlled by the pressure of the fluid within the control tank for opening said valve and thereby permitting actuation of the diaphragm valve to admit fluid to the apparatus.

1,628,860. MAP OR DISPLAY RAIL. JOHN C. STEINKRAUS, Cicero, Ill. Filed Aug. 21, 1926. Serial No. 130,725. 2 Claims. (Cl. 248—48.)



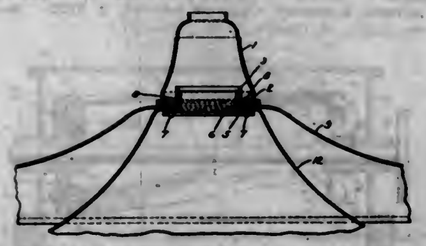
2. A map support adapted to be secured to the moulding of a room, comprising a hollow rail member having a longitudinal slot formed in one side thereof and extending throughout the length of said rail member, cylindrical plugs mounted in said rail member, supporting members secured to said plugs and extending through the slot in said rail member and members having sockets formed therein for the reception of yieldable material loosely mounted on said supporting members.

1,628,861. APPARATUS FOR CEMENTING SOLES TO SHOES. LAWRENCE P. TAYLOR, Los Angeles, Calif. Filed Sept. 8, 1925. Serial No. 54,986. 5 Claims. (Cl. 12—38.)



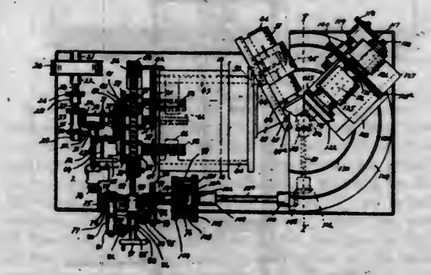
1. A device for attaching soles to shoes comprising: a pliable bag filled with noncompressible liquid; a box for supporting said pliable bag, said box having an inward projecting rim for holding said pliable bag in said box; an insert form adapted to be inserted in a shoe, said insert form having a rim and being expansible so

that said form may be extended to the extremities of the bottom of said shoe, said shoe having cement applied to the bottom and having a sole with cement applied thereto temporarily attached to the bottom thereof; and means engaging said insert form in a manner to exert a pres-



sure against the inner surface of the bottom of said shoe and to force said sole against said pliable bag while said cement sets, said pliable bag conforming to the shape of the bottom of said shoe and exerting a pressure against the bottom of said sole which is equal at all points.

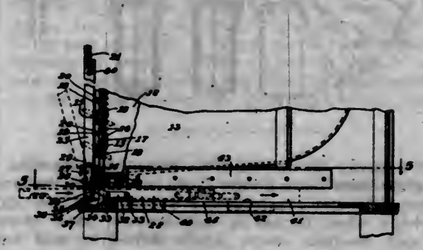
1,628,862. LOCOMOTIVE HEADLIGHT. JOHN R. TOWNSEND, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 20, 1923. Serial No. 681,757. 9 Claims. (Cl. 240—7.12.)



8. In an illuminating device, a reflector casing, a light-transmitting door in said casing, means for effecting a dust-and-moisture-proof closure thereof, a saddle detachably mounted on said reflector casing, a marker-light casing mounted on said saddle and an auxiliary casing detachably secured to said saddle.

1,628,863. SHADE HOLDER. JOHN R. TOWNSEND, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 8, 1924. Serial No. 684,973. 6 Claims. (Cl. 240—127.)

1. A shade holder comprising a canopy and two co-operating threaded members in said canopy, means for suspending a shade from one member and means in the other member for supporting a globe and for securing said shade, globe and canopy together.

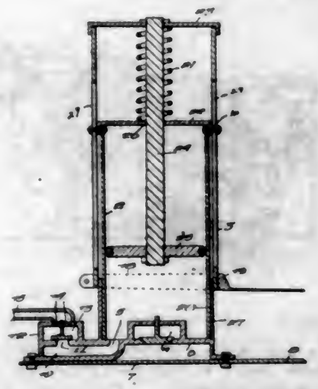


1,628,864. MACHINE FOR GENERATING GEARS. NIKOLA TESOJEVICH, Detroit, Mich., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed May 7, 1923, Serial No. 637,372, and in Canada April 19, 1923. 85 Claims. (Cl. 90—4.)

1. In a gear hobbing machine, the combination of a work spindle and a hob spindle having their axes non-intersecting and nonparallel, a feed spindle for rotating one of said spindles about an axis intersecting the axis of said work spindle and in acute angular relation to the axis of said hob spindle, and means for rotating said three spindles to maintain a predetermined timed relation between said hob and work spindles.

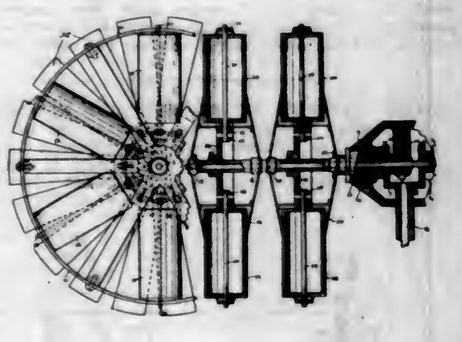
15. In a gear hobbing machine, the combination of a work spindle, a hob spindle, a blank mounted on said work spindle, a hob mounted on said hob spindle, said hob having cutting teeth of the modified involute type, the member mounted upon one of said spindles being of conical form, and means for adjusting said spindles into acute angular relation such that said hob and said blank are tangent to a common plane upon opposite sides thereof, means for rotating said spindles in a timed relation, and means for feeding said hob into said blank.

1,628,865. CLOSURE AND ITS SUPPORT. BENJAMIN C. WEBSTER, Southport, Conn., assignor, by mesne assignments, to Columbia Phonograph Company, Inc., a Corporation of New York. Filed July 3, 1923. Serial No. 649,257. 5 Claims. (Cl. 45—52.)



1. In a cabinet having an opening, a door, and a carriage in the cabinet on which the door is pivotally mounted and with which it slides, the carriage being of greater thickness than said door and holding the same in spaced relation to the cabinet and objects contained therein.

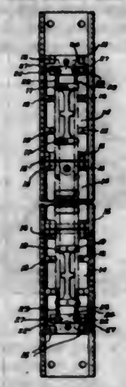
1,628,866. BATHER'S PUMP. NICHOLAS WEILER, Canton, Ill. Filed Apr. 17, 1924. Serial No. 707,260. 6 Claims. (Cl. 103—153.)



1. A water pump including a pair of cylinders slidable one over the other, the inner cylinder having a bottom with a water inlet and a water outlet, a valve within

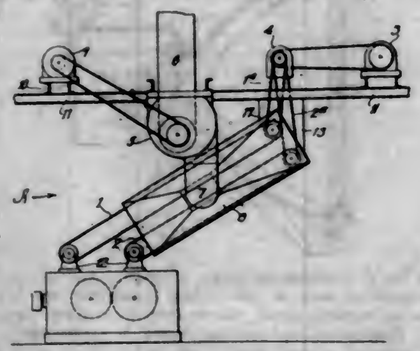
said inner cylinder controlling said inlet, a valve controlling said outlet outside of said inner cylinder, and a nipple extending from said last valve, a cap for said

inner cylinder, said outer cylinder having opposing guide slots, bolts extending through said slots and forming securing means for said cap.



1,628,867. AIR MOTOR. LOUIS WERNICKE, West Bend, Wis. Filed Aug. 24, 1925. Serial No. 52,029. 2 Claims. (Cl. 170—39.)

1. A device of the character described, comprising a revoluble main shaft, a rigid sleeve surrounding the same, a revoluble sleeve surrounding a portion of the rigid sleeve, a wheel carried by said shaft, a wheel carried by said revoluble sleeve, means carried by said main shaft for revolving said wheels in opposite directions, a plurality of cylinders rotatably mounted in each wheel, means in connection with said rigid sleeve for rotating the cylinders of the wheels, a second shaft, and means for transmitting motion from the main shaft and said revoluble sleeve to said second shaft.



1,628,868. ELECTRIC HEATING UNIT. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 20, 1924. Serial No. 733,054. 3 Claims. (Cl. 201—63.)

3. An electric resistor supporting member comprising a base member, a plurality of opposed sets of aligned substantially straight members integral therewith and extending upwardly therefrom, and a plurality of aligned

members located between said sets of straight members, having an upwardly extending portion and an overhanging portion.

1,628,869. MASTICATING OF RUBBER AND APPARATUS THEREFOR. HARRY CLARANCE YOUNG, Sutton, and HENRY OWEN BURR, Walney, England, assignors to Dunlop Tire and Rubber Corporation of America, a Corporation of New York. Filed July 12, 1926, Serial No. 121,978, and in Great Britain May 1, 1925. 4 Claims. (Cl. 18—2.)

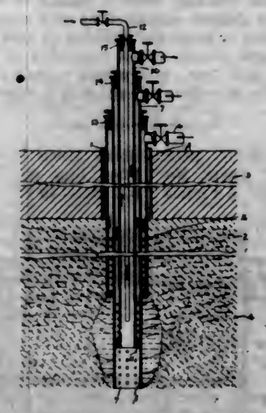
1. In combination with the rolls of a rubber masticating mill, a conveyor comprising a series of spaced rods joined at their ends to connecting links, and a fan adjacent said conveyor for distributing a current of air over the rubber carried on said conveyor.

1,628,870. ROTARY CUTTING HEAD. THEODORE C. ALFRED, Lancaster, Ohio. Filed Feb. 2, 1925. Serial No. 6,213. 6 Claims. (Cl. 146—121.)

1. A rotary cutting head comprising a frame adapted for rotation about a longitudinal axis, the outer portion of said frame being provided with a recess, arranged

transversely with respect to said axis, a blade holder including a rib arranged to be seated within said recess, binding devices for seating and maintaining the rib of said holder within said recess at various positions of longitudinal adjustment with respect thereto, and a cutting blade connected with said holder so that the cutting edge of said blade may be advanced or retracted tangentially with regard to the cutting circle of said blade in accordance with the longitudinal adjustment of the holder with respect to said frame.

1,628,871. FERTILIZER OR STRAW SPREADER. WILLIAM E. BRUCE, Randado, Tex. Filed Oct. 20, 1925. Serial No. 63,724. 10 Claims. (Cl. 275—1.)



1. In a device of the type described, a platform, means for moving the platform in opposite directions and means operated by reversal of movement of the platform for causing one end of the platform to move into or out of engagement with the ground including a wheel supported axle for the platform freely shiftable from one end of the platform to the other thereof.

1,628,872. PROCESS OF PRODUCING A HYDRAULIC ALUMINOUS BINDING MATERIAL TOGETHER WITH AN IRON ALLOY. LÉONCE DE LAMBERT, Lyon, France, assignor of one-half to Pierre Zucco, San Francisco, Calif. Filed Apr. 17, 1924. Serial No. 707,299. 7 Claims. (Cl. 75—14.)

1. A process for simultaneously producing a hydraulic aluminous binding material and iron alloy comprising, heating a charge of ferro aluminous materials, phosphorous materials, a carbonaceous reducer and lime stone to liquation; and cooling the resultant products.

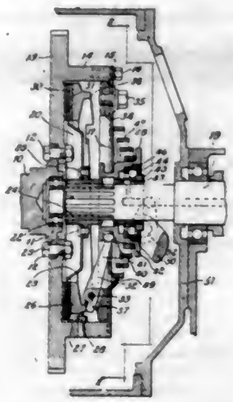
1,628,873. PROCESS OF SULPHUR MINING. AUGUST T. DRACHENBERG, Freeport, Tex. Filed June 17, 1926. Serial No. 116,585. 5 Claims. (Cl. 262—3.)

1. A process of subterranean sulphur mining through use of the liquid fusion system comprising delivering heated fusion fluid to the sulphur deposit, discharging at a level above said sulphur deposit a flow of mud laden liquid to fill the space above the sulphur and confine the fusion fluid to the sulphur zone, and removing the fused sulphur.

1,628,874. FARM PULVERIZER. JAMES A. EASTES, Mount Comfort, Ind. Filed May 28, 1926. Serial No. 112,224. 5 Claims. (Cl. 55—21.)

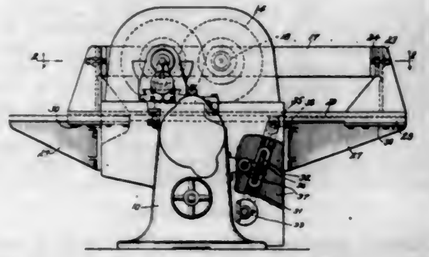
4. In a clod compactor and pulverizer, a rear roller formed of two cylindrical sections, crushing members projecting from the surfaces of the roller sections in spiral relation to the axis of the roller sections, the spiral relation on one section of the roller being opposed to that on the other section, a front roller formed of two cylindrical sections, crushing members projecting from the surfaces of the front roller sections in spiral relation to the axes of the roller sections, the spiral relation of the crushing members on one front section being opposed to that on the other front section and the spiral relation on each front roller section being opposed to that on the corresponding rear roller section, said crushing members having a relatively small projection from the roller surfaces as compared to the diameter of the rollers, and means for angularly positioning said front and rear roller sections with respect to each other whereby the angularity of the crushing members is varied with respect to the line of travel of the rollers.

1,628,875. HEATING UNIT. KARL EHRGOTT, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1924. Serial No. 703,676. 5 Claims. (Cl. 201—63.)



5. In a heating unit, in combination, a sheet-metal plate, spaced pairs of integral laterally-extending flange portions, alined notches in each pair of flange portions, insulating thimbles located in said notches, elongated sheet-metal members of substantially U-shape in lateral section and having notches in their side portions interfitting with said pairs of flanged portions and holding said thimbles in proper operative positions, and a resistor member extending through said thimbles and therebetween and distributed substantially uniformly over the plate.

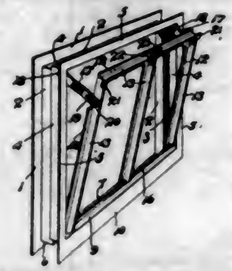
1,628,876. ELECTRIC HEATING UNIT. KARL EHRGOTT, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 21, 1924. Serial No. 707,827. 7 Claims. (Cl. 201—63.)



6. In an electric heating unit, in combination, a pair of co-operating flange portions, each flange having a plurality of spaced openings and a plurality of spaced integral lugs at the edge thereof bent to substantially arcuate form and in substantial alinement with each other, perforated refractory thimbles in said openings, a rod extending through said alined lugs to hold said flange portions and said thimbles in said openings, and a resistor member extending through said perforated thimbles.

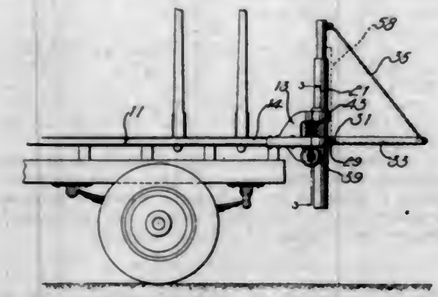
1,628,877. FRICTION CLUTCH. DAVID E. GAMBLE, Chicago, Ill., assignor to The Borg & Beck Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 27, 1923. Serial No. 659,482. 20 Claims. (Cl. 192—68.)

1. In a friction clutch, the combination of a driving element, a driven shaft, a driven element rotatable with said driven shaft and movable longitudinally thereof, means carried by the driving element embracing the driven element, a thrust ring, a sleeve rotatably journaled upon the driven shaft, a collar rotatably journaled upon said sleeve, means operatively connecting said collar with said thrust ring, and yielding means disposed without the embracing means and cooperating with said collar for causing said connecting means to hold the driving and driven elements in frictional engagement.



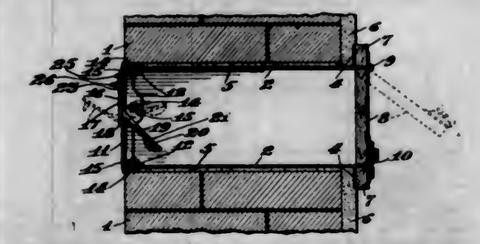
1,628,878. WORK CARRIER. FREDERIC E. GARDNER, Beloit, Wis. Filed Apr. 14, 1924. Serial No. 706,274. 12 Claims. (Cl. 51—114.)

1. A grinding machine comprising, in combination, a base, a pair of annular grinding elements disposed in opposed relation on said base, a slide mounted for reciprocation on said base below said grinding elements, a pair of brackets mounted on the ends of said slide, and a thin flexible work carrier adjustably secured at its opposite ends to said brackets and positioned to reciprocate between the opposed faces of said grinding elements.



1,628,879. WINDOW CONSTRUCTION. JOHN J. GILLMAN, Muskegon, Mich., assignor to Solar-Polar Storm Sash and Screen Co., Muskegon Heights, Mich., a Corporation of Michigan. Filed July 21, 1924. Serial No. 727,115. 8 Claims. (Cl. 189—69.)

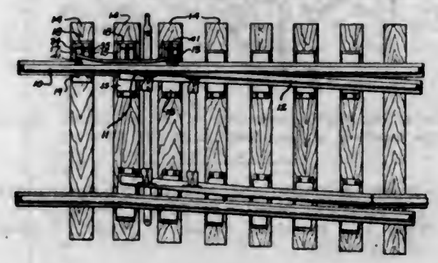
1. In a window construction, an open casing, a frame constructed for the placing of glass or screen therein and adapted to lie in said casing, links connected pivotally to the upper ends of the opposed vertical sides of the casing and having slotted lower end portions, headed pins passing through the slots into the vertical sides of the frame a short distance below the upper ends, detachable and pivotal interengaging means integrally formed



on the lower members of the frame and casing, and a laterally turned ear at the upper end of each of the vertical sides of the frame to extend over said links, substantially as and for the purposes described.

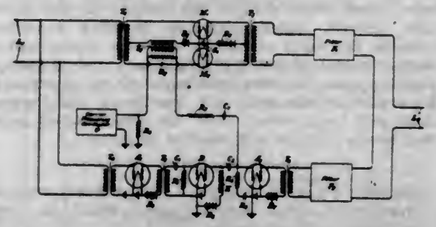
1,628,880. TRUCK ELEVATOR. WILLIAM H. HEISE, Los Angeles, Calif. Filed Mar. 20, 1926. Serial No. 96,167. 4 Claims. (Cl. 214—75.)

1. In combination: structure consisting of the floor of a vehicle; frames rigidly secured to the rear end of said floor; vertical bearings secured rigidly to said frames; vertical posts slidably supported by said bearings; a platform supported in horizontal position by said posts; racks formed on said posts; worms supported by said frames adjacent to said floor, said worms engaging said racks; and means for synchronously rotating said worms.



1,628,881. MAIL BOX. JOHN HELM and HENRY C. HELM, St. Louis, Mo. Filed June 23, 1925. Serial No. 39,028. 5 Claims. (Cl. 232—45.)

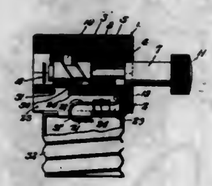
1. A wall panel for mail boxes and the like, having an opening therein, a closure element for said opening, comprising a door portion proper, having a shouldered bottom edge portion resting loosely and rockably on the lower



edge portion of said opening, said closure element having notches at its opposite ends coincident with its shouldered bottom edge portion, said notched portions loosely straddling the adjacent side marginal portions of said opening, and retaining studs projecting inwardly at opposite sides of said opening and overhanging said closure element but being normally free of contact therewith and permitting tilting of said closure element.

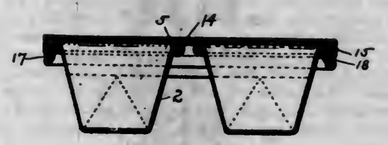
1,628,882. SWITCH-POINT GUARD. PAUL HOFFMAN, La Grange, Ill., and JAMES B. STRONG, Suffern, N. Y., assignors to Ramapo Ajax Corporation, New York, N. Y. a Corporation of New York. Filed Aug. 7, 1926. Serial No. 127,730. 19 Claims. (Cl. 246—441.)

2. A guard rail structure comprising a movable switch point adjacent thereto, spaced lugs engaging the underside of the running rail and a rib integral with the guard rail spaced from said lug, said rib extending from the head of the guard rail to a point beyond the plane passing through the curved ends of the guard rail.



1,628,883. CARRIER AMPLITUDE-CONTROL SYSTEM. WILLIAM H. T. HOLDEN, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 27 1926. Serial No. 98,021. 10 Claims. (Cl. 178—44.)

1. In a signaling system, a source of signaling oscillations, a high frequency wave, means for controlling the amplitude of said high frequency wave in accordance with the amplitude of the oscillations of said signaling source, and a modulator for superimposing said signaling oscillations on said controlled high frequency wave, the amplitude of said high frequency wave impressed on said modulator decreasing as the amplitude of the oscillations of said signaling source increases, and vice versa.



1,628,884. ELECTRIC SWITCH. WILLIAM LEE, Jackson, Mich., assignor to Reynolds Spring Company, Jackson, Mich., a Corporation of Delaware. Filed May 26, 1925. Serial No. 33,047. 1 Claim. (Cl. 173—346.)

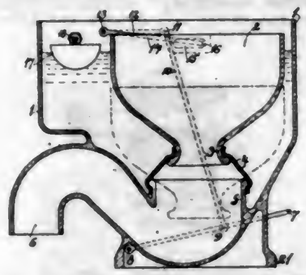
A noiseless switch including an insulating base composed of upper and lower sections provided in their opposing faces with registering recesses, a rotary switch member mounted between the upper and lower sections and having a spirally grooved contact portion, a stud embedded in one of the sections and engaging the spirally grooved contact portion of the switch member and causing a longitudinal movement of the same when the switch member is rotated, a stationary switch contact mounted in one of the said recesses and having a con-

tact portion extending into the path of the movable switch member and arranged to be engaged by the inner end thereof, and a center contact secured to the insulating base and having a portion bearing against the spirally grooved contact portion of the rotary switch member.

1,628,885. COVERED BAKING PAN. JOSEPH GEORGE JACKSON, Chicago, Ill., assignor to Edward Katzinger Company, Chicago, Ill. Filed Mar. 9, 1925. Serial No. 14,143. 1 Claim. (Cl. 53—6.)

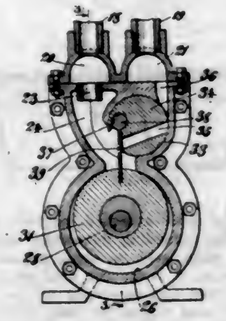
A multiple of pans attached together to form a unit, a reinforced lip extending outwardly around the upper edges of said pans, said lip being capable of lateral resilient movement, a cover for said unit, a rigid strap member reinforced and enveloped by the extended edges of said cover, and bosses on said cover reinforced by said strap member and arranged to engage with said lip.

1,628,886. MOLDED PLYWOOD. RAY P. JACKSON, Edgewood Park, GEORGE C. KENT, Turtle Creek, and ELBRIDGE J. CASSELMAN, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 13, 1922. Serial No. 528,964. 6 Claims. (Cl. 20—91.)



6. A method of forming composite material which comprises impregnating layers of wood with fresh, unoxidized phenolic condensation product, superposing a plurality of said treated layers and simultaneously applying a temperature of 120° to 150° C. and pressure ranging from 1,000 to 1,500 pounds per square inch thereto to form a unitary structure.

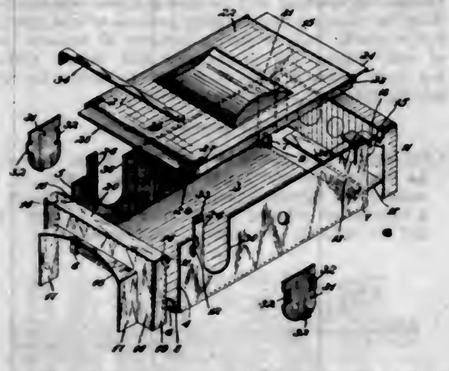
1,628,887. WATER CLOSET. OSCAR FREDRIK KARLSSON, Sodertalje, Sweden. Filed May 24, 1924, Serial No. 715,669, and in Sweden Apr. 11, 1924. 3 Claims. (Cl. 4—13.)



1. A water closet comprising an inner basin; movably connected at the bottom to the discharge and arranged in an outer receptacle for flushing water; the width of

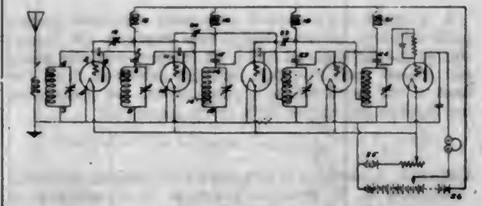
the said inner basin decreasing downwards; and mechanical means for depressing the inner basin during

the whole of the flushing stroke to allow flushing water to overflow simultaneously from all sides into the inner basin.



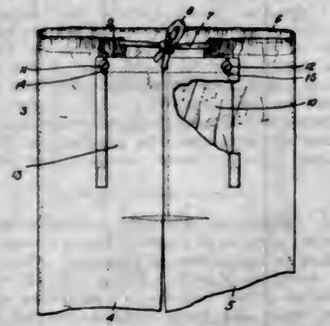
1,628,888. ROTARY PUMP. JOHN KLINGE, Dubuque, Iowa. Filed May 11, 1925. Serial No. 29,274. 4 Claims. (Cl. 103—132.)

1. A rotary pump comprising a pair of similar body members having open upper chambers on one side of each body and circularly bored valve seats on the other side a cover removably engaged over said members, said cover having inlet and outlet openings communicating respectively with the chambers and valve seat bores, said body having cylindrical bores in the main lower portions, a shaft passing axially through the last named bores, eccentrics fixed in opposed relation on said shaft, cylinders rotatable on said eccentrics, cylindrical valves in the mentioned valve seats, said valves each having tangential ports communicating with its corresponding chamber in said cover, said valves having bores adjacent their periphery parallel with their axes and grooves leading thereto, pivots operative in the bores of said valves, and plates on said pivots engaging radial slots in said cylinders, said plates transmitting rotary motion to said valves and serving as closures between the sides of the body members and for the ports in said valves.



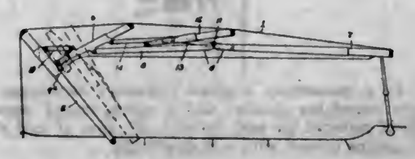
1,628,889. SWITCH BOX. HUBERT K. KRANTZ, Brooklyn, N. Y., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1920. Serial No. 402,351. 5 Claims. (Cl. 247—2.)

1. In a box, a bottom member, side members fixed thereto having inwardly-extending projections and slots adjacent thereto, an end member having interlocking members fitting within the said slots in the side members and preventing lateral displacement of the end member with respect to the side members, and a cover having a portion fitting beneath the said projections and



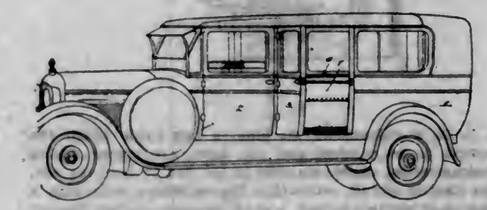
preventing relative movement of the end member and the side members in the direction of the slots.

1,628,890. METHOD AND MEANS FOR STABILIZING AMPLIFIERS. EDWARD H. LANGE, New York, N. Y. Filed Aug. 28, 1925. Serial No. 53,002. 5 Claims. (Cl. 179—171.)



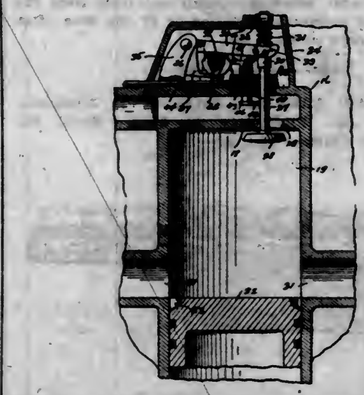
1. The method of preventing regeneration in a conductively coupled amplifier provided with a plurality of subsidiary amplifying means having, tuned input circuits, tuned output circuits, and inherent capacity between said circuits, which comprises inserting capacitance between the input circuit of one said means and the output circuit of another said means and thereby impressing upon the first said input circuit electromotive force substantially equal and opposite to that impressed upon said input circuit from the output circuit of said first means through said inherent capacity.

1,628,891. PYJAMA PANTS. AMELIA LEFKOWITZ, New York, N. Y. Filed July 15, 1925. Serial No. 43,690. 1 Claim. (Cl. 2—235.)



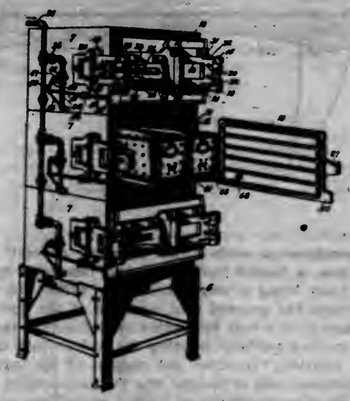
In pyjama pants, a body member provided at its front with a slit, and at its top edge with a shirred waistband open in front and with its end portions extending substantially to the slit, the end portions of the waistband being movable toward and from each other in order to shift the adjacent portions of said body member and thus to close and open said slit, said adjacent portions of said body member being free and adapted to meet together so as to completely close said slit throughout its entire length, a flap connected with said body member and wide enough to cover said slit whether open or closed, said flap being free to swing into different normal positions relatively to said body member in order to cover and uncover said slit, and means for securing said flap in position to cover said slit and thereby conceal the same.

1,628,892. TOP FOR VEHICLES AND THE LIKE. FRED K. LEWIS and CHARLES R. ALLEN, Ashtabula, Ohio, assignors to The Ashtabula Bow Socket Company, Ashtabula, Ohio, a Corporation of Ohio. Filed Nov. 2, 1921. Serial No. 512,274. 5 Claims. (Cl. 296—116.)



1. In a top for vehicles and the like, the combination of a main support attached to the top of the vehicle, a supplemental bow pivotally attached to said support, an articulated auxiliary bow pivotally attached to said supplemental bow, a second supplemental bow pivotally attached to the rear portion of said auxiliary bow, plural interconnected links connecting the outer portion of said auxiliary bow and said two supplemental bows, plural interconnected links connecting said first-named supplemental bow with said support and adapted to sustain the same in inclined position relatively to said support when the top is open, and means operatively connecting said two sets of interconnected links.

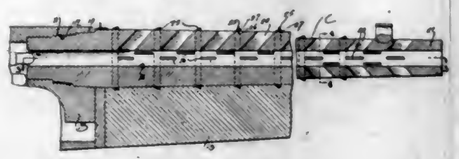
1,628,893. INNER RECEPTACLE FOR HEARSES. WALTER LIVINGSTON and ALBERT EDWARD LIVINGSTON, Hastings, Nebr. Filed Jan. 2, 1926. Serial No. 78,944. 2 Claims. (Cl. 296—16.)



1. An inner receptacle for the body of a hearse, said inner receptacle comprising an elongated body closed at its inner end and having an opening in its rearward or outer end, said body being made of impervious, heat resistant material, a door hinged to said body for swinging movement to and from position to cover the opening in the rear end of the body, said door having a marginal rabbet in its inner face, and a sealing strip seated in said rabbet and adapted to contact with the rear end of said body when said door is closed so as to produce an airtight seal between said door and said body of the inner receptacle.

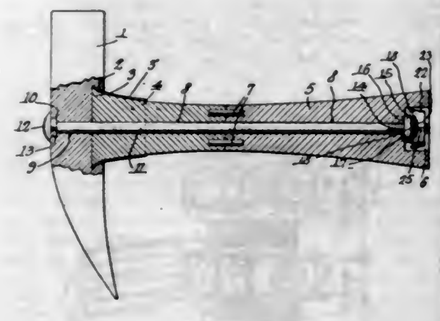
1,628,894. INTERNAL-COMBUSTION ENGINE. EDWARD H. MAUPIN, Dallas, Tex., assignor to Maupin Automotive Corporation, a Corporation of Texas. Filed Apr. 1, 1925. Serial No. 19,868. 8 Claims. (Cl. 123—29.)

3. The combination in an internal combustion engine, a mixing chamber communicating with the cylinders, exhaust manifolds, independent air pressure lines serving respectively the mixing chamber and the manifolds, means for controlling the delivery of fuel to the mixing chamber, and means for controlling and releasing the charge in the chamber to the cylinders and controlling the operation of the pressure line with respect to the mixing chamber.



1,628,895. STEAM COOKER. WILLIAM MCKENNA, Chicago, Ill., assignor to Albert Pick & Company, Chicago Ill., a Corporation of Illinois. Filed Feb. 10, 1921 Serial No. 443,794. 6 Claims. (Cl. 126—20.)

1. In a steam cooker, the combination of a structure having a chamber therein adapted to retain steam to heat the products placed therein, and a door for access to the chamber, said door being pivoted adjacent one of its ends, a pipe for delivering steam into said chamber, a self-closing slide-valve in said pipe, adapted to control the entire volume of steam delivered to said chamber, means

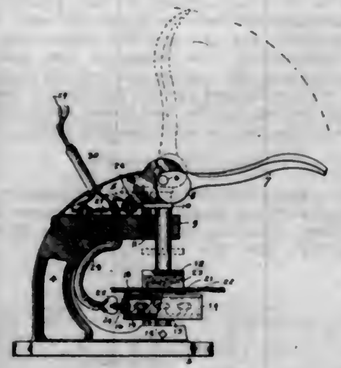


for securing the door closed, and a device between the door and said valve whereby the valve will be held open while the door is secured closed and instantaneously released so the valve will be automatically and completely closed to entirely cut off the supply of steam during the initial opening movement of the door, said device comprising an element which is entirely separable from the door to permit independent movement of the door after the valve has been closed.

1,628,896. GUN BARREL. COLUMBUS L. MEDEARIS, Shreveport, La. Filed May 28, 1926. Serial No. 112,312. 10 Claims. (Cl. 89—14.)

1. In a gun barrel the combination of a gun barrel body having a bore therethrough, said body having transverse exit ports therethru from the bore to the outer periphery thereof sloping forwardly from said bore towards the muzzle of the barrel.

1,628,897. HAMMER OR THE LIKE. ROBERT W. MILLS, Benton Harbor, Mich. Filed June 4, 1925. Serial No. 26,222. 1 Claim. (Cl. 306—38.)



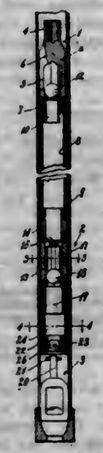
The combination with a tool having a dovetail groove in one face, a handle having one end insertable into the groove, there being a longitudinal bore within the handle and through the grooved tool, one end of the bore being counterbored, of a bolt removably seated within the bores having one end portion engaging the tool to hold the bolt against rotation, the other end portion of the bolt being screw threaded and extending into the counterbore, a disk loosely fitted on the bolt and having projections engaging a wall of the counterbore, said bolt being slidable in the disk, spaced projections on one face of the disk, a washer loosely mounted on the bolt and having radial arms held against rotation by the projections on the disk, said arms projecting radially beyond the disk, a nut engaging the threaded portion of the bolt and seated in the counterbore, and teeth upon the nut for snapping into engagement with the projecting ends of the arms, thereby to hold the nut against retrograde movement.

1,628,898. TELEPHONE TRANSMITTER. CHARLES R. MOORE, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 17, 1923. Serial No. 669,028. 9 Claims. (Cl. 179—122.)

1. In a transmitter, a sound responsive diaphragm, a carbon containing chamber and a conical-shaped closure of sheet material for said chamber, the apex of said closure making contact with said diaphragm.

1,628,899. ELECTRIC VULCANIZER. MORTON MURPHY, Indianapolis, Ind. Filed Oct. 8, 1926. Serial No. 140,395. 3 Claims. (Cl. 219—19.)

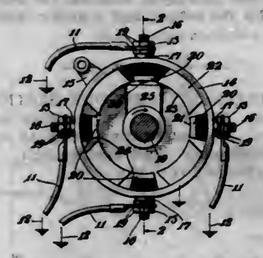
1. In a vulcanizing machine, a box upon which the article to be patched and the patch are placed during vulcanization, resistance coils in the box to heat the box, an electric circuit connecting the resistance coils with a source of electric energy, a shaft movable endwise toward and from that part of the box on which the patch is vulcanized to press the patch and article together during vulcanization, a cam for moving the shaft toward the box, means for operating the cam, means for moving the shaft away from the box, and a circuit make-and-break means opeated by the movement of the shaft.



1,628,900. DEEP-WELL GAS AND OIL SEPARATOR. KARL P. NEILSEN, Long Beach, Calif. Filed May 13, 1926. Serial No. 108,767. 9 Claims. (Cl. 103—203.)

1. In a well having a pump a gas and oil separator, comprising an outer shell, a pipe within said shell and spaced therefrom, a tube extending into said pipe and opening into the pump, said shell having fluid intake ports extending therethrough into the space between the pipe

and shell, and gas outlet ports also extending from the space, and baffle plates on said pipe extending between the pipe and casing whereby the oil and gas are separated.

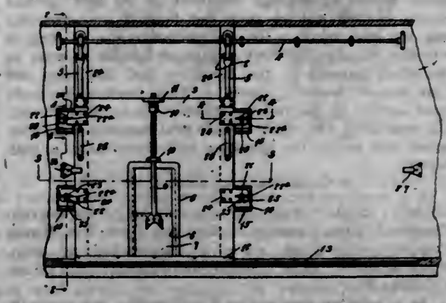


1,628,901. PUMP-PLUNGER ASSEMBLY. KARL P. NEILSEN, Long Beach, Calif. Filed May 18, 1926. Serial No. 109,628. 3 Claims. (Cl. 103—225.)

1. In a pump, a plunger in said pump, a top valve on said plunger, said top valve comprising an open cage, and a threaded box on the upper end of said cage, adapted to receive the end of the sucker rod, the lower end of said cage being threaded to screw into the top of the plunger and a valve seat adapted to screw into the lower end of the cage upon which a ball is adapted to seat.

1,628,902. COMMUTATING MECHANISM FOR IGNITION SYSTEMS AND THE LIKE. THOMAS P. NICKELL and WILLIAM H. RODEFELD, Richmond, Ind.; said Nickell assignor to Robert S. Blair, Stamford, Conn. Filed June 2, 1922. Serial No. 565,299. 7 Claims. (Cl. 200—26.)

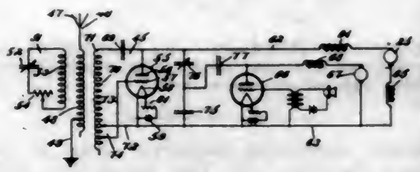
3. In mechanism of the general nature of that herein described, in combination, a series of metal contact members having their active surfaces arranged in circular form, and a rotary contact member co-acting therewith and continuously engaging with a plurality of said first contacts and formed to bridge the space therebetween, the



contact members of said series being alternately live and grounded, and said rotary contact member being adapted to bridge adjacent grounded contacts.

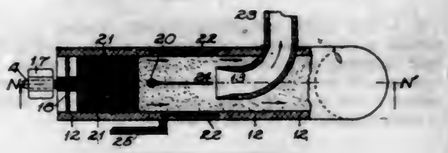
1,628,903. ATTENTION ARRESTER. JAMES H. NORTHROP, Santa Ana, Calif. Filed Apr. 12, 1923. Serial No. 931,570. 10 Claims. (Cl. 40—139.)

1. A sign board comprising a plate adapted to have printed matter thereon; a runway across said plate; light reflecting balls operable in said runway; means for continuously moving the light reflecting balls along said runway; and means for illuminating the moving objects to attract attention to said board.



1,628,904. CAR-DOOR-SECURING MEANS. FRANK J. NOVAK and FRANK J. CISEK, Scappoose, Oreg. Filed July 14, 1925. Serial No. 43,643. 2 Claims. (Cl. 292—108.)

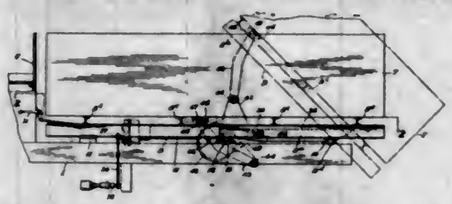
1. Car door securing means comprising a slotted keeper secured to the door, a retaining bolt secured to the car, a housing secured to the car by the retaining bolt and



having an open side, a keeper-engaging bolt pivoted to the retaining bolt and located wholly within the housing when out of engagement with the keeper and adapted to be swung through the open side of the housing into engagement with the keeper, and a keeper-contacting nut carried by the keeper-engaging bolt.

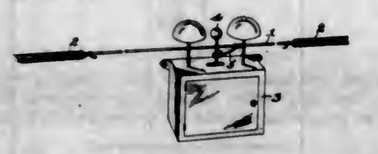
1,628,905. WIRELESS TELEPHONE SYSTEM. ALEXANDER NYMAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept 2, 1921. Serial No. 497,951. 2 Claims. (Cl. 250—6.)

1. In a wireless transmission system, an oscillation-generator system including condensive and reactive elements, a constant supply of exciting energy therefor, an antenna circuit and an absorbing circuit operatively associated therewith, and a modulating circuit including reactance elements, one of which is a variable-impedance element adapted to vary the amplitude and the frequency of the high-frequency energy generated by said oscillation-generator system in accordance with sound waves, said antenna and absorbing circuits being so tuned that said modulations in frequency effect opposite variations in the power absorbed by each circuit.



1,628,906. AIR CLEANER. JOSEPH FRANCIS O'BYRNE, Golden, Colo. Filed May 12, 1926. Serial No. 108,550. 4 Claims. (Cl. 183—7.)

1. A dust separator comprising, in combination, a tubular member of insulating material, a second tubular member extending through the wall of the first tubular member, and having its open end located concentrically inside the first member, means for causing a current of air to flow through the first mentioned tubular member in a direction opposite to the direction that the open end of the second member points, a high tension electrode located axially of the tubular members, a cylindrical electrode located in the walls of the first mentioned tubular member and means for charging said electrode to a high potential.



1,628,907. DUMP TRUCK. GORDON R. PENNINGTON, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 30, 1924. Serial No. 723,077. 5 Claims. Cl. 298—21.)

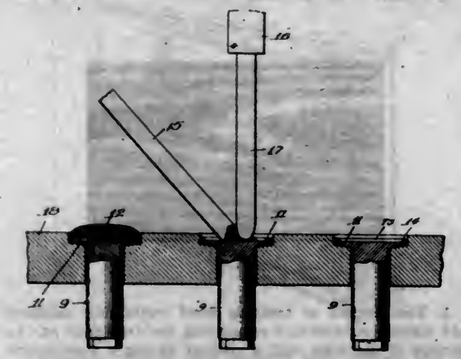
1. In a hoisting mechanism for elevating the pivotally mounted body of a dump truck, the combination of an elongated plunger; a guide therefor adapted to be mounted on the chassis frame of the truck; means for moving the plunger on its guide; and means adapted to operatively connect the plunger to the truck body comprising a crosshead, a guide for said crosshead adapted

to be mounted on the said chassis frame, and connecting means between the plunger and crosshead adapted to permit their relative bodily movement in two planes substantially at right angles to each other.

1,628,908. ALARM. STIVIN POULOS, Boston, Mass. Filed May 8, 1926. Serial No. 107,719. 9 Claims. (Cl. 116—104.)

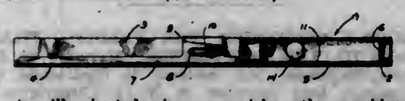
7. A mechanically operated signal system for a building having a plurality of compartments, a sound producing member in every compartment, a soft malleable hook mounted on an inflammable cord, said hook normally engaging the sound producing member to retain same inactive, and operable spring means for pulling said hook to straighten the same, and thereby release said sound producing member in every compartment.

1,628,909. TRUCK CONVEYER. NORMAN H. PREBLE, Detroit, Mich., assignor to The Cecil R. Lambert Company, Inc., Detroit, Mich., a Corporation of Michigan. Filed July 9, 1923. Serial No. 650,510. 5 Claims. (Cl. 104—162.)



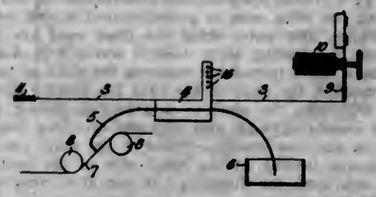
1. The combination with a longitudinally reciprocable bar, of rolls supporting said bar, members longitudinally spaced upon said bar for advancing a truck, power means connected to said bar for reciprocating the same and a wheeled carriage affording additional supporting means for said bar carried by the power means intermediate said rolls.

1,628,910. CERAMIC PROCESS AND PRODUCT. THEODORE C. PROUTY and WILLIS O. PROUTY, Hermosa Beach, Calif., assignors, by mesne assignments, to American Encaustic Tiling Company, Ltd., Los Angeles, Calif., a Corporation of New York. Filed Mar. 7, 1925. Serial No. 13,883. 65 Claims. (Cl. 25—156.)



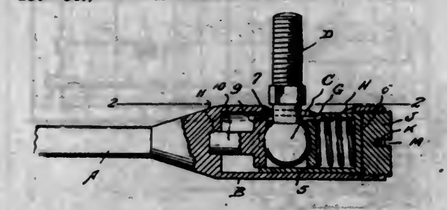
1. The process of manufacturing ceramic articles which comprises the operations of subjecting the bisque to a maximum heat limited to a relatively narrow range of temperature and forming the bisque mixture of material that has a relatively narrow range of contraction within said range of temperature.

1,628,911. ELECTRICALLY-WELDED VALVE TAPPET. GEORGE R. RICH, Battle Creek, Mich. Filed Nov. 5, 1926. Serial No. 146,313. 3 Claims. (Cl. 219—10.)



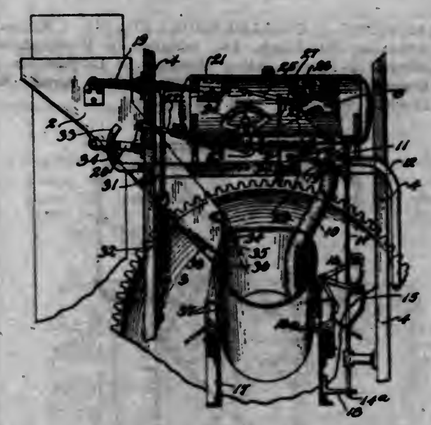
1. A composite metal article of manufacture, comprising a steel shank having a steel seating surface, and a white iron crown electrically deposited on said steel seating surface.

1,628,912. ILLUMINATED SIGN. STEVEN A. RICE, San Francisco, Calif. Filed Aug. 10, 1926. Serial No. 49,220. 2 Claims. (Cl. 40—133.)



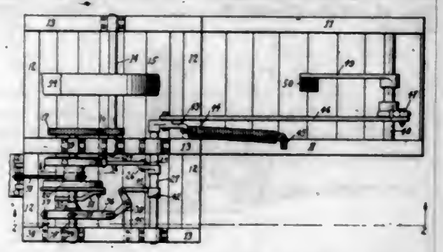
1. An illuminated sign comprising the combination of a comparatively shallow sheet metal box open at the front, an electric light therein, a removable metal front plate having characters stencil cut therethrough, a colored backing plate carried by the stencilled plate at the rear thereof, flanges integral with the edges of the stencilled plate and bent backward therefrom in a manner to receive and to hold the backing plate, and a pair of independent members extending respectively along the ends of the box therein and spaced from the front marginal edge of the box in a manner providing a pair of vertical slideways for receiving the ends of the combined front plate and backing plate thereinto.

1,628,913. SIPHON AND LIKE RECORDER. JOHN RIDDLE, London, England, assignor to Telegraph Construction and Maintenance Company, Limited, London, England. Filed Nov. 21, 1924, Serial No. 751,290, and in Great Britain Aug. 16, 1924. 8 Claims. (Cl. 178—91.)



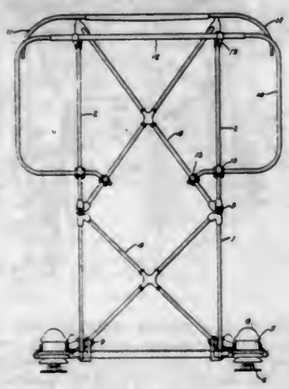
1. In a recording instrument of the type in which a movement of a marking instrument is recorded on a moving slip of material, the combination of a strip of flexible material, a marking instrument carried wholly by said strip, and means giving a rapid intermittent pull upon one end of said strip longitudinally thereof to vibrate said strip laterally or at an angle to the direction of its length toward and away from the slip of material.

1,628,914. STEERING CONNECTING ROD FOR AUTOMOBILES. MARTIN C. RIDENOUR, Kingwood, W. Va., assignor of one-sixth to Thomas M. Ridenour and one-sixth to Minnie L. Ridenour, Kingwood, W. Va. Filed Dec. 11, 1925. Serial No. 74,819. 1 Claim. (Cl. 287—90.)



In combination with a ball and socket joint; wherein the joint includes a socket casing having one end open and having a slot, a ball for reception in the socket casing, one end of the slot being larger than the ball to permit insertion of the ball in the casing and the other end being smaller than the ball and long enough to permit the projection of a shank from the ball, a retaining spring in the casing for exerting pressure upon the ball to retain it adjacent the smaller end of the slot, a nut closing the open end of the casing and tensioning the spring to exert pressure upon the ball; of a sleeve rotatably mounted within the socket casing and having one end closed and the other end open and provided with a longitudinally extending slot starting at the open end and terminating a distance from the closed end, the width of said slot being less than the diameter of said ball, said sleeve housing the spring and ball, and said nut being adapted to abut the closed end of said sleeve to tension said spring.

1,628,915. CEMENT-MEASURING AND WATER-PROPORTIONING DEVICE. JOHN F. ROSS, Cleveland, Ohio, assignor to Koehring Company, Milwaukee, Wis. Filed June 22, 1926. Serial No. 117,663. 17 Claims. (Cl. 83—73.)



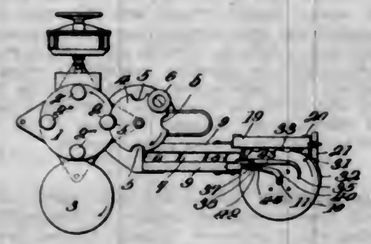
1. In combination, a mixing machine, and a cement and water proportioning means associated therewith comprising a water tank, a cement receptacle, means to supply cement to the receptacle to vary its position according to the weight of the cement therein, a mixing drum, means for supplying water from the tank to the mixing drum, and means for varying the volumetric capacity of the tank in accordance with the movement of the cement receptacle under the influence of cement received in the latter.

1,628,916. HOISTING MECHANISM. GEORGE T. RONK, Fairfield, Iowa. Filed Feb. 24, 1925. Serial No. 11,305. 3 Claims. (Cl. 254—187.)

1. In combination, a supporting frame, a drum shaft, a cable drum rotatively mounted on said shaft, said drum having at one end a brake drum and at its opposite end a driving drum, a driving arm secured to said drum shaft, a lever pivoted to said arm, an external clutch band for said driving drum having one end connected to said driving arm and its other end connected to one end of said pivoted lever, the free end of said lever extending inwardly adjacent to said driving shaft, a conical sleeve slidably mounted on said shaft and designed to engage said pivoted arm to tighten said brake band, an external brake band for said brake drum, a rock shaft, a control lever, means for imparting movement from said control lever to said rock shaft, means for operatively connecting said rock shaft with said conical sleeve, means for operatively connecting said rock shaft with the brake band of said brake drum, the parts being so arranged that when the rock shaft is in one position of its movement the brake band will be drawn taut and the conical sleeve released, and when in another position of its movement the brake band of said brake drum will be released and the conical sleeve moved into contact with said pivoted arm for locking said driving drum and said driving shaft in unison, and a spring for applying yieldable pressure to said brake band.

1,628,917. TROLLEY-SHOE GUARD. WILLIAM SCHAAKE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 26, 1925. Serial No. 18,408. 3 Claims. (Cl. 191—73.)

1. A current-collector device comprising an extensible pantograph frame, a collector shoe secured thereto, and a guard member comprising a transversely extending member secured to the pantograph frame independently of said shoe to constitute a brace, the ends of which terminate in loops.

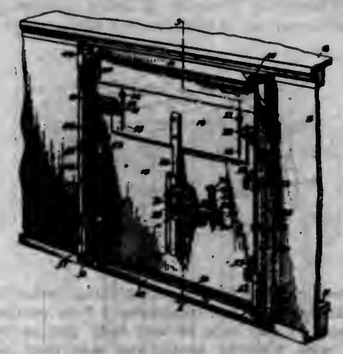


1,628,918. IMITATION DRIFTWOOD AND PROCESS OF MANUFACTURING SAME. CARL E. SCHMIDT, Oscoda, Mich. Filed May 24, 1926. Serial No. 111,452. 7 Claims. (Cl. 41—41.)

1. The method of treating wood containing cellulose and lignose constituents comprising the treatment of the surface of the same with a reagent having a more active solvent action on one of said constituents than on the other, and subsequently removing the parts of the wood affected by the solvent action.

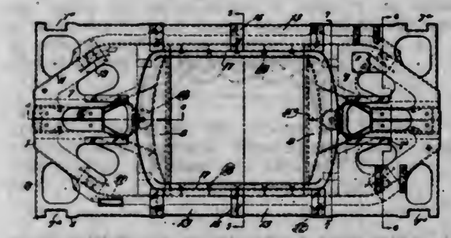
6. An imitation of an aged wood such as drift wood and the like comprising a commercial wood object formed to the desired general configuration, the surface of said wooden object being pitted at places corresponding to the location of the cellulose constituents of the wood.

1,628,919. MECHANISM FOR FEEDING FILLED CANS TO CLOSING MACHINES. MATTHEW M. SEDWICK, Baltimore, Md., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 11, 1924. Serial No. 685,599. 16 Claims. (Cl. 198—22.)



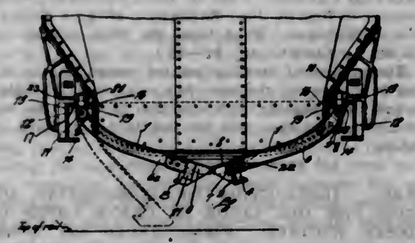
1. In a closing machine, the combination of means for feeding the filled cans in predetermined spaced relation, a rotating disk onto which the filled cans are fed at random, a rotating shaft located above said disk and having a spiral thread for engaging the cans on the disk intermediate the ends of the cans for spacing the cans and delivering the same to said feeding means, a cam ledge associated with said disk for directing the filled cans on the disk into the thread of the shaft and yielding means located on the other side of the cans from said cam ledge for directing one can at a time to said threaded shaft.

1,628,920. DOOR CLOSURE FOR RAILWAY CARS. EDWARD M. SENFTLE and FRANK ECKERT, Buffalo, N. Y. Filed May 21, 1925. Serial No. 31,748. 18 Claims. (Cl. 20—27.)



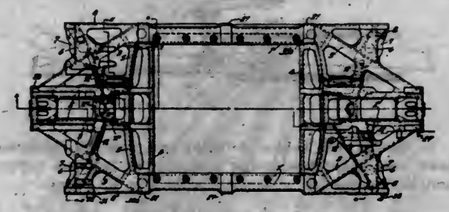
1. A closure for a railway car having a doorway, comprising a carriage mounted for lengthwise movement on the exterior of the car, a door for closing said doorway,

and means for mounting said door on said carriage and constructed to permit of moving said door inwardly and



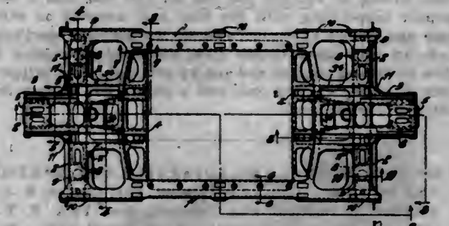
outwardly through said doorway and pressing said door outwardly against the inner side of the car wall.

1,628,921. UNDERFRAME FOR ORE CARS. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed July 21, 1922. Serial No. 576,527. 18 Claims. (Cl. 105—415.)



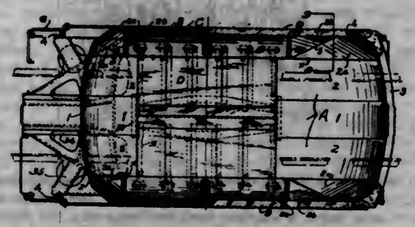
1. A cast steel underframe having a centrally arranged hopper opening, the end walls of which are curved and obliquely disposed.

1,628,922. DUMPING DOOR AND MOUNTING. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Nov. 9, 1925. Serial No. 67,828. 10 Claims. (Cl. 105—250.)



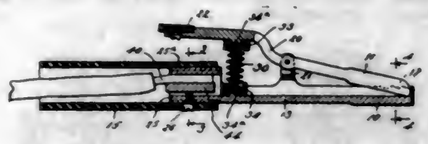
3. In a dumping car door, a beam extending along an edge of the door and including a vertical flange substantially paralleling the door edge but spaced therefrom, there being openings in said flange at intervals along its length, door stiffening members extending transversely of said beam and through said openings, and elements extending transversely of said beam and bracing said edge from said flange intermediate to said stiffening members.

1,628,923. HOPPER-CAR STRUCTURE. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 19, 1925. Serial No. 76,479. 45 Claims. (Cl. 105—415.)



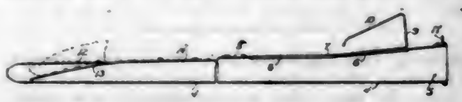
3. In a car framing, a striking plate, side sills, diagonal sills extending inwardly and longitudinally of the underframe from the ends of said side sills to the end of the underframe at a point spaced from the face of said striking plate, and an end post connected to the side of the striking plate in front of the end of said diagonal sill.

1,628,924. CAR UNDERFRAME. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Dec. 28, 1925. Serial No. 77,928. 21 Claims. (Cl. 105—415.)



3. In a one piece car underframe casting, a bolster, bearings on said bolster near the ends thereof for pivotally engaging a truck, and draft sills projecting outwardly from said bolster intermediate said bearings, and bolster reinforcing members extending transversely of the bolster adjacent to said bearings.

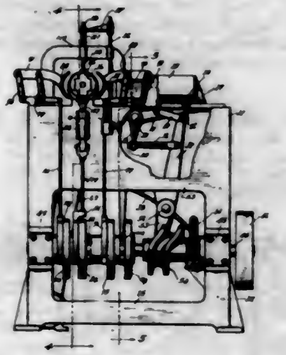
1,628,925. RAILWAY CAR. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of New Jersey. Filed Jan. 7, 1926. Serial No. 79,782. 46 Claims. (Cl. 105—250.)



2. In a hopper car, a car side wall and side floor, an end floor comprising a flat central section, a section on each side of said central section curved toward the side of the car and toward the longitudinal center of the car, and flat sections on the sides of said curved sections extending toward the side of the car and toward the longitudinal center of the car and connected to said side wall and side floor.

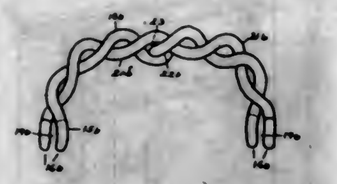
1,628,926. ELECTRODE HOLDER. CLIFFORD F. SHORT, North Long Beach, Calif. Filed Nov. 23, 1925. Serial No. 70,834. 4 Claims. (Cl. 219—8.)

1. An electrode holder including two pivotally connected jaws, one of the jaws being semi-circular in cross section and having notches at opposite points in its edges.



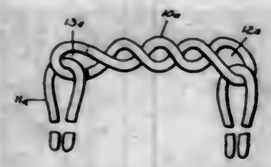
1,628,927. INSTRUMENT FOR INSERTING CONTINUOUS BATS INTO UPHOLSTERY PLAITS. MAURICE JOSEPH STACK, Cohoes, N. Y. Filed Feb. 16, 1926. Serial No. 88,626. 12 Claims. (Cl. 226—44.)

1. An instrument of the class described, comprising a tube having an entrant end and an exit end, and a bat gripper cooperating with the tube and mounted on said tube and located at the exit end for the purposes specified.



2. An instrument of the class described comprising a tube having an entrant end and an exit end, a bat gripper located at the entrant end, and a second bat gripper located at the exit end.

1,628,928. METHOD AND APPARATUS FOR MAKING CAN BODIES. WILLIAM E. TAYLOR, East Orange, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 2, 1923. Serial No. 636,073. 10 Claims. (Cl. 113—12.)



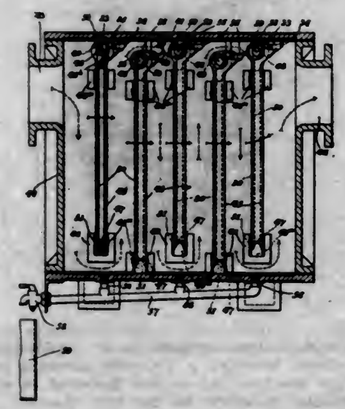
1. A machine for forming can bodies of the lap seam type, comprising a forming horn, a holder for blanks adjacent said horn, a suction feed for removing the blanks downwardly from said holder, means for limiting the movement of said suction feed in accordance with the flexibility of the blank in the position assumed, means for feeding the separated blanks directly to said mandrel, means for arranging the blanks in body form upon the mandrel, and means for welding the blank edges to maintain exact relationship therebetween during a subsequent seam finishing operation.

1,628,929. ANTISKIDDING DEVICE. ALBERT R. THOMSON, Derby, Conn. Filed June 29, 1923. Serial No. 648,584. 6 Claims. (Cl. 152—14.)

4. A tread element for an anti-skidding device formed of wire and hardened and comprising a body portion and end portions at the ends of said body portion for cooperating with terminal hooks, and said body portion being composed of similar parts of wire that are opposed and adjacent and also twisted and that individually extend from end to end of said body portion.

1,628,930. TREAD MEMBER FOR ANTISKIDDING DEVICES. ALBERT R. THOMSON, Derby, Conn. Filed Mar. 26, 1925. Serial No. 18,413. 1 Claim. (Cl. 152—14.)

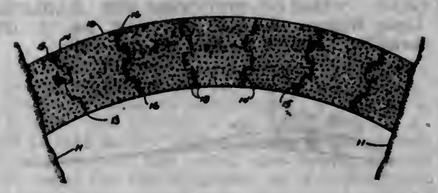
An active tread member for an anti-skidding device made of a single piece of wire that is bent adjacent the middle to provide an open loop and a pair of strands connected to the arms of said loop, the free ends of said strands being swaged to provide a hook structure, the said strands being positioned side by side and twisted, said strands being normally separated one from the other by an open space and the axis of said strands being substantially straight.



1,628,931. PROCESS FOR TREATING WAXED AND PRINTED PAPERS. PAUL H. TODD, Kalamazoo, Mich., assignor to Renard, Inc., Kalamazoo, Mich., a Corporation of Michigan. Filed Sept. 13, 1926. Serial No. 135,281. 9 Claims. (Cl. 92—18.)

1. The process of treating printed waxed papers consisting in submerging the same in a solution of tri-sodium phosphate, and heating with agitation to cause the wax to rise to the surface and the ink to be dissolved, as specified.

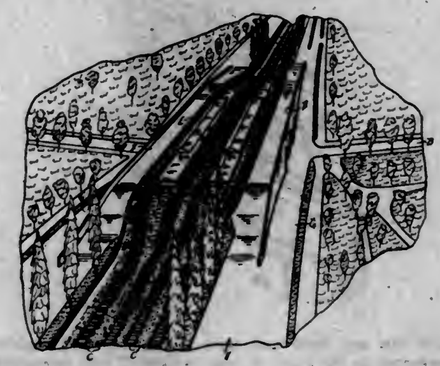
1,628,932. ABSTRACTION OF LUBRICATING OIL FROM THE OIL VAPOR IN CRANK CASES OF DIESEL ENGINES. ROBERT TRAILL and ROBERT STRACHAN, Glasgow, Scotland, assignors to The Fairfield Shipbuilding & Engineering Company, Limited, Glasgow, Scotland. Filed Dec. 7, 1925, Serial No. 73,745, and in Great Britain July 11, 1925. 2 Claims. (Cl. 183—70.)



1. In an internal combustion engine of the Diesel type, apparatus which is accessory to the engine and comprises, in combination, means operated independently of the

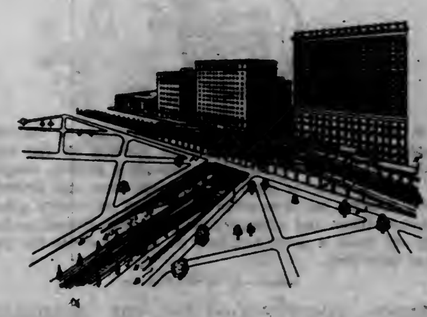
engine for removing oil fog from the crank case continuously, a combined mechanical separator and filter containing filtering media in staggered relationship, the oil vapor being partly arrested within the interstices of the

said media and partly caused to settle to the bottom of the casing therefor, means whereby the oil abstracted is collected and means whereby the clarified air is allowed to pass into the atmosphere.



1,628,933. METHOD OF GROUTING. ARTHUR E. TROIBL, Berkeley, Calif. Filed Nov. 11, 1925. Serial No. 68,272. 4 Claims. (Cl. 72—106.)

1. A method of constructing concrete dams and the like in adjacent units and thereafter grouting the space between such units, consisting of securing a form to the exposed face of the poured unit in a position whereby the adjacent unit will be poured therearound and connected thereto, the shape and arrangement of the form being such as to provide a conduit between the two units, pouring the second unit and permitting the same to set and thereafter grouting the space between the units formed by their shrinkage by forcing liquid cement into the conduit and outwardly therefrom into the said space.

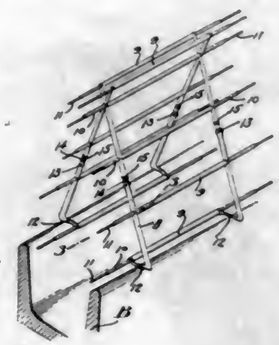


1,628,934. HIGHWAY CONSTRUCTION. DANIEL L. TURNER, New York, N. Y., and JOHN P. HALLIHAN, Detroit, Mich. Filed Aug. 3, 1925. Serial No. 47,978. 7 Claims. (Cl. 104—124.)

3. A highway comprising parallel high speed and low speed lanes having frequent points of inter-communication and at the same grade for the greater part of their extent, a crossing highway at a lower grade than said first mentioned highway, downwardly inclined portions of said low speed lanes forming inter-communication with

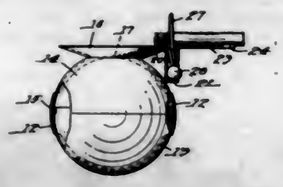
said crossing highway at the grade thereof and upwardly inclined portions of said high speed lanes for passing uninterruptedly over said crossing highway.

1,628,935. SUPERHIGHWAY. DANIEL L. TURNER and JOHN P. HALLIHAN, Detroit, Mich. Filed Aug. 3, 1925. Serial No. 47,974. 4 Claims. (Cl. 104—124.)



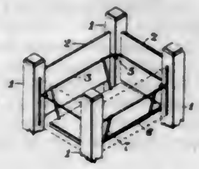
2. A highway crossing construction comprising parallel high speed and low speed lanes extending in one direction, parallel high speed and low speed lanes extending in a transverse direction, the low speed lanes of each highway intersecting at the same level, the high speed lanes of one highway being elevated above said low speed lanes at the point of crossing and the high speed lanes of the other highway being depressed below said low peed lanes at said crossing, upwardly inclined portions connecting the elevated lanes on opposite sides of said crossing, and downwardly inclined portions connecting said depressed lanes on the opposite sides of said crossing.

1,628,936. DRYING RACK FOR BATHTUBS. FRANCES M. TURNER, Minneapolis, Minn., assignor of one-half to Joseph E. Cardarelle, Minneapolis, Minn. Filed Mar. 8, 1926. Serial No. 93,183. 1 Claim. (Cl. 68—84.)



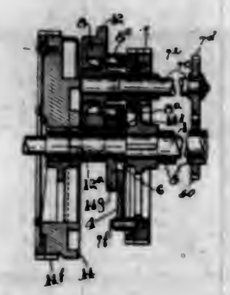
A drying rack applicable to a bath tub and comprising pairs of legs, the legs of each pair being in diverging relation, connected near their upper ends and arranged to straddle a bath tub and be spread or contracted to fit

bath tubs of different widths, the lower ends of said legs being extended laterally inward to afford feet having concave under sides adapted to fit over the rim of the



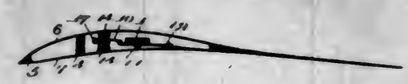
bath tub and hold said legs, and horizontal members connected to the pairs of legs, certain of said horizontal members being connected to the inner ends of the feet.

1,628,937. CIGAR AND CIGARETTE HOLDER. BERNARD E. WALBERG, Worcester, Mass. Filed June 17, 1926. Serial No. 116,729. 5 Claims. (Cl. 131—51.)



5. As an article of manufacture, a cigar or cigarette holder comprising a pair of arms pivoted on the same axis each having an upwardly extending portion adapted to grasp a cigar or cigarette between them and provided with weights on them adapted to hold an article placed between them, and a substantially horizontal rest projecting out from a point adjacent to the pivot for the purpose described.

1,628,938. CONSTRUCTION FOR THE ASSEMBLING OF BOX-LIKE STRUCTURES, SUCH FOR EXAMPLE AS BOXES, TABLES, AND THE LIKE. GEORGE P. WASHBURN, Portland, Oreg. Filed Apr. 9, 1925. Serial No. 21,878. 6 Claims. (Cl. 217—43).

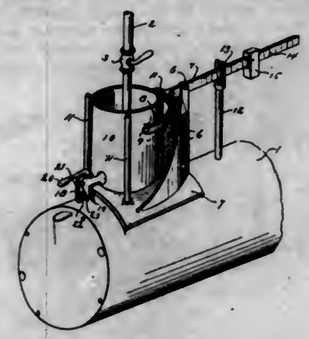


6. A tee box comprising mortised corner members serving as legs, side members tenoned for engagement with said corner members, a loop member peripherally disposed inside said box and capable of resisting tensional stresses, angle members engaging said loop member, screw means for drawing said corner members diagonally inward, and a closure member and means engaging said loop member for holding the closure member.

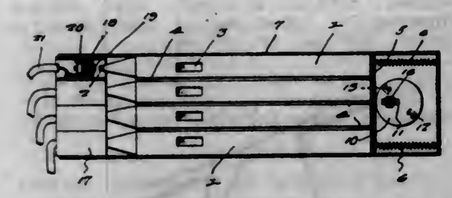
1,628,939. VARIABLE-SPEED MECHANISM. JOHN HARRY WELLS, Boston, Mass., assignor to Multisize Rotary Press Co., Limited, Toronto, Canada. Filed Sept. 24, 1925, Serial No. 58,433, and in Canada Sept. 30, 1925. 14 Claims. (Cl. 74—7.)

1. In variable speed mechanism the combination of a rotary driven member; a rotatably mounted carrying member; a speed-varying member journaled on said carrying member eccentric to the axis thereof; gearing between said speed-varying member and the driven member; means including a ratchet device for imparting a stepwise rotary movement to the speed-varying member during one portion of each revolution of the carrying member whereby the speed of the rotary driven member is varied relative to the speed of the carrying member; means including a cam adapted to co-operate with the speed-varying member to gradually absorb the momentum thereof at the end of its partial revolution; and means for positively locking the speed-varying member from rotation on its axis during the other portion of each revolution of the carrying member while the speed varying member is not being moved by the ratchet device.

1,628,940. WING CONSTRUCTION FOR AIRPLANES. JACOB WENGER, Highland, Ill. Filed Jan. 7, 1925. Serial No. 1,082. 3 Claims. (Cl. 244—12.)



1. An airplane wing having a relatively fixed support, means constituting a mounting for the wing being rigidly secured to the support and permitting free vibration of the wing, and means including a lever carried by the support being so movable in respect to parts of the wing as to progressively regulate the freedom with which said vibrations may take place.



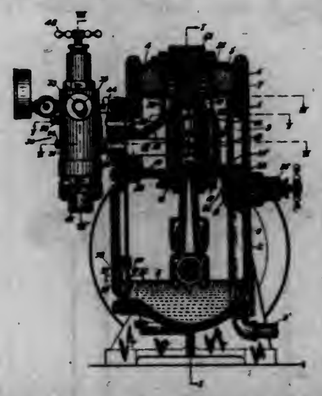
1,628,941. ICE-CREAM MACHINERY. GEORGE HALL WHITE, Washington, D. C., assignor to George P. Sacks, Bradley Hills, Md. Filed Apr. 16, 1921. Serial No. 462,068. 12 Claims. (Cl. 249—54.)

1. The combination with an ice cream freezer of a mix control device including a receptacle and a scale beam to one end of which said receptacle is connected, a feed pipe leading into said receptacle, means controlled by the position of the receptacle for governing the supply from the feed pipe to the receptacle, a discharge pipe leading from the receptacle, a manually operable valve in said pipe, the freezer being formed

with an opening to receive the discharge pipe when the commodity receptacle is depressed, and means operated in the opening movement of the manually operable valve when the receptacle is depressed to lock the receptacle to the freezer.

1,628,942. SPARK-PLUG TESTER. WILLIAM G. WILLIAMS, Kingwood, W. Va., assignor of one-half to Arthur Gribble, Kingwood, W. Va. Filed Oct. 7, 1924. Serial No. 742,170. 2 Claims. (Cl. 175—183.)

1. In a spark plug testing device of the class described, a casing of elongated form, said casing being substantially flat and oblong in cross section, a plurality of sleeves fitted into one end of the casing, contacts arranged in said sleeves, conductor wires connected with said contacts, and a plug testing unit slidably mounted in the casing, said unit being made up of a plurality of conventional self contained spark plug testers arranged in side by side abutting relation, each tester comprising a body having a contact at one end cooperable with the adjacent one of the first named contacts, a sight opening for a spark gap, a transparent closure for the sight opening, means connecting all of said testers together to group them together forming said unit, and means in such casing for sliding said unit to render said testers effective.

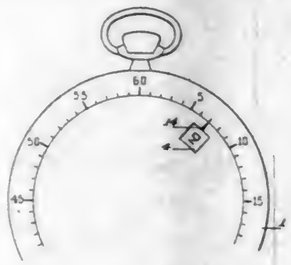


1,628,943. APPARATUS FOR PUMPING LIQUIDS. EDSON R. WOLCOTT, Los Angeles, Calif. Filed Oct. 16, 1924. Serial No. 743,972. 8 Claims. (Cl. 103—235.)

1. A liquid pump comprising a plurality of working chambers located contiguously one above another so as to form a substantially continuous series of such chambers, a liquid conducting passage extending within and substantially coterminous with each of said working chambers, each of said liquid conducting passages communicating at its lower and upper ends respectively with the next higher working chamber, check valve means in each of said liquid conducting passages permitting only upward flow of liquid therethrough, means for creating relatively high pressure and relatively low pressure in alternate working chambers, and means for periodically

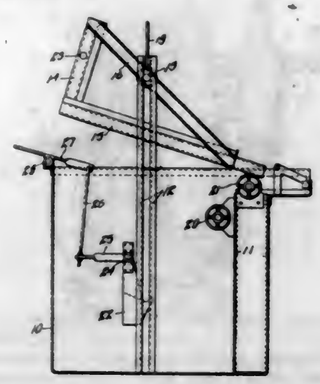
changing the condition in each working chamber from relatively high pressure to relatively low pressure, and vice-versa.

1,628,944. COMPRESSOR FOR REFRIGERATING APPARATUS, FRANCIS E. WRIGHT, Cleveland, and RALPH M. WARNER, East Cleveland, Ohio. Filed Feb. 1, 1924. Serial No. 689,838. 9 Claims. (Cl. 230—6.)



1. In a compressor, the combination with an exterior housing comprising a body member and a removable top; of a cylinder within said body member provided with a gas inlet and a gas outlet; said body member being provided with interior walls forming a crank chamber and a chamber separate from said crank chamber communicating with said outlet; said separate chamber being provided with an oil pocket having a valve-controlled outlet discharging into said crank chamber below the lower end of said cylinder.

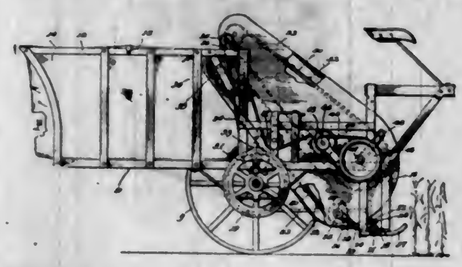
1,628,945. COMPOSITION FOR TREATING FRUIT AND THE LIKE. ERNEST M. BROGDEN, Santa Monica, Calif., assignor to Brogdex Company, Winter Haven, Fla., a Corporation of Florida. Filed Aug. 9, 1924. Serial No. 731,207. 11 Claims. (Cl. 99—8.)



1. As a new article of manufacture, a composition useful especially for preservatively coating fruit and the like which comprises a waxy material and a liquid vehicle consisting principally of kerosene, mixed together in such proportions that it can be spread on fruit to produce a film coating of paraffin thereon, said composition being free of ingredients harmful to fruit.

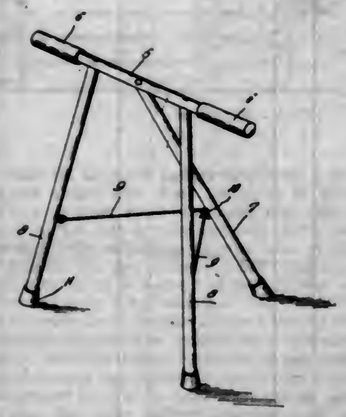
1,628,946. TIME-INDICATING DEVICE. GEORGE H. BROWN, Paris, France. Filed Apr. 19, 1926, Serial No. 103,111, and in France Mar. 11, 1926. 4 Claims. (Cl. 58—127.)

1. A device for indicating time comprising in combination a first dial fixed and graduated, a second movable dial mounted on the same axis as the first dial, a window in the movable dial and means connected to the movable dial provided with numbers, and means for presenting the numbers abruptly and successively in registry with said window.



1,628,947. COMBINED THAWING TANK AND DUMPING APPARATUS. LEON BUEHLER, Jr., and NORMAN M. SMALL, Waynesboro, Pa., assignors to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed July 2, 1925. Serial No. 41,218. 7 Claims. (Cl. 62—105.)

1. The combination of a thawing tank having an outlet, a cage for cans movable up and down in the tank, means adjacent one side of the cage for guiding it in its up and down movement said means permitting the cage to tilt to one side at the upward limit of its movement for dumping the cakes of ice from the cans, and connections whereby the cage may be raised and lowered, said connections being arranged to permit vertical loading of the cans into the cage substantially as set forth.

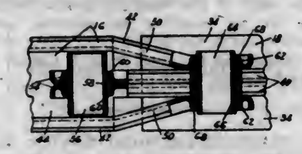


1,628,948. HARVESTER. LOUIS CARTER, Marston, N. C. Filed July 27, 1923. Serial No. 654,228. 1 Claim. (Cl. 56—158.)

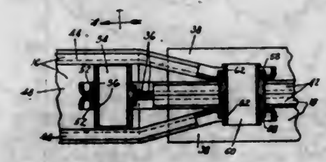
A harvester comprising a frame having a forward depending portion, an axle intermediate the ends of the frame, wheels at the ends of the axle, an upwardly and rearwardly inclined casing at the front of the frame having its lower end close to the ground and open and provided in opposite sides with arcuate slots, said casing being entirely enclosed with the exception of the entrance at the lower end and a discharge at the upper end, cutting and gathering mechanisms at the lower end of the depending portion of the frame opposite the opening of the casing, upper and lower conveyer belts completely housed within the casing to receive the harvest from the cutting mechanism and deliver it through the

upper end of the casing, the lower end of the upper conveyer being supported on a shaft which is adjustable in the said arcuate slots, drive mechanism for the conveyers disposed at one side of the casing and connected to one of the wheels, and drive mechanism for the cutting mechanism located at the opposite side of the casing and connected to the other wheel, both drive mechanisms being independent of each other and disposed exterior of the casing.

1,628,949. INVALID SUPPORT. MARY CATHRINE, Galesburg, Ill. Filed Mar. 31, 1926. Serial No. 98,811. 3 Claims. (Cl. 272—63.)



1. In an invalid support of the class described, a horizontal handle bar, adapted to be disposed in front of the user, a leg extending downwardly and directly forwardly from the handle bar intermediate the ends thereof, and an additional pair of leg members extending downwardly and rearwardly from the respective ends of the handle bar.



1,628,950. BRAKE. OTTO B. CLARK, Evansville, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 23, 1926. Serial No. 124,318. 8 Claims. (Cl. 188—250.)

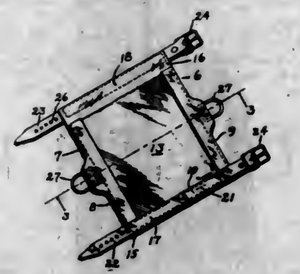
2. A brake comprising, in combination, a shoe having a cylindrical friction part and a pair of spaced arms projecting beyond and within the curve of said friction

part, a separate bushing secured to said arms at their end and serving as a connection between the arms, a pivot anchor for the shoe received in said bushing, and a second shoe having a cylindrical friction part and having an anchoring arm extending beyond and within the curve of the friction part and projecting through the opening defined by said arms and said bushing and by the end of the friction part of the first shoe.

1,628,951. BRAKE SHOE. OTTO B. CLARK, Evansville, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed July 28, 1926. Serial No. 125,464. 5 Claims. (Cl. 188—250.)

5. A brake shoe having two portions formed with alined openings, a bushing in said openings having shoulders adjacent said portions and facing away from the center of the shoe with the metal of said portions of the shoe about the openings displaced over the shoulders of the bushing to lock the bushing permanently to the shoe.

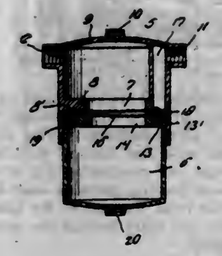
1,628,952. TREATMENT OF FURNACE GASES TO RECOVER ZINC OXIDE. JOHN F. CREGAN, Pueblo, Colo., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 12, 1922. Serial No. 581,231. 8 Claims. (Cl. 23—148.)



3. The process of forming zinc oxide, which consists in forming in a reverberatory furnace a zinc fume, subjecting said fume to a reducing atmosphere at a high temperature by adding thereto an excess of reducing gas, to reduce oxides formed during smelting, and then oxidizing the fume.

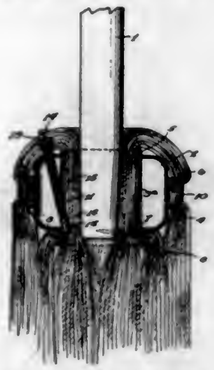
1,628,953. PROCESS OF MAKING ZINC OXIDE. JOHN F. CREGAN, Pueblo, Colo., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 25, 1924. Serial No. 745,794. 18 Claims. (Cl. 23—148.)

1. The process of producing zinc oxide directly from zinc bearing material, which comprises smelting the material, passing the distilled zinc vapor to a settling chamber to settle out foreign material, removing said vapor and mixing air therewith, then conducting said mixture into a burning chamber and permitting combustion therein to convert the zinc vapor into oxide.



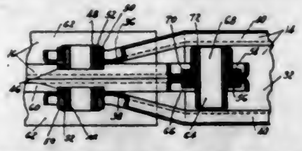
1,628,954. CARD-DISPLAY RECEPTACLE FOR AUTOMOBILES. HANSON H. DEDMON, Berkeley, Calif. Filed Dec. 29, 1923. Serial No. 683,370. 5 Claims. (Cl. 40—10.)

1. A card display receptacle for automobiles comprising a compartment having a flexible back wall, edge members arranged on said back wall forming pockets along adjacent edges thereof, a flexible transparent front wall having its edge portions disposed in said pockets, an edge



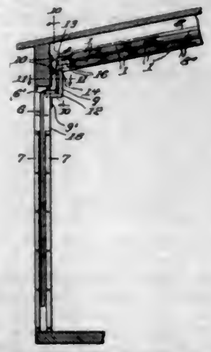
member fixed to said back wall and adapted to be folded over an edge of said front wall, and means for securing the receptacle in flexed position around the steering post of said automobile.

1,628,955. OIL FILTER. JOHN W. DE PRIES, McCoy, Oreg. Filed May 12, 1926. Serial No. 108,570. 1 Claim. (Cl. 210—165.)



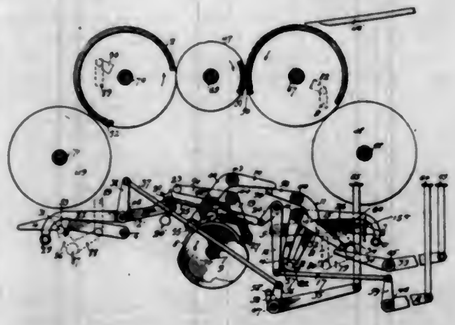
In an oil filter of the class described, a pair of interfitting cylindrical filter chamber sections arranged in superposed relation, the upper section being formed with inlet and outlet openings adjacent the top thereof, the adjacent bottom and top wall of the upper and lower sections being formed centrally with registering openings, the adjacent faces of said walls being formed with oil channels arranged concentrically of the openings, a filter screen arranged horizontally between the bottom and top walls of the upper and lower sections respectively, and consisting of a metallic ring, and a filter screen within the center thereof, said ringe being formed with spaced openings adapted to register with the aforementioned oil channels, the top wall of the lower section being formed with openings in registration with the openings in said filtering ring for permitting the oil to pass into the lower section, and a pipe formed within the upper section for delivering the oil from the inlet opening to the oil channel in the bottom wall of the upper section, the oil thence passing through the openings in the filter ring and the lower section top wall into said lower section and thence upwardly through the filter screen into the upper section, and then through the outlet opening of said upper section.

1,628,956. FOUNTAIN MOP. LESTER DOAK, McMinnville, Tenn. Filed Mar. 17, 1926. Serial No. 95,402. 5 Claims. (Cl. 15—138.)



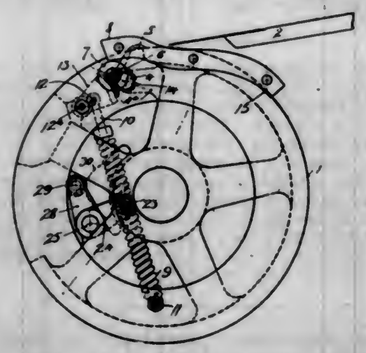
1. A mop comprising an annular fount provided with an outlet in its inner wall, thrums passing through the opening of the fount and extending across the outlet in the inner wall thereof and a handle set into the opening of the fount and serving to secure the thrums therein.

1,628,957. BRAKE SHOE. ADIXL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1926. Serial No. 139,388. 8 Claims. (Cl. 188—250.)



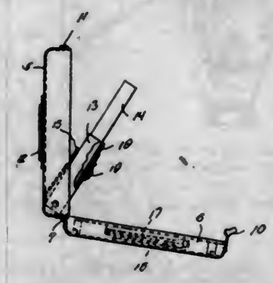
8. A brake shoe having at its end a pair of spaced stiffening webs formed with co-axial openings in combination with a pair of pivot bushings having flanges engaging the faces of the webs and bearing portions projecting through the openings, and reinforcing and retaining members sleeved on said bearing portions and engaging the opposite faces of the webs, the end of the bearing portion being displaced over the outer face of the retaining member to hold it in place.

1,628,958. GRAIN DOOR. EUGENE DUGAW, Tacoma, Wash. Filed May 17, 1926. Serial No. 109,700. 5 Claims. (Cl. 20—34.)



1. In combination with a car and its doorway, a grain door comprising a plurality of sections, each section having a socket in its lower edge and a reduced upper edge, the reduced edge of one section fitting in the socket of the other section, a projection at each end of each section, a track at each side of the doorway engaged by the projections, guideways at the sides of the doorway terminating short of the upper end of the doorway for receiving the ends of the sections, double tracks at the top of the car for receiving the sections, latches for holding the sections in the double track parts and a track section for connecting the track in each side of the doorway with each double track part.

1,628,959. CYLINDER-TRIPPING DEVICE FOR MULTICYLINDER PRESSES. FRED S. ENGLISH and THOMAS L. PERRY, New London, Conn., assignors to The Babcock Printing Press Manufacturing Company, New London, Conn., a Corporation of Connecticut. Filed June 12, 1922. Serial No. 567,694. 15 Claims. (Cl. 101—184.)

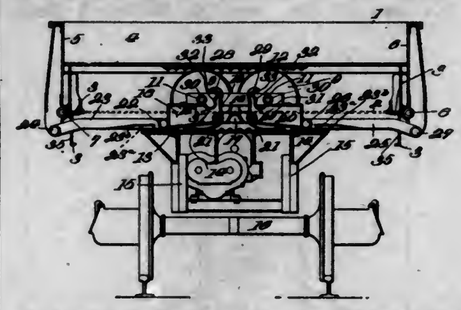


1. In a press the combination of means for tripping a cylinder, power means for operating the same, manual means for initiating the operation of the tripping means, and means whereby the cylinder may be tripped through said initiating means after the later is operated too late for said power means.

1,628,960. GRIPPER-TENSIONING MECHANISM FOR PRESSES. FRED S. ENGLISH and THOMAS L. PERRY, New London, Conn., assignors to The Babcock Printing Press Manufacturing Company, New London, Conn., a Corporation of Connecticut. Filed May 6, 1925. Serial No. 28,355. 5 Claims. (Cl. 101—409.)

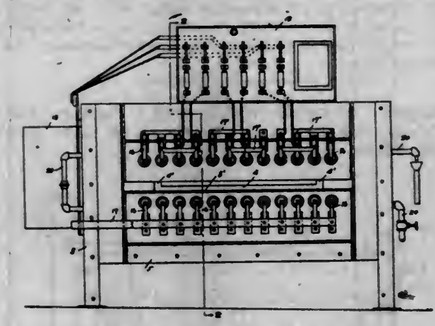
1. In a press the combination of a cylinder, grippers thereon adapted to engage and hold a sheet for movement with the cylinder, means for operating the grippers to engage and hold the sheet, and means for applying an auxiliary or additional closing pressure upon said grippers at the moment they are closed upon the sheet and adapted to automatically release said auxiliary pressure before the grippers are opened, said auxiliary means including a spring for exerting closing pressure on the grippers.

1,628,961. BATHER'S CIGARETTE AND MATCH CASE. GEORGE H. EYER and ELWOOD S. SNYDER, Nutley, N. J. Filed Aug. 26, 1926. Serial No. 131,703. 1 Claim. (Cl. 206—38.)

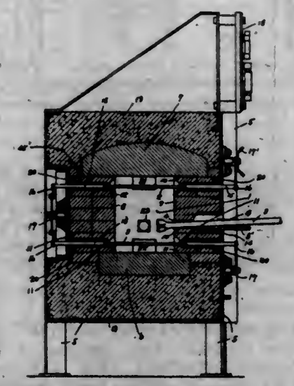


In a cigarette and match case for bathers, a pair of hingedly interconnected case sections, means whereby the sections may be secured in closed relation, means whereby the case may be supported upon the suit of the bather means within one case section for facilitating the attachment of a package of matches therein, a holder for cigarettes pivotally disposed within the other case section, means within the case section for swinging said holder outwardly of the sections when the case is open, the front face of said cigarette holder being provided with coin receiving depressions, and means at the lower ends of the depressions for rigidly securing the coins therein.

1,628,962. LINGERIE CLASP. ESTELLA M. FLETCHER, Portland, Oreg. Filed Aug. 28, 1926. Serial No. 132,180. 2 Claims. (Cl. 24—78.)

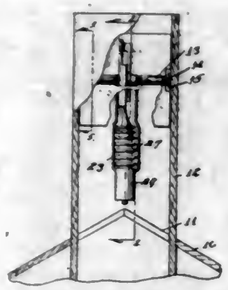


1. In a device of the character described, the combination of a body portion bent over midway its ends, projections formed upon the inner side of one of the end sections, a hook formed upon one of the end sections adapted to engage with, and maintain the end section of the opposite side in intimate contact therewith, a projection formed along one side of one of the end sections, an engaging element associated with the projection and a tab associated with the engaging element.

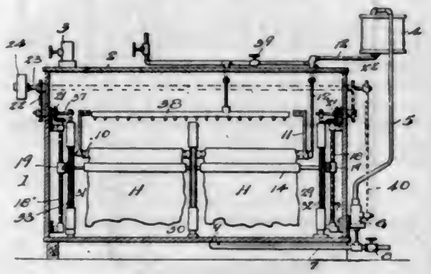


1,628,963. DUMP CAR. HENRY FORT FLOWERS, Findlay, Ohio. Filed Nov. 6, 1923. Serial No. 673,115. 14 Claims. (Cl. 105—269.)

1. A dump car including a body adapted to be moved laterally and tilted for dumping, means for moving said body laterally and subsequently tilting the body to dump the contents thereof, a door at the side of said body, and means operated by the lateral movement of said body for opening said door.



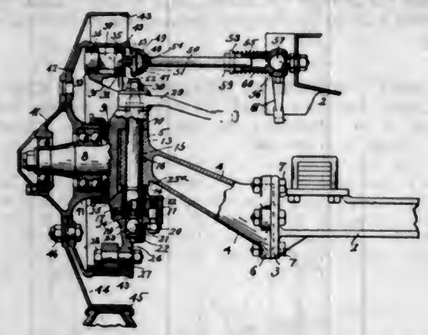
1,628,964. DRILL-HEATING FURNACE. HAROLD K. FOX, Fresno, Calif. Filed Mar. 15, 1926. Serial No. 94,642. 6 Claims. (Cl. 204—64.)



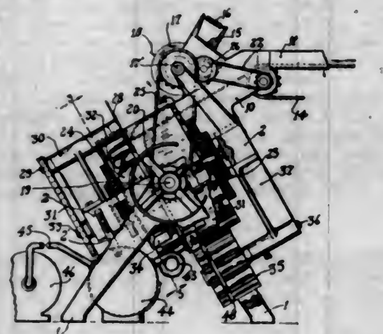
1. A furnace provided with means for heating the same and a slot in the side of the furnace adapted for the insertion of tools to be heated for passage along the slot said slot having enlargements at spaced points for the passage of the heads of the tools and a restricted portion to prevent their withdrawal connecting the enlargements.

1,628,965. VENTILATOR. HENRY GIESE, Ames, Iowa, assignor to Iowa State College of Agriculture and Mechanic Arts, Ames, Iowa, a Corporation of Iowa. Filed Apr. 28, 1926. Serial No. 105,193. 4 Claims. (Cl. 236—49.)

1. In combination, a building having an upright ventilating flue, a damper for opening and closing said flue, a temperature controlled mechanism, means actuated by said temperature controlled mechanism for moving said damper from a partially closed position to an open position, or vice versa, through a certain predetermined temperature range, means for locking said damper in its open position at times when the temperature rises above said predetermined temperature range and for locking said damper in its partially closed position at times when the temperature falls below said predetermined temperature range.



1,628,966. TANNING APPARATUS. CHARLES JOHN GLASEL, New York, N. Y. Filed Sept. 16, 1919. Serial No. 324,191. 5 Claims. (Cl. 149—9.)



1. The step in the art of treating folded hides which consists in supporting the hides in a container, separately injecting a liquid solution onto the inner sides of the folded hide and the outer sides of the folded hide, working the hide by mechanical action in the presence of the solution, and withdrawing the liquid solution from the container.

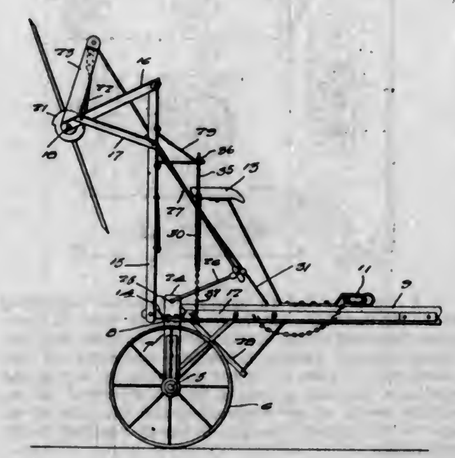
1,628,967. BRAKE-ACTUATING DEVICE. GILBERT C. GOODE, East Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 25, 1922. Serial No. 603,245. 4 Claims. (Cl. 188—194.)

1. The combination with a vehicle having a steering wheel mounted upon a spindle pivoted to swing about a vertical axis, of a brake drum carried by the wheel, a brake shoe and a brake shoe actuating member supported on said spindle, and means for actuating said brake shoe from the vehicle frame comprising an operating shaft comprising two telescopically connected sections, a compression spring interposed between said shaft sections, one of said shaft sections having a universal joint connection with said brake shoe actuating member and the other of said shaft sections having a universal joint connection with a part fixed to the vehicle frame, said spring acting to press said first mentioned shaft section toward said actuating member.

1,628,968. FISH EVISCERATOR. JAMES A. GRAY, San Francisco, Calif, assignor to American Can Company, San Francisco, Calif., a Corporation of New Jersey. Filed June 16, 1925. Serial No. 37,441. 21 Claims. (Cl. 17—4.)

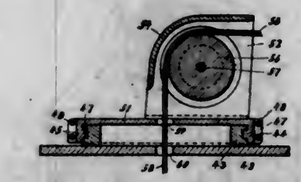
1. A fish cutting and cleaning apparatus comprising a movable fish carrier, means for retaining the positioned fish thereon, means for successively acting on the positioned fish to cut the same to expose the entrails, air pressure means with which the cut fish are successively aligned for acting thereon to remove the entrails therefrom, and means actuated by the cut fish on aligning with the air pressure means for controlling its operation.

1,628,969. SHANK REENFORCEMENT. ROBERT J. GRIESEDIECK, St. Louis, Mo. Filed Aug. 21, 1922. Serial No. 583,384. 2 Claims. (Cl. 36—76.)



1. In a device of the character described, a sheet-like body having a longitudinal stiffening rib on its upper side, said rib being severed transversely and the segments thereof normally abutting each other.

1,628,970. COMPOSITION FOR WASHING CLOTHES OR OTHER FABRICS. CHRISTIAN B. HAGEN, Marshalltown, Iowa. Filed June 8, 1920. Serial No. 387,433. 2 Claims. (Cl. 87—5.)

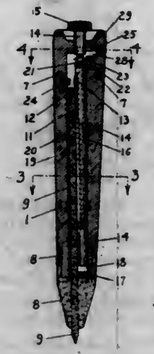


1. A composition for washing clothes or other fabrics, consisting of fire clay, sodium chloride, chloride of lime, and ultramarine blue.

1,628,971. HAY-BUNCHING RAKE. ERNEST F. HALLIDAY, Bishop, Calif. Filed May 19, 1925. Serial No. 31,387. 1 Claim. (Cl. 56—380.)

In combination, a wheeled supporting structure, a frame pivotally mounted on the supporting structure, a rake rotatably mounted in the frame, means for rotating the rake when desired, a pair of brackets projecting from the frame, rods piercing openings provided in said brackets, nuts on the ends of said rods, springs engaged on the ends of said rods, chains engaged on the ends of said springs and engaged with the wheeled supporting structure, said springs being tensioned to urge said frame to a raised position.

1,628,972. ROTATABLE BLOCK HOUSING. LORENTZ EMIL HANSEN, Bergen, Norway. Filed June 16, 1923, Serial No. 645,840, and in Norway June 28, 1922. 2 Claims. (Cl. 212—70.)

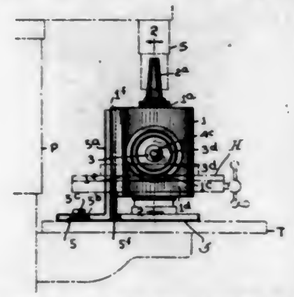


1. In combination with a crane having a hollow mast, a circular guide secured at the upper end of said mast, said guide being provided with a peripheral groove, a cover plate adapted to cooperate with said groove for rotation therein, a housing on said plate and a sheave in said housing, said housing, plate and guide being provided with openings to permit a cable to be passed over said sheave and through said mast.

1,628,973. DOUBLE-SWIVEL HANGER AND SUPPORT FOR PUNCHING BAGS AND THE LIKE. WILLIAM REES HARLEY, Los Angeles, Calif. Filed May 8, 1923. Serial No. 637,431. 8 Claims. (Cl. 272—78.)

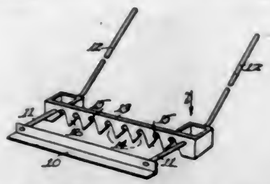
2. A hanger having a shank; a swivel nut detachably and adjustably attached to said shank; a hollow bushing in which said shank and nut are movably mounted; a cylinder having a seat in which said bushing is mounted; and a support for said cylinder.

1,628,974. LEAD PENCIL WITH EXTERNAL FEED. CHARLES F. HARTMAN, Los Angeles, Calif. Filed Sept. 29, 1925. Serial No. 59,313. 9 Claims. (Cl. 120—17.)



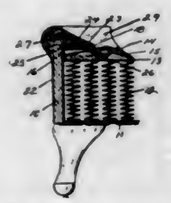
1. In a device of the class described, a shell consisting of two halves, a longitudinal slot of oblong cross section adapted to guide a marking element in said shell in conjunction with a longitudinal slot of circular cross section adjacent thereto, a turnable rod having a ratchet face mounted in said round slot, a tip portion with a collar uniting at one end the two halves of the shell and provided with an aperture aligned with said oblong slot through which to project said marking element, a shoe adapted to grip one end of said marking element, said shoe having a projecting pawl adapted to engage said ratchet face of said rod, to provide a feeding means to propel the marking element toward the point of the pencil.

1,628,975. MILLING ATTACHMENT. OMAR HAWKINS, Leesburg, Ind. Filed Feb. 19, 1926. Serial No. 89,344. 2 Claims. (Cl. 90—12.)



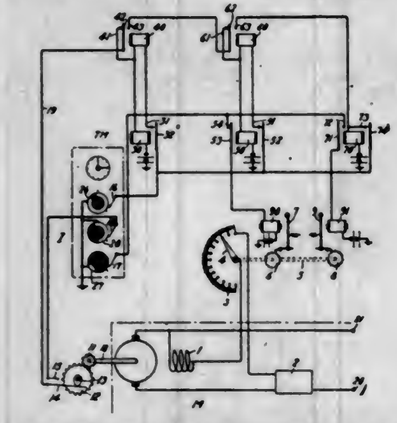
1. In a portable milling attachment for drill presses in combination, a drive shaft adapted to be fixedly secured to the machine tool spindle and having a housing mounted thereon, a rotary cutter shaft mounted within the housing having its axis of rotation angularly dis-

posed with respect to the axis of rotation of the drive shaft, operative connections between the drive and cutter shafts comprising beveled pinions secured to the said shafts and meshing with each other, means adapted to preclude lateral movement of the milling attachment,



said means comprising a base plate adapted to be fixedly secured to the machine tool table and provided with an integral perpendicularly disposed bracket arm having a dove-tailed sliding connection with the aforesaid housing.

1,628,976. TOOL FOR BENDING METAL FABRICS. CHARLES W. HAWTHORNE, Shrewsbury, Mass., assignor, by mesne assignments, to The Chase National Bank of the City of New York, trustee, New York, N. Y. Filed Oct. 20, 1923. Serial No. 669,836. 3 Claims. (Cl. 81—15.)

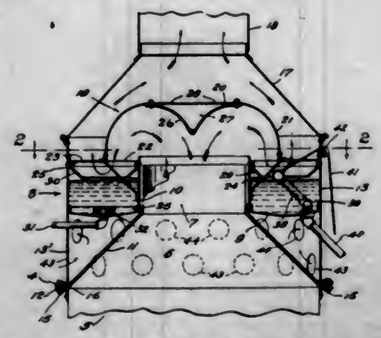


1. A tool for bending metal fabric comprising a fabric engaging cross bar, operating means fixed thereto, and a fabric lifting bar mounted on said operating means said lifting bar having a plurality of spaced hook-shaped projections to engage and lift portions of the fabric, and said projections having V-shaped lower ends facilitating application of said bending tool to the metal fabric.

1,628,977. UPHOLSTERED BOX-SPRING STRUCTURE. EMIL H. HERENSTREIT, Milwaukee, Wis. Filed Dec. 11, 1925. Serial No. 74,699. 10 Claims. (Cl. 155—184.)

1. A box spring with a frame structure having rigid side walls and having an outer cover provided with upper marginal portions inwardly extended over the upper edges of said side walls, and a yielding support for said marginal portions of the cover located at a substantial distance inwardly from the upper margin of said rigid side walls, said support having connections with the box walls adapted to permit relatively yielding movement with reference thereto, said support being relatively unyielding with reference to the springs.

1,628,978. AUTOMATIC REGULATOR FOR ENERGY TRANSFORMERS. RALPH E. HEASLEY, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 6, 1923. Serial No. 655,803. 7 Claims. (Cl. 172—293.)

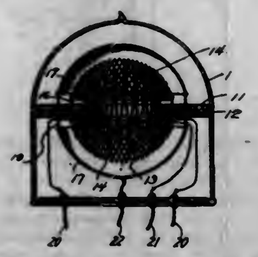


1. A regulator for an energy-transformer comprising means for indicating any desired unit of time, an interrupter operated at the expiration of each time unit controlled thereby, another interrupter controlled by said transformer, a train of relays controlled by said second mentioned interrupter, and a circuit controlled by the conjoint action of the interrupters and the train of relays for varying the amount of energy supplied to the transformer.

1,628,979. PROCESS OF UTILIZING FLEXIBLE MOLDS FOR PRODUCING SPONGE-RUBBER ARTICLES. HARRY M. HOOD, Chicago, Ill., assignor to Featheredge Rubber Company, Inc., a Corporation of Illinois. Filed July 21, 1925. Serial No. 45,134. 6 Claims. (Cl. 18—53.)

1. The process of producing sponge rubber bodies of extended length, which comprises the step of curing a strip of sponge rubber compound in a flexible mold of substantially greater cross sectional area than the cross sectional area of such compound.

1,628,980. DRAFT REGULATOR. FREDERICK T. HOPE, Seattle, Wash., assignor of one-fourth to George A. Meagher, Seattle, Wash. Filed Aug. 4, 1924. Serial No. 730,046. 7 Claims. (Cl. 110—147.)



1. In a draft controller for stacks, a water tank surrounding the stack in spaced-apart relation, a smoke uptake mounted on said tank, a hood located within said uptake and extending over the stack and a portion of the tank, said hood having vent holes in the top thereof and a hollow conoidal deflector detachably connected to and depending from the top of the hood, the chamber within said deflector having direct communication through said vent holes with the space thereabove in said uptake.

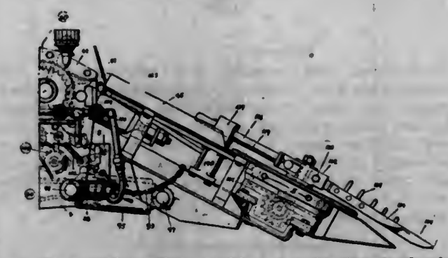
1,628,981. PACKAGE OF PAPER NAPKINS, TOWELS, AND THE LIKE. PAUL H. HORWITT, Brooklyn, N. Y., assignor to Independent Paper Mills, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,162. 1 Claim. (Cl. 206—57.)

A combined package and dispenser for paper napkins, each of which is folded to have a longitudinally extending free edge comprising a container the top of which is partly cut away for forming an opening through which the longitudinally extending free edge of the uppermost napkin in a pile of folded napkins is accessible for individual withdrawal, the four edges of said opening being formed by inwardly extending flanges which act to confine the napkins, one end of the package, adjacent said opening, being slotted, a manually operated cover, slidable in the slot beneath said flanges, over the pile of napkins, for protecting the napkins from dust and dirt, and movable to uncover the uppermost napkin to allow manual withdrawal thereof, and a hinged end flap, one edge of which is tucked in under one of said flanges, permitting loading of the receptable from the end.

1,628,982. ELECTRON-DISCHARGE DEVICE. ROBERT I. HULSIZER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 28, 1921. Serial No. 473,441. 3 Claims. (Cl. 250—27.5.)

1. An electron discharge device comprising an enclosing vessel, an apertured plate supported in said vessel, a filamentary cathode wound to present a substantially spherical surface supported by said plate within the aperture, and a pair of substantially semi-spherical electrodes supported from said plate at opposite sides thereof substantially concentric with said cathode.

1,628,983. ELECTRICAL NETWORK. KENNETH S. JOHNSON, Jersey City, N. J., assignor to Western Electric Company, Incorporated, N. Y., a Corporation of New York. Filed July 9, 1923. Serial No. 650,288. 9 Claims. (Cl. 178—44.)



1. A network connection between a transmitting impedance of one absolute value and a receiving impedance of a different absolute value, said network having arms the impedance of each of which is such a function of the absolute values of said terminal impedances and of a single other finite quantity, which quantity is the same in the case of each arm, that said network is capable, when connected between said impedances, of presenting to each of said absolute impedances an absolute impedance equal thereto, at a given frequency.

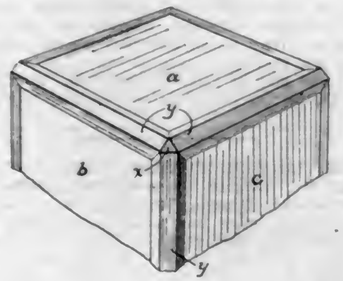
1,628,984. RUNNER FOR CURTAIN RODS. ROBERT CRAWFORD JOHNSON, Leicester, England. Filed Mar. 26, 1925, Serial No. 18,372, and in Great Britain July 16, 1924. 5 Claims. (Cl. 156—20.)

1. The combination with a supporting rod and ordinary runners slidable thereon, of a separate reeving member provided with means for attaching a reeving cord thereto, and with attaching means for detachably securing it to an ordinary runner, and said ordinary runners each being provided with a portion to be engaged by said attaching means for detachably securing said reeving member in operative relation therewith, whereby said reeving member may be placed in operative engagement with one or other of said ordinary runners to convert it into a master runner, and may be removed therefrom, without disengaging the reeving cord from said separate reeving member.

1,628,985. LOADING MACHINE. JOSEPH F. JOY, Pittsburgh, Pa., assignor, by mesne assignments, to Joy Manufacturing Company, Franklin, Pa., a Corporation of Delaware. Filed Mar. 3, 1924. Serial No. 696,689. 4 Claims. (Cl. 198—10.)

1. In a coal loading machine, a gathering mechanism including a gathering conveyor, adapted to gather coal from the floor of a mine, a vertically flexible main gathering finger arranged in normal parallel relation to the upper face of said gathering conveyor means causing the coal gathering actuation of said finger, and an auxiliary smaller finger rigidly carried by said main finger positioned at the outer side of and terminating inwardly of the free end of said main finger.

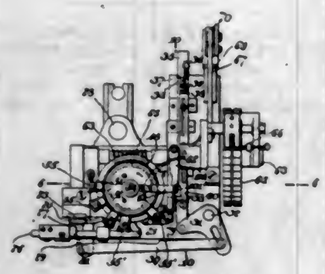
1,628,986. INSULATING MATERIAL. ARCHIE R. KEMP, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 9, 1923. Serial No. 673,822. 1 Claim. (Cl. 106—23.)



A jointing compound for rubber insulated cables comprising the following ingredients in approximately the proportions named, rubber 40%, zinc oxide 34%, litharge 20%, sulphur 4%, paraffine 2%.

1,628,987. THERMIONIC DEVICE AND METHOD OF EVACUATING THE SAME. ROBERT W. KING, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 24, 1920. Serial No. 412,587. 1 Claim. (Cl. 250—27.5.)

In a vacuum tube, a plate electrode, said plate having a portion struck out to form a pocket, a cover for said pocket, tabs cut out from said plate to engage said cover to hold it in position, and vaporizable material contained within said pocket.

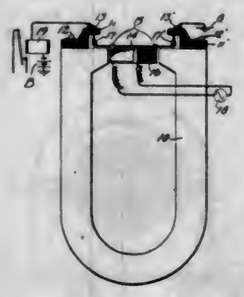


1,628,988. TRUNK. FRANK H. LANGMUIR, Woodbury, N. J., assignor to Belber Trunk & Bag Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 19, 1925. Serial No. 76,377. 5 Claims. (Cl. 217—69.)

1. A trunk body provided with bevelled edges and provided also with bevelled corners each of whose faces extends in a plane oblique to all the faces of the three adjacent trunk walls and all the faces of the three adjacent bevelled edges, and reinforcing strips secured to the outside of the walls and adjacent to and along opposite sides of said bevelled edges and bevelled to form faces in substantially the same planes as the faces of said bevelled edges.

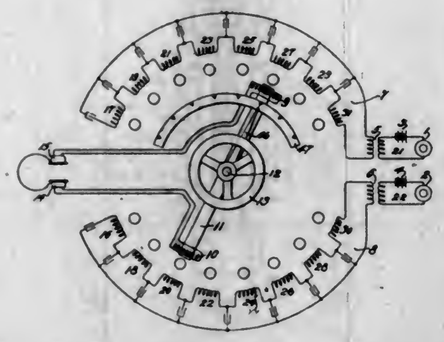
1,628,989. AUTOMATIC CONTROLLING MECHANISM. AARON E. LOEWY, Philadelphia, Pa., assignor to Liberman Manufacturing Company, a Corporation of Delaware. Filed July 24, 1924. Serial No. 727,858. 7 Claims. (Cl. 192—139.)

1. In an automatic controlling mechanism, the combination of a rotatable head, a driving mechanism adapted to cause step by step rotative movement of the head and to permit free rotative movement of the head independently of said driving mechanism, a plurality of elements adjustably secured around the periphery of the head, having arc shaped outer margins for slidable engagement



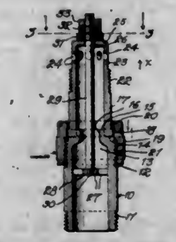
with a detent, and a spring actuated detent for cooperating with said elements, each element adapted to release the detent at the required point in the rotative movement of the head.

1,628,990. ALLOY. FRANCIS F. LUCAS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 8, 1925. Serial No. 61,163. 3 Claims. (Cl. 75—1.)



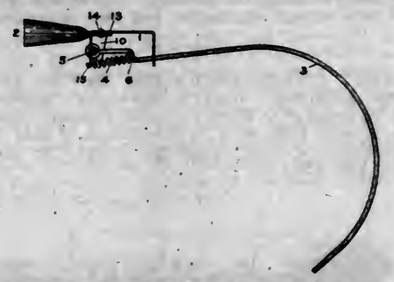
1. A steel alloy containing as essential elements thereof the following metals in substantially the following proportions by weight: Nickel 7 to 20%, tungsten-like metal 7 to 10%, chromium 6 to 8%, manganese 2 to 7%, carbon $\frac{1}{10}$ to $\frac{1}{5}$%, iron, remainder.

1,628,991. SWITCHING DEVICE. DANIEL D. MILLER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1924. Serial No. 715,002. 3 Claims. (Cl. 200—91.)



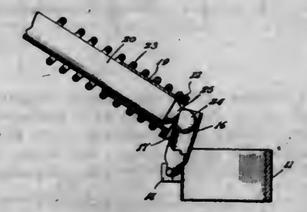
1. In a switching device a magnet, a stationary terminal member, a contact member normally contacting with and supported by said terminal member and a coil in the field of said magnet mounted upon said contact member, said coil operating in response to alternating current flowing therein to effectively break the contact between said contact member and said terminal member.

1,628,992. SYSTEM FOR LOCATION OF A SOURCE OF SOUND VIBRATIONS. JOHN MILLS, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1920. Serial No. 432,970. 5 Claims. (Cl. 177—386.)



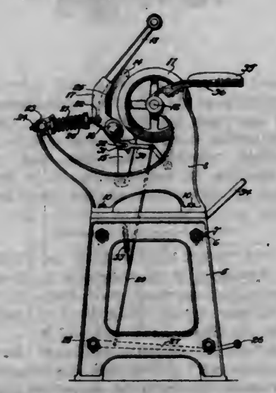
3. An electrical compensator comprising a pair of artificial electrical lines, each consisting of series inductances and shunt capacities; and a pair of secondary coils one coupled to each of said lines, said coils being movable along said lines to vary the position at which they are coupled to said lines.

1,628,993. SPRINKLER AND ROTOR ELEMENT THEREFOR. LEO OLSCHEWSKI, Irvington, N. J. Filed June 28, 1923. Serial No. 648,386. 3 Claims. (Cl. 285—122.)



1. A rotor-element for sprinklers, comprising a lower tubular member, a tubular rotor-member, said rotor-member having an end-wall provided with a perforation, and said rotor-member being further provided with discharge-orifices, means connected with said lower tubular member for rotatably mounting said rotor-member upon said lower tubular member, a stem within said lower member and said rotor-member, said stem having a portion extending through the perforation in the end-wall of said rotor-member, a disc of phenolic condensation product mounted upon that portion of the stem extending from the end-wall of the rotor-member and against which said end-wall is adapted to rotate, and means upon said stem for maintaining said disc in its position upon the projecting end-portion of said stem.

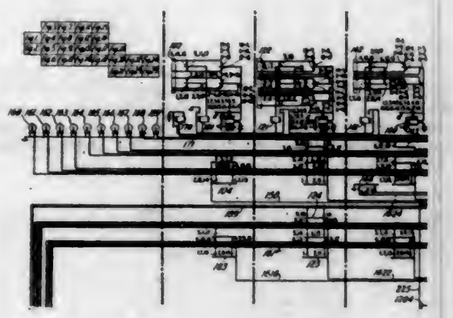
1,628,994. RAKE. ROBERT CARL OEHEN, Moline, Ill. Filed Nov. 12, 1924. Serial No. 749,535. 6 Claims. (Cl. 55—114.)



5. In a rake, a folded sheet metal head of channel shape having oppositely arranged slots in the sides of the channel, supporting means connected with the head and adapted to support a pivot rod, a rod supported thereby, and teeth pivoted on the rod and extending through the pairs of oppositely arranged slots.

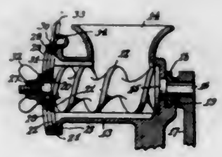
1,628,995. FOOT ACCELERATOR. JOHN W. PHILLIPS, Lillington, N. C. Filed Sept. 15, 1926. Serial No. 135,610. 6 Claims. (Cl. 74—39.)

1. A device of the character described including a rock shaft adapted for attachment to a throttle, a spring-retracted plunger disposed transversely of the shaft, and a sliding pivotal connection between said plunger and the shaft for rotating the shaft and opening the throttle as the plunger is depressed.



1,628,996. IRONING MACHINE. CHARLES E. REDDIG, Kew Gardens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 9, 1922. Serial No. 542,200. 1 Claim. (Cl. 68—9.)

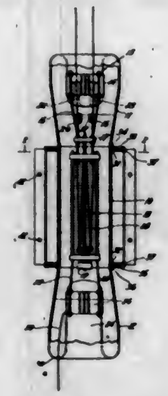
In an ironing machine, the combination with a roll, a shoe arranged to be moved to and from coacting relation with said roll, a hand lever and a foot lever mecha-



nism for operating the same, said foot lever mechanism including a toggle joint and a device in said toggle joint for permitting the operation of said shoe by the hand lever without affecting the foot lever mechanism.

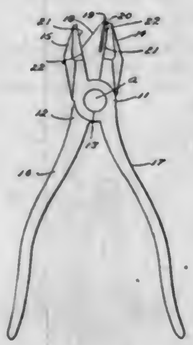
1,628,997. TESTING DEVICE FOR TESTING REGISTER SENDERS. JOHN B. RETALLACK, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 6, 1925. Serial No. 41,627. 10 Claims. (Cl. 179—175.)

1. In a testing device for testing register senders, means for setting the registers of a sender, means for progressively testing the correctness of the selection controlling operations of the sender, and means to test the ability of the sender to prevent false selections.



1,628,998. MEAT CHOPPER. MICHAEL A. ROLLMAN, Mount Joy, Pa. Filed May 23, 1925. Serial No. 32,355. 5 Claims. (Cl. 148—186.)

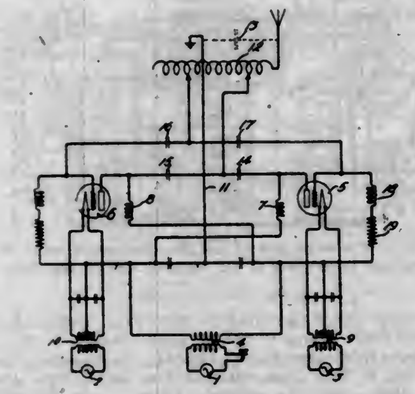
1. In a meat chopper, a casing and a screw therein, a cutting appliance at the rear end of the screw chamber embodying a gage-disk provided with exit openings and means for removably locking said gage-disk to the casing, an intermediate rotatable gage-disk and means for rotatively adjusting it and locking it in its adjusted positions, and a cutter-disk on the rear face of the rotatable disk.



1,628,999. ELECTRON-DISCHARGE DEVICE. VICTOR L. RONCI, Brooklyn, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 19, 1924. Serial No. 756,863. 1 Claim. (Cl. 250—27.5.)

In combination, an electron discharge device having an external anode with flared ends, glass portions fused to said flared ends, an electrode supported from each of said glass portions, of a water jacket surrounding said anode, said jacket comprising a pair of perforated discs welded to said anode, one near each end thereof and a body portion consisting of two semi-cylindrical sections, portions thereof being bent to form a pair of projections

on each part, corresponding projections of the two parts being welded together and the two parts being welded at their ends to said pair of discs.

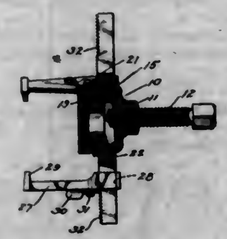


1,629,000. TOOL FOR ADJUSTING POINTS OF SPARK PLUGS. VINCENT P. RUMELY, Detroit, Mich. Filed Oct. 4, 1924. Serial No. 741,607. 4 Claims. (Cl. 81—15.)

1. A tool for adjusting the points of spark plugs, comprising a pair of movable jaws and an externally supported spacer member consisting of angularly disposed plates, one of which plates extends between said jaws and is adapted to receive the points of a spark plug on opposite sides thereof to provide a predetermined gap between said points when said jaws are moved toward one another.

1,629,001. OSCILLATION GENERATOR. JOHN C. SCHELLENG, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 18, 1923. Serial No. 663,409. 4 Claims. (Cl. 250—36.)

1. In an oscillation generating system a pair of electric discharge tubes each having a cathode and an anode, an oscillatory circuit common to said tubes, a source of alternating current voltage for said tubes, connections for applying the entire voltage of said source across the anode and cathode of each tube in opposite sense, a connection from the cathodes in common to said oscillatory circuit, a connection from the anodes in common to said oscillatory circuit, and means for preventing the flow of current of the frequency of said source from one

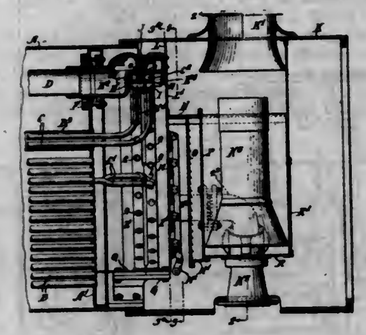


cathode to the other or from one anode to the other while permitting current of the frequency generated to pass readily between either cathode or either anode and the oscillatory circuit.

1,629,002. MANUFACTURING MENTHOL. KARL SCHÖLLKOPF, Dusseldorf-Oberkassel, Germany, assignor to Rheinische Kampfer-Fabrik Gesellschaft mit beschränkter Haftung, Dusseldorf-Oberkassel, Germany. Original application filed Nov. 28, 1922, Serial No. 603,853, and in Germany Mar. 11, 1922. Divided and this application filed June 26, 1926. Serial No. 118,833. 1 Claim. (Cl. 260—153.)

The process for manufacturing inactive menthol which consists in heating thymol with catalysts promoting the hydrogenation and hydrogen under pressure, separating the inactive menthol from the liquid menthols mixture, heating the latter with an alkaline metal mentholate, subjecting the reaction product to steam distillation and fractionating the distillate.

1,629,003. COMBINATION PULLER. DAVID H. SCHONFELD, Fresno, Calif. Filed May 28, 1924. Serial No. 716,369. 1 Claim. (Cl. 29—85.)

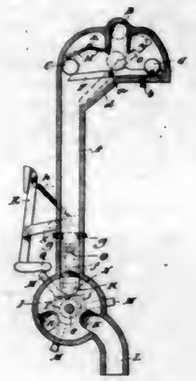


A wheel puller comprising a cup shaped head member, a pressure screw threaded through a threaded opening in the end of said head member, a plurality of arcuate inwardly projecting flanges arranged in spaced relation to each other around the mouth of the cup, an adapter adapted to be threadedly connected to the hub of a wheel, arcuate flanges on the adapter complementary to the flanges on the head member and capable of interlocking therewith to removably connect the adapter to the head member with the adapter positioned concentric to the pressure screw, said flanges when interlocked resisting relative axial movement between the head member and the adapter, and a radial flange projecting outwardly from the exterior surface of the head member and circumscribing the same at the point thereon where the head member connects with the adapter whereby a clamping device may be arranged on the head member and abut against the flange so that operation of the head member will operate the clamping structure.

1,629,004. PROCESS FOR THE PRODUCTION OF MOLYBDENUM TRIOXIDE AND TUNGSTEN TRIOXIDE. PAUL SCHWARZKOPF, Berlin-Charlottenburg, Germany. Filed July 23, 1926, Serial No. 124,350, and in Germany Apr. 26, 1926. 6 Claims. (Cl. 23—17.)

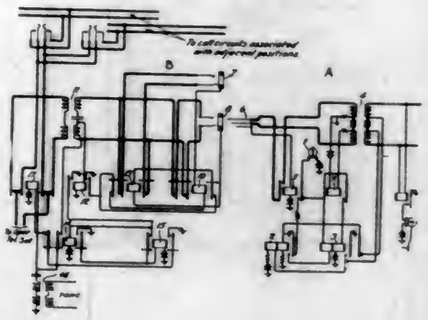
1. In a process for the production of molybdenum trioxide and tungsten trioxide from their ores, melting the respective ore and evaporating the oxide from the ore while in the molten state.

1,629,005. STEAM SUPERHEATER FOR LOCOMOTIVES. IRWIN A. SEIDERS, Reading, Pa. Filed Apr. 14, 1924. Serial No. 706,294. 4 Claims. (Cl. 122—462.)



1. In combination with a locomotive boiler, superheater flues extending longitudinally through the boiler and arranged in concentric circular arcs, arc shaped superheater headers of greater diameter than the outer row of superheater flues secured in front of the boiler and superheater tubes extending into the flues and having laterally extending end extensions secured to the headers.

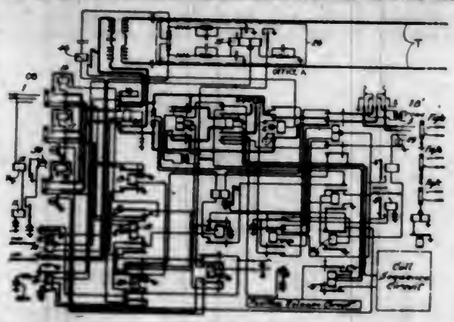
1,629,006. COIN-RECEIVING MECHANISM FOR VENDING MACHINES. RUFUS B. SHERBURNE, LEON G. SHERBURNE, and MARTIN HANSEN, New York, N. Y.; said Leon G. Sherburne and said Martin Hansen assignors to said Rufus B. Sherburne. Filed Nov. 21, 1923. Serial No. 675,987. 2 Claims. (Cl. 194—102.)



1. A coin receiving mechanism for vending machines which comprises a coin receiving tube provided with a weight-testing lever, a size-testing aperture co-operating with said lever to drop out undersized coins and a tilting

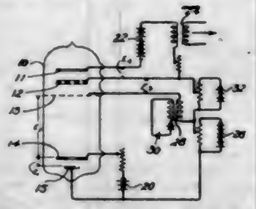
lever adapted to close the entrance to said tube under pressure from over-sized coins,—and a normally locked

releasing device adapted to be unlocked by coins delivered to it by said receiving tube, after passing said testing levers and aperture.



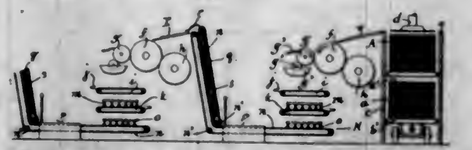
1,629,007. TELEPHONE-EXCHANGE SYSTEM. ERMY R. SMITH, Maplewood, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,782. 13 Claims. (Cl. 179—41.)

3. In a telephone system, a trunk of a certain character, an operator's telephone set normally connected to said trunk, trunks of other character, means for connecting said head set to said other trunks, a source of tone current, and means for connecting said source of tone current to said trunk of a certain character, upon the disconnection of said telephone set therefrom.



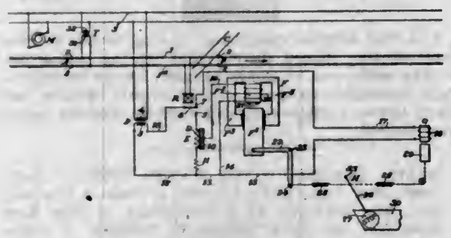
1,629,008. TELEPHONE SYSTEM. ERMY R. SMITH, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 29, 1925. Serial No. 40,237. 10 Claims. (Cl. 179—43.)

5. A two-way trunk line terminating at each end in outward and inward terminals, a signal at each inward terminal responsive to a connection established over a distant outward terminal, and means associated with the inward terminals of said line for reoperating said signal at the inward terminal at one end of said line and for changing the electrical characteristics of the inward ter-



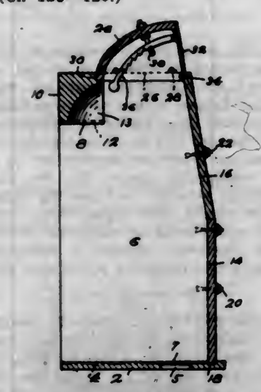
minal at the same end of the line responsive when disconnection takes place at the opposite end of said line.

1,629,009. LOW-IMPEDANCE ELECTRIC DISCHARGE DEVICE. HOMER C. SNOOK, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 7, 1920. Serial No. 401,886. 1 Claim. (Cl. 250—27.)



In combination, an electric discharge device comprising a gas filled container, a plurality of main discharge electrodes and a plurality of auxiliary discharge electrodes therein, a source of current connected between said main discharge electrodes, means for adjusting the potential of the current from said source to a point insufficient to produce ionization between said main electrodes, a second source of current connected between said auxiliary electrodes for producing a discharging therebetween and a flow of positive carriers between said main electrodes to cause ionization therebetween, a control electrode located between said auxiliary electrodes and said main electrodes to control the degree of said ionization, a third source of current connected between said control electrode and one of said main electrodes, a fourth source of current connected between said control electrode and one of said auxiliary electrodes, and means for adjusting current from said third and said fourth sources so that the potential of said control electrode is substantially equal to the resultant of the potentials produced by the carriers in the vicinity of said control electrode and by the field produced by said other electrodes.

1,629,010. PRESS. FREDERIC THÉVOZ, Geneva, Switzerland. Filed Dec. 22, 1925. Serial No. 77,160. 4 Claims. (Cl. 101—152.)

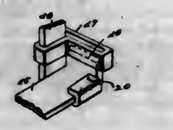


2. In an apparatus for forming a composite impression, in combination, a plurality of proximate devices for applying impressions arranged in series, a plurality of superimposed reciprocating endless bands between each two devices, means to transfer a sheet from one band to another, means to direct air against the sheet when on a band, and means to transfer the sheet from a band to a succeeding device.

1,629,011. ELECTRORESPONSIVE APPARATUS. HOWARD A. THOMPSON, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 7, 1923. Serial No. 630,510. 5 Claims. (Cl. 172—240.)

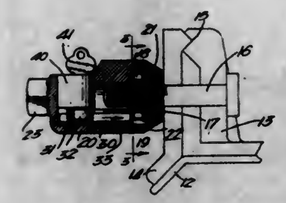
1. In combination, an electric conductor, a device controlled by the flow of current in said conductor and operating when such current exceeds a given value to increase the impedance of said conductor thereby decreasing the value of the current, and means included in circuit with said conductor and responsive to a decrease in said current for further decreasing this current to a value below said given value.

1,629,012. FIRE BOX. HENRY G. TRIMBLE, Kansas City, Mo. Filed Aug. 3, 1925. Serial No. 47,911. 1 Claim. (Cl. 126—120.)



A fire-box consisting of a base, a rear wall seated upon said base and having an upper forwardly sloping portion, side walls seated upon said base and having offsets in their upper forward portions, a lintel seated in said offsets and having a longitudinal recess in its rear portion, an upwardly and rearwardly curved hood resting at its forward portion upon said lintel and having its rear margin spaced above the upper margin of the rear wall to leave an opening, and marginal flanges on said lintel which rest upon the side walls of the fire box.

1,629,013. CONTINUOUS PROCESS OF PRODUCING SPONGE RUBBER ARTICLES. FRANK V. WEDLOCK, Chicago, Ill., assignor to Featheredge Rubber Company, Inc., a Corporation of Illinois. Filed July 21, 1925. Serial No. 45,142. 6 Claims. (Cl. 18—53.)

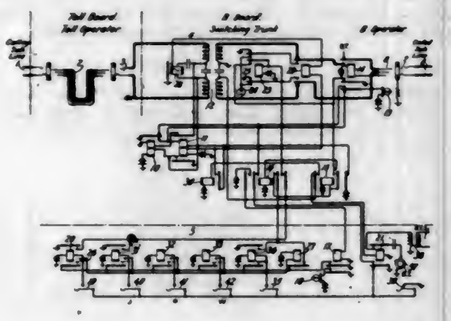


1. The process of producing sponge rubber bodies which comprises the steps of placing a long length of sponge rubber compound between surfacing layers of a medium readily flexible in all directions and drawing said flexible medium, and with it drawing the compound, through a heated zone in the presence of a heated die, whereby said compound is caused progressively to expand and move the surfacing layers of flexible medium to take the shape of the die and whereby the compound is progressively cured into an extended body of sponge rubber having a cross sectional shape corresponding to the shape of the die.

1,629,014. LINE GUIDE FOR TRACTORS. CARL WOODIN, Pocahontas, Iowa. Filed Feb. 5, 1925, Serial No. 7,034. Renewed Apr. 7, 1927. 2 Claims. (Cl. 180—77.)

1. A controlling device for controlling motor vehicles comprising a clutch pedal having an upwardly extended end portion, a lever having a laterally and upwardly extended portion adapted to embrace the clutch pedal at a point adjacent to the upwardly extended flange, a vertically movable securing member mounted on the lever and adapted to be positioned over the upwardly extended flange to lock the lever to the clutch pedal.

1,629,015. SPARE-TIRE LOCK. DELBERT F. AXELSON, Los Angeles, Calif., assignor to Axelson Machine Company, Los Angeles, Calif., a Corporation of California. Filed June 7, 1923. Serial No. 643,883. 6 Claims. (Cl. 70—122.)

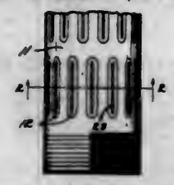


1. A lock comprising: a bolt; a nut threaded on said bolt, said bolt passing through said nut; a casing surrounding said nut and free to rotate with relation thereto; means for securing said casing around said nut; and key-operated means for locking said casing on said nut so that said nut may be unscrewed by turning said casing, said nut being cylindrical and having an annular rim of larger diameter than the body of the nut, said means for securing said casing over said nut comprising an end plate fitting over the body of said nut and welded to said casing.

1,629,016. TELEPHONE SYSTEM. WILLIAM M. BEAUMONT, Summit, N. J., and FELIX A. BONOMI, Brooklyn, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 20, 1925. Serial No. 51,298. 5 Claims. (Cl. 179—46.)

1. In a telephone system, subscriber's lines, a trunk comprising a signal, means for operating said signal re-

sponsive to the seizure of said trunk, means for disabling said signal responsive to the connection of said trunk to an idle line, means for maintaining said signal operated

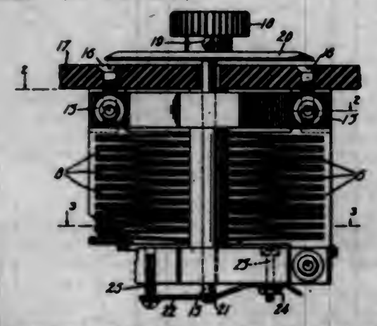


responsive to the connection of said trunk to a busy line and means for disabling said signal responsive to the signaling of the subscriber on the busy line.

1,629,017. WEATHER STRIP. JOHN J. BURROUGHS, Houston, Tex. Filed Mar. 9, 1926. Serial No. 93,424. 3 Claims. (Cl. 20—68.)

1. A device of the character described including a track adapted to be carried by the casing of a wall opening and provided with a groove, an actuating bar slidable in said groove, a weather strip, said track and strip being provided, one with guides and the other with guideways in which the guides work, said track and bar being provided, one with arcuate notches, the corresponding sides of said notches having sloping faces, and the other with rollers which are seated in said notches and adapted to operate against the sloping faces thereof on one side and the weather strip on the other side, when said actuating bar is moved.

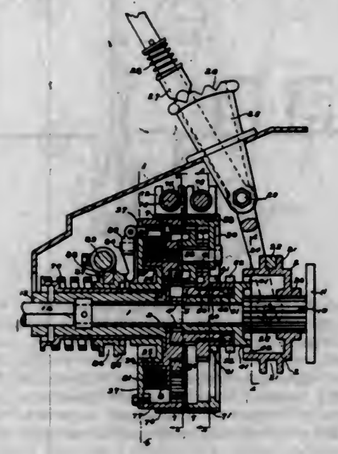
1,629,018. STRAINER. CLARENCE J. COBERLY, Los Angeles, Calif., assignor to Kobe, Inc., Los Angeles, Calif., a Corporation of California. Filed Jan. 5, 1925. Serial No. 736. 6 Claims. (Cl. 166—6.)



1. A well strainer comprising: a pipe having an elongated opening formed therein, said opening having converging walls; and an elongated insert having correspondingly converging walls and secured in said opening, said insert having a single elongated aperture disposed lengthwise thereof.

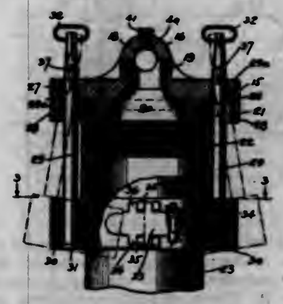
1,629,019. CELLULOID TOY WATER PISTOL. IRWIN COHN, New York, N. Y., assignor to Irwin & Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 23, 1926. Serial No. 150,298. 1 Claim. (Cl. 42—56.)

A celluloid toy water pistol comprising two sheets of celluloid, each formed in the configuration of a pistol face and having an outwardly projected wall portion, each sheet being formed with a marginal flange and the flanges of the sheets being united, a collapsible reservoir located in the chamber formed by said projected wall portion, a tube leading from the reservoir to the end of the pistol barrel, supporting means for the tube, and a trigger projecting through an opening formed intermediate the two sheets, said trigger being movable on a pivotal support and having an extension contacting with the collapsible reservoir, whereby a movement of the trigger will swing said extension to collapse the reservoir.



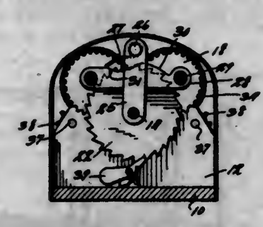
1,629,020. CONDENSER. EDWARD B. CRAFT, Hackensack, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 6, 1922. Serial No. 586,418. 3 Claims. (Cl. 175—41.5.)

1. A condenser of the air type, comprising a fixed member having a set of plates spaced in fixed relation and of



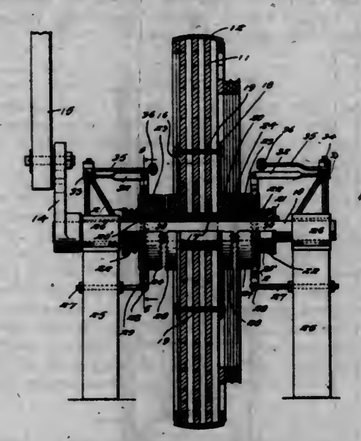
cross section tapering uniformly at all radii toward the center, and a movable member having a similar set of plates tapering uniformly at all radii away from the center, said fixed and movable plates being tapered the same amount to provide uniform air space therebetween when the members are assembled in cooperative relation.

1,629,021. PLANETARY-GEAR DRIVE FOR AUTOMOBILES. CHARLES L. CULVER, Olalla, Wash. Filed Apr. 1, 1925. Serial No. 19,788. 2 Claims. (Cl. 74—34.)



1. A planetary transmission comprising a complete planetary gear train comprising a sun gear, planet carrier and planet gears, and a supplemental gear train comprising a sun gear and intermediate planetary gears journaled upon the planet carrier of the first train and meshing with the planet gears of said first train, and means for transmitting power through either sun gear.

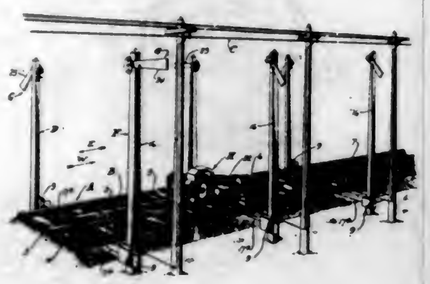
1,629,022. CEMENTING HEAD. HERBERT A. DAVIS and CLEO F. DAVIS, Torrance, Calif. Filed Apr. 22, 1924. Serial No. 708,129. 4 Claims. (Cl. 166—14.)



1. A cementing head comprising a body adapted to be supported on a coupling collar and having a groove therein for receiving the upper edge of the collar, a compressible member within said groove, and means adapted to engage said collar for securing the body to the collar and for compressing said compressible member to provide a fluid tight joint between the body and collar.

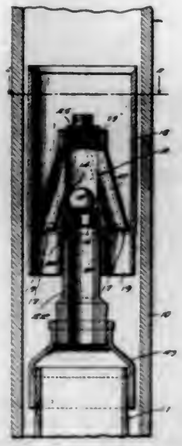
1,629,023. LOOM COUNTER. JAMES MARION DAVIS, Newberry, S. C. Filed Jan. 14, 1926. Serial No. 81,282. 3 Claims. (Cl. 74—54.)

1. A mechanism of the character described including an actuating rock shaft, a ratchet wheel loosely mounted thereon, an arm carried and oscillated by the actuating shaft and having a pawl engaging with said ratchet wheel and a bar supported in chordal relation to the ratchet wheel and having its outer edge face outwardly curved, said edge face at one end of the bar being extended beyond the ratchet teeth and at the other end of the bar being disposed inward of the ratchet teeth, and then extending beyond the ratchet teeth, the pawl traveling over said curved face of the bar whereby to hold the pawl from engagement with the ratchet teeth for the greater portion of its stroke, then permit the engagement of the pawl with the ratchet teeth and then again lift the pawl after the pawl has traveled at a predetermined distance in said engagement.



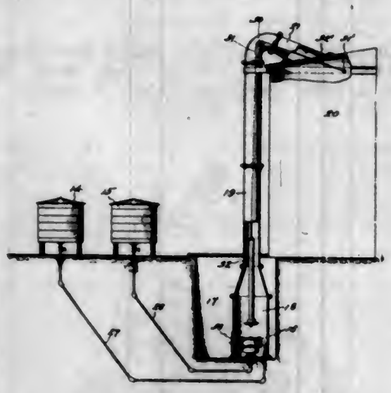
1,629,024. WELL-DRILLING APPARATUS. THOMAS S. DIETLE, Pawhuska, Okla. Filed Oct. 14, 1926. Serial No. 141,537. 4 Claims. (Cl. 255—13.)

1. In combination with the band wheel shaft of well drilling apparatus having the usual crank for raising and lowering the drilling tools, a band wheel rotatably mounted upon said shaft and a pair of spring pressed ratchet clutches for connecting said band wheel to the shaft having the teeth thereof oppositely disposed.



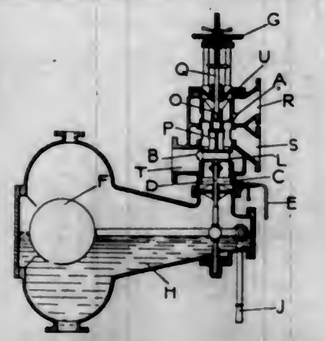
2. In combination with the band wheel shaft of well drilling apparatus having the usual crank for raising and lowering the drilling tools, a band wheel rotatably mounted upon said shaft, a pair of spring pressed ratchet clutches for connecting said band wheel to the shaft having the teeth thereof oppositely disposed and means for simultaneously or independently engaging said clutches.

1,629,025. THIRD-RAIL ELECTRIC-CURRENT-FEEDING SYSTEM FOR ELECTRIC RAILWAYS. ARTHUR DOAN, Berkeley, Calif. Continuation of application Serial No. 493, filed Jan. 5, 1925. This application filed Feb. 26, 1927. Serial No. 171,323. 2 Claims. (Cl. 191—29.)



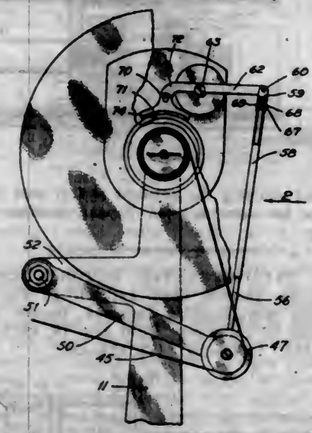
1. A third rail electric current feeding system for electric railways comprising a third rail divided into sections, said sections being insulated from each other and from the ground, a pair of rails running parallel with the third rail over which an electric train is adapted to travel, a semaphore apparatus for each third rail section and cooperating with the electric train, a source of electric current, wires connecting each third rail section with said source of current supply, a switch in each wire adapted to make or break the current circuit to each third rail section, and means actuated by the semaphore apparatus for opening and closing said switches as the train advances.

1,629,026. CORING DEVICE. BOYDE H. DYE, Tipton, Calif. Filed Dec. 9, 1926. Serial No. 153,636. 3 Claims. (Cl. 255—72.)



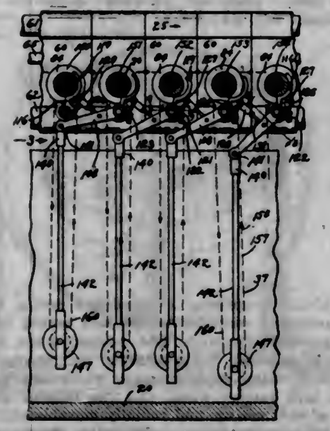
1. In combination with a core barrel of rotary well drilling apparatus, a hollow body having a closed upper end, said hollow body being in communication with and supported from the upper end of the core barrel, a check valve for controlling communication between the hollow body and the core barrel, downwardly directed outlets for the hollow body communicating with the hollow body above the seat for the check valve and the sleeve surrounding the hollow body having an open top and downwardly directed outlets at its lower end, the outlets of the hollow body aligning with the outlets of the sleeve.

1,629,027. APPARATUS FOR EXTINGUISHING FIRES. ORLANDO R. ERWIN, Forest Hills, N. Y., assignor to Foamite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 4, 1920. Serial No. 421,634. 2 Claims. (Cl. 169—4.)



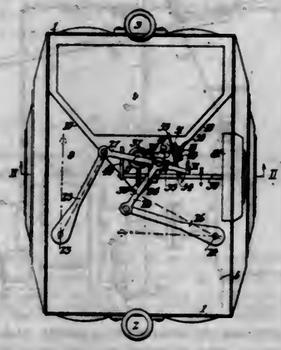
1. In a foam fire extinguishing apparatus, a delivery head, inlets thereinto for component foam making solutions, a frangible diaphragm dividing the head into compartments each having its individual supply inlet, a frangible diaphragm closing the outlet from the delivery head and a common breaker for said diaphragms adapted on release to break both diaphragms to permit the mixture of the solutions and escape of the mixture from the head.

1,629,028. STEAM-CONDENSING AND BOILER-WATER-SUPPLY APPARATUS OF STEAM-POWER PLANTS. HARRY FOTHERGILL and HAROLD HILLIER, Westminster, London, England. Filed Oct. 9, 1926, Serial No. 140,626, and in Great Britain Dec. 16, 1925. 14 Claims. (Cl. 257—24.)



1. A closed boiler feed system comprising a condenser, a condensate extraction pump connected on its suction side to the condenser, a float chamber arranged on the suction side of the condensate extraction pump and having a water level corresponding to the level on said suction side, a float in said chamber, a pressure operated valve device connected in said closed system between the feed pump and the condensate extraction pump, said valve being associated with the float and adapted to be operated in accordance with the movements of the float, to cause water to be delivered through said valve, alternatively, to the condenser when the float falls, or in to the system on the delivery side of the condensate extraction pump when the float rises.

1,629,029. FILM-TAKE-UP DEVICE WITH BRAKE. FRANK E. GARBUTT, Los Angeles, Calif., assignor to Famous Players-Lasky Corporation, New York, N. Y., a Corporation of New York. Filed July 25, 1925. Serial No. 46,155. 2 Claims. (Cl. 242—55.)

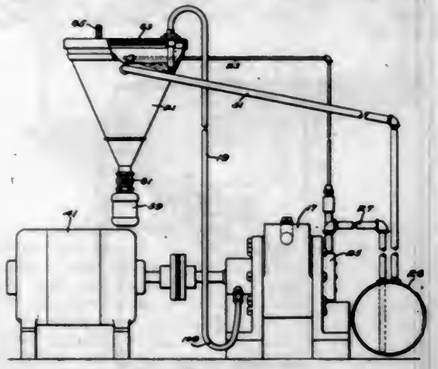


2. In a film winding device, the combination of: a rotatably supported shaft; a winding reel on which a film may be wound, mounted on said shaft to rotate therewith; means for frictionally driving said shaft; a swingably supported pulley over which said film extends in a manner to support said pulley, said pulley being moved when the tension of said film changes; a rod pivotally associated with said pulley; a guide member into which said rod extends, said guide member having an upper end which said rod may engage and a lever to which said guide member is attached, said lever being swung when said rod exerts a force on the end of said guide member; a brake drum rigidly secured to said shaft; and a brake shoe attached to said lever, said shoe being operated by said lever in a manner to engage said drum and to permit said winding reel to be rotated at such a speed that said film will be maintained at a uniform tension.

1,629,030. AUTOMATIC FILM-TENSIONING MECHANISM HAVING INDIVIDUAL SPOOLS. FRANK E. GARBUTT, Los Angeles, Calif. Filed Mar. 2, 1926. Serial No. 91,698. 13 Claims. (Cl. 271—2.1.)

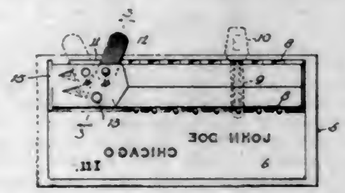
1. In a film developing apparatus, the combination of: a drive roller; means for rotating said drive roller; a driven floating roller, there being a film wound around said drive and driven rollers; means for controlling the rate of rotation of said drive roller, said control means having a brake arranged to engage said drive roller; and a member energized by movement of said floating roller relative to said drive roller to actuate said control means, thus operating said brake.

1,629,031. GAS-METER MECHANISM. WILFORD A. GAUGH, Erie, Pa., assignor to American Meter Company, Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 28, 1924. Serial No. 746,345. 9 Claims. (Cl. 73—1.)



1. In a gas meter, the combination with a casing; of a crank shaft in said casing arranged to be operated by a flow of gas through the meter; a crank arm rigidly connected with the top of said crank shaft; a bracket in said casing, having a bearing encircling said crank shaft; said bracket having two slots in it, in parallel relation respectively tangential to circles of different radii and concentric with the axis of said shaft; a single fulcrum pin extending in said bracket across said slots; a trip lever hung on said pin in the slot of said bracket most remote from the axis of said crank shaft, and normally presented in the path of said crank arm, and arranged to be idly tilted by said crank arm at each revolution of said crank shaft in one direction; a stop lever, hung on said fulcrum pin in the other of said slots in coaxial relation with said trip lever and normally out of the path of said crank arm; said stop lever having a lateral projection extending transversely across the path of said trip lever; said trip lever being arranged to be tilted in the reverse direction by reverse rotation of said crank arm incident to the reverse movement of the meter mechanism to then engage said projection on said stop lever and set up the stop lever in position to stop the reverse rotation of said crank arm and the meter mechanism connected therewith, after more than one complete reverse revolution of said crank arm.

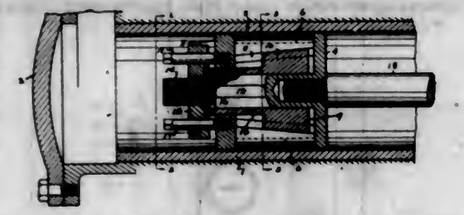
1,629,032. LIQUID-FUEL-BURNING APPARATUS. GEORGE E. GOODRIDGE, Reading, Mass., assignor to Reginald C. Heath, Brookline, Mass. Filed July 2, 1926. Serial No. 120,061. 6 Claims. (Cl. 158—36.3.)



1. A liquid fuel burning apparatus comprising a burner nozzle and a main fuel reservoir, a supply chamber arranged at an elevation above the main reservoir, a fuel supply pump through which the entire supply of liquid fuel for said chamber is lifted and delivered thereto, an overflow conduit leading back from the supply chamber to the main reservoir to provide a gravity flow for the surplus liquid fuel back to the reservoir and to insure the maintenance of a substantially constant level in the supply chamber without the necessary use of valved orifices, a second and main pump for delivering commingled gas and liquid fuel in finely divided form

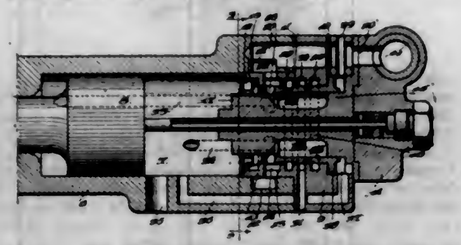
through the burner nozzle, said main pump having a suction conduit provided with an inlet orifice immersed below the constant level of the liquid fuel in the supply chamber for delivering a predetermined quantity of liquid fuel from the reservoir when said main pump is operated and provided with a second orifice between the liquid fuel level and the pump connected to a source of gaseous supply to cause the same to commingle with the liquid fuel, said fuel and gas supply orifices being adjustable to vary the mixture and said suction conduit being connected to present a gravity-opposing path to the liquid

fuel from the supply chamber, whereby the passage of liquid fuel from said chamber to the pump is prevented except during the operation of the latter, the supply pump being connected to operate only with and during the operation of the main pump and its delivery conduit being so connected to the supply chamber and so located and arranged as not to be under the influence of the static head therein, thereby to provide a gravity-opposing return path, whereby through said combination there may be provided an open valveless supply system free from leakage.



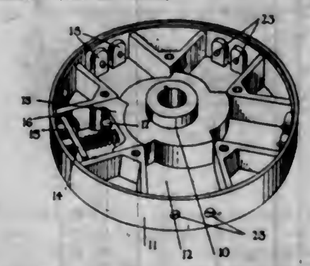
1,629,033. INDEX TAB. HENRY E. HUBBARD, Chicago, Ill., assignor to Addressograph Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1926. Serial No. 121,651. 4 Claims. (Cl. 101—369.)

1. A printing device having a slot adjacent its upper edge, a switch tab projecting through said slot, the lower end of said tab being pivotally engaged with the printing device and the upper end of said tab projecting above the upper edge of the printing device, said tab adapted to swing from end to end of the slot in the printing device, and means for holding the tab in adjusted position.



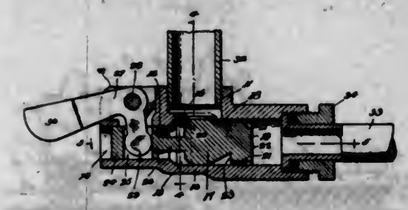
1,629,034. PUMP PLUNGER. GRANVILLE A. HUMASON, Houston, Tex. Filed June 21, 1926. Serial No. 117,464. 1 Claim. (Cl. 74—109.)

A pump plunger including end members, a support between said members formed of sections having converging inside faces, an expander between said end members, one end of which is threaded through one of said members, an expansible sleeve around said support, an extension carried by the other end member and extending through said expander and whose free end is externally threaded, a locking member threaded onto said



free end and abutting the adjacent end of said expander and means for securing said locking member against unscrewing.

1,629,035. FLUID-OPERATED MOTOR. AUGUST H. KATTERJOHN, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Jan. 18, 1923. Serial No. 613,482. 19 Claims. (Cl. 121—26.)

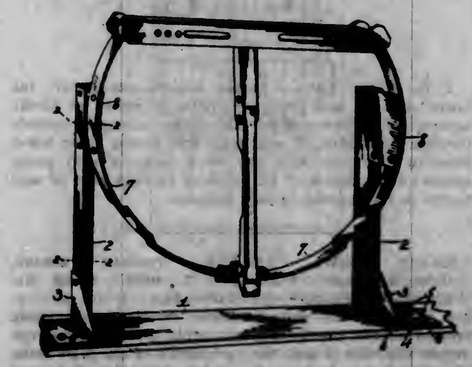


1. In a fluid operated motor, the combination with a cylinder member having a piston chamber and a piston operating in the chamber, of an automatic hollow distributing valve located in rear of the piston chamber and having a front open end, a fluid reservoir within the valve having means of communication at its front end with the rear end of the piston chamber, and means for automatically operating the valve to cause its front end to move to and from a position across said means of communication to periodically cut it off.

1,629,036. CLUTCH. VIRGIL H. KITRELL, University Place, Nebr. Filed Apr. 24, 1926. Serial No. 104,442. 2 Claims. (Cl. 64—100.)

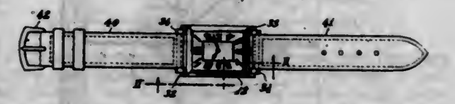
1. A clutch comprising a cylindrical casing, a ratchet wheel positioned centrally within said casing and rotatably connected therewith, said ratchet wheel being reversible in position, walls dividing the interior of said casing into radial compartments which are positioned between said ratchet wheel and the interior peripheral surface of said casing, and radially movable clutch shoes within the compartments, said clutch shoes being also reversible whereby said clutch may be reversed by the reversal of said ratchet wheel and said clutch shoes.

1,629,037. MANUALLY-CONTROLLED STEAM-OPERATED CYLINDER COCK AND DRIFT VALVE. ARTHUR T. KUEHNER, Elkridge, Md. Filed Sept. 14, 1921. Serial No. 500,488. 3 Claims. (Cl. 121—134.)



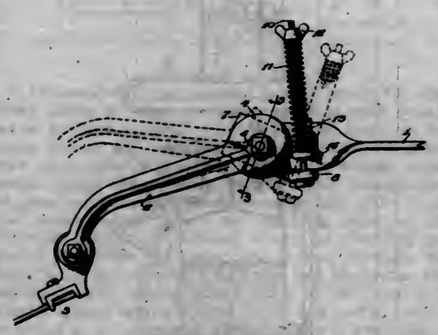
1. In combination with a steam cylinder, a cylinder cock including a relief valve controlling an outlet passage from the cylinder, a conduit for supplying live steam to the valve, the valve being provided with means having opposed faces of unequal area whereby the valve may be closed against the steam pressure in the cylinder and held closed by steam at the same pressure in said conduit acting on the larger of said faces, and weight operated means constantly urging the valve to open position and automatically operable when the supply of steam to the valve is cut off for opening the valve against steam in said conduit at the same pressure as the steam in the cylinder.

1,629,038. PROCESS FOR CLEANING AND PRESSING PAPER MONEY. GEORGE W. LEIGHTLITNER, Apollo, Pa. Original application filed June 17, 1925, Serial No. 37,760. Divided and this application filed Apr. 23, 1926. Serial No. 104,205. 2 Claims. (Cl. 15—269.)



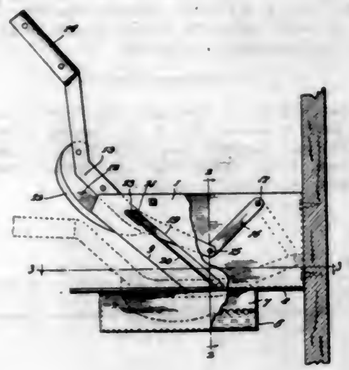
1. A method of cleaning flexible material consisting of applying cleaning fluid to the material and scrubbing the same while moistened, swabbing the scrubbed material, and finally drying and pressing the scrubbed and swabbed material.

1,629,039. TIRE CARRIER. THOMAS H. LYNN, Williamsport, Pa. Filed Apr. 11, 1922. Serial No. 551,509. 1 Claim. (Cl. 224—29.)



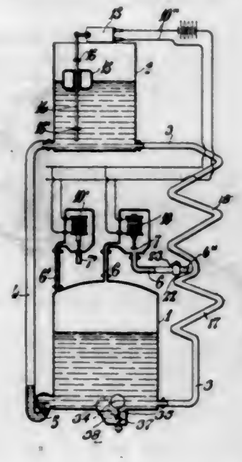
A tire carrier comprising a segmental band, spaced standards each having a web extending parallel with the plane of the band and a web extending outwardly at a right angle to the first-mentioned web, plates secured to and projecting outwardly from the outwardly projecting webs of the standards adjacent the upper ends thereof, and rigidly secured to the band, and anchors each consisting of a vertical branch rigidly secured to the outwardly projecting web of a sandard at the lower end of the standard and a horizontal member extending laterally from the lower end of the vertical branch to be secured to the running board of a vehicle.

1,629,040. ARTICLE HOLDER AND CASE. JEREMIAH MCGREVY, Richmond Hill, N. Y., assignor to Solidarity Watch Case Company, New York, N. Y., a Corporation of New York. Filed Nov. 10, 1924. Serial No. 748,976. 6 Claims. (Cl. 58—88.)



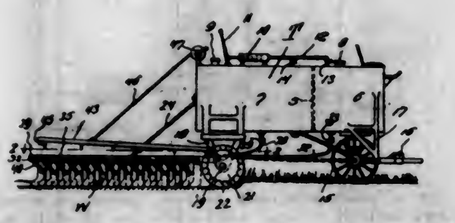
1. In an article holder and case, the combination of a holding member adapted to hold a watch movement, pivoted casing members for enclosing the holding member, such holding member having one of its edges longitudinally recessed, a spring-pressed locking member mounted entirely on the holding member within the recess and movable bodily therein, such casing members each having an inwardly extending, protuberance for interlocking with the locking member, whereby said casing members are releasably held closed.

1,629,041. YIELDABLE COUPLING. WILLIAM MINER, Milo Township, Bureau County, Ill. Filed Mar. 30, 1926. Serial No. 98,578. 6 Claims. (Cl. 97—184.)



1. In combination with parts to be yieldably connected, and a bolt pivotally connecting said parts, an abutment member mounted on said bolt and connected with one of the members to move therewith and adapted to normally engage the other member, a seat carried by the last mentioned member, a bolt passing freely through said seat and engaging the abutment member, an open spring mounted upon said seat and surrounding the bolt and a nut on the bolt for holding the spring on its seat and regulating the tension thereof.

1,629,042. TAIL-DOCKING MACHINE. KARL W. MOORE, Cynthiana, Ky. Filed Feb. 3, 1926. Serial No. 85,743. 8 Claims. (Cl. 128—305.)

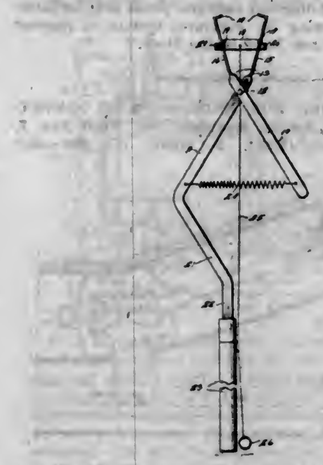


1. In a tail docking machine, a support constituting a stationary rest for the tail to be docked, and a cutting blade supported for slidable movement in a curvilinear path toward and from the rest and coacting therewith when moved in the direction of the rest to impart a shearing cut to the tail thereon.

1,629,043. APPARATUS FOR CENTRAL HEATING. HENRI MOREAU, Paris, France. Filed Nov. 16, 1922, Serial No. 601,363, and in France Nov. 18, 1921. 3 Claims. (Cl. 237—64.)

1. In a central heating plate for heating by circulation of hot water, the combination of a pulsating tank and an elevated tank arranged at different levels, and means connecting the lower portions of the tanks, said means including water heating means and radiators, and a second means also connecting said tanks and including a non-return valve, and means for automatically and periodically causing in the pulsating tank a pressure of compressed air and atmospheric pressure.

1,629,044. PRAIRIE-FIRE FIGHTER. HARVEY B. MORTER, Ainsworth, Nebr. Filed July 23, 1926. Serial No. 124,426. 1 Claim. (Cl. 126—271.2.)



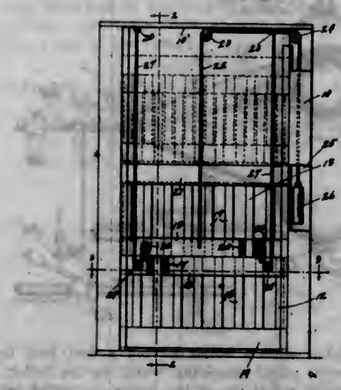
An apparatus of the class described, including means for burning prairie grass, fire extinguishing means disposed about the first means, a pair of flexible fire confining walls, outside of the second means, each wall comprising a chain formed of a plurality of pivoted links, sections pivotally mounted on the chain and depending therefrom, and spring means tending to hold the sections in vertical positions.

1,629,045. BLAST FURNACE. JOHN A. PARKER, Rifle, Colo. Filed July 7, 1925. Serial No. 41,952. 2 Claims. (Cl. 266—41.)

1. In a blast furnace having a surrounding wall, the lower edge of said wall comprising a series of blocks separated by water spaces, said blocks extending entirely through the width of said wall and having their lower faces in alignment with the lower faces of said water spaces; and a series of air passages through each of said blocks to the interior of said furnace.

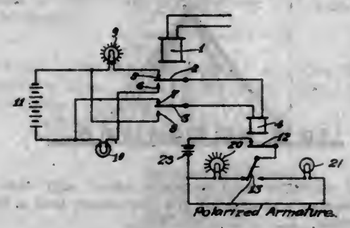
1,629,046. FOWL CATCHER. THOMAS PEPPARD, Olympia, Wash. Filed July 7, 1926. Serial No. 120,985. 5 Claims. (Cl. 119—154.)

3. A device of the character described comprising crossed shanks pivoted to each other and each provided at one end with a jaw, the extremities of the jaws being inwardly turned and one jaw overlapping the other, said extremities acting as stops preventing the two near approach of the jaws to each other, the jaws being slotted, a trigger bar disposed within said slots and having shoulders adjacent its opposite ends whereby the jaws may be held open, the trigger bar being longitudinally movable



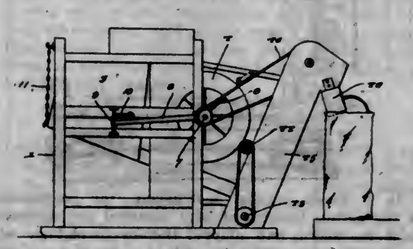
in said slots to permit the closing of the jaws, and a spring urging the shanks towards each other.

1,629,047. REFRACTORY LINING. ROBERT B. POGUE, Chicago, Ill., assignor to The American Brake Shoe & Foundry Company, New York, N. Y., a Corporation of Delaware. Filed June 6, 1925. Serial No. 35,490. 1 Claim. (Cl. 106—10.)



A refractory lining comprising substantially forty per cent ganister, substantially forty per cent mica schist, and ten to twenty per cent of fine clay, in such proportions that expansion and contraction of the ingredients under heat is compensated.

1,629,048. ELEVATOR GATE. IRA M. POSTON, Dallas, Tex. Filed Oct. 25, 1926. Serial No. 143,818. 4 Claims. (Cl. 39—63.)

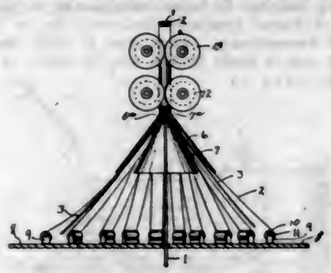


1. In an elevator gate, a gate frame, a pair of telescoping gate sections mounted to slide vertically in said frame, a flexible connection suspended in the frame and and supporting the lower gate section, a counterbalance attached to said connection, other flexible connections suspended from the top of the frame and attached to the upper gate section, and revolving supports on both sections and over which the last named flexible connections are looped.

1,629,049. ELECTRIC SIGNALING AND INDICATING APPARATUS. HARRY MELVILLE PROUD, West Ealing, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Apr. 8, 1920, Serial No. 372,171, and in Great Britain Apr. 14, 1919. 4 Claims. (Cl. 177—311.)

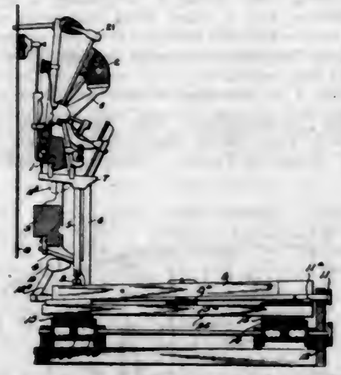
1. In combination, a source of current, two signaling devices and an indicator responsive to reversals of current polarity, and circuit controlling means for at times connecting one of said devices and said indicator with said source so that current of one polarity is supplied to the indicator, and at other times connecting the other of said devices and said indicator with said source so that current of the opposite polarity is supplied to the indicator.

1,629,050. APPARATUS FOR TREATING GRAINS. LOUIS J. PULS, Walla Walla, Wash. Filed Nov. 24, 1925. Serial No. 71,118. 5 Claims. (Cl. 83—28.)



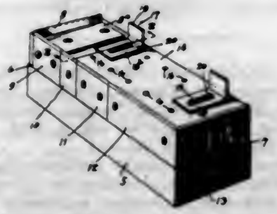
1. In combination a treatment casing, means for supplying power or other treatment agent to said casing, means in the casing at an intermediate point in the length thereof for feeding commingled grain and treatment agent, means in advance of the treatment agent feeding means in the casing for thoroughly commingling the grain and treatment agent, means in rear of the treatment agent feeding means for supplying grain to the treatment casing, and delivery means for receiving the treated grain from the casing; the feeding means in the casing being in the form of an auger, and the grains and treatment agent mixing means being in the form of a cylinder aligned with and fixed at its heel end to the delivery end of the auger and containing ribs or fins adapted to agitate and mix the grain and the treatment agent.

1,629,051. PROCESS OF FORMING METALLIC PACKING. HAMPTON P. RHODES, Houston, Tex., assignor to Rhodes Master Packing Company, Houston, Tex., a Corporation of Texas. Filed Oct. 4, 1924. Serial No. 741,777. 1 Claim. (Cl. 154—2.)



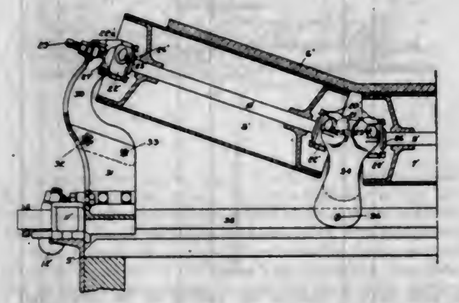
A method of forming a flexible packing comprising feeding a core longitudinally, simultaneously forming an envelope for said core by leading a plurality of flexible strips from spaced sources of supply into contact with said core while applying pressure against both the inner

and outer surfaces of said envelope as it is being formed to interfold said strips with each other and thereby com-



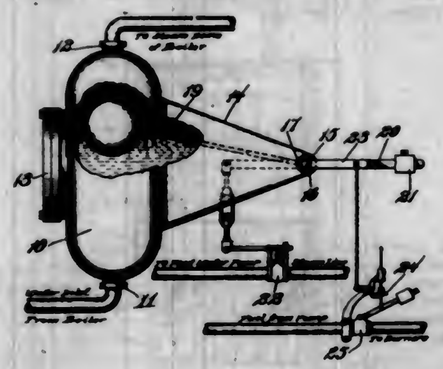
pact and constrict said envelope about said core, and finally pressing and shaping the assemblage into a desired cross section.

1,629,052. TRANSPOSING MECHANISM FOR PIANOS, ORGANS, AND THE LIKE. OSCAR RICHARDS, Montrose, Colo. Filed June 4, 1924. Serial No. 717,816. 3 Claims. (Cl. 84—445.)



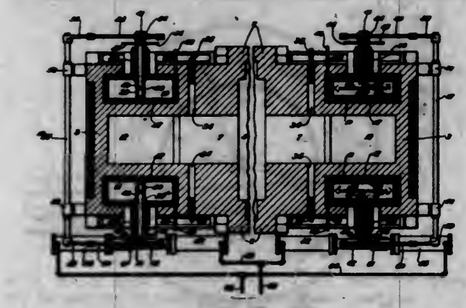
1. In a keyed musical instrument, the combination with the action thereof, of keys mounted for movement beneath the action and adapted thereby to register with the action in a plurality of positions, a frame supporting the keys including longitudinally extending rack bars, a plurality of shafts extending at right angles to the rack bars and mounted upon the frame of the instrument, one of the shafts extending out through the front of the instrument, a plurality of pairs of rollers mounted upon the shafts and having meshing engagement with the rack bars, each of said rollers having opposed flanges embracing the rack bars and that shaft extending through the front of the instrument having a finger hold whereby it may be operated.

1,629,053. MARKER BLOCK. CARL C. SCHRADER, Hughson, Calif. Filed June 1, 1926. Serial No. 112,945. 2 Claims. (Cl. 33—197.)



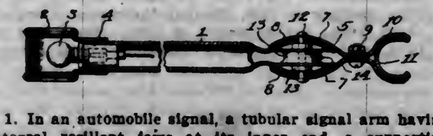
1. A marker device comprising a block, marking means extending beyond a face of the block, said means comprising a plurality of marking plates of different lengths, and having screw-receiving holes therein, screws detachably securing said plates to said block, the apertures in said plates being so disposed that the plates may be interchanged while allowing the apertures therein to register with the original screw holes in the block.

1,629,054. CARRIER FOR ENDLESS-BELT CONVEYERS. FRANK E. SMITH, Scottdale, Pa. Filed Nov. 7, 1924. Serial No. 748,353. 2 Claims. (Cl. 308—20.)



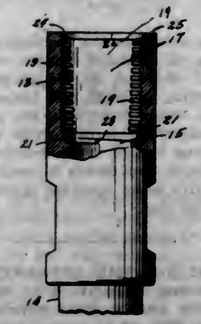
1. A roller supporting structure comprising a pair of fixed supporting members, a shaft journalled therein, a bracket at each end of the shaft having a removable upper end portion pivotally secured thereto, a bearing slidably retained in each of said upper end portions, intermediate brackets on the shafts also having bearings slidably retained therein, means loosely engaging said fixed supporting members for limiting the rocking movement of the shafts, and rollers supported by the bearings in the brackets.

1,629,055. BOILER-CONTROL DEVICE. MARION DEE SMITH, Casper, Wyo., assignor of one-half to Clarence E. Ross, Fort Worth, Texas. Filed Sept. 13, 1924. Serial No. 737,615. 1 Claim. (Cl. 122—447.)



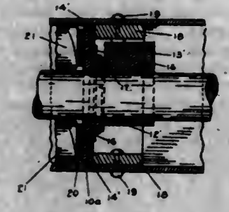
In combination with a boiler having a fuel feed line and a feed water pump supplying water to the boiler, a chamber arranged exteriorly of the boiler connected with the boiler above and below the water line thereof, a float operating within the chamber, a shaft rocked by the rise and fall of the float, a feed line for the feed water pump, a cut-off valve in said feed line, an adjustable connection between said shaft and said valve closing the valve upon elevation of the float, a self-closing latch valve in the fuel line to the boiler, and means operatively connecting the valve and said shaft operating to release the latch of the latch valve and permit the latch valve to close upon a predetermined lowering of the float within the chamber.

1,629,056. REGENERATIVE FURNACE. ANDREW W. SODERBERG, Munhall, Pa. Filed June 10, 1921. Serial No. 476,517. 5 Claims. (Cl. 263—15.)



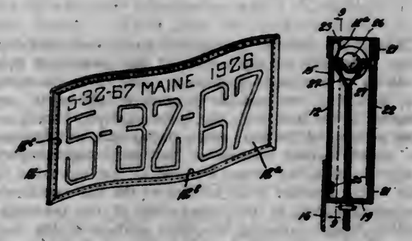
1. In a regenerative open hearth furnace having a hearth, a combined gas and air port, and an air port at each end of said hearth, a single slag pocket arranged below said ports at each end of said furnace, and vertical flues connecting said air ports and said combined gas and air ports with said slag pockets, butterfly type valves mounted in said flues connecting said air ports, and hydraulic cylinders having suitable lever connections with said valves, and adapted to simultaneously operate the valves at both ends of said furnace.

1,629,057. AUTOMOBILE SIGNAL. HUGH H. THEIS, Taylor, Tex. Filed Mar. 28, 1925. Serial No. 19,065. 2 Claims. (Cl. 116—54.)



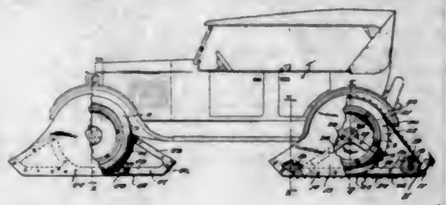
1. In an automobile signal, a tubular signal arm having integral resilient jaws at its inner end, a supporting clamp provided with jaws embracing the jaws of the arm, an axle pin connecting said jaws, a guide pulley between the jaws of the arm and journaled on said pin, a tubular guide on the vehicle, a cable extending through said guide and between said jaws and over the pulley and attached at one end to the signal arm beyond its pivotal connection, and control means attached to the other end of the cable.

1,629,058. THREADED COUPLING. ROBERT A. WILSON, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed July 30, 1925. Serial No. 47,004. 4 Claims. (Cl. 285—149.)



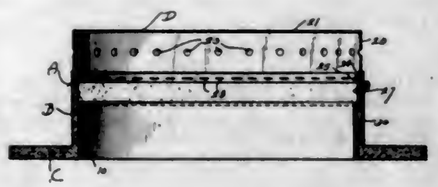
1. A coupling comprising in combination a straight cylindrical pin carried by the pin member and having threads arranged in longitudinal panels, on opposite sides, a tapered extension on the lower end of the pin below the threads, guide shoes on the lower edge of the extension, a box having a well shaped to snugly receive said pin and provided with threads arranged in spaced vertical panels to mesh with the threads of the pin, a tapered socket at the bottom of the well below the threads thereof for receiving the extension of the pin, and guide seats at the bottom of the socket for receiving and supporting the guide shoes.

1,629,059. GREASE RETAINER. RUDOLPH WITKOVSKI, Beatrice, Nebr. Filed Feb. 11, 1926. Serial No. 87,715. 2 Claims. (Cl. 286—7.)



1. A grease retainer comprising a collar having an annular flange at one end thereof, said collar and flange being in the form of two halves of substantially like dimensions, wipers projecting from said collar and in alignment therewith, a composition washer loosely surrounding said collar and bearing against said annular flange, a rigid washer snugly encircling said collar and bearing against said composition washer, and a resilient ring surrounding said collar and bearing against said rigid washer to hold the two parts of said collar and flange in assembled relation with said composition washer and said rigid washer.

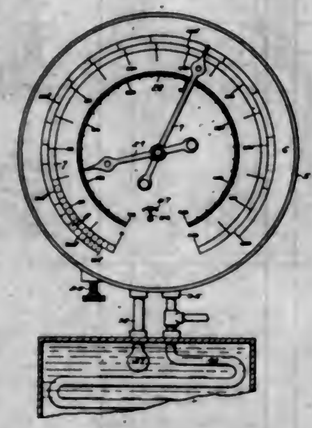
1,629,060. WEATHERPROOF ANTITHEFT ATTACHMENT FOR MOTOR VEHICLES. LEWIS W. WOLFSON, Boston, Mass. Filed Sept. 16, 1926. Serial No. 135,979. 4 Claims. (Cl. 40—132.)



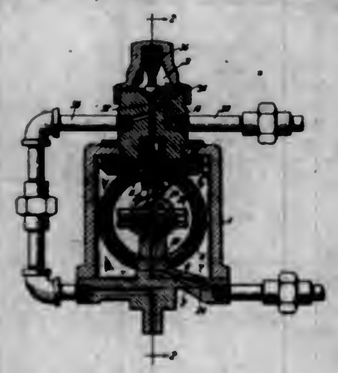
1. An anti-theft accessory for a licensed motor vehicle, comprising, in combination, a flexible license plate substantially duplicating in size and indicia the usual license plate of the vehicle, and foldable to permit storage in a garment pocket, a weatherproof casing having an opening formed to receive the flexible plate in an unfolded condition, means being provided within the casing for releasably confining the flexible plate therein in an unfolded flat condition, the casing including a transparent front wall formed to permit inspection of the confined plate; and means for attaching the casing to a portion of the vehicle adjacent the usual license plate hereof, in position permitting simultaneous inspection of the two plates, the flexible plate being protected by the casing from contamination when in use.

1,629,061. SLED ATTACHMENT FOR AUTOMOBILES. EDWARD R. ARMSTRONG, Holland, Mich. Filed Aug. 8, 1924. Serial No. 730,806. 1 Claim. (Cl. 180—5.)

A sled attachment for the rear wheels of automobiles comprising a runner open at its bottom and having upstanding inner and outer side flanges, a support secured to the inner one of said side flanges and extending upwardly therefrom and having its upper portion provided with a laterally extending stem, a clamp adapted to be removably secured about the axle housing for the rear wheels including separable sections, one section having a bore receiving the said stem, a side plate secured to the outer side flange of the runner and having an opening to accommodate the outer end of the hub of the wheel, a sprocket gear for attachment to the rear wheel, sprocket gears rotatably carried by said runner, a sprocket chain trained about said gears and having a lower stretch extending between the last-mentioned gears, and traction elements carried by the chain and extending through the open bottom of the runner.



1,629,062. HEAD COVERING. MIGUEL ROSES ARTAU, Santurce, P. R. Filed Aug. 13, 1924. Serial No. 731,826. 1 Claim. (Cl. 2—175.)

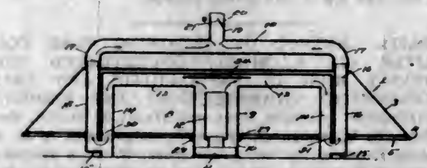


In a head covering a body portion of substantially annular formation having a brim at the lower edge thereof, a crown of diaphanous material said crown including a top wall and an annular perforate side wall portion adapted to lie flush with the outer surface of the annular body portion of the hat, said annular side wall portion of the crown having formed at the lower edge thereof an inwardly extending flange adapted to rest upon the upper edge of the annular body portion of the hat and having a depending flange at the inner edge of the inwardly extending flange engaging the inner surface of the wall of the body portion of the hat, and a band of greater height than the outer wall face of the body portion for concealing the juncture of the body portion with the crown portion.

1,629,063. TERMINAL-DIFFERENCE GAUGE. CHARLES HAROLD BERRY, Detroit, Mich. Filed Apr. 16, 1924. Serial No. 706,951. 6 Claims. (Cl. 73—109.)

1. A terminal difference gauge comprising pressure responsive means, means controlled by said responsive means to indicate the temperature of vaporization corresponding to the absolute pressure of one medium throughout variations of the existing atmospheric pressure, in combination with a temperature responsive means mechanically separated from the pressure responsive means and disposed in such relation to a second medium that is being acted upon by the first named medium, as to indicate the temperature imparted to said second medium by said first medium and a member common to both the pressure responsive means and the temperature responsive means, the positions of said two means, with respect to each other upon said member, indicating the terminal difference, as described.

1,629,064. TEMPERATURE, PRESSURE, OR FLOW REGULATING DEVICE. ANDREW BITZEL, Akron, Ohio, assignor to The Thermo Instrument Company, Akron, Ohio, a Corporation of Ohio. Filed May 28, 1925. Serial No. 33,682. 9 Claims. (Cl. 236—86.)

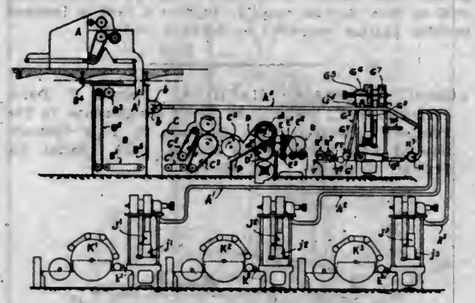


1. In a heat, pressure or flow regulating and responsive device, a housing, an actuating element responsive to heat or pressure in a chamber, an air passageway, a valve therein, a pin resting upon the heat responsive element, a rotatable gear, a bridge piece upon the gear, said bridge piece having a non-rotatable connection with said pin, a screw-threaded plug located in the housing and in which said pin is received, and means to hold said plug non-rotatably, the valve being operated through the medium of the said pin and plug.

1,629,065. BOWLING-GAME APPARATUS. GRANVILLE BRADSHAW, London, England. Filed Mar. 8, 1927, Serial No. 173,726, and in Great Britain May 6, 1925. 9 Claims. (Cl. 273—41.)

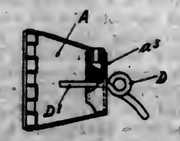
1. In a bowling game apparatus, an alley bed, a support maintained below one end of the alley bed, targets mounted for movement on the support, projections on the targets for engagement with the under side of the alley bed to form a continuance of the alley bed when the targets are in substantially horizontal position.

1,629,066. BROODER. WILLIAM G. BRUNS, Sioux Falls, S. Dak. Filed Jan. 5, 1926. Serial No. 79,335. 1 Claim. (Cl. 19—32.)



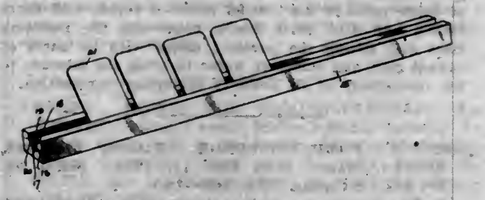
In a brooder of the class described, in combination, a burner, a cylindrical housing surrounding said burner, a conduit connected with the upper portion of the housing and including branches extending in opposite directions from said housing, said branches including depending portions and upwardly directed portions, supporting members carried by the lower portion of said housing and extending radially therefrom, a sectional hood adapted to enclose said housing and conduit, said housing including a flattened apex portion and downwardly inclined side and end wall portions, said apex portion being provided with openings through which the discharge end of the upwardly directed portions of said branches are extended, and a substantially U-shaped conductor pipe, the end portions of the arm of which are connected with the discharge end portions of said branches.

1,629,067. ABDOMINAL SUPPORTER. WILLIAM T. BUCKNER, Shelbyville, Ky., assignor of one-half to Agnes Frederick Guthrie, Shelbyville, Ky. Filed Mar. 6, 1926. Serial No. 92,767. 2 Claims. (Cl. 128—148.)



1. A pneumatic pad for a surgical appliance, the same comprising a front and back, united at their outer marginal edges, an air valve applied to the back, a base-plate coextensive with the pad and secured at its outer edge thereto and provided with an opening to accommodate the said air valve, a collar projecting from the base plate in line with the opening therein, and a cap threaded to said collar and serving as protective means for the air valve and as fastening means for securing the pad to the appliance.

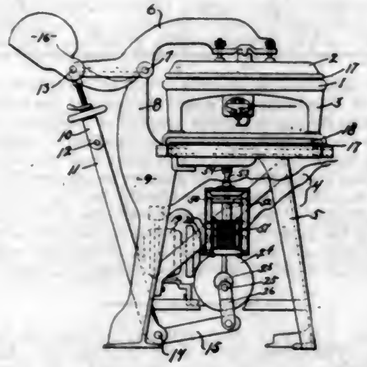
1,629,068. APPARATUS FOR USE IN TREATING COTTON AND OTHER FIBROUS MATERIALS. JOHN WILLIAM COOK, Manchester, England. Filed July 16, 1923, Serial No. 651,909, and in Great Britain July 18, 1922. 9 Claims. (Cl. 19—72.)



1. In apparatus for treating cotton or other fibrous material the combination of means for opening the material, mechanical feeding apparatus adapted to loosen and carry forward the material, a plurality of pneumatic feeding appliances adapted to receive the material from the mechanical feeding apparatus, means adapted to regulate the supply of material to the said pneumatic feeding apparatus, means adapted to deliver the material from the pneumatic feeder in the form of a doubled fleece, a plurality of carding engines, and means adapted to divide and feed the said doubled fleeces to the various carding engines.

1,629,069. LAPPET AND THREAD GUIDE OF SPINNING, TWISTING, AND LIKE MACHINES. NORMAN COOK, Manchester, England. Filed Sept. 27, 1924, Serial No. 740,326, and in Great Britain Sept. 28, 1921. 2 Claims. (Cl. 118—12.)

1. In a lappet and thread guide for spinning twisting and like machines the combination with a thread guide of a lappet having a metal plate the forward portion of which is bent to form a cylindrical bushing the interior of which is tapped and in the walls of which are cut oppositely situated holes on a line transversely of the bushing, the said holes being adapted to receive the shank of the thread guide, and a set screw adapted when screwed into the bushing to abut against the portion of the thread guide shank that crosses the said bushing.

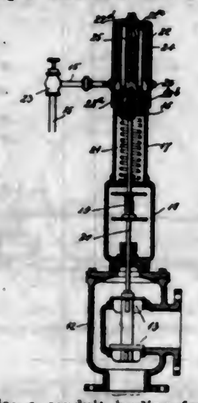


1,629,070. CARD RACK. HERBERT T. COX, Los Angeles, Calif. Filed Jan. 16, 1926. Serial No. 81,786. 1 Claim. (Cl. 273—150.)

A card rack comprising an elongated body having in its upper side a longitudinally disposed groove coextensive in length therewith, said groove having a flat bot-

tom and one side wall rising at right angles therefrom, and another side wall which is transversely stepped from end to end, the upper edge of the latter wall and the edge of the step therein being disposed in an inclined plane which intersects the lower edge of the first side wall so that they all coact to support a card in inclined position against rearward or forward tilting.

1,629,071. PRESSING MACHINE. JOSEPH P. DALY, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed May 9, 1924. Serial No. 712,046. 3 Claims. (Cl. 68—9.)



1. The combination of a pressing machine including a buck, a press head movable toward and from the buck, mechanism for actuating the press head including a toggle and actuating means including a constantly running drive shaft, a driven shaft and connections between the driven shaft and the toggle and connections between the drive shaft and the driven shaft for clutching the driven shaft to the drive shaft, with a conveyor movable over the face of the buck between the buck and the head, actuating means for the conveyor connected to the driven shaft which is actuated by the driving shaft through the clutch, the actuating means for the conveyor including timing mechanism to actuate the conveyor during the opening and closing only of the press head.

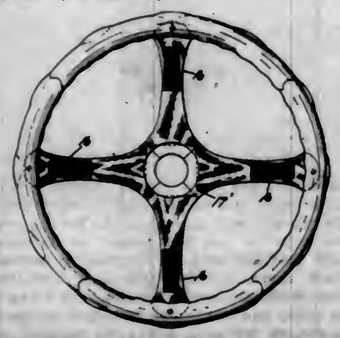
1,629,072. COMPOSITION FOR AND METHOD OF COATING METAL SURFACES. RALPH R. DANIELSON, Chicago, Ill. Filed Dec. 1, 1923. Serial No. 678,043. 10 Claims. (Cl. 148—1.) (Granted under the act of Mar. 3, 1883; 22 Stat. L. 625.)

1. A composition for use in protecting metallic surfaces in selective carburization comprising, 100 parts of frit, prepared by sintering at 800° C. to 900° C., a mixture of 64.90 parts of flint, 36.96 parts of borax, 6.95 parts $NaNO_3$ and 8.17 parts Pb_3O_4, powdering the resulting mass and sifting the powder; mixed with 93 parts of enamel clay, and sufficient water to bring the mixture to the consistency of an ordinary enameling composition.

1,629,073. PUMP GOVERNOR. WILFORD FLETCHER, Billerica, Mass. Filed Feb. 11, 1924. Serial No. 691,869. 2 Claims. (Cl. 103—16.)

1. The combination with a steam pump equipped with a valve controlling the supply of motive fluid thereto, said valve having an upwardly extending stem with a controlling piston at the upper end thereof, a cylinder in which said piston is fitted equipped with a backing spring, and an oil containing chamber borne at the top of said cylinder having a connection with the pump discharge,

and having also a conduit leading from the top portion thereof downward through the bottom thereof, and opening into the top of the piston cylinder.



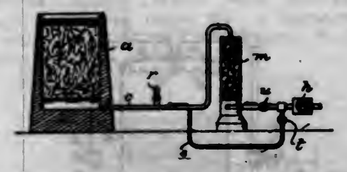
1,629,074. METHOD OF OBTAINING FROM COD-LIVER OIL A HIGHLY-CONCENTRATED SUBSTANCE RICH IN ANTIRACHITIC AND ANTI-XEROPHILIC VITAMINES AND THE PRODUCT THEREOF. CASIMIR FUNK and HARRY E. DUBIN, New York, N. Y., assignors, by mesne assignments, to H. A. Metz Laboratories, Inc., New York, N. Y., a Corporation of New York. Filed June 28, 1923. Serial No. 648,390. 14 Claims. (Cl. 167—7.)

1. Process of concentrating the vitamine content of a vitamine-containing material which comprises extracting the material with an organic acid and separating the resulting extract from the organic acid.

8. Process of concentrating the vitamine content of cod liver oil which comprises extracting the oil with glacial acetic acid, separating the resulting extract from acetic acid, saponifying the separated extract and separating saponified from unsaponified material, and further concentrating the vitamine content of the unsaponified material by a digitonin precipitation.

11. A vitamine-containing product derived from an organic acid extract of cod liver oil, said product containing in concentrated form antixerophthalmic and antirachitic vitamines in substantially the same ratio as cod liver oil.

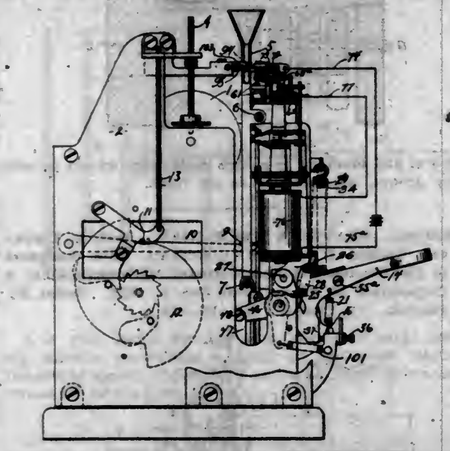
1,629,075. HANDWHEEL. HARVEY D. GEYER, Dayton, Ohio, assignor, by mesne assignments, to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Aug 15, 1922. Serial No. 582,010. 2 Claims. (Cl. 74—33.)



1. A handwheel having a rim and a spider comprising wooden spokes, said spokes being widened at their inner ends and abutting each other on radial lines and rigidly joined together, the joint being made by a polygonal central spline having the same number of straight sides as the wheel has spokes, the corners of said polygonal spline lying substantially at the lines of contact of adjacent spokes.

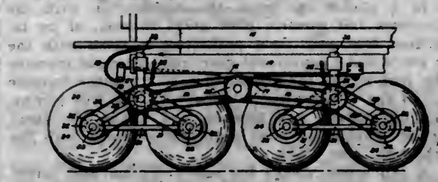
1,629,076. WINDOW-SASH CONSTRUCTION. CHARLES M. GIBSON, Rochester, N. Y. Filed Apr. 23, 1926. Serial No. 104,079. 2 Claims. (Cl. 20—49.)

1. A window sash comprising vertically slidable supporting members, a glass retaining frame, stop plates secured to the frame and supporting members respectively, the adjacent stop plates being located in different vertical planes and arranged to substantially overlap each other when the frame is in vertical position, the supporting members and frame being recessed under their respective stop plates to afford openings which receive the co-operating and overlapping stop plates, and means pivotally connecting the stop plates at their lower ends to permit swinging movement of the frame about its lower portion.



1,629,077. PRODUCTION OF FODDER. MARTIN HÖLKEN, Sr., Barmen, Germany. Filed Apr. 24, 1925. Serial No. 25,595, and in Germany Feb. 17, 1925. 5 Claims. (Cl. 99—11.)

1. The described method of preserving green fodder in silos by conversion into sweet pressed fodder, which consists in initially forcing into the packed silage gases containing atmospheric air having its normal free oxygen content, and in subsequently forcing in gases practically devoid of free oxygen, and using these latter gases to drive out of the silage the more or less oxygen-laden gases.



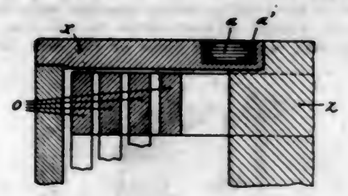
1,629,078. RECORDING MACHINE. JAMES F. KIELY, Syracuse, N. Y. Filed June 15, 1923. Serial No. 645,579. 4 Claims. (Cl. 234—48.)

1. In a recording machine the combination of a printing couple comprising a stamp element and a card receiver element having relative movement to effect the printing of a record on the card in the receiver and relative lateral movement to locate the record on the card, operating means for effecting such relative movements, stop mechanism for limiting the lateral movement in successive positions, mechanism operated by the relative movement of the printing couple elements while making a record to produce a modification in the form of a boss projecting out of the plane of the card for con-

trolling the operation of the stop mechanism during the next printing operation on the card, said stop mechanism comprising a part located out of the plane of the card and in the path of the boss to be engaged and shifted thereby, during the lateral movement of the car receiver.

1,629,079. TRACKLESS VEHICLE. HARRY A. KNOX, Davenport, Iowa. Filed Nov. 8, 1924. Serial No. 748,891. 4 Claims. (Cl. 180—22.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

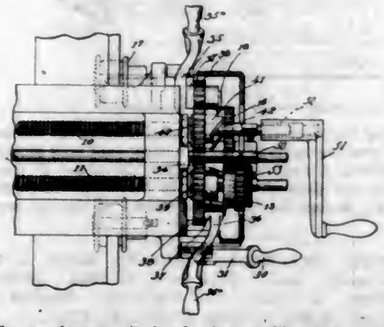
4. A truck unit for motor vehicles embodying a main frame adapted to be centrally pivoted on an end of the vehicle axle, a plurality of groups of wheels independently hung from each end of the frame and means for driving the wheels.



1,629,080. CONCENTRATION OF MINERALS FROM ORES BY THE USE OF SULPHONES AS FLOTATION REAGENTS. FREDERICK LAIST and FREDERICK F. FRICK, Anaconda, Mont. Filed Apr. 13, 1926. Serial No. 101,793. 7 Claims. (Cl. 209—166.)

1. A process of concentrating ores by froth flotation, which comprises subjecting to a flotation operation a mixture of the ore containing a sulphone in a quantity effective for flotation.

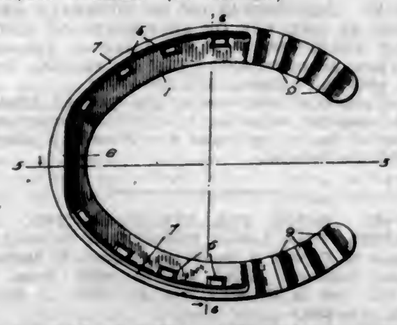
1,629,081. ROTOR FOR DYNAMO-ELECTRIC MACHINES. FRANZ LASZLO, Mulheim-Ruhr, Germany, assignor to Thyssen & Co. Aktiengesellschaft, Mulheim-Ruhr, Germany. Filed Dec. 2, 1925, Serial No. 72,755, and in Germany Dec. 28, 1922. 2 Claims. (Cl. 171—206.)



1. The combination, in a rotor for dynamo-electric machines, of a rotor core, rotor coil heads projecting from the ends of the latter, a solid fastening-hood placed

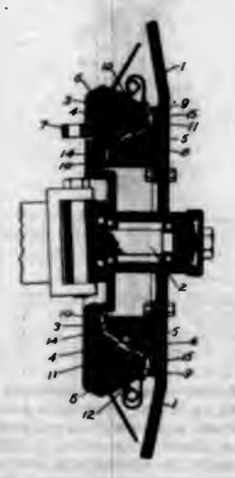
over said coil heads with its inner end upon said rotor core and having at said inner end at least one deep ring

groove, and bindings of a high yield-point wound in said ring groove, substantially as set forth.



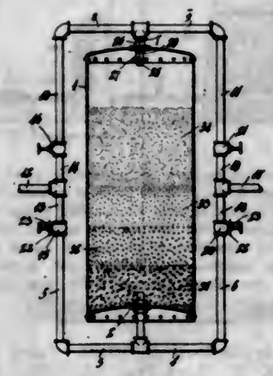
1,629,082. TRAVERSE MECHANISM. CARL E. LINDEN and GEORGE E. LANGEN, Cincinnati, Ohio, assignors to The Cincinnati Planer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 9, 1921. Serial No. 443,652. 12 Claims. (Cl. 90—49.)

1. In a planer rail head, the combination with the feed screws and movable click gears thereon, of an intermittent feed gear train positioned to mesh with the click gears, and a continuous gear train for rapid traverse of the feed screws comprising in part a member movable into and out of operative relation with the feed screws, means for moving said member, and means for simultaneously moving the click gears out of mesh with the intermittent gear train.



9. A rail screw, means for power driving said screw, a handle for manually setting said screw, and means for disconnecting it automatically from the screw upon coupling the power means to the screw.

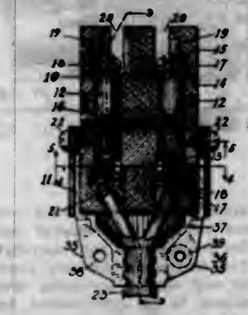
1,629,083. HORSESHOE. PETER F. MEADE, U. S. Army, Washington, D. C. Filed Sept. 17, 1924. Serial No. 738,315. 3 Claims. (Cl. 168—24.)



2. A horseshoe including a body having a toe portion and heel portions, a plurality of transverse calks at the heel portions, a toe calk, and main body calks extending between and merging into a forward heel calk and said toe calk, the outer face of said calks all extending vertically from the outer edge of the body throughout, said calks being provided with relatively wide bases and narrow contact faces to prevent the anchoring of accumulations of foreign matter and prevent slipping in all directions.

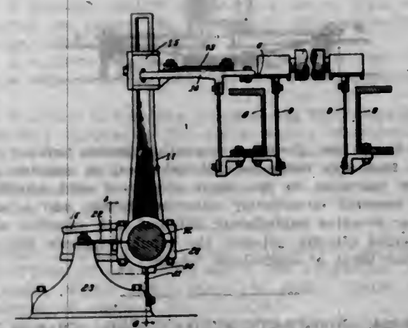
1,629,084. ELECTROMAGNETIC BRAKE. ROBERT V. MORSE, Ithaca, N. Y. Filed Aug. 7, 1924. Serial No. 730,727. 8 Claims. (Cl. 188—156.)

1. In a brake, the combination of a rotating member to be braked, a friction brake adapted to operate on said member, mechanical means for applying said friction brake, magnetic means for augmenting the force of said mechanical means when the brake is applied, said magnetic means being energized by the rotation of the member to be braked.



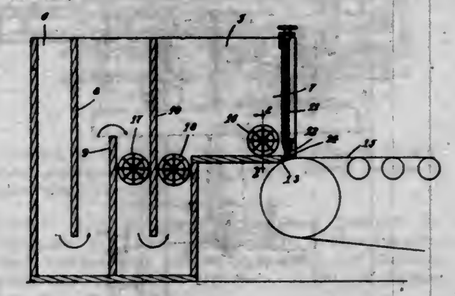
1,629,085. FILTER. EDMOND ROBERTSON, Newport, Ky. Filed Sept. 21, 1923. Serial No. 664,055. 1 Claim. (Cl. 210—144.)

In a filter comprising an upright cylindrical enclosure having passages respectively in its top and bottom from its interior outward, and filtering material interposed between said passages, resting on the bottom of said enclosure around the lower passage and spaced down from the upper passage said material being progressively



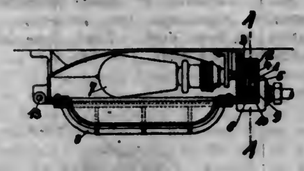
of finer texture from bottom to top, inlet means, connections from said inlet means to the respective passages, outlet means, connections from the outlet means to the respective passages, cutoff valves in said connections between the respective passages and the inlet means and outlet means, and a combined filtering-outlet and washing-inlet nozzle in the space above the filtering material spaced away from said material but freely accessible therefrom, leading down from the upper passage and having a lower downwardly directed opening and openings in various lateral directions.

1,629,086. CONNECTION PLUG. MAURICE J. WOHL, Long Island City, and MAX MAYER, New York, N. Y., assignors to M. J. Wohl & Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed Mar. 1, 1923. Serial No. 622,040. 14 Claims. (Cl. 173—322.)



1. In a connection plug, and insulating block, a connection terminal held therein, a pair of shells alike in shape covering said body, jaws forming a clamping tube at the cable end of said shells an alining edge on one longitudinal side of each shell overlapping the outside of the other shell and pivot pins in said ledges near the terminal end of said plug forming means to oscillate said shells with their jaws, and means on said shells to press them and their jaws against each other.

1,629,087. SHAKER MOUNTING FOR FOURDRINIER MACHINES. ALONZO ALDRICH, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed Jan. 30, 1925. Serial No. 5,696. 17 Claims. (Cl. 92—45.)

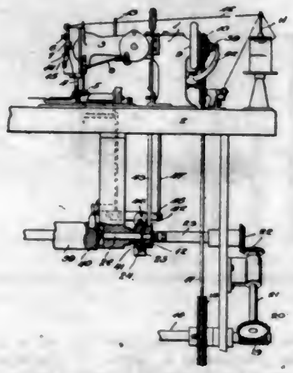


1. The mounting for an oscillatory shaft comprising sets of flat springs fixed at longitudinally spaced points to the shaft in radial relation thereto and spaced circumferentially to provide vertical and lateral support therefor.

1,629,088. MIXER FOR FOURDRINIER FLOW BOXES. ALONZO ALDRICH, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed July 19, 1926. Serial No. 123,281. 5 Claims. (Cl. 92—44.)

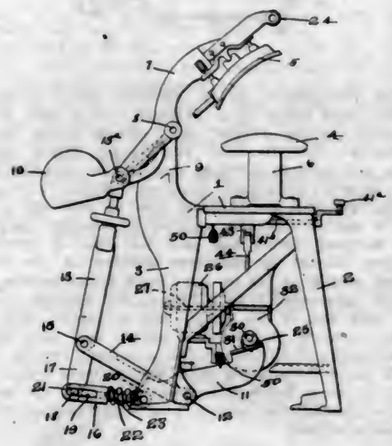
1. A pulp mixer for the flow box of a paper making machine comprising a series of perforated circumferentially spaced and radially arranged mixer plates, and means for rotating the mixer.

1,629,089. EXPLOSIONPROOF FITTING FOR ELECTRIC GLOWLAMPS. JOHANNES BECKMANN, Altona-Ottensen, Germany. Filed Nov. 30, 1926, Serial No. 151,792, and in Germany Mar. 3, 1926. 1 Claim. (Cl. 240—17.5.)



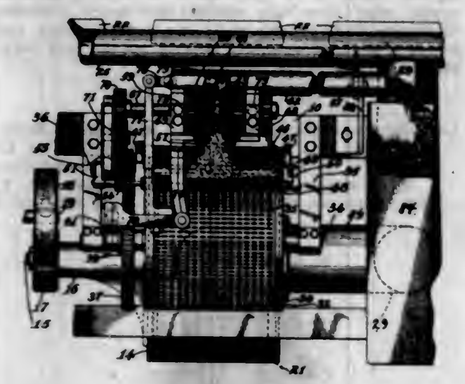
The combination, in an explosion proof fitting for electric glow-lamps, of a flattened switch axle part, a stationary fitting member and a hinged fitting member, fastening-screws to close said hinged fitting member upon said stationary fitting member, an open-ended casing integral with said stationary fitting member, a spring-influenced non-turnable slide in said casing having a slotted end and adapted to straddle therewith the flattened switch axle part and thus to prevent a turning thereof in the open position of the hinged fitting member, a lug on the hinged fitting member having an open-ended keyhole therein and adapted to enter the open end of the casing and to retract said slide while receiving the flattened switch axle part in the round boring of its keyhole and allowing a turning thereof in its closed position only, said flattened switch axle part in its switched-on position preventing an opening of the hinged fitting member even after loosening of said fastening-screws.

1,629,090. AUTOMATIC STOP MECHANISM FOR SEWING MACHINES. JOHN BOSTON, Newark, N. J., assignor, by mesne assignments, to T. Harden Carter. Original application filed Sept. 4, 1918, Serial No. 252,527, Patent No. 1,502,544, dated July 22, 1924. Divided and this application filed Sept. 18, 1923. Serial No. 663,489. 3 Claims. (Cl. 112—219.)



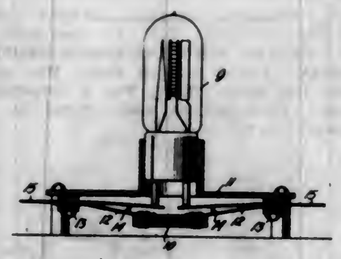
1. In a machine of the class described, a movable element, means to control operation of the machine through movement of said element, means to operate said element by feed of the material up to the point of exhaustion including a material-engaging device having a spring, a weighted lever arm normally held slightly to one side of

its fulcrum by light pressure of said spring, and a connection flexibly longitudinally disposed between said arm and element to enable the weight of the arm to



exert maximum force on said element when released by said spring to draw said connection and thereby move the element and associated parts.

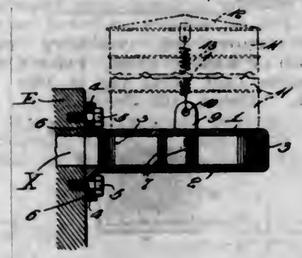
1,629,091. PRESSING MACHINE. ALBERT B. CLISSON, Syracuse, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed June 18, 1924. Serial No. 720,869. 3 Claims. (Cl. 68—9.)



1. In a pressing machine, a frame, cooperating pressing elements supported by the frame and one being supported to move toward and from the other, and means for actuating the movable element comprising a power member and toggle mechanism between the power member and the movable element, the toggle mechanism comprising a link pivotally connected to the movable element, a second link pivoted to the first link and to the frame, and a third link pivoted to the power member and to one of the former links, one of said links comprising sections having an endwise movement relative to each other and a spring for resisting such endwise movement.

1,629,092. WASTE-REMOVAL APPARATUS. FRANK L. CROCKETT, North Uxbridge, Mass., assignor to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Sept. 10, 1918. Serial No. 253,350. Renewed Dec. 1, 1925. 8 Claims. (Cl. 19—115.)

6. The combination in a multiple head combing machine, of a series of narrow elongated nozzles, one placed close to the periphery of each scavenging brush, a suction producing device, passageways connecting all said nozzles to the said suction producing device, and a screen means, common to all said nozzles, intercepting the fibers in the air current.



1,629,093. SIGNALING SYSTEM. AUSTEN M. CURTIS, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 8, 1923. Serial No. 679,315. 5 Claims. (Cl. 178—70.)

1. In a low frequency signaling system subject to high frequency extraneous disturbances, an amplifier, a series reactance in the input circuit of said amplifier and mounted immediately adjacent thereto, and a condenser mounted immediately adjacent said amplifier and connected directly between the input terminals thereof without leads of appreciable length.

1,629,094. HOT-PLATE AUTO COOKER. CHARLES W. DALY, Davenport, Iowa. Filed June 30, 1925. Serial No. 40,665. 1 Claim. (Cl. 126—20.)

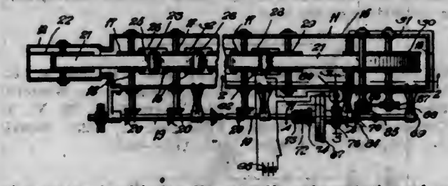
An exhaust manifold adapted to serve as a hot plate, said manifold comprising a hollow body portion of oval outline and having a flat top wall, said manifold having its rear end provided with an outlet opening and having one lateral wall provided immediately in front of said outlet opening with an inlet passage and

equipped with attaching flanges, and a baffle in said manifold interposed between said inlet passage and said outlet opening.

1,629,095. TUNING PIN HOOKS AND METHOD OF MAKING THE SAME. ROBERT C. DANLY, Chicago, Ill., assignor to Ludwig & Ludwig, Inc., Chicago, Ill., a Corporation of Illinois. Filed Apr. 26, 1926. Serial No. 104,625. 10 Claims. (Cl. 113—116.)

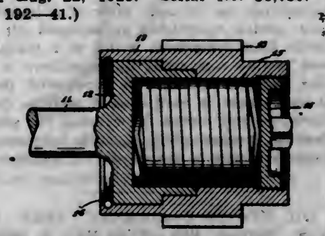
1. The method of forming an article having a pair of hook shape wings in spaced relation, which comprises the blanking out of a plate metal blank having a flat main portion, a pair of flat wings in spaced relation and an extension intermediate of said wings, forming said blank along its midwidth with a hollow rib providing a receiving channel, deflecting said intermediate extension to form a closure web for an end of the channel formed by the hollow rib, forming a central orifice in said closure web, and bending the free ends of the wings into a hook form.

1,629,096. COSMETIC. ARTHUR L. DAVIS, Alton, Ill. Filed Nov. 22, 1923. Serial No. 676,257. 7 Claims. (Cl. 167—9.)



1. A cosmetic capable of absorbing matter from and bleaching the human skin, comprising silica gel reduced to a fine state of pulverization.

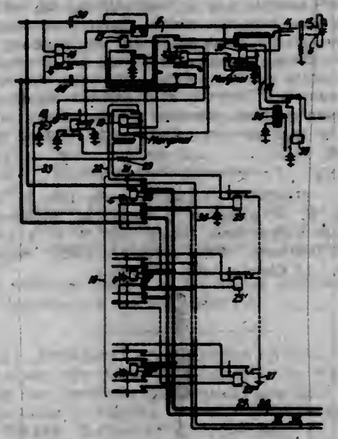
3. A cosmetic capable of absorbing matter from the human skin comprising silica gel mixed with pulverized talc.



6. A process of bleaching and cleansing the human skin comprising applying to the skin a coating of pulverized silica gel and permitting the coating to remain in contact with the skin until the oil and impurities have been absorbed from the surface and pores of the skin and then removing the coating.

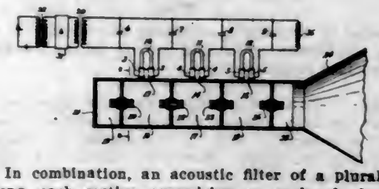
1,629,097. APPARATUS FOR HANDLING MOTION-PICTURE FILMS. VINCENT C. DE YBARRONDO, Los Angeles, Calif. Filed May 16, 1928. Serial No. 639,344. 3 Claims. (Cl. 271—2.3.)

1. In a film handling apparatus, the combination of: a film feeding mechanism; a film take-up mechanism; a film operatively associated with said mechanisms and arranged to form an intermediate depending loop; friction means for applying power to said take-up mechanism; gravity means hanging in said loop and adapted to be elevated when the loop is shortened by a speed increase of lineal travel of its take-up run; and means controlled by said gravity means for causing slippage of said friction means by frictionally retarding the rotation of said take-up mechanism when said gravity means reaches a predetermined elevation.



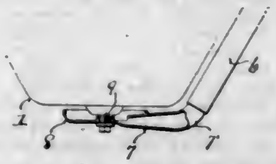
1,629,098. SPRING CLUTCH. CHARLES DREXLER, Indianapolis, Ind., assignor to L. G. S. Devices Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 22, 1925. Serial No. 51,730. 4 Claims. (Cl. 192—41.)

1. In combination, two relatively rotatable members, one of said parts being provided with a central circular recess, a coil spring located in such recess and operatively connected to the other of said rotatable members, so that when said two members tend to rotate relatively in a direction to unwind said spring said spring will tend to expand, at least the majority of the turns of said coil spring being in contact with adjacent turns, axially collapsible resilient means located at one end of said spring, and means for applying axial pressure to said spring through said resilient means.



1,629,099. TELEPHONE SYSTEM. CLARENCE B. FOWLER, Queens, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 12, 1925. Serial No. 49,742. 3 Claims. (Cl. 179—50.)

1. In a telephone system, a line, a connecting trunk therefor, a relay arrangement for completing a talking connection and maintaining without interruption a cer-



tain electrical condition on said trunk, means for operating said relay arrangement responsive to the connection of all of the conductors of the trunk with the corresponding conductors of the line.

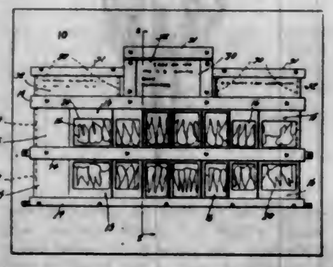
1,629,100. TRANSMISSION SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1923. Serial No. 681,926. 10 Claims. (Cl. 178—44.)

1. In combination, an acoustic filter of a plurality of sections, each section comprising an enclosed air chamber, an electric filter comprising a line of a plurality of sections, each section comprising an impedance in shunt with the line and an impedance in series with the line, one of said impedances in each of said sections comprising an inductance, and means for causing the electrical currents flowing through each of said inductances to produce vibratory energy in one of said air chambers.

1,629,101. OIL HEATER FOR CRANK CASES. FRANK HEIMERL, St. Nazianz, Wis. Filed Mar. 4, 1926. Serial No. 92,378. 2 Claims. (Cl. 184—104.)

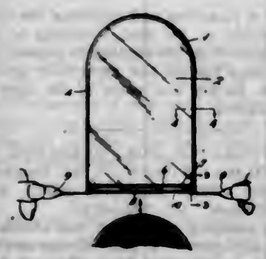
1. The combination of an internal combustion engine having an exhaust manifold and having a crank case provided with a drain plug, an attachment of disc-like contour having a central aperture surrounded by an upstanding flange and having a marginal flange, said central aperture being adapted to receive the drain plug, whereby the member may be held adjacent the bottom of the crank case with the central flange contacting with the bottom of the crank case and the marginal flange spaced therefrom, said member having an outwardly extending tubular portion opening into such member, and a pipe connection between said exhaust manifold and said tubular portion, whereby exhaust gases are distributed by said member adjacent the bottom of said crank case.

1,629,102. FUSIBLE ELEMENT. DE LOS N. HICOK, Newark, N. J., assignor to Federated Engineers Development Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Aug. 17, 1922. Serial No. 582,564. 14 Claims. (Cl. 169—42.)



1. As a new article of manufacture, a temperature sensitive device comprising a liquid container adapted to receive a fusible substance in liquid state, a fusible substance therein consisting of a stable organic compound of crystalline character, and a stressed element anchored in the compound.

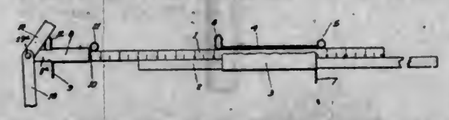
1,629,103. PROTECTED CONCRETE PILE AND METHOD OF MAKING SAME. FRANK S. HONBERGER, Los Angeles, Calif. Filed Aug. 28, 1926. Serial No. 132,073. 7 Claims. (Cl. 25—155.)



4. A protected concrete body, comprising a main inner body of comparatively dense concrete, and a surrounding concrete sheathing formed integrally with said main body and of comparatively porous concrete and having its interstitial spaces filled with asphalt.

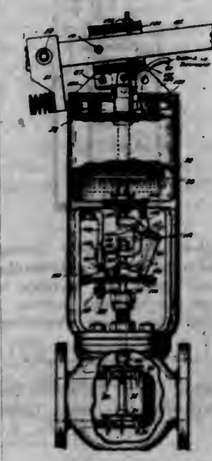
1,629,104. MAKE-UP FRAME FOR X-RAY PHOTOGRAPHY. ALBERT H. HONEY, Los Angeles, Calif. Filed Oct. 23, 1924. Serial No. 745,300. 3 Claims. (Cl. 40—64.)

1. A make-up device for holding a plurality of transparencies to be collectively photographed, embodying an opaque plate with an opening therethrough and slideways on opposite sides of the opening, a plurality of opaque transparency carriers of uniform height dimension adapted to fit into said slideways and collectively cover said opening, said carriers embodying two leaves with registering apertures therethrough and said apertures in the several carriers being of different dimensions so as to expose transparencies of different sizes.



1,629,105. RACKET CASE. ELBERT C. HOOVER and IRWIN C. HOOVER, Washington, D. C. Filed Sept. 17, 1924. Serial No. 738,215. 1 Claim. (Cl. 150—52.)

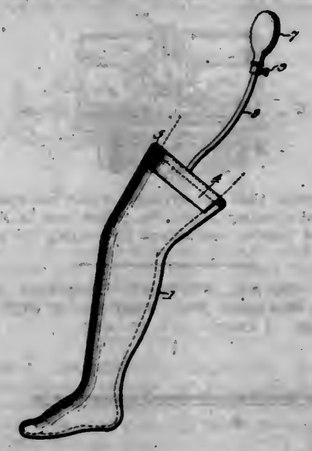
An open month case of the character described consisting of two similar fabric sections secured together at their peripheral edges by an attached strip, the material of



the case at the mouth thereof being folded back and secured upon itself, an elastic band inserted within the folded portion to normally constrict the opening of the mouth, said mouth being capable of extension by hand pulls which are formed by extending the strip which is attached to the peripheries of the fabric sections beyond the mouth of the case on each side thereof.

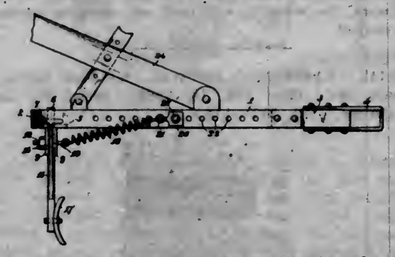
1,629,106. HANDY MEASURING DEVICE. CHARLES JOSEPH JOHNSON, Sacramento, Calif. Filed Aug. 19, 1925. Serial No. 51,128. 2 Claims. (Cl. 33—98.)

1. A measuring device including a bar, a slide movable thereon, a flat spring extending lengthwise between adjacent faces of the slide and bar, and rigid loops of different shapes projecting outwardly from both ends of the spring transversely thereof and outwardly of the slide.



1,629,107. HUMIDITY REGULATOR. ARTHUR E. KRICK, Danville, Ind., assignor to The Humidity Control Company, Indianapolis, Ind., a Corporation of Indiana. Filed Oct. 22, 1923. Serial No. 669,910. 19 Claims. (Cl. 236—44.)

1. In combination, a shiftable controlling member, an actuating member therefor, and a floating spring-collapsed toggle acting on said controlling member and collapsible on either side of alined position to tend to move the controlling member toward either of its end positions, said toggle being substantially free from outside lateral pressure and reaction and capable of a limited opening movement from either of its collapsed positions without changing the position of said controlling member.



1,629,108. APPARATUS FOR THE TREATMENT OF VARICOSE VEINS. SIMON LAKE, Milford, Conn. Filed Sept. 5, 1924. Serial No. 736,146. 2 Claims. (Cl. 128—299.)

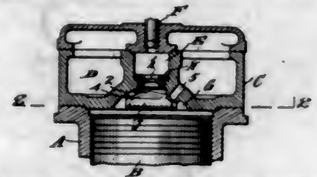
1. An apparatus for treating varicose veins of a body member, comprising a casing fitted to but out of contact with said member and substantially conforming to the shape of said member, an elastic band carried by said casing and folded inwardly thereof and intimately embracing said body member, and means for introducing fluid under pressure into said casing including a ring

lying between said casing and said band and provided with a plurality of openings for evenly distributing the fluid under pressure throughout said casing.

1,629,109. CULTIVATING APPARATUS. LEWIS MASON LEE, Frankfort, Ky. Filed Mar. 18, 1924. Serial No. 700,111. 7 Claims. (Cl. 97—174.)

1. In cultivating apparatus, the combination of a draft beam, a shovel frame pivoted thereto, and springs anchored to the end portions of the frame and connecting the frame to the beam, the springs being adjustable along the beam for varying the points of purchase and the tension of the springs simultaneously.

1,629,110. STIFFENER FOR BOOTS AND SHOES AND COMPOUND USED THEREIN. STANLEY P. LOVELL, Brockton, Mass. Filed Mar. 10, 1923. Serial No. 624,267. Renewed Oct. 7, 1926. 7 Claims. (Cl. 91—68.)



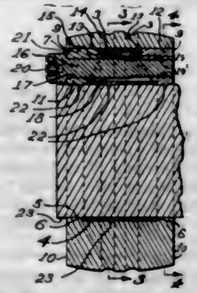
3. A stiffener for boots and shoes and the like, consisting of fibrous material impregnated with a stiffening compound comprising a lignite-extracted wax and a vegetable oil.

7. A stiffening compound for fibrous material consisting of Montan wax and soya bean oil.

1,629,111. INTERNAL-COMBUSTION ENGINE. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 25, 1924. Serial No. 728,101. 3 Claims. (Cl. 123—33.)

1. In an internal combustion engine, the combination with a precombustion chamber having a restricted opening to the cylinder and a fuel injector delivering fuel to the

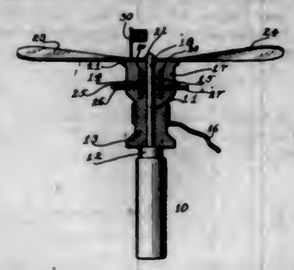
chamber, of a dome-shaped combustion chamber in the cylinder having its axis coincident with the restricted opening from the precombustion chamber and of less area



in cross section than the cylinder, a fuel spreader in the dome-shaped chamber above the piston and in line with the fuel fed thereto, and means for cooling the spreader.

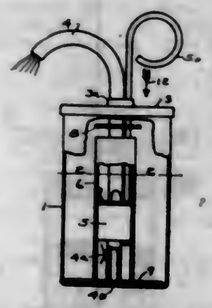
1,629,112. FLORAL SUPPORT. FREDERICK D. MACDONALD, Milwaukee, Wis. Filed May 8, 1925. Serial No. 28,838. 1 Claim. (Cl. 47—41.)

A floral support for removable positioning within a container and comprising a metal band having a notched upper edge, a plurality of wires having their ends secured in said notches, said wires crossing each other to form a plurality of apertures for the reception of stems of flowers, the wires betwen each two crossing points being crimped.



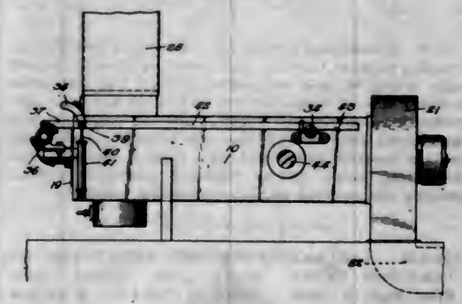
1,629,113. FASTENING DEVICE. WILLIAM MAIER, St. Louis, Mo. Filed Jan. 16, 1925. Serial No. 2,880. 7 Claims. (Cl. 287—114.)

1. The combination with a pair of elements disposed toward one another in embracing and embraced relation, respectively, and one of which is provided with a laterally-extending groove in its cooperating face and which groove opens into its lateral face, of a fastening device adapted to be inserted laterally into said groove, said device comprising a pair of blocks having their inner opposite surfaces inclined, a shoe abutting said blocks and presenting inclined abutting faces and means threadedly engaging one of said blocks for simultaneously urging the pair of blocks together for forcing said shoe into contact with one of said embraced elements.



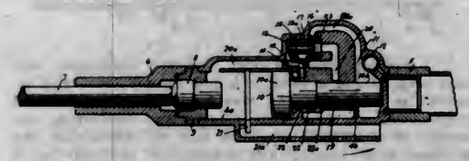
1,629,114. FLYING TOY. ANIELLO MASCOLO, Waterbury, Conn. Filed Dec. 7, 1925. Serial No. 73,630. 1 Claim. (Cl. 244—2.)

In a flying toy, a handle member, a cord-driven spool rotatively mounted on said handle member, a flying member having a hub detachably interlocked with said spool and adapted to receive rotative motion therefrom, said flying member having an inclined lifting propelling blade at one end of said hub, said hub having on its other end



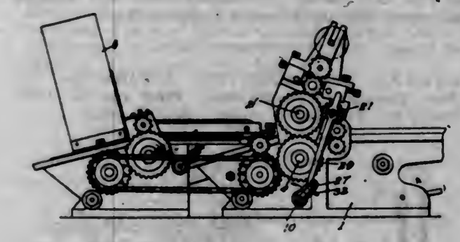
a pair of horizontal flat gliding wing members secured thereto, whereby when the spool is rotated, the flying member will rise vertically and laterally through the air.

1,629,115. PUMP FOR ELEVATING AND DISPENSING LIQUIDS. FREDERICK W. MITCHELL, Cleveland, Ohio. Filed May 9, 1925. Serial No. 29,069. 2 Claims. (Cl. 221—80.)



1. In combination, a receptacle having a discharge spout, a piston mounted on and surrounding the spout, a cylinder around the piston and movable relative thereto on interruption of the cylinder serving to charge the cylinder or to eject the charge therefrom through the spout.

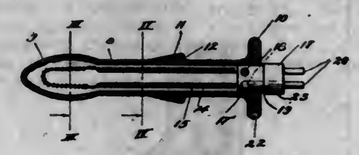
1,629,116. HEATER. FRED P. MUEHLENBECK, Chicago, Ill., assignor to Eugene C. Gmelin, Chicago, Ill. Filed Feb. 11, 1925. Serial No. 8,475. 3 Claims. (Cl. 158—42.2.)



1. An apparatus of the character specified having an endless passage therein, a blower for circulation of air in said passage, a burner within the passage, means of fuel supply for the burner subject to the suction of the blower, a vane in said passage movable to and adapted to be held in open position by the action of the blower, a cut-off valve in said means adapted for manual opening independently of the vane and normally seeking a closed position, and a connecting means between said valve and vane to automatically engage the vane through opening movement of the valve to hold the valve against closing influence.

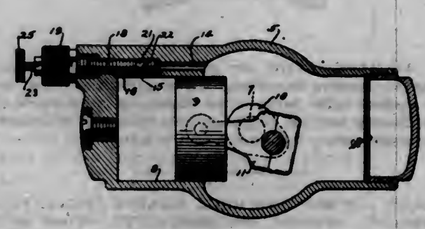
1,629,117. FLUID PRESSURE TOOL. ERNEST PENBERTHY, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 27, 1925. Serial No. 5,005. 11 Claims. (Cl. 121—18.)

1. In a fluid pressure tool, in combination, a cylinder having coaxial interconnected large and small bores, a piston formed with a head fitting the large bore and a stem fitting the small bore and arranged to be reciprocated in said cylinder, the small bore of said cylinder being counterbored to form a cushion chamber, and an enlargement on the stem of said piston for cooperation with said counterbore near the end of the piston stroke for cushioning the piston.



1,629,118. SHEET-FEEDING CONTROL MEANS. CLAUDE L. POST, Chicago, Ill. Filed Mar. 24, 1923. Serial No. 627,455. 10 Claims. (Cl. 101—233.)

1. In combination with a pair of rolls, means for separating said rolls, a cam rotatably actuated by one of said rolls and engageable to actuate said separating means whenever there is no material being fed through the rolls, means carried by said roll and controlled by the material being fed through the rolls for operating said rotatable cam, and a stationary cam engageable with said rotary cam for retrieving it from engagement with said first-mentioned separating means.

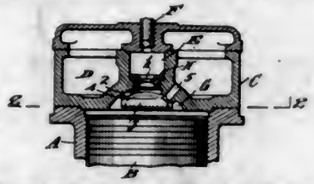


1,629,119. DILATOR. ALBERT F. REITZ, Kansas City, Mo. Filed Oct. 2, 1925. Serial No. 60,034. 4 Claims. (Cl. 219—21.)

4. A dilator comprising a hollow casing open at one end, a plug for the open end of said casing, a heating element connected to said plug, and a resilient U-shaped insulating element of slightly less length of said heating element and adapted to support the latter out of contact with the interior of the casing, said insulating element having its free ends in frictional engagement with the

interior of the casing adjacent to said plug, and means for securing said plug in slightly spaced relation to the ends of said insulating element for maintaining the branches of said heating element under slight tension.

1,629,120. DOORCHECK. PERCY H. RIPPLE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 14, 1926. Serial No. 135,298. 6 Claims. (Cl. 16—51.)

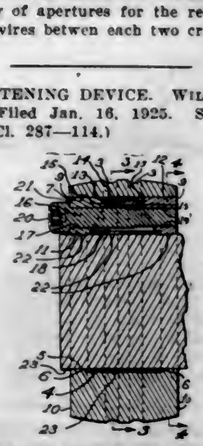


1. In a door check, a body including a cylinder, a piston therein, means for controlling the flow of fluid from one end of said cylinder to the other including a screw threaded member threaded onto said body and adapted to permit fluid to pass between the intermeshing threads on said screw threaded member and said body.

1,629,121. PUMP. PHILIP S. RUSSEL, St. Louis, and DAVID M. BOYD, Kirkwood, Mo., assignors, by mesne assignments, to Electrol, Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 27, 1925. Serial No. 26,031. 9 Claims. (Cl. 103—116.)

1. In a device of the class described, the combination of a pump housing, a pair of intermeshing gears in said housing, a drive shaft, a coupling member arranged to seat in the housing by outward pressure, a separate coupling member between said first named coupling member operable to aline the first named coupling member with the driven gearing, and means for holding the first named coupling member to its seat in the pump housing.

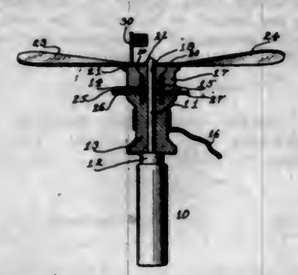
chamber, of a dome-shaped combustion chamber in the cylinder having its axis coincident with the restricted opening from the precombustion chamber and of less area



in cross section than the cylinder, a fuel spreader in the dome-shaped chamber above the piston and in line with the fuel fed thereto, and means for cooling the spreader.

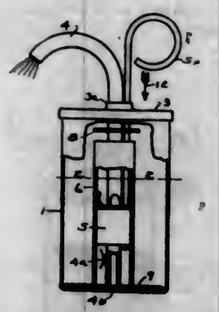
1,629,112. FLORAL SUPPORT. FREDERICK D. MACDONALD, Milwaukee, Wis. Filed May 8, 1925. Serial No. 28,838. 1 Claim. (Cl. 47—41.)

A floral support for removable positioning within a container and comprising a metal band having a notched upper edge, a plurality of wires having their ends secured in said notches, said wires crossing each other to form a plurality of apertures for the reception of stems of flowers, the wires betwen each two crossing points being crimped.



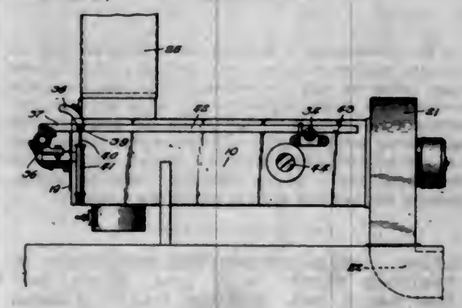
1,629,113. FASTENING DEVICE. WILLIAM MAIER, St. Louis, Mo. Filed Jan. 16, 1925. Serial No. 2,880. 7 Claims. (Cl. 287—114.)

1. The combination with a pair of elements disposed toward one another in embracing and embraced relation, respectively, and one of which is provided with a laterally-extending groove in its cooperating face and which groove opens into its lateral face, of a fastening device adapted to be inserted laterally into said groove, said device comprising a pair of blocks having their inner opposite surfaces inclined, a shoe abutting said blocks and presenting inclined abutting faces and means threadedly engaging one of said blocks for simultaneously urging the pair of blocks together for forcing said shoe into contact with one of said embraced elements.



1,629,114. FLYING TOY. ANIELLO MASCOLO, Waterbury, Conn. Filed Dec. 7, 1925. Serial No. 73,630. 1 Claim. (Cl. 244—2.)

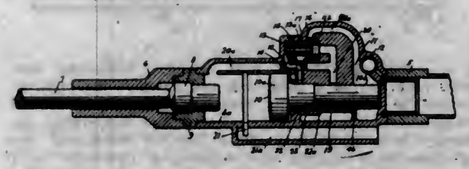
In a flying toy, a handle member, a cord-driven spool rotatively mounted on said handle member, a flying member having a hub detachably interlocked with said spool and adapted to receive rotative motion therefrom, said flying member having an inclined lifting propelling blade at one end of said hub, said hub having on its other end



a pair of horizontal flat gliding wing members secured thereto, whereby when the spool is rotated, the flying member will rise vertically and laterally through the air.

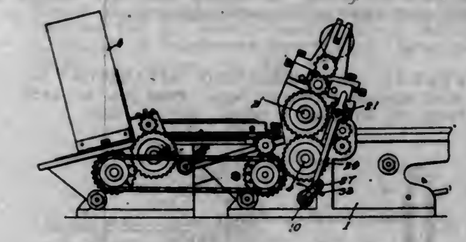
1,629,115. PUMP FOR ELEVATING AND DISPENSING LIQUIDS. FREDERICK W. MITCHELL, Cleveland, Ohio. Filed May 9, 1925. Serial No. 29,069. 2 Claims. (Cl. 221—80.)

1. In combination, a receptacle having a discharge spout, a piston mounted on and surrounding the spout, a cylinder around the piston and movable relative thereto on interruption of the cylinder serving to charge the cylinder or to eject the charge therefrom through the spout.



1,629,116. HEATER. FRED P. MUEHLENBECK, Chicago, Ill., assignor to Eugene C. Gmelin, Chicago, Ill. Filed Feb. 11, 1925. Serial No. 8,475. 3 Claims. (Cl. 158—42.2.)

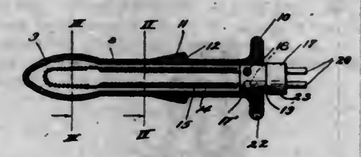
1. An apparatus of the character specified having an endless passage therein, a blower for circulation of air in said passage, a burner within the passage, means of fuel supply for the burner subject to the suction of the blower, a vane in said passage movable to and adapted



to be held in open position by the action of the blower, a cut-off valve in said means adapted for manual opening independently of the vane and normally seeking a closed position, and a connecting means between said valve and vane to automatically engage the vane through opening movement of the valve to hold the valve against closing influence.

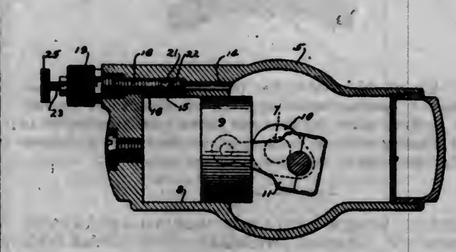
1,629,117. FLUID PRESSURE TOOL. ERNEST PENBERTHY, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 27, 1925. Serial No. 5,005. 11 Claims. (Cl. 121—18.)

1. In a fluid pressure tool, in combination, a cylinder having coaxial interconnected large and small bores, a piston formed with a head fitting the large bore and a stem fitting the small bore and arranged to be reciprocated in said cylinder, the small bore of said cylinder being counterbored to form a cushion chamber, and an enlargement on the stem of said piston for cooperation with said counterbore near the end of the piston stroke for cushioning the piston.



1,629,118. SHEET-FEEDING CONTROL MEANS. CLAUDE L. POST, Chicago, Ill. Filed Mar. 24, 1923. Serial No. 627,455. 10 Claims. (Cl. 101—233.)

1. In combination with a pair of rolls, means for separating said rolls, a cam rotatably actuated by one of said rolls and engageable to actuate said separating means whenever there is no material being fed through the rolls, means carried by said roll and controlled by the material being fed through the rolls for operating said rotatable cam, and a stationary cam engageable with said rotary cam for retrieving it from engagement with said first-mentioned separating means.

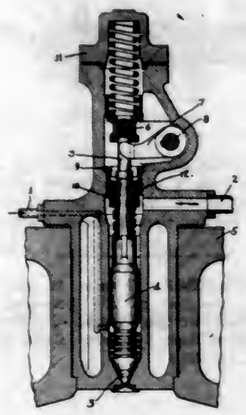


1,629,119. DILATOR. ALBERT F. REITZ, Kansas City, Mo. Filed Oct. 2, 1925. Serial No. 60,034. 4 Claims. (Cl. 219—21.)

4. A dilator comprising a hollow casing open at one end, a plug for the open end of said casing, a heating element connected to said plug, and a resilient U-shaped insulating element of slightly less length of said heating element and adapted to support the latter out of contact with the interior of the casing, said insulating element having its free ends in frictional engagement with the

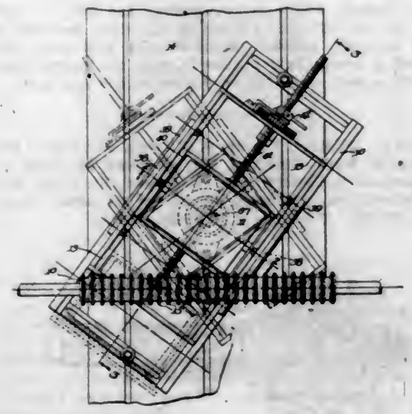
interior of the casing adjacent to said plug, and means for securing said plug in slightly spaced relation to the ends of said insulating element for maintaining the branched of said heating element under slight tension.

1,629,120. DOORCHECK. PERCY H. RIPPLE, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 14, 1926. Serial No. 135,298. 6 Claims. (Cl. 16—51.)



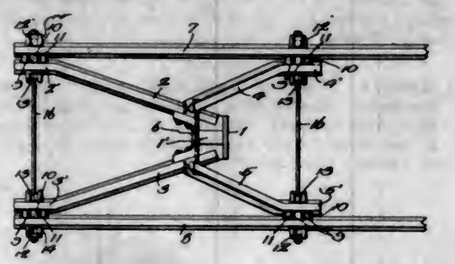
1. In a door check, a body including a cylinder, a piston therein, means for controlling the flow of fluid from one end of said cylinder to the other including a screw threaded member threaded onto said body and adapted to permit fluid to pass between the intermeshing threads on said screw threaded member and said body.

1,629,121. PUMP. PHILIP S. RUSSELL, St. Louis, and DAVID M. BOYD, Kirkwood, Mo., assignors, by mesne assignments, to Electrol, Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 27, 1925. Serial No. 26,031. 9 Claims. (Cl. 103—116.)



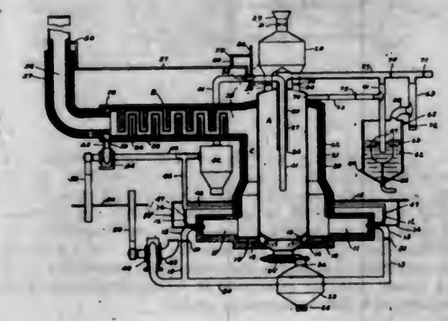
1. In a device of the class described, the combination of a pump housing, a pair of intermeshing gears in said housing, a drive shaft, a coupling member arranged to seat in the housing by outward pressure, a separate coupling member between said first named coupling member operable to aline the first named coupling member with the driven gearing, and means for holding the first named coupling member to its seat in the pump housing.

1,629,122. FUEL ENGINE VALVE. WALTER SCHENKER, Winterthur, Switzerland, assignor to Busch-Sulzerbros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 18, 1925, Serial No. 57,256, and in Switzerland Dec. 15, 1924. 4 Claims. (Cl. 123—33.)



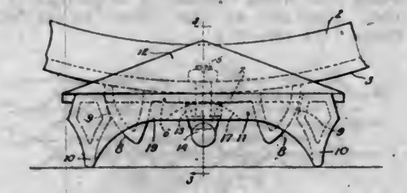
1. An injection valve for injection type engines comprising a housing containing the movable valve member and a check valve between the inner and outer parts of said housing adapted to prevent transmission of dangerous pressure from the former to the latter.

1,629,123. SCREW AND GEAR MAKING APPARATUS. HENRY J. SCHMICK, Williamsport, Pa. Filed Sept. 12, 1923. Serial No. 662,337. 12 Claims. (Cl. 90—4.)



1. In the manufacture of articles of the character described, a cutter having a fixed direction of cut, means for rotatably and slidably mounting a work blank for engagement by said cutter at the cutting point, said means being pivotally supported whereby the direction of sliding motion may be adjusted to suit the work in hand, and means for causing said work blank to roll in the line of direction of its sliding movement, said rolling means acting in opposition to said sliding means to return the work to the cutting point.

1,629,124. RAILWAY BUMPING POST. AUGUST E. SCHULTS, Forest Park, Ill., assignor of one-half to Arthur A. Jahr, Forest Park, Ill. Filed Oct. 7, 1926. Serial No. 140,086. 18 Claims. (Cl. 104—254.)

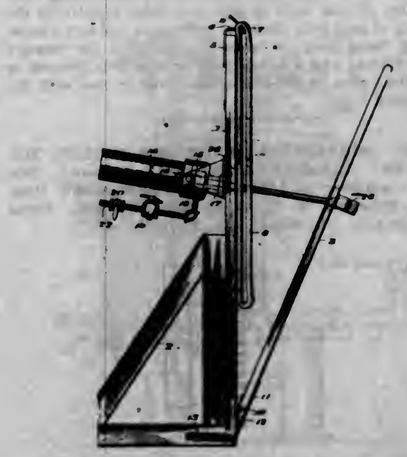


1. A railway bumping post including horizontal base rails each having a head, web and flange; four rails between the base rails and also having heads, webs and flanges, two of these rails sloping and converging upwardly in a forward direction and the remaining two of these rails sloping and converging upwardly in a rearward direction; a bumping block carried by the upper ends of the four sloping rails, the lower ends of these sloping rails being horizontally continued along the aforesaid base rails, one of these base rails having the lower end of one of the forwardly sloping rails and the lower end of one of the rearwardly sloping rails in proximity thereto, the lower ends of the remaining sloping rails being in proximity to the other base rail; and four clamping structures, the lower end of each sloping rail being supplied with a clamping structure for assembling it with the adjacent base rail, each clamping structure comprising a pair of jaws engaging the outer sides of the webs of the rails to which it pertains, a yoke connecting these jaws and embracing these rails, two clamping blocks disposed between these rails and respectively engaging the inner sides of their webs and having their opposed faces converging, a wedging block interposed between said clamping blocks, and a clamping bolt structure assembling said wedging block and yoke and forcing the wedging block into wedging engagement with the aforesaid clamping blocks.

1,629,125. GAS-GENERATING APPARATUS. LEO PAUL SEBILLE, Cleveland, Ohio. Filed Jan. 17, 1923. Serial No. 613,148. 1 Claim. (Cl. 48—73.)

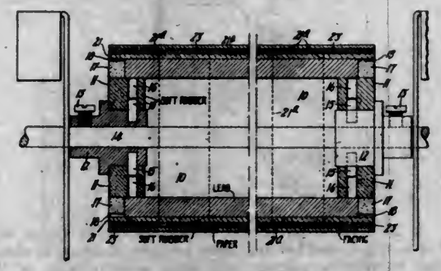
In gas generating apparatus, the combination of a substantially cylindrical gas generating chamber having a vertical axis, means for externally heating said chamber, means for supplying fuel to the upper part of said chamber, means for withdrawing gases from the upper part of said chamber, a plurality of concentric pipes extending longitudinally through the upper part of said chamber and through which gases may be discharged, means for superheating the gases discharged through one of said pipes, and means for returning such superheated gases to the lower part of the chamber.

1,629,126. TRACTION WHEEL. LOUIS E. SLAUSON, Moline, Ill., assignor to Grid-Iron Grip Company, Rock Island, Ill. Filed Nov. 15, 1924. Serial No. 750,022. 3 Claims. (Cl. 305—13.)



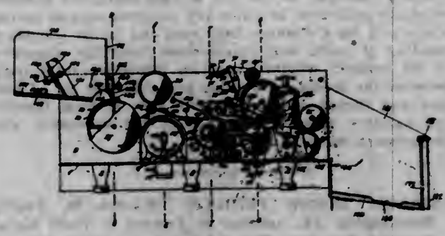
3. The combination of a rim, a driving tooth, a traction shoe cooperating with said driving tooth and having a central aperture, within which said tooth is received, a pickup bar, a common means for securing said pick-up bar and said tooth to said rim, the ends of said pick-up bar extending on the outer side of said shoe, and the outer side of said shoe being provided with arcuate recesses to receive the ends of said bar.

1,629,127. METHOD OF WELDING HOLLOW SHAFTS. CLARENCE W. SPICER, Plainfield, N. J., assignor to Spicer Manufacturing Corporation, a Corporation of Virginia. Filed July 20, 1926. Serial No. 123,805. 2 Claims. (Cl. 219—10.)



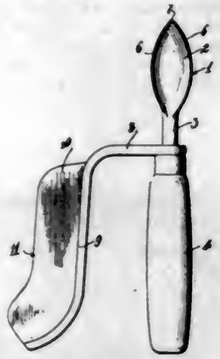
1. A method of butt welding ends on hollow shafts including the step of inserting in the tube before the final weld a predetermined quantity of viscid fluid.

1,629,128. APPARATUS FOR DEFLATING TUBES. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 7, 1922. Serial No. 566,443. 11 Claims. (Cl. 154—9.)



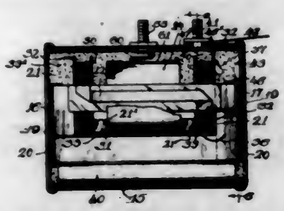
1. Apparatus for exhausting air from collapsible tubes comprising, cooperating presser members operable to receive and compress the tubes therebetween, means for suspending the tubes between said members, and means for operating said members.

1,629,129. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Rutherford, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 3, 1924. Serial No. 710,768. 16 Claims. (Cl. 197—147.)



1. A cylindrical typewriter platen comprising a weighted self-sustaining tubular soft metal body, means for cushioning said body directly upon the platen axle, and a flexible durable covering for said body, said body being nearly the full diameter of the finished platen.

1,629,130. ROTARY PRINTING DEVICE. FREDERICK W. STORCK, Somerville, Mass., assignor to Standard Mailing Machines Company, Everett, Mass., a Corporation of Massachusetts. Filed May 31, 1923. Serial No. 642,581. 9 Claims. (Cl. 101—241.)

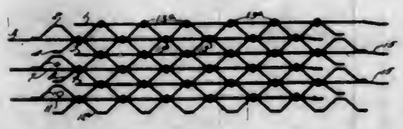


1. In a device of the character specified the combination of means for feeding an envelope, a movable stop member arranged to engage the forward edge of said envelope and to arrest the movement thereof, means whereby said stop member may be moved out of operative engagement with said envelope thereby permitting said envelope to pass by said stop member and retain said stop member in a fixed position during its passage, a counter and means for operating said counter, said means being arranged to operate only upon contact with said stop member when the position of said stop member is influenced by a passing envelope.

1,629,131. COMBINATION PEACH PITTER. ALBERT V. SULLIVAN, Alameda, Calif., assignor to California Packing Corporation, San Francisco, Calif., a Corporation of California. Filed Aug. 5, 1926. Serial No. 127,212. 3 Claims. (Cl. 146—31.)

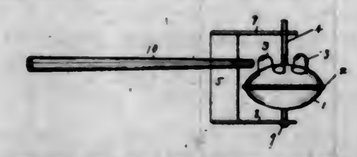
1. In a peach pitter, the combination of a spoon having a shank and halving blade secured to the said shank and having its cutting edge lying substantially in the plane of the spoon.

1,629,132. ELECTRIC JUMP-SPARK COIL. CHESTER H. THORDARSON, Chicago, Ill. Filed Feb. 27, 1925. Serial No. 12,046. 5 Claims. (Cl. 175—357.)



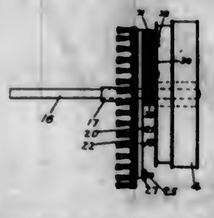
1. In an electric jump spark coil, a core, a secondary winding centrally on one leg of said core, two primary windings connected in series and mounted on and spaced along said leg a distance from each end of the secondary winding to avoid heat transference from the secondary to the primary windings, and an insulating sheet lying between the secondary winding and the other leg of said core and turned outwardly at its ends to form insulating barriers between the ends of the secondary and the primary windings.

1,629,133. MOTOR VEHICLE. WALTER M. TROUT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 28, 1923. Serial No. 683,147. 9 Claims. (Cl. 296—28.)



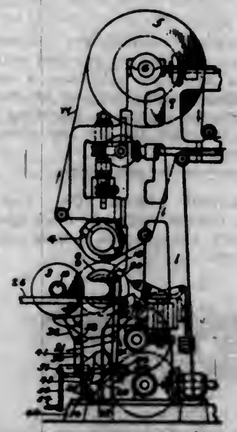
1. In an automobile body, the combination of a pressed metal body sill having a horizontal body portion, adapted to rest on the upper surface of a chassis frame side member, a vertical shoulder extending downwardly from the outer edge of said horizontal body portion, and adapted to engage the outer side of said frame side member, and a portion extending horizontally from the lower edge of said vertical shoulder, and a plurality of sheet metal body panels having their lower edges rigidly secured to said last-mentioned horizontal portion of the sill.

1,629,134. CONTINUOUS-GRATING STRUCTURE. WILLIAM A. VAN HOFFEN, Brooklyn, N. Y., assignor to Irving Iron Works Company, a Corporation of New York. Filed July 29, 1925. Serial No. 46,724. 15 Claims. (Cl. 189—82.)



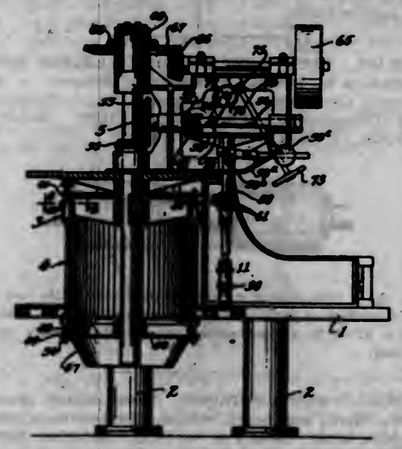
1. As a new article of manufacture a grating unit comprising a series of straight bars and a series of bent strips fastened together, the members of each series being in staggered relation to each other lengthwise of the unit.

1,629,135. SPINNING TOP. WILLIAM A. VINSON, Baltimore, Md. Filed May 9, 1921, Serial No. 467,874. Renewed Oct. 12, 1926. 1 Claim. (Cl. 46—32.)



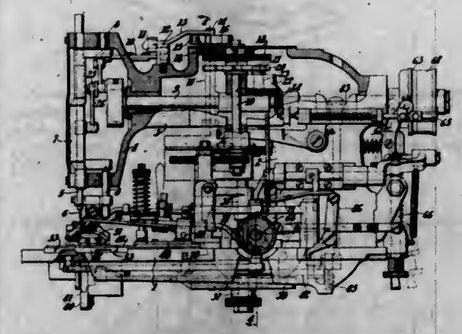
The combination of a bracket comprising a vertical piece having two arms projecting at right angles thereto, one of which is provided with an aperture and the other with a depression near the free ends thereof, a spinning top comprising a body having a stem projecting vertically through the center thereof and having one end projecting through said aperture and the other end resting in said depression, and a number of blades on the upper surface of the said body and arranged symmetrically around the said stem at a radial distance less than the radius of said body to give a greater velocity to the periphery of said body than the velocity of the said blades, said top being adapted to be thrown from the bracket while revolving and a hollow tube permanently secured to the vertical piece of the said bracket and in line with the said blades.

1,629,136. MOISTENING DEVICE FOR MAILING MACHINES. LAWRENCE J. ZAHN, Long Island City, N. Y., assignor to International Postal Supply Company, Brooklyn, N. Y. Filed Aug. 20, 1926. Serial No. 130,418. 11 Claims. (Cl. 91—37.)



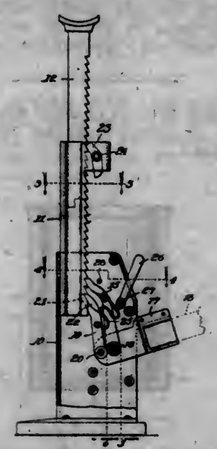
1. In a moistening device for the purpose described, a support, rotary operating members mounted at each end of the support, an endless chain carried by said operating members, a bearing carried by said support, a drive shaft passing through said bearing, driving means connected between said shaft and at least one of said operating members and moistening brushes carried by said endless chain and adapted to be moved through an associated receptacle containing a liquid.

1,629,137. INTAGLIO PRINTING MACHINE. ADOLPH M. ZUCKERMAN, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 4, 1925. Serial No. 48,035. 3 Claims. (Cl. 101—157.)



1. In a printing machine, the combination of an engraved form cylinder, cooperating impression means, a pivoted fountain in which the cylinder runs, open bearings for the cylinder, means for rotating the bearings to permit the cylinder to be moved sidewise therefrom through the openings, and means for swinging the fountain away from the cylinder to permit such sidewise removal of the cylinder.

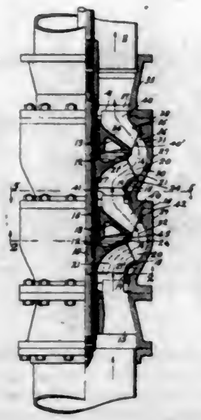
1,629,138. SHREDDING MACHINE. ARTHUR R. ADAMSON, Los Angeles, Calif. Filed Mar. 12, 1925. Serial No. 15,079. 7 Claims. (Cl. 146—93.)



1. In a shredding machine, the combination of a rotary drum, a plurality of guideways disposed substantially radially from the axis of the drum, a plurality of shredding bars extending longitudinally of the drum and carrying blades, feeding mechanism associated with the guideways for feeding the material to be shredded against the side of the drum, said shredding bars being disposed apart to permit the shredded material to pass into the interior of the drum, a hopper below the drum for receiving the shredded material, and means above the drum for rotating the drum.

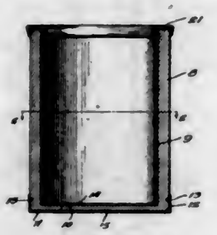
1,629,139. SEWING MACHINES. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 26, 1925. Serial No. 58,778. 4 Claims. (Cl. 112—73.)

1. In a group-stitching machine, a reciprocating needle, a needle-gate, a crank-shaft, a crank carried by said shaft, a pitman connection between said crank and gate for vibrating the latter, a sewing shaft connected to reciprocate said needle, a work-holder, a feed-wheel connected to impart feeding movement to the work-holder, and means including a pin-and-star-wheel drive actuated by the sewing shaft for imparting step-by-step rotary motion to the feed-wheel, said crank being connected to receive semi-rotational impulses from said pin-and-star-wheel drive.



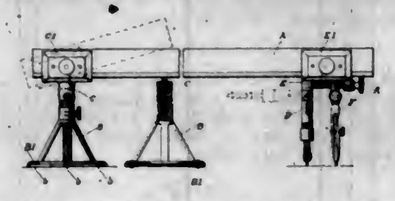
1,629,140. DOUBLE-LIFT JACK. JOHN W. BATE, Racine, Wis. Filed Apr. 4, 1924. Serial No. 704,175. 4 Claims. (Cl. 254—111.)

1. A lifting jack comprising a base, two telescoping lifting members slidable in the base, the outer of said members being U-shaped, the inner member substantially



filling the U-shaped, groove therein, registering ratchet teeth on the front of said members, a ratchet pawl, a retaining pawl, operating on said teeth, the teeth of the inner member serving to hold the ratchet pawl out of engagement with the teeth of the outer member until said inner member is raised a predetermined amount.

1,629,141. HYDRAULIC PUMP. HARRY F. BENSON, Holyoke, Mass., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed May 18, 1925. Serial No. 30,899. 13 Claims. (Cl. 103—88.)



1. A hydraulic pump, in combination, a casing, an impeller therein forming and delivering the flow in a direction of outward radial and axial components, an annular chamber extending from the impeller outlet and providing a vane-free passage for said flow, said chamber having a boundary water-contact surface impressing upon the flow advancing therealong a gradually increasing inward radial component, and a diffuser on the discharge side of said passage in axial alinement therewith, having vanes with their inlet ends lying substantially in the line of flow discharging from said chamber and a surface contour gradually impressing on the flow advancing therealong toward the outlet end a gradually increasing axial component.

1,629,142. DICE BOX. LAWRENCE BONELL, Chicago, Ill. Filed June 12, 1924. Serial No. 719,487. 3 Claims. (Cl. 273—145.)

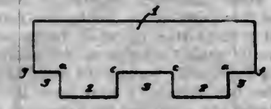
1. A dice box, provided at its open end with a surrounding inwardly projecting resilient ring, and means adapted for utilizing the resiliency of the ring to secure and lock it in its operative position to the body of the box.

1,629,143. DRAFTING COMPASS. PAUL J. BUNGART, Oceanside, N. Y. Filed Nov. 18, 1922. Serial No. 601,942. 8 Claims. (Cl. 33—27.)

1. A drafting compass comprising a centering support having a base of substantial area provided with a central window, anchoring means for said base, a radial beam, and means providing a swivelling and hinging joint between the beam and the support in a position above said window, whereby the view through the window is substantially unobstructed.

1,629,144. SPRAYING APPARATUS. CHARLES LAURENCE BUDDICK, London, England. Filed Sept. 13, 1922, Serial No. 588,072, and in Great Britain Oct. 15, 1921. 1 Claim. (Cl. 299—141.)

In an atomizing nozzle, a body having a central passage therethrough, a second passage through said body, means for supplying a liquid to said central passage, means for feeding air under pressure to said second passage, a liquid jet member communicating with said central passage and having a tapering portion ending in a circular opening, a hollow cap fitting on said body and communicating with said second air passage and having an opening concentric with said liquid jet member to form an annular orifice, a cylindrical air jet member within said liquid jet member and coaxial therewith and slightly spaced therefrom to form a relatively narrow annular orifice for said liquid, and means connecting said cylindrical air jet member with the hollow portion of said cap to supply said air to both said air jets under substantially the same pressure.

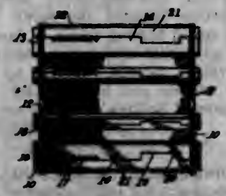


1,629,145. TREATMENT OF CORK TEXTILE ROLLS. HERMAN F. BUSCH, Millvale, Pa., assignor to Armstrong Cork Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1925. Serial No. 67,122. 5 Claims. (Cl. 19—143.)

1. As a new article of manufacture, a textile roll having a cork working surface impregnated with a substance which gives it an added slickness, substantially as described.

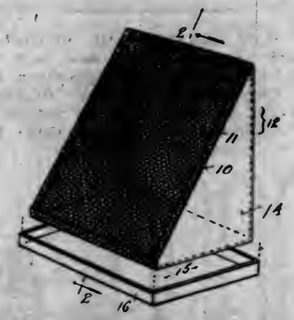
1,629,146. STRIP SHINGLE. LEON BUAHA, Minneapolis, Minn., assignor to William Edwin Nelson, Minneapolis, Minn. Filed Feb. 11, 1924. Serial No. 692,156. 2 Claims. (Cl. 108—8.)

1. A strip shingle comprising a body portion having a plurality of separated butts projecting from one edge thereof with sides perpendicular thereto throughout to their ends, the size and contour of each butt corresponding to the size and contour of the separating spaces between two butts, the distance between the outer edge of each butt and the end of the shingle being equal to one-



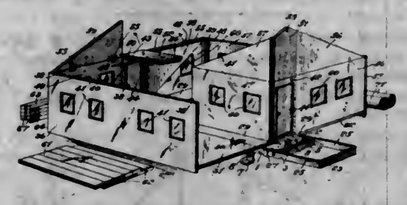
half the distance between the inner edges of the butts and substantially equal to the length of the butt, and the length of the butts being approximately one-half the width of the body of the shingle.

1,629,147. BLOOMERS AND METHOD OF MAKING THE SAME. FRANKLIN CHATFIELD, Minneapolis, Minn., assignor to The Munsingwear Corporation, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 8, 1924. Serial No. 742,427. 6 Claims. (Cl. 2—225.)



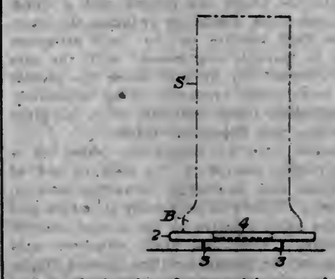
1. A woman's undergarment comprising leg sections, a substantially diamond-shaped gore inserted into the crotch of the garment between said leg sections and having its edges united to the longitudinal edges of the fabric composing the leg sections and extending through the crotch up into the front and back seams of the garment, and leg gores formed separately from said diamond-shaped gore and tapered in form having their wider ends stitched to the opposite converging edges of one end of said crotch gore, and extending down the leg seams from said crotch gore and cooperating therewith to provide necessary crotch fullness.

1,629,148. INDUCTION-COIL CORE. GEORGE S. CHAUNCEY, South Orange, N. J. Filed Dec. 20, 1924. Serial No. 757,228. 4 Claims. (Cl. 175—359.)



1. A coil core comprising a pair of duplicate heads having equally spaced open radial slots in their peripheries, a series of bars fitting the slots and having notches engaging the bottoms thereof, means in said bars to receive the windings of a coil, and a second series of bars disposed in the slots over the first named bars, said second bars receiving the windings of another coil, all of said bars extending uniformly outward beyond said heads.

1,629,149. ASH SIFTER. MORRIS CITRIN, Brooklyn, N. Y. Filed Jan. 2, 1926. Serial No. 78,749. 1 Claim. (Cl. 209—352.)



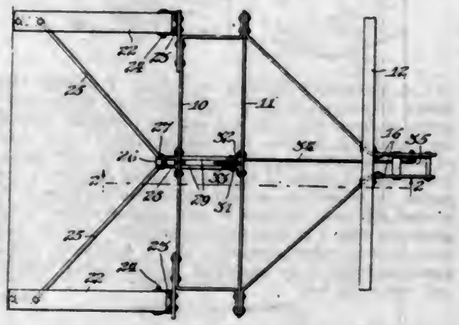
A fireproof ash sifter comprising a unitary supporting member, a screening unit consisting of a frame and a screen thereon, said frame removably held in said supporting member, a tray engaging the open end of the supporting member, and a gate in said tray.

1,629,150. KNOCKDOWN OR FOLDABLE BUILDING. THOMAS C. COLT, Orange, N. J. Filed Oct. 2, 1924. Serial No. 741,197. 3 Claims. (Cl. 20—2.)

1. A knock-down building comprising, a foldable foundation frame, a collapsible superstructure comprising a series of floor, side wall and end wall sections hingedly interconnected together, said superstructure being adapted for separable supported connection with said foundation frame; a series of collapsible rafter elements having means to separately connect their free ends with the erected side wall sections of said superstructure; a longitudinal ridge rod detachably engageable with the peak ends of said rafter elements; and a detachable roofing means adapted to be supported by said rafter elements and said ridge rod.

1,629,151. DRYING TILE. CHARLES B. CUSHWA, Youngstown, Ohio, assignor to The Commercial Shearing & Stamping Company, Youngstown, Ohio, a Corporation of Ohio. Filed Feb. 10, 1926. Serial No. 87,271. 7 Claims. (Cl. 34—17.)

1. A drying board, comprising a substantially circular supporting member having a central opening therethrough and providing a substantially continuous ring, and a stif-

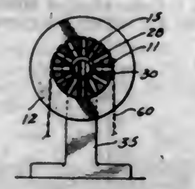


fening flange on the supporting member, the flange being integral with the supporting member and extending all around the same in a substantially uninterrupted manner.

1,629,152. SLOT CLEANER FOR MOTION-PICTURE MACHINES. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Apr. 28, 1923, Serial No. 635,331. Divided and this application filed Dec. 20, 1924. Serial No. 757,115. 3 Claims. (Cl. 179—100.1.)

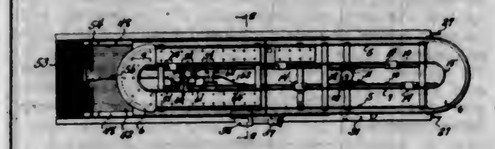
1. Means for maintaining the light aperture of motion picture machines for recording and reproducing sound unobstructed by dust, dirt, or the like, which consists of two members which form an aperture one member being offset from the other.

1,629,153. IMPLEMENT HITCH. SAMUEL K. DENNIS, Chicago, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed June 16, 1924. Serial No. 720,153. 8 Claims. (Cl. 97—236.)



1. The combination with an implement frame and a draft structure pivoted together at the forward end of the implement frame for angular adjustment vertically, of means for effecting said adjustment comprising a depending lever pivoted on the frame and formed with a transversely extending cam track, means for swinging the lever, and an extension fixed relative to the draft structure having a portion in movable engagement with the cam track at a point substantially directly below the pivotal support of the lever, said extension being separately pivoted to the implement frame coaxially with the pivot of the draft structure and implement frame.

5. The combination with an implement frame, of a draft structure pivotally related to the forward end of the implement frame and extending forwardly thereof, a bracing device fixed relative to said draft structure and having an extension offset relative to the pivotal connection of the implement frame and draft structure, said bracing device also having pivotal relation to said implement frame at a point in horizontal alinement with the axis of the pivotal connection between the draft structure and implement frame, and a depending cam lever mounted on the implement frame rearwardly of the draft structure and connected to the bracing device for vertically adjusting the implement frame.



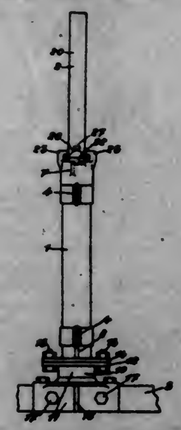
8. A device of the class described comprising, in combination, a wheel supported implement frame, a draft frame located forwardly of the implement frame and pivotally related to the latter, the draft frame having an extension vertically spaced relative to the implement frame and extending rearwardly beyond the point of pivotal connection of the two frames, a cam lever pivoted on the implement frame and engaging the extension of the draft frame at a position within substantially the same vertical confines as those occupied by the pivot of the cam lever, and means for swinging the lever to move the extension toward or away from the implement frame.

1,629,154. PNEUMATIC PULLEY FOR MOTION-PICTURE FILMS. VINCENT C. DE YBARRONDO, Los Angeles, Calif. Filed June 30, 1926. Serial No. 119,525. 7 Claims. (Cl. 271—2.3.)

1. In combination: a pulley wheel having a peripheral surface in which openings are formed; means for forming a vacuum in one of said openings when its mouth is covered; and means for connecting an uncovered opening with said covered opening for releasing said vacuum before said mouth is uncovered.

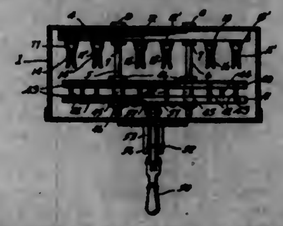
1,629,155. BOTTLE-WASHING MACHINE. JOHN R. DOSTAL, Milwaukee, Wis., assignor to Dostal & Lowey Hydro Company, Inc., Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Oct. 13, 1923, Serial No. 668,352. Divided and this application filed Nov. 24, 1924. Serial No. 751,938. 5 Claims.. (Cl. 141—7.)

1. In a bottle washing machine, the combination of a reservoir for a cleansing liquid, liquid spraying means, means for drawing said liquid from said reservoir and supplying it to said spraying means, means for passing label bearing bottles through the spray, a screen over which the used liquid bearing labels is passed, a carriage adapted to travel across said screen, means for reciprocating said carriage, a wiper carried by said carriage, and means for raising and lowering said wiper on the inward and outward motion, respectively, of said carriage.



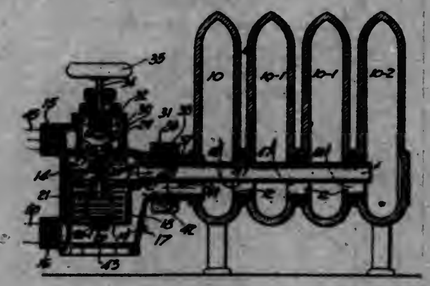
1,629,156. NURSING-BOTTLE HOLDER. LAWRENCE P. FLESHNER, Kansas City, Mo., assignor of one-half to William L. Hotsenpiller, of Kansas City, Mo. Filed May 6, 1926. Serial No. 107,117. 7 Claims. (Cl. 248—65.)

1. In a nursing bottle holder, supporting means including two members pivoted together on a vertical axis and adjustable toward and from each other, two devices having means adapted to engage a bottle respectively adjacent to its ends for supporting the bottle, means supporting one of said devices supported by said members at the axis thereof, a flexible member supported by said members at points spaced from said axis, and fastening



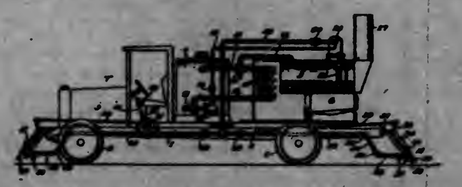
means supporting the other of said devices and supported by and having traveling engagement with said flexible member.

1,629,157. COACH-WORK COLUMN OF VEHICLES. GEORGES GANGLOFF, Geneva, Switzerland. Filed Nov. 19, 1925. Serial No. 70,074, and in Switzerland Nov. 27, 1924. 3 Claims. (Cl. 296—45.)



1. In a vehicle coach work column the combination of two portions, the second of which is separable from the first and is adapted to be removably secured thereto, attachment means for securing both portions to one another, whereby the said second portion can be placed in position either as a prolongation of the former and there secured, or can be housed within the former and there also secured, said attachment means comprising a foot at one end of the second portion, lugs at the upper end of the first portion between which the foot is adapted to pass in either of its two positions, and a clamping member by means of which the foot may be secured.

1,629,158. SAFETY SWITCH. ANDREW E. GRISWOLD, Seattle, Wash. Filed Aug. 25, 1923. Serial No. 659,280. 8 Claims. (Cl. 200—163.)



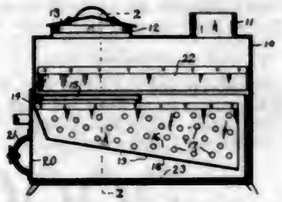
1. In a switch of the character described, the combination with a switch control member and fixed contacts of guide members, a carriage adjustable on the guide members by the control means and comprising spaced apart bars, switch blades disposed between the bars and adapted to be moved with the carriage from and against the contacts, and means connecting the bars and clamping them against the blades, holding the latter secure within the carriage.

1,629,159. AUTOMATICALLY-GOVERNED CONDENSING DEVICE. EDGAR R. HAWLEY and CARL W. SCOTT, Salt Lake City, Utah. Filed Feb. 1, 1926. Serial No. 85,334. 9 Claims. (Cl. 236—42.)

1. In an automatically governed condensing device, a chambered condensing unit, an inlet for fluid thereto, a closure for said inlet, thermostatic means for operating said closure, a conductor for fluid extending from said inlet to a part of the condensing unit remote from said inlet, said conductor being located within the condensing unit, an outlet from said condensing unit, and a conductor for fluid extending from said outlet to said thermostatic means.

1,629,160. SNOW-MELTING APPARATUS. VERNARD IRVING HERRMANCE, Montrose, N. Y. Filed Jan. 15, 1926. Serial No. 81,507. 1 Claim. (Cl. 299—81.)

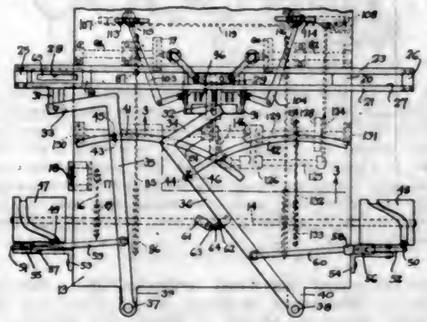
In a snow burner including a truck and a boiler, spray pipes at each end of the truck and connected with the boiler, said pipes extending transversely of the truck, a deflector above each spray pipe for deflecting the steam downward, said deflectors supporting the spray pipes, pairs of parallel links connecting each deflector to the truck, arms connected with corresponding links of the pairs, connections between the arms at each end of the truck, a lever, and connections between the arms at each end of the truck and the lever for enabling the lever to simultaneously raise and lower the deflectors.



1,629,161. PROCESS FOR STABILIZING COLLOIDAL SYSTEMS. WILLY O. HERRMANN and WOLFRAM HAENNEL, Munich, Germany, assignors to Consortium Fuer Elektrochemische Industrie, Munich, Germany. Filed July 1, 1926, Serial No. 119,983, and in Germany July 17, 1925. 8 Claims. (Cl. 252—6.)

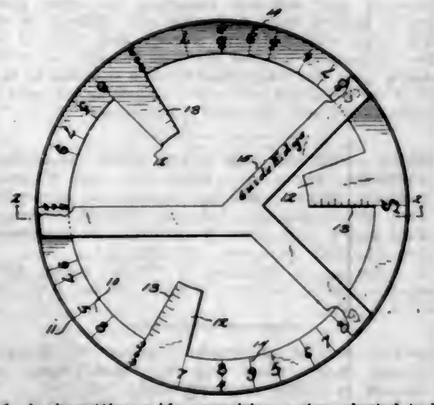
1. A method of stabilizing a colloidal system which comprises mixing polymerized vinyl alcohol with said system.

1,629,162. TRASH BURNER. ROGER P. HOLMAN, Omaha, Nebr. Filed Aug. 16, 1926. Serial No. 129,896. 4 Claims. (Cl. 126—225.)



1. A refuse-burner comprising a casing having its top provided with an intake passage for refuse and a smoke

exit passage, and provided at its front with an opening, a drawer having an air draft aperture and provided with a compartment for receiving refuse, and having per-

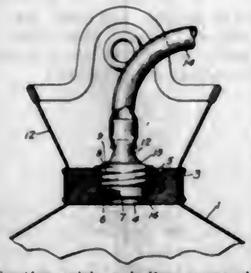


forated walls to permit a communication of air with the aperture of said drawer and with the smoke exitway, and a draft damper for the air draft aperture of said drawer.

1,629,163. CIGAR MACHINE. THOMAS A. HORTON, Kingston, N. Y. Filed Aug. 28, 1925. Serial No. 53,031. 33 Claims. (Cl. 131—5.)

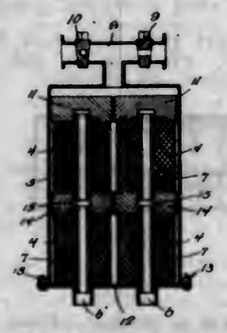
33. In a cigar machine, a run-way, two filler-load-forming molds travelling in said run-way from loading to discharging positions, a vertically movable discharge plunger, means for lowering said plunger to discharge the load from said mold when either of said molds is brought to discharging position, a series of horizontally slidable fingers coacting with said plunger when lowered to hold said discharged load in position beneath said mold, and a horizontally reciprocating pusher for carrying said load from beneath said fingers when extended after the plunger is raised.

1,629,164. PIE-CUTTING GUIDE. MILTON C. HUGHES, Roy, Wash. Filed June 24, 1926. Serial No. 118,340. 3 Claims. (Cl. 33—174.)



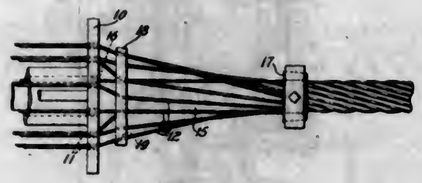
1. A pie cutting guide comprising a ring adapted to be centered upon a pie and having spaced indications on its margin of the number of cuts to be made from the indications to the center of the pie in order to cut any desired number of pieces or segments, said ring having inwardly projecting tongues adapted to rest upon the upper surface of a pie and spaced equidistantly from each other.

1,629,165. METHOD OF AND COMPOSITION FOR TRANSFERRING DESIGNS, PICTURES, AND THE LIKE. HELEN JOHNSTON HURT, New York, N. Y. Filed Sept. 11, 1926. Serial No. 134,947. 10 Claims. (Cl. 41—33.)



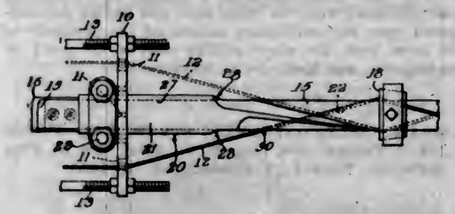
9. A transfer solution comprising a vegetable oil, an alkali in chemical union and diluted to a syrupy consistency.

1,629,166. SOCKET AND PLUG CONNECTION. FRANK S. HYATT, Brooklyn, N. Y. Filed Apr. 23, 1926. Serial No. 104,009. 1 Claim. (Cl. 128—247.)



The combination with a hollow screw-threaded socket member provided with a base constituting an annular flange which forms an opening, of a hollow screw-threaded plug member having an upper wall constituting an inwardly flaring annular flange providing the wall of an opening, a hollow nipple received within the opening in said upper wall and adapted to removably receive a tube thereon and a compressible annular hollow gasket frictionally held within the plug member with the upper edge thereof engaging the upper wall of said plug member and the lower edge thereof which normally extends beyond the lower end of said plug member adapted to engage the base of said socket member and the upper and lower edges of said gasket being compressed whereby portions thereof will extend inwardly within the opening in the base of said socket member and the opening in said plug member to produce a water-tight connection when said plug member is screwed tightly within said socket member.

1,629,167. MEANS FOR DRYING TEXTILE MATERIALS. HERMANN KRANTZ, Aachen, Germany. Filed Mar. 24, 1922, Serial No. 546,426, and in Germany Jan. 15, 1917. 3 Claims. (Cl. 34—30.)



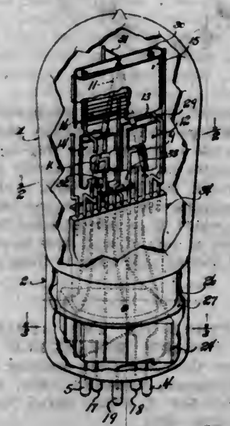
1. An apparatus for drying textile and the like materials, comprising a closable vessel for receiving the material to be dried, said vessel having at one end an opening communicating with the outer atmosphere and being provided at its other end with a controllable valve for connecting the vessel to a source of steam and with another controllable valve for connecting the vessel to a device for passing air through the vessel and the material contained therein, said material having a perforated tubular member extending through the same and being in communication with the opening communicating the vessel with the outer atmosphere, and a packing disc placed on the material which disc is provided with a recess for the reception of the end of said perforated tubular member.

1,629,168. METHOD OF AND APPARATUS FOR SERVING MATERIAL UPON A CORE. HENRY ROGERS MASSINGHAM, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 12, 1926. Serial No. 80,755. 9 Claims. (Cl. 117—16.)

1. The method of serving a plurality of strands to a non-circular shaped core, which consists in distributing the strands from a plurality of points around the core, maintaining the length of each individual strand between its point of distribution and its point of application to the core the same irrespective of its point of application to the core and wrapping it therearound.

1,629,169. METHOD OF AND APPARATUS FOR SERVING MATERIAL TO A CORE. HENRY ROGERS MASSINGHAM, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1926. Serial No. 142,624. 9 Claims. (Cl. 117—34.)

1. The method of serving a strand to a non-circular shaped core, which consists in preforming the strand into its ultimate formation upon the core, and then assembling the thus formed strand upon the core.

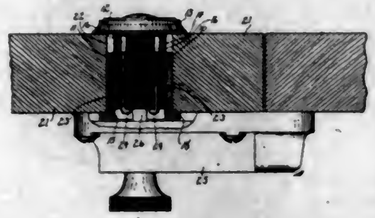


1,629,170. APPARATUS FOR FORMING SLEEVES AND ASSOCIATING THEM WITH ARTICLES. GILBERT L. MATTHIAS and WALDEMAR D. KMENTT, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 16, 1924. Serial No. 693,280. 28 Claims. (Cl. 29—88.2.)

1. Apparatus for forming sleeves and applying them to articles, said apparatus comprising means for feeding a length of tubing to a severing and assembling position, means for there severing successive sleeve lengths therefrom, and means for inserting said articles into said

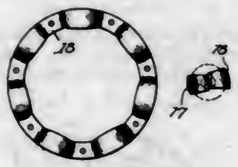
sleeve lengths successively while the latter are substantially in the position in which they are severed from said long length of tubing.

1,629,171. ELECTRON-DISCHARGE DEVICE. ARISTOTE MAVROGENIS, Milwaukee, Wis. Filed Sept. 16, 1926. Serial No. 135,817. 5 Claims. (Cl. 250—27.5.)



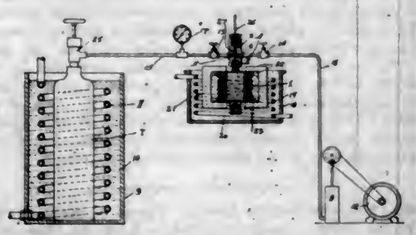
1. A unitary electron discharge device comprising an evacuated vessel having a full wave rectifier provided with a pair of plates and a cathode, a current limiting device provided with a plate and a cathode, the plate of the current limiting device being connected to the cathode of the rectifier, and an audion having a plate and a cathode and an interposed grid, the plate of the audion being connected to the cathode of the current limiting device, a heater for said cathodes, and a connection leading to the center point of the heater.

1,629,172. CYLINDER LOCK. JAMES J. MURPHY, Terryville, Conn., assignor to Eagle Lock Co., Terryville, Conn., a Corporation. Filed Jan. 19, 1926. Serial No. 82,238. 2 Claims. (Cl. 70—46.)



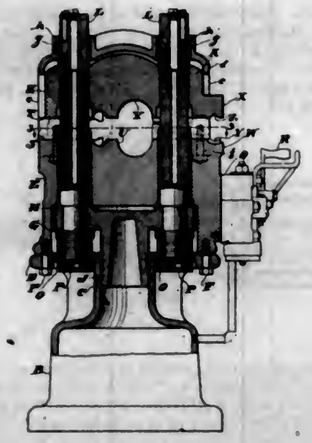
1. In a cylinder-lock, the combination with an externally-threaded cylinder-unit for insertion into a door from the outside thereof, of an internally-threaded housing-unit

for insertion into the door from the inside thereof, to which it is secured, whereby the two units are extensibly connected and installed in the door against lon-



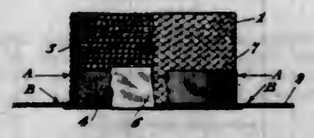
gitudinal movement in either direction, and means concurrently engaging with the said units for preventing their relative rotation in the door, the said means being insertable from the rear end of the locking-unit.

1,629,173. METHOD OF MAKING BALL RETAINERS. HARRY N. PARSONS, Chicago, Ill., assignor to Marlin-Rockwell Corporation, a Corporation of New York. Filed Mar. 5, 1926. Serial No. 92,465. 2 Claims. (Cl. 29—148.4.)



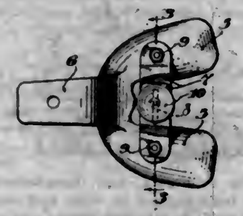
1. The method of making ball retainers consisting of forming two flat-rings with substantially annular portions concentric with the center of said ring and with wider intermediate portions curved both inwardly and outwardly from said concentric portions, pressing said intermediate portions into hemispherical form on one side of the concentric portions which lie in substantially the same plane, trimming an edge of each of said rings to substantially a true circle, and uniting said rings to form a retainer for balls.

1,629,174. METHOD OF AND APPARATUS FOR CHARGING HOLLOW EXPANSIBLE ELEMENTS. HAL T. PATTON, Cleveland, Ohio, assignor to The Bishop & Babcock Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 7, 1922. Serial No. 599,614. 5 Claims. (Cl. 226—20.)



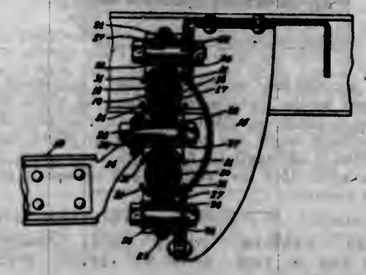
1. In a method of charging a hollow expansible element with a volatile liquid adapted to volatilize at a given temperature, the steps which consist in maintaining said element in its normal condition of extension and at a temperature slightly above the condensation temperature at the existing pressure of the liquid to be charged, exhausting the contents of said element to produce a high vacuum therein, and then filling said element with vapor of the desired volatile liquid.

1,629,175. DRILL SHARPENER. ARTHUR E. PETERS, Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 11, 1925. Serial No. 68,447. 2 Claims. (Cl. 76—5.)



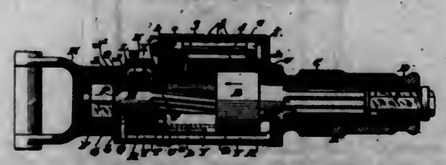
1. In a drill sharpener, the combination of a hollow base formed with an integral raising cylinder having a lateral flange, an anvil block supported on said flange and having a clamping cylinder at its lower portion surrounding the raising cylinder, a clamping piston in said clamping cylinder having a reduced extension in said raising cylinder, a movable cross head above the anvil block, posts connected to the cross head and the clamping piston, the upper ends of the posts extending beyond the cross head to form guide members, a guiding and protecting yoke extending over the cross head and having legs supported upon the anvil block outside of the periphery of the cross head, the upper guiding ends of the posts extending into said apertures in the yoke.

1,629,176. SELF-CONFORMING STRAW HAT. FREDERICK G. PHELPS, New York, N. Y. Filed Nov. 10, 1924. Serial No. 748,844. 7 Claims. (Cl. 2—193.)



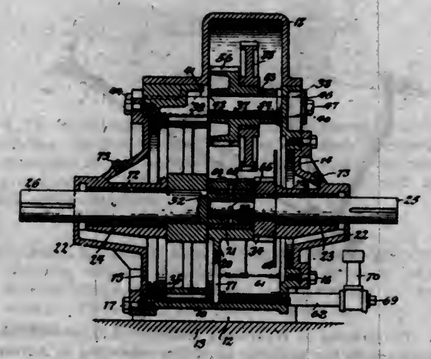
1. As an article of manufacture, a straw hat having a stiffened crown portion, a stiffened brim, and a flexible zone comprising the conjuncture of the crown and the brim, in combination with a single wide braid of straw extending circumferentially of the hat and overlying the flexible zone, said braid being attached to the inside of the crown and to the bottom of the brim to provide a vertical support for the flexible side wall of said crown.

1,629,177. DENTAL IMPRESSION TRAY. BENJAMIN F. SAHR, Hutchinson, Minn. Filed July 10, 1926. Serial No. 121,698. 3 Claims. (Cl. 32—6.)



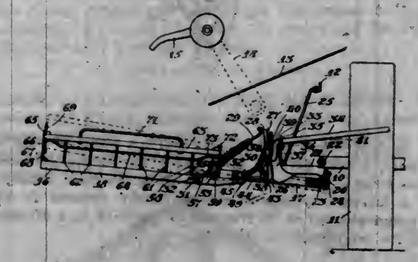
1. A dental impression tray for lower jaw impressions having one-piece a U-shaped body and a projecting handle and provided with a rigidly held transverse pressure bar formed with a fingerpiece at the transverse center of the tray for equalizing the pressure on the two sides of the tray.

1,629,178. CONNECTION FOR TORQUE ARMS OR THE LIKE. FLORAIN J. SHOOK, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 6, 1924. Serial No. 754,388. 9 Claims. (Cl. 180—85.)



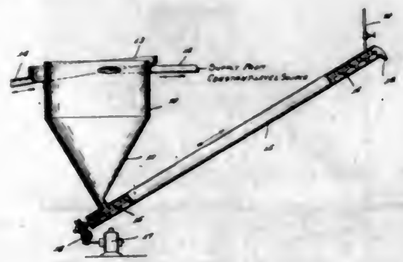
1. A torque arm connection comprising a torque arm, an anchorage therefor, and a connecting member operatively interposed between the two, said member having attachment points for the arm and anchorage respectively and comprising opposed facings of flexible material converging toward said attachment points and held bulged apart between said points by a cushion of resilient material.

1,629,179. ROCK DRILL. FRED M. SLATER, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 24, 1925. Serial No. 39,165. 3 Claims. (Cl. 121—18.)



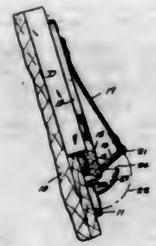
1. In a fluid actuated rock drill of the hammer type, the combination of a cylinder and reciprocating piston, rotation mechanism for the drill steel including a rifle bar, a valve in the form of a sleeve surrounding the rifle bar for controlling the admission of pressure fluid to both ends of the cylinder, a valve casing located at the side of the cylinder having exhaust ports leading from the ends of the cylinder thereinto, and a reciprocating fluid actuated piston valve located in the said valve casing for controlling the exhaust of motive fluid from the cylinder through the said exhaust ports and valve casing to atmosphere.

1,629,180. SPEED CHANGER. HARRY J. SMITH, Lakewood, Ohio. Filed Aug. 12, 1924. Serial No. 731,572. 13 Claims. (Cl. 74—7.)



1. A speed changer comprising a small high speed gear wheel, a large low speed gear wheel, a double pair of gear wheels each pair being connected and consisting of a small gear wheel and a large gear wheel, the large gear wheel of one pair meshing with the small high speed gear wheel and the small gear wheel of the other pair meshing with the large low speed gear wheel, and a single connected pair of small and large gear wheels, the large gear wheel of the single pair meshing with the small gear wheel of the pair geared with the righ speed gear wheel, and the small gear wheel of said single pair meshing with the large gear wheel of the pair geared with the slow speed gear wheel, said small high speed gear wheel and large low speed gear wheel being on one axis, said double pair of gear wheels being on another axis, and said single pair of gear wheels being on still another axis and the axes of said high and low speed shafts and the intermediate shafts being parallel and equidistant.

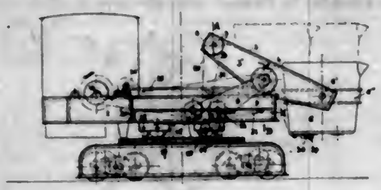
1,629,181. BUNDLE CARRIER. HERBERT B. SPERRY and GUSTAV W. WITTE, Chicago, Ill., assignors to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Mar. 1, 1922. Serial No. 540,114. 13 Claims. (Cl. 56—480.)



1. In combination, a frame, a bracket pivoted to said frame and having upwardly and rearwardly diverging arms, a bundle carrier including a support connected to the end of the rearwardly diverging arm of said bracket and supported thereby, and control means connected to the upwardly diverging arm for controlling the pivotal movement of the bracket to effect movement of the support for dumping the bundle carrier.

1,629,182. WHIRLPOOL CLASSIFIER AND CLASSIFYING PROCESS. RAY T. STULL, Columbus, Ohio, assignor to Stull Process Company, Savannah, Ga., a Corporation of Georgia. Filed Feb. 21, 1923. Serial No. 620,389. 9 Claims. (Cl. 209—211.)

1. The process of separating colloidal or quasi-colloidal particles from fine granular particles, consisting in delivering a mixture of such particles suspended in liquid tangentially to the outer portion of a horizontally extended internally unobstructed body of liquid under impetus sufficient to establish a horizontal whirl having an angular velocity which decreases toward the center, overflowing a thin sheet of liquid carrying the quasi-colloidal particles from the periphery of the liquid body above but close to the level of the feed, and collecting the granular particles below the feed region.

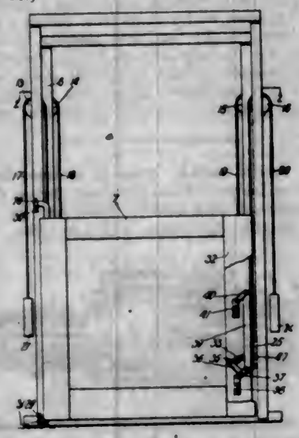


1,629,183. BRACKET HINGE. DANIEL D. SWEM, Bridgeport, Conn., assignor to The Artistic Bronze Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 3, 1926. Serial No. 85,662. 7 Claims. (Cl. 16—184.)

1. A door hinge comprising a butt, a strap pivoted to the butt, a yoke pivoted to the butt on the opposite side of the strap pivot from the strap when the door is closed, and a laterally yieldable spring rigidly secured to the strap and pivoted at its free end to the yoke at a distance from its connection to the butt.

1,629,184. FOUNDRY LADLE CRANE. ARTHUR THOMAS, Mont-sur-Marchienne, Belgium, assignor to Ateliers de Constructions Electriques de Charleroi Societe Anonyme, Brussels, Belgium. Filed Mar. 19, 1926, Serial No. 95,865, and in Belgium Mar. 25, 1925. 12 Claims. (Cl. 22—82.)

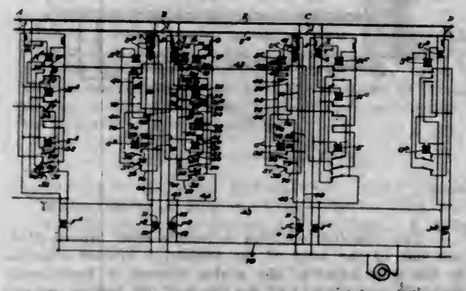
1. A foundry ladle crane, comprising a structure adapted to pivot around a vertical axis, a ladle-support mounted on said structure, means for slewing said structure with said ladle support around said axis, means for operating said ladle support to move the ladle towards



and away from said axis, and independent means for operating said ladle-support to raise and lower the ladle without lifting said pivotal structure.

1,629,185. NONSLIP FLOOR CONSTRUCTION. FRANK J. TONE, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Jan. 25, 1922. Serial No. 531,772. 3 Claims. (Cl. 94—6.)

1. A non-slip floor surface including a supporting mass of cement having plane-faced fragments of a flat slab of abrasive material embedded in the upper surface thereof to a uniform depth and with the plane upper faces of the fragment substantially flush with the surface of the mass in which they are embedded and exposed to present a tread surface.

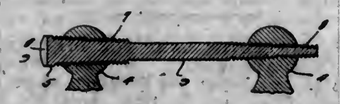


1,629,186. WINDOW. JOSEPH VIDINA, Chicago, Ill. Filed July 26, 1926. Serial No. 124,790. 3 Claims. (Cl. 20—46.)

1. In a window of the class described a stationary frame, a sash slidably arranged in said frame, a counterweight attached to said sash, hinge parts on said sash, corresponding hinge parts on said frame, said parts being adapted to engage each other, when the sash is slidably moved into a predetermined position, guide ways in said stationary frame, guide plates on one side of said sash adapted to engage one of said guide ways, a guide bar on the other side of the sash, means for moving said guide bar into and out of engagement with a guide way opposite

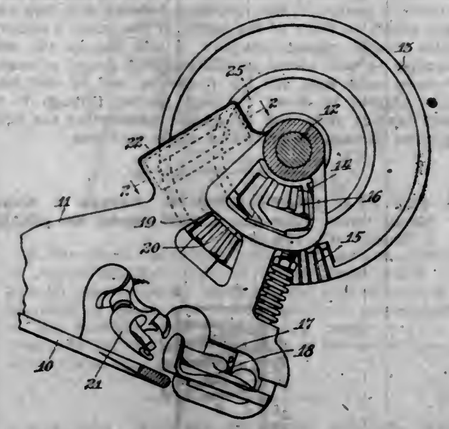
of the first mentioned guide way, a second counterweight, means for removably connecting said second counterweight to the sash, means on the stationary frame to hold said connecting means when removed from the sash, and means for moving said connecting means selectively into engagement with the sash and the stationary frame respectively.

1,629,187. RAILWAY-TRAFFIC CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 25, 1923. Serial No. 641,388. 21 Claims. (Cl. 246—34.)



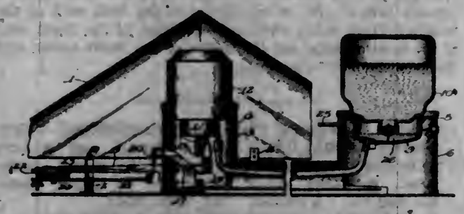
1. In combination, a right hand and a left hand section of railway track, a track relay for said left hand section, a stick relay for said right hand section, means for energizing said stick relay as soon as said track relay is de-energized by a train in the left hand section moving toward the right hand section, and apparatus controlled in part by said stick relay for supplying train governing current to the rails of said forward section.

1,629,188. KNITTED CAP. ROBERT G. WARREN, Milwaukee, Wis. Filed Nov. 6, 1925. Serial No. 67,271. 1 Claim. (Cl. 2—172.)



A knitted cap comprising a body portion, fasteners located on opposite sides thereof adjacent the front, a flap secured to the lower edge of the body portion and adapted to be folded upwardly with the ends of the flap secured to said fasteners or to be folded downwardly with the ends of the flap secured to said fasteners or folded downwardly with the ends of the flap secured to each other beneath the chin of the wearer, said flap having panels intermediate the ends thereof, each of said panels being formed of a central straight knitted portion joined to the remainder of the flap by means of rack knitted portions, said panels projecting below the main line of the lower edge of the flap when said flap is folded downwardly.

1,629,189. ELECTRICAL CONNECTOR. FRANK L. WEAVER and MICHAEL F. CAMPION, Norwich, Conn. Filed May 4, 1925. Serial No. 27,813. 6 Claims. (Cl. 173—324.)



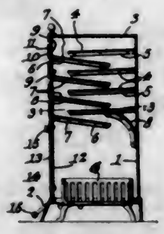
1. In combination with an electrical storage battery including the battery plate groups and their terminals, a connecter for the terminals comprising a tapered member having threaded portions adapted to engage with the plate group terminals.

1,629,190. KNOTTER CAM OILER FOR HARVESTERS. WILLIAM WEBBER, La Grange, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Jan. 12, 1925. Serial No. 1,811. 7 Claims. (Cl. 289—8.)

3. In a knotter mechanism for binding mechanisms having a frame, a knotter shaft carried in the frame, a cam wheel having gear faces fixed to said shaft, a knotter hook pinion and a cord holder pinion carried on shafts journaled in the frame and engageable with the gear faces on the cam wheel, and a bracket provided with an oil soaked pad carried on the frame, said pad engageable by the gear faces on the cam wheel for lubricating said gear faces and pinions.

1,629,191. OIL-BURNER-CONTROL MECHANISM. EDWARD L. WELLS, Macomb, Ill., assignor to American Steel Products Co., Macomb, Ill., a Corporation of Illinois. Filed May 21, 1926. Serial No. 110,666. 5 Claims. (Cl. 236—6.)

1. In an oil-burning heater, a burner, a supporting element upon which the burner is pivoted, an oil supply



connected to the burner, means for raising and lowering the oil supply with respect to the burner, and thermostatic means for regulating the height at which the pivoting portion of the supporting element is disposed.

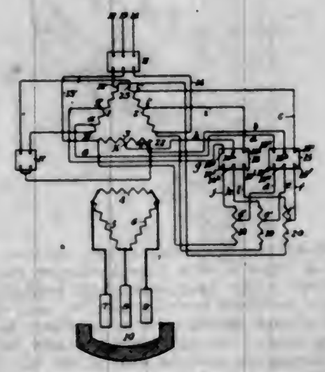
1,629,192. REFLECTOR LAMP FOR DIAPROJECTION FOR CINEMATOGRAPHY. WILHELM WINZENBURG, Kragenhof, near Kassel, and FRIEDRICH NOACK, Kassel, Germany. Filed June 23, 1923. Serial No. 647,408. 4 Claims. (Cl. 88—24.)

1. In a cinematographic projection apparatus, a reflector lamp for diaprojection, comprising, in combination, a concave mirror, a condensing lens located opposite said mirror, a source of light arranged between said lens and the mirror in front of the centre of the same, a lantern slide located opposite one half of said lens on the side counter to said source of light, optical means arranged between said slide and the respective half of said lens and adapted to direct the rays passing through it to said lantern slide, and means for intercepting the rays passing through the other half of the said lens.

1,629,193. GRATE HOUSING. LUTHER B. ZILAR, Miami, Okla. Filed Aug. 4, 1926. Serial No. 127,119. 1 Claim. (Cl. 126—58.)

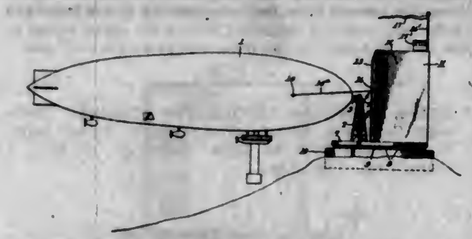
A device of the class described including a housing open at the bottom and having an outlet aperture at the top, there being a door opening in the front of the housing adjacent the bottom, a closure for the door opening, a series of superposed baffle plates within the housing secured to the front thereof, a series of superposed baffle plates within the housing and secured to the back thereof, the baffle plates of one series being extended between the baffle plates of the other series, said plates cooperating to provide a tortuous passage for combustion products, a combined deflector and reflector connecting the lower baffle of one series to the back wall of the housing, there being clean-out openings in the front wall of the housing adjacent the baffles of the front series, and closures for said openings.

1,629,194. PROCESS FOR MANUFACTURING DIHYDROXY PERYLENE. ALOIS ZINKE and ALBERT KLINGLER, Graz, Austria, assignors, by mesne assignments, to Felice Bensa. Filed Oct. 4, 1922. Serial No. 592,203. 3 Claims. (Cl. 260—154.)



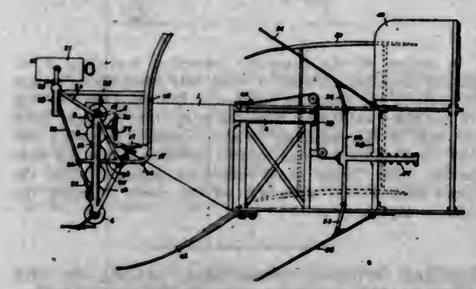
1. A process for manufacturing dihydroxyperylene consisting in intimately mixing dinaphthols with aluminum chloride, heating the mixture for a period of time not exceeding one hour to a temperature not exceeding the melting temperature of the dinaphthols and lixiviating the mass obtained whereby any undecomposed aluminum chloride and products of decomposition thereof are removed.

1,629,195. DOOR-CLOSING HANDLE. WILLIAM M. ARCHIBALD, Jacksonville, Fla. Filed June 19, 1926. Serial No. 117,160. 4 Claims. (Cl. 16—112.)



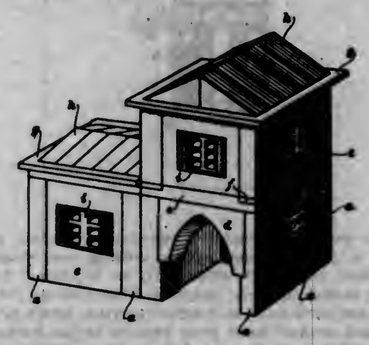
1. The combination with a vehicle door hinged along one side of the body of the vehicle, a bracket attached to the door adjacent the center thereof, a horizontally swinging arm pivoted to the bracket and having one end thereof extended adjacent the hinged edge of the door and provided with a handle, the bracket and arm being connected by a torsion spring urging the handled end of the arm into engagement with the inner face of the door, said bracket being U-shaped and having vertically aligned openings formed in the arms thereof through which a downturned extension upon the inner end of the arm is directed, said torsion spring being coiled about the downturned extension of the arm between the arms of the bracket and having one end thereof abutted against the bight of the bracket and the opposite end thereof secured to the downturned extension of the arm.

1,629,196. METHOD OF OPERATING ELECTRIC FURNACES. SAMUEL ARNOLD, 3d, Ben Avon, Pa. Filed Apr. 14, 1926. Serial No. 101,925. 8 Claims. (Cl. 204—64.)



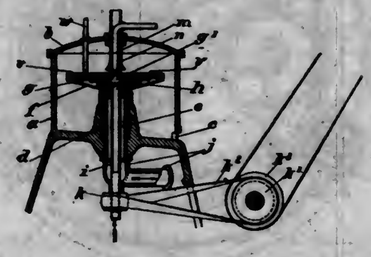
1. In the method of operating electric arc furnaces, the step comprising providing at least three available voltages, and utilising an intermediate voltage for starting the melt.

1,629,197. AIRSHIP ANCHORAGE. WILLIAM AUBERLIN, Northfield, Ohio. Filed Jan. 18, 1926. Serial No. 82,022. 3 Claims. (Cl. 244—2.)



1. An airship anchorage comprising a rotary platform, a mooring mast mounted thereon, and a windshield mounted on the platform beside the mooring mast, the mast being located at one side of the center of rotation of the platform and the windshield being located at the opposite side of the said center.

1,629,198. FLYING APPARATUS. RENÉ AUGUSTE BERARD, Bellevue, France. Filed July 12, 1924, Serial No. 725,711, and in France July 18, 1923. 5 Claims. (Cl. 89—40.)



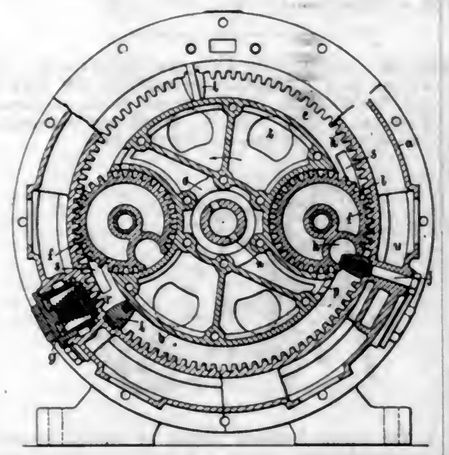
1. In combination with a flying machine, a fork mounted thereon for rotation about a longitudinal axis and a frame mounted for turning movement about a fixed axis extending transversely of the prongs of the fork, said frame being arranged to carry a weapon and being provided with a seat for a gunner.

1,629,199. BOX OF BRICKS FOR BUILDING ROOMS INCLOSED BY WALLS. ALBERT BOSSLET, Munich, Germany. Filed Jan. 10, 1925, Serial No. 1,696, and in Germany Dec. 21, 1923. 1 Claim. (Cl. 46—35.)

A box of bricks for building rooms inclosed by walls comprising building elements of which the buildings are built by putting the building elements side by side or one on the other, said building elements consisting of four corner posts provided with vertical recesses extending downwardly from the upper ends of the posts and of a width less than the thickness of the post and terminating intermediate of the ends thereof, of intermediate elements inserted in the recesses of the corner posts in flush relation with the outer edges of the same, four nogging pieces supported by said corner posts, the ends of which pieces overlap each other so that a frame is formed which serves as a bond between several building elements, a horizontal roof supporting board arranged upon the nogging pieces, and a roof consisting of two solid triangular elements arranged upon the said horizontal board with their inner portions abutting so as to form a sloping roof with a horizontal ridge.

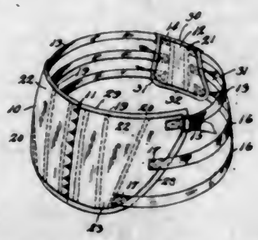
1,629,200. METHOD OF AND APPARATUS FOR CARRYING OUT CHEMICAL REACTIONS OR PHYSICAL PROCESSES. ERNST BUHTZ, Berlin, Germany. Filed Apr. 6, 1925, Serial No. 21,194, and in Germany Feb. 7, 1925. 10 Claims. (Cl. 23—230.)

1. The herein described method of causing chemical or physico-chemical reactions of substances which consists in simultaneously supplying the said substances in the form of superposed films in amounts corresponding to the chemical composition of the components to be formed by the reaction to a disk near the center thereof, and rotating the said disk.



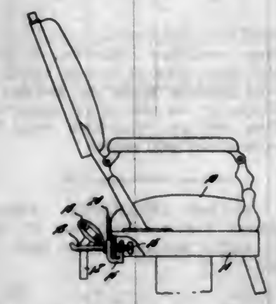
1,629,201. WINDOW-CLEANING DEVICE. MARIE CHRISTELER, Utica, N. Y. Filed July 14, 1926. Serial No. 122,343. 3 Claims. (Cl. 15—103.)

1. A device of the class described comprising a carriage, a guide post, a pad slidably supported thereon, said guide post being pivoted to said carriage, a grooved



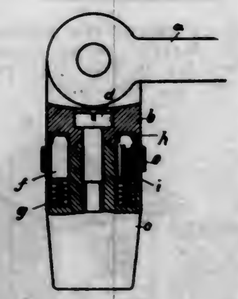
pulley at the upper end of said post, a pair of grooved pulleys at the lower end of said post, cables trained on said pulleys attached to said pad for reciprocating the latter, a strap mounted on said carriage, and flexible means in said strap for normally retaining the guide post in upright position when positioned adjacent a window.

1,629,202. PUMP, COMPRESSOR, OR THE LIKE. BAUCH CONKLIN, London, England. Filed Jan. 25, 1924, Serial No. 688,587, and in Great Britain Jan. 26, 1923. 2 Claims. (Cl. 230—30.)



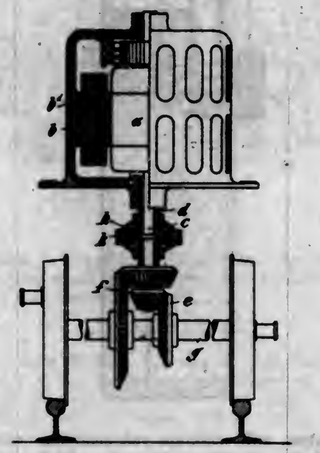
1. A compressor pump or the like comprising an outer casing an inner drum concentric with said casing and spaced therefrom the space between said casing and drum constituting the working chamber a centrally disposed hollow shaft on which the drum is mounted means whereby fluid entering the shaft is passed through the drum into the working chamber means for filtering the fluid as it enters the shaft abutments rotatably mounted on the drum teeth on the outer surface of the abutments cooperating teeth on the inner surface of the casing vanes on the outer casing extending into the working chamber the fluid being compressed between the abutments and vanes and means whereby a portion of the fluid can leak past the vanes.

1,629,203. ABDOMINAL SUPPORTER. JENNIE M. COON, Battle Creek, Mich. Filed June 25, 1923. Serial No. 647,693. 1 Claim. (Cl. 2—41.)



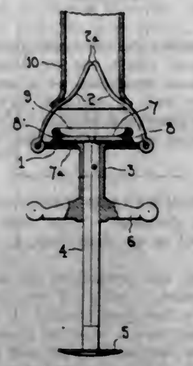
A three piece abdominal supporter comprising a front pad composed of substantially segmental parts shaped to fit the curvature of the abdomen and connected by a detachable fastening, a stayed rear pad of less area than the front pad and increasing in diameter downward to fit the lower portion of the back adjacent the base of the spinal column, connecting straps disposed at the upper edges of the front and rear pads, lower connecting straps extending upward from the lower portion of the front pad to the rear pad, and adjusting devices for upper straps at the front pad and for the lower straps at the rear pad.

1,629,204. HOLDING DEVICE FOR CHAIRS. THEODORE COTE and EDWARD VICTOR COTE, Tupper Lake, N. Y. Filed Dec. 23, 1925. Serial No. 77,313. 1 Claim. (Cl. 155—188.)



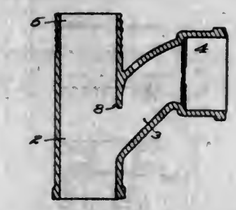
A device of the character described including a U-shaped clamping member, a wing bolt adjustable through one side of the clamping member, a U-shaped yoke having an inwardly extending threaded projection engaged with the side of the clamping member opposite the wing nut and upwardly extending spaced parallel projecting rods having their lower ends removably engaged with the upper edge of the inside wall of the clamp to which the yoke is attached.

1,629,205. WRENCH WITH HEAD HINGED ON THE SHAFT AND WITH REVERSIBLE RATCHET MECHANISM. HANS DISTLER, Feuerbach, near Stuttgart, Germany, assignor to The Firm Spezial-Werkzeug-Fabrik Feuerbach-G. m. b. H., Feuerbach, Germany. Filed Aug. 24, 1925, Serial No. 52,166, and in Germany Dec. 20, 1924. 2 Claims. (Cl. 81—60.)



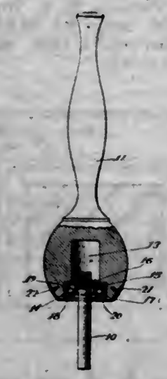
1. A wrench comprising in combination a shaft, a head piece, a joint element having notches and connecting said head piece with said shaft, an adjusting ring between said head piece and said joint element, teeth on the inner surface of said adjusting ring, pawls pivotally arranged on said head piece parallel to the axis of the same and in a circle around this axis, and teeth on said pawls and meshing with said teeth of said adjusting ring so that when said adjusting ring is rotated said pawls are swung 180° around their axes.

1,629,206. DRIVING MEANS FOR ELECTROLOCOMOTIVES. HANS DOLLMANN, Berlin-Waidmannslust, Germany. Filed Sept. 26, 1925, Serial No. 58,954, and in Germany Oct. 13, 1924. 5 Claims. (Cl. 105—52.)



2. Driving means for electro-locomotives comprising an electro-motor having an armature and magnetic field adapted to rotate in opposite directions; a shaft connected to the armature; a hollow shaft connected to the magnetic field; a power shaft at right angles to the axis of the armature; a plurality of conical gear wheels connected on said shafts; and an elastic coupling for the first-two-named shafts.

1,629,207. RING INSERTER FOR MILKING-MACHINE TEAT-CUP INFLATIONS. THOMAS NEILSON DRUMMOND, Hamilton, New Zealand, assignor of one-half to Leslie Beauchamp Maunsell, Eridge, Masterton, New Zealand. Filed Oct. 22, 1926, Serial No. 143,458, and in New Zealand June 21, 1926. 6 Claims. (Cl. 29—88.2.)

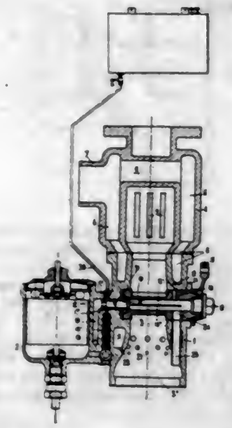


1. A ring inserter for milking machine teat cup inflations, comprising a disc; fingers pivotally attached to the edge of the latter so that their outer ends can contact with each other; a ring carrying disc located between said pivoted fingers and said first mentioned disc, and a stem slidable through the first mentioned disc, to which said ring-carrying disc is secured.

1,629,208. SOIL FITTING. DANIEL LOT ERNST, Los Angeles, Calif. Filed Aug. 27, 1925. Serial No. 52,924. 1 Claim. (Cl. 137—75.)

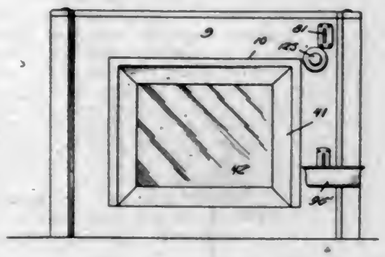
A soil and vent plumbing apparatus including a soil fitting having a substantially straight, continuous main vertical tube whose lower end is insertible into the socket of a contiguous soil pipe and whose upper end is attachable to the base of a closet, one side of the tube having a Y-branch ending in a hub whose axis is substantially perpendicular to the tube for attachment of a venting elbow superjacent a floor girder; whereby cutting of the girder is eliminated; the upper part of the said tube ending in a plane above the said hub, and a curtain wall at the mouth of the branch.

1,629,209. JUMPING ROPE. WILLIAM FAIRBANKS, Los Angeles, Calif. Filed Mar. 4, 1926. Serial No. 92,218. 2 Claims. (Cl. 272—75.)



1. A jumping rope comprising a pair of handles having recesses therein, a flexible element having its ends extending into said recesses, an angular bearing race adapted to support the end of the flexible element within its respective recess, a second angular bearing race disposed within each recess about the flexible element, balls disposed between the races, a cage enclosing the races and balls within each handle, and means for securing each cage within its respective recess.

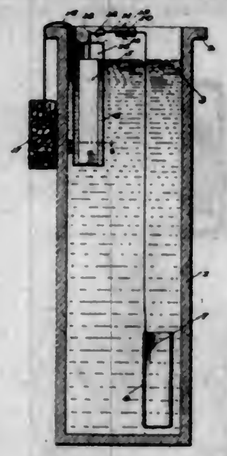
1,629,210. CARBURETOR. ENRICO FERROLDI, Turin, Italy. Filed July 1, 1922, Serial No. 572,144, and in France July 8, 1921. 1 Claim. (Cl. 261—18.)



A carburetor for internal combustion engines adapted to operate on heavy fuel, comprising a carbureting chamber, separate means for containing a heavy fuel and a light fuel, separate ducts connecting said means with said chamber, said ducts having restricted portions so as to prevent the passage of the heavy fuel when the carburetor

is cold and to prevent the passage of the light fuel when the carburetor is heated by restricting the flow of vapor, and means for heating said carburetor by a fluid the tem-

perature of which depends upon the operation of the engine to control the flow of the two fuels to the carbureting chamber.



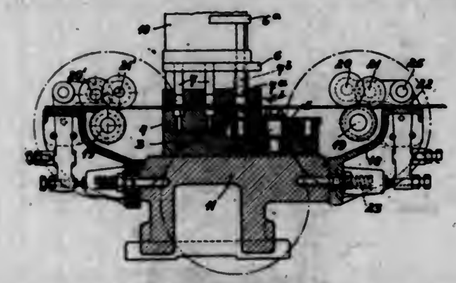
1,629,211. COIN-CONTROLLED MECHANISM. GANDOLOFO GIAMBRA, Paterson, N. J. Original application filed Jan. 16, 1926, Serial No. 81,860. Divided and this application filed Sept. 2, 1926. Serial No. 133,191. 5 Claims. (Cl. 194—65.)

1. A coin controlled mechanism including a support, a fixed chute on said support, a movable chute, an extension on the movable chute provided at its upper end alongside of the fixed chute, a bar pivoted adjacent the lower end of the movable chute and extending upwardly and having an extension disposed inwardly of the fixed and movable chutes, a loop on said movable chute for receiving the upper end of the bar, a cam engageable with said bar below the loop, means for rotating the cam, adjustable means for stopping a coin in said movable chute delivered thereto from the fixed chute at a point to be engaged by the extension of the bar, and a pair of fixed chutes with which the lower end of the movable chute is registrable.

1,629,212. PROCESS AND APPARATUS FOR RECOVERING SILVER FROM PHOTOGRAPHER'S SPENT HYPOSULPHITE SOLUTION. ERNEST K. GIFFEN, Salida, Colo. Filed Sept. 19, 1923. Serial No. 57,455. 5 Claims. (Cl. 204—16.)

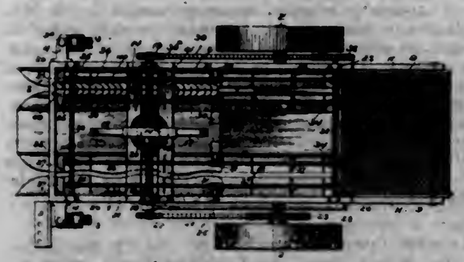
5. A process for the recovery of silver from spent hyposulphite solutions which comprises immersing elements in remote relation in the solution to form a voltaic cell and connecting said elements externally through an ohmic re-

sistance which will maintain the maximum voltage between said elements during deposition of silver upon one of said elements.



1,629,213. TOOL-HOLDING DEVICE. LANK HUGHES, Washington, D. C. Filed June 10, 1926. Serial No. 115,135. 7 Claims. (Cl. 206—16.)

1. In a tool holding device, a container, a plurality of tool holding means within the container, each of said tool holding means consisting of a fixed part and a relatively movable part, a common spring means acting upon the movable parts and adapted to hold said movable parts in either open or closed position in regard to the fixed parts.

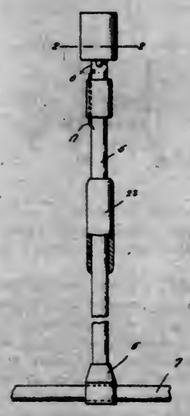


1,629,214. BUTTON-MAKING MACHINE. HUGO ISRINGHAUS, Barmen, Germany. Filed July 7, 1924, Serial No. 724,730, and in Germany July 9, 1923. 3 Claims. (Cl. 79—3.)

1. A device for the production of metal buttons by means of an eccentric press from two strips of material conducted through the press parallel to each other, comprising in combination an eccentric press with an outer ram and an inner ram working in said outer ram, a die plate, a revolving disk under said die plate, a feeding device for guiding the strips of material in proximity to each other over the die, a row of punches over each strip of material for shaping the elements of the button, said two rows of punches being connected with the outer ram, a drawing tool arranged in the extreme punch of one row of punches seen in the direction of movement of the strip of material, and an assembling punch for uniting the shaped and punched button elements, said last mentioned two punches being connected with the inner ram said disk being provided with a plurality of circumferentially spaced moulds, said moulds

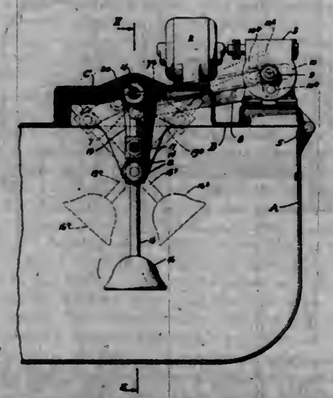
being adapted to cooperate with said drawing tools and said assembling punch and to move the partially formed elements to said assembling punch.

1,629,215. HARVESTER. HOMER B. JOHNSON, Sheridan, Ind.; Emma K. Johnson administratrix of said Homer B. Johnson, deceased. Filed Sept. 1, 1922. Serial No. 585,757. 7 Claims. (Cl. 56—126.)



1. In a bean harvester, the combination with the framework, of a pair of troughs spaced apart and forming a sinuous slot between them, portions of said troughs lying horizontally near the bottom of the machine and the rear portions of said troughs being inclined, means located over the plane of the horisontal portions of said troughs for driving the beans from the plants in lateral directions to each side of said plants, and conveyors having drags movable through said troughs from front to rear.

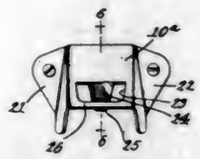
1,629,216. RADIATOR PROTECTOR. LOUIS G. KLENCK, Jr., St. Paul, Minn. Filed Oct. 8, 1926. Serial No. 140,402. 1 Claim. (Cl. 293—54.)



A device of the class described including, in combination, a frame, a sheet of foraminous material stretched across the frame, a plurality of bolts piercing openings in the frame, a pair of rods diagonally disposed in relation to the frame and having eye ends pierced by the bolts, spacing blocks on the bolts adjacent the brace rods, and nuts on the bolts for holding them in engagement with a radiator in the manner described.

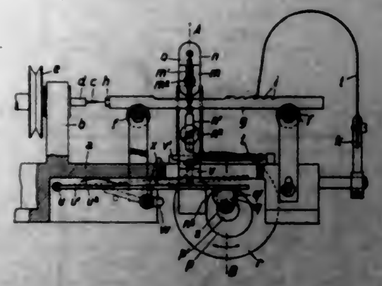
1,629,217. SOCKET MEMBER. WILLIAM W. LARGENT and CHARLES A. STILES, Tyrone, Pa. Filed Apr. 6, 1926. Serial No. 100,119. 4 Claims. (Cl. 81—124.1.)

4. In a wrench of the character described, a handle having a bore, a socket adapted for detachable engagement upon one end of the handle, a pin slidable within the bore in the socket attaching end of the handle and engaging at its forward end with said socket, means for projecting the pin through the socket for discharging the nut therefrom, and means operable by the pin when moved to nut projecting position for locking the socket upon the handle.



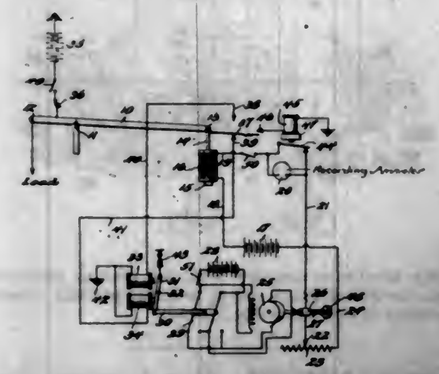
1,629,218. WASHING-MACHINE MECHANISM. ALBERT G. LARSON, Piedmont, and EDWARD R. COOPER, San Leandro, Calif.; said Cooper assignor to Josephine W. Cooper, San Leandro, Calif. Filed Oct. 15, 1925. Serial No. 62,532. 5 Claims. (Cl. 259—101.)

1. In a washing machine of the character described, a supporting member, a driving motor, a continuously operating driving shaft driven by the motor, a rocker shaft journaled on the support, means for transmitting a rocking movement from the drive shaft to said rocker shaft,



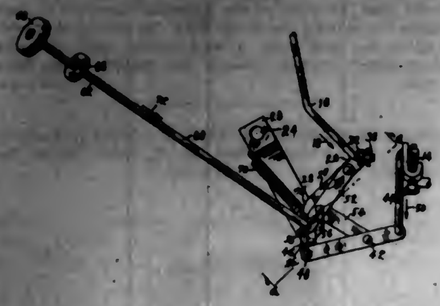
a reciprocally mounted plunger also carried by the support, and means whereby a reciprocal and a simultaneous oscillating movement in a vertical plane is transmitted from the rocker shaft to the plunger.

1,629,219. BOTTLE OPENER. DEXTER W. LILES, Badin, N. C. Filed Aug. 13, 1925. Serial No. 50,071. 1 Claim. (Cl. 65—46.)



In a bottle opener, a body portion including a length of sheet metal bent to provide lateral side members, ears formed on the lateral side members, said ears having openings to receive securing screws to secure the device to a supporting structure, said body portion having an opening stamped therein, one edge of the opening being formed into a knife-like edge, a depending tongue having a forwardly extended end portion extending from one wall of the opening, said knife-like edge adapted to engage one edge of a bottle cap, and said forwardly extended end portion adapted to engage the outer surface of the bottle cap to bend the same at this point.

1,629,220. MACHINE FOR DRILLING DRAWING DIES. SIEGMUND LOEWENHERZ and MAX STOCKMAYER, Berlin, Germany, assignors to Patent-Treuhand-Gesellschaft für Elektrische Glühlampen m. b. H., Ehrenbergstrasse, Berlin, Germany, a Corporation of Germany. Filed Sept. 2, 1925. Serial No. 54,006. 12 Claims. (Cl. 77—1.)

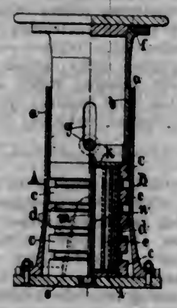


1. A machine for drilling drawing dies, in particular diamond dies, including a drill, a work holder adapted to be reciprocated in relation to the drill, and means for moving the work holder through the same distance independently of its position during the drilling operation, said means including a pressure applying member adapted to press on and displace said work holder.

1,629,221. RECORDING SCALE. BARRY MACNUTT, Gloucester, Mass. Filed July 9, 1925. Serial No. 42,493. 4 Claims. (Cl. 177—351.)

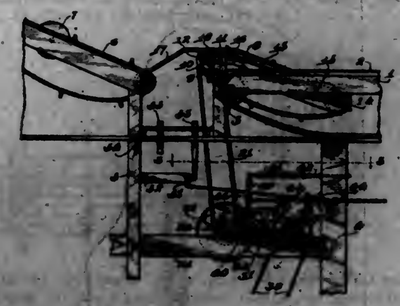
1. Automatic weighing apparatus comprising, in combination, a beam fulcrumed between its ends, means to apply an article to be weighed to one end of said beam, a magnetic core secured to the other end of said beam, a solenoid winding surrounding said core, a source of electricity connected in circuit with said winding, an adjustable resistance in said circuit, means to adjust said resistance to balance the load on said beam by electromagnetic attraction of said core, a recording ammeter and means to connect said ammeter in said circuit upon the obtaining of a balance.

1,629,222. FOOT ACCELERATOR. JACK E. MESSENGER, Des Moines, Iowa. Filed July 26, 1926. Serial No. 125,016. 18 Claims. (Cl. 74—92.)



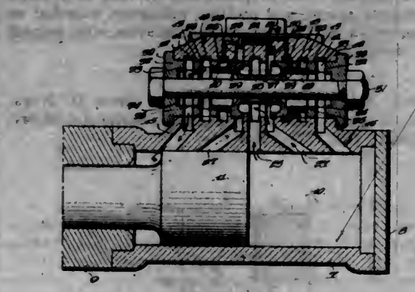
1. A foot accelerator for carburetors comprising a support, a pair of levers pivotally connected together and mounted on said support and capable of movement independently of each other, toggle levers pivotally connected to said pair of levers, and a foot actuatable member in engagement with said toggle levers for moving them whereby movement of said pair of levers relative to each other may be made and means of connection between one of said pair of levers and a carburetor valve.

1,629,223. FIREPLACE. STEPHEN MOGYORÓS and STEPHEN VIDI, East Pittsburgh, Pa. Filed Nov. 19, 1926. Serial No. 149,404. 4 Claims. (Cl. 126—79.)



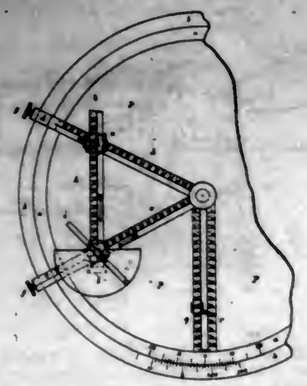
1. In a structure of the class described, a plurality of combustion chambers, a fire box below each chamber and an ash pit below each fire box, a smoke flue, and means for placing the lower end of the smoke flue in communication with either ash pit, a pipe adapted to swing with reference to the upper end of the flue, a swinging plate on which the plate is mounted, and means for shifting the plate and pipe to position for establishing communication between the flue and either combustion chamber.

1,629,224. BUFFER FOR RAILWAY AND LIKE CARS. HEINRICH MOHR, Hagen, Germany. Filed June 8, 1925, Serial No. 35,776, and in Germany Nov. 8, 1924. 7 Claims. (Cl. 213—221.)



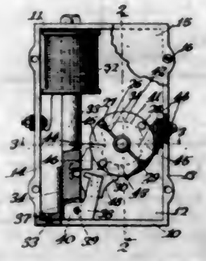
1. A buffer gear for railway and like cars comprising in combination: solid rings adapted to move longitudinally, intermediate split rings adapted to be compressed or expanded radially by the longitudinal movement of said solid rings, and a single series of concentrically arranged approximately cylindrical split springs separated one from another by concentric air spaces and adapted to be compressed or expanded one after the other in successive operations by the action of said intermediate rings whereby longitudinal forces or shocks are transmitted radially to the said series of split springs, substantially as described.

1,629,225. TRANSFER TABLE FOR SAWMILLS. CARL MOSEN and WILLIAM J. COLEMAN, Bend, Oreg. Filed Mar. 10, 1926. Serial No. 93,658. 2 Claims. (Cl. 143—92.)



1. In combination, a trimmer table, a transfer table, and conveying means therebetween consisting of inclined bars each having a portion thereof horizontally disposed.

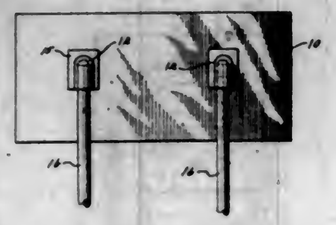
1,629,226. FLUID-OPERATED MOTOR. WILLIAM G. NAESMITH, Denver, Colo., assignor to The Denver Rock Drill Mfg. Co., Denver, Colo. Filed Dec. 6, 1922. Serial No. 605,290. 5 Claims. (Cl. 121—29.)



1. In a fluid operated motor, the combination with a cylinder member having a piston chamber and a reciprocatory piston operating therein, of a valve chest having a valve chamber, means for supplying motive fluid to the end portions of the valve chest, intake passages for directing such motive fluid from the ends of the valve chest to the ends of the piston chamber, said piston chamber having exhaust permitting passages between the intake passages opening into the valve chamber between the supply means, an exhaust outlet from the valve chest between the exhaust permitting passages, a distributing valve in the valve chamber having end portions that control the passage of motive fluid from the supply means to the intake passages and spaced valve flanges that control the exhaust of fluid through the exhaust permitting passages to the outlet, the surface areas of the said end portions being greater than the surface areas of said flanges, means for intermittently supplying live motive fluid alternately against said smaller surface areas of the flanges during a portion of the piston stroke while maintaining corresponding pressure against the opposite larger surface areas to hold the valve against shifting, while relieving the corresponding end portion area of the valve of pressure, and means controlled by the piston as it reaches the limit of its stroke to deliver motive fluid under pressure against said end portions and supplementing the pressure against the flanges to shift the valve.

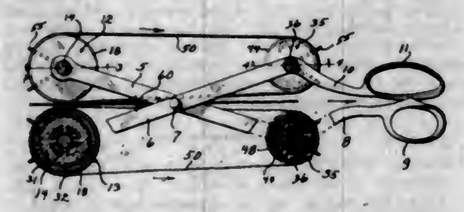
1,629,227. MANEUVER INDICATOR. FABBRIZIO RUSPOLI, Turin, Italy. Filed Feb. 9, 1922. Serial No. 535,183. 14 Claims. (Cl. 33—75.)

1. In an instrument of the class described, in combination, a supporting member, a disk rotatably mounted in said member and having marked on its surface a series of logarithmic spirals, having the center of the disk as a focus, and having a series of parallel lines spaced at a definite distance apart and numbered from the center, a series of parallel lines perpendicular to said first series and definitely spaced and position indicators mounted on said supporting member in coacting relation with respect to said markings.



1,629,228. GAS-BURNER CONTROL. EPPA H. RYON, Pasadena, Calif. Filed May 8, 1925. Serial No. 28,947. 7 Claims. (Cl. 137—139.)

1. A gas burner control comprising a solenoid, a core slidable within the solenoid adapted to be attracted thereby, a stem having an aperture therethrough rotatably disposed in a gas line, means providing projections upon the stem, and a pawl carried by said core capable of engaging one of said projections when the solenoid is energized to rotate said stem a predetermined amount, said pawl having a flat side so arranged as to be engaged by a succeeding projection upon the stem so as to serve as a stop for the stem.

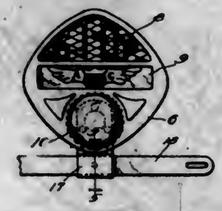


1,629,229. SIGN. EDWARD SHARP, Jr., Brookline, Mass. Filed Feb. 11, 1926. Serial No. 87,655. 1 Claim. (Cl. 40—125.)

A sign for outdoor advertising comprising in combination, a pair of cylindrical metal rods adapted to be driven into the ground in spaced relation to one another, said posts each having pointed lower ends and frusto-conical upper ends, a sign board, and sockets having straight bores open at their lower ends and closed at their upper ends, secured in parallel spaced relation upon the rear face

of the sign board for slidably receiving the upper tapered ends of the rods for detachable supporting of the sign board upon the rods.

1,629,230. GARMENT PRESSER AND CREASER. VIRGIL ARIEL STEVENS, Green Cove Springs, Fla. Filed Sept. 30, 1926. Serial No. 138,798. 8 Claims. (Cl. 68—9.)



1. In a device of the class described, the combination of a pair of arms pivotally connected intermediate their ends, pressing rollers rotatably carried by the forward end of each arm, tensioning rollers rotatably carried by the rear end of each arm and extending parallel with the pressing rollers, endless belts trained over each pressing roller and the tensioning roller carried by the opposite arm from which the pressing roller is mounted, and means for moving the belts together with their supporting rollers, laterally toward and away from one another.

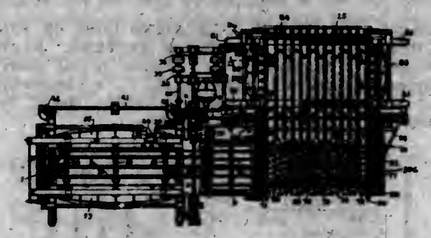
1,629,231. REAR SIGNAL LIGHT FOR AUTOMOBILES. PAUL A. STOVER, Racine, Wis., assignor to The Stover Signal Engineering Company, Racine, Wis., a Corporation of Delaware. Filed Apr. 4, 1923. Serial No. 629,765. 7 Claims. (Cl. 177—329.)

1. A vehicle signal lamp comprising a casing, a partition dividing said casing into two compartments, a lamp in one of said compartments coacting therewith to constitute a tail light, a lamp in the other compartment actuable to indicate change in velocity of a vehicle, said second lamp coacting with its compartment to constitute a stop light, a translucent lens and an indicia-bearing translucent panel over said tail light compartment, a translucent warning lens over said stop light compartment and a cover for said casing securing said lenses and panel in assembled relation to said casing.

5. A vehicle signal lamp comprising a casing, a removable cover therefor, a partition separating said compartment into two chambers, said cover being provided with two apertures overlying one of said compartments, a tail lamp in said latter compartment capable of constant illumination, a signal lens underlying one of said two apertures and an indicia-bearing translucent panel underlying the other of said apertures, said cover being provided with a third aperture overlying the other of said compartments, a lamp in said last named compartment

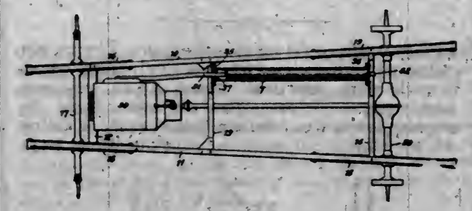
capable of temporary illumination and a warning lens underlying said third aperture, said lenses and panel being removable when said cover is removed from said casing and being positioned against removal by said cover when the latter is in assembled relation to said casing.

1,629,232. REAR SIGNAL LIGHT FOR AUTOMOBILES. PAUL A. STOVER, Racine, Wis., assignor to The Stover Signal Engineering Company, Racine, Wis., a Corporation of Delaware. Filed Sept. 8, 1923. Serial No. 661,568. 14 Claims. (Cl. 177—31.4.)



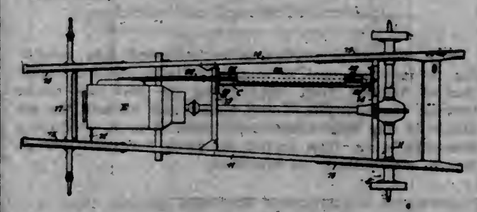
6. A device of the class described, comprising a housing, having an opening, metal strips secured to opposite walls thereof, and said opening in said housing, a transparent panel closing said opening and held by said angularly disposed strips, and a cover having means for securing it to said first named strips, said first and second named strips being secured to said housing by a common means.

13. A vehicle lamp comprising a metal housing having a back wall with an aperture therein, a lamp supporting member having a plurality of lamp receiving openings therein, means for removably securing said supporting member to said wall over said aperture, said member and housing being so shaped as to form a space with which the lamp receiving openings communicate, contact members extending through said aperture into said space, each having a contact portion adjacent a corresponding lamp receiving opening and means for supporting said contact members on and insulating them from said housing.



14. A vehicle signal lamp comprising a sheet metal housing open at one side and having an aperture in the bottom thereof, a cover for said open side and a translucent cover for said aperture in the bottom, spring strips having free ends yieldingly engageable with said transparent cover to hold the same in position, angularly disposed fastening strips, said fastening strips and said spring strip being secured to said housing by common fastening means, and means to secure said first named cover to said fastening strips.

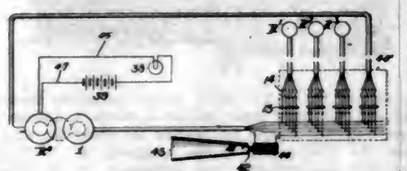
1,629,233. AUTOMATIC PLATE AND SHEET TRIMMING AND SQUARING MACHINE. FRANK H. STREINE, New Bremen, Ohio, assignor to The Streine Tool and Manufacturing Company, New Bremen, Ohio, a Corporation of Ohio. Filed Mar. 16, 1925. Serial No. 15,925. 18 Claims. (Cl. 164—48.)



1. In an automatic sheet metal trimming machine, right and left hand shear devices located in horisontally spaced relation, means for feeding the sheet material between the shears and means operated by the moving sheet for discontinuing the operation of the feeding means and causing the operation of the shearing devices.

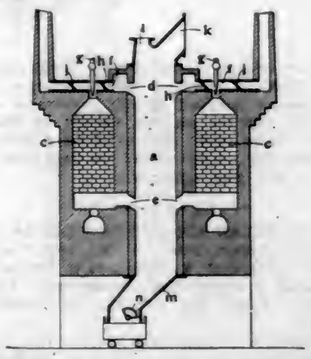
1,629,234. MOTOR-VEHICLE FRAME. ALFRED T. STURT, Flint, Mich., and WALTER F. PFANDER, Yonkers, N. Y., assignors to Durant Motors Incorporated, a Corporation of Delaware. Filed Apr. 16, 1921. Serial No. 461,847. 4 Claims. (Cl. 280—106.)

1. A motor vehicle frame having longitudinal side members, transverse members secured thereto, and an auxiliary member mounted on said transverse members to resist the twisting stresses exerted on the frame comprising a sheet metal shell of circular cross section having connecting plates welded on each end for securing it to said transverse members.



1,629,235. MUFFLER AND MOTOR VEHICLE FRAME. ALFRED T. STURT, Flint, Mich., and WALTER F. PFANDER, Yonkers, N. Y., assignors to Durant Motors Incorporated, a Corporation of Delaware. Filed Jan. 27, 1922. Serial No. 532,199. 6 Claims. (Cl. 280—106.)

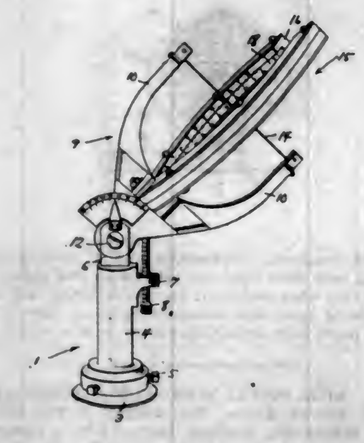
1. A combined frame stiffener and muffler comprising an outer elongated shell, a front head, an inner conduit extending through said front head and having a multiplicity of holes formed therein through which the exhaust gases escape to the chamber formed by said outer shell, means for preventing the escape of gas between said conduit and said front head, a rear head having a lip formed



therein through which the exhaust escapes to atmosphere, means for rigidly securing said shell to cross members of a vehicle frame to prevent any relative movement therebetween, and means carried by said rear head for supporting the rear end of said conduit.

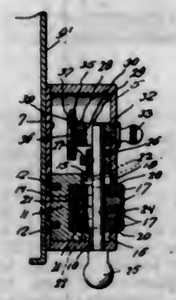
1,629,236. MEANS FOR INDICATING LOSS OF SYNCHRONISM IN TRANSMISSION SYSTEMS. ELMER A SPERRY, Brooklyn, N. Y., assignor to the Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 12, 1920. Serial No. 403,049. 7 Claims. (Cl. 177—311.)

5. In a self-synchronous A. C. transmission system, a transmitter, a plurality of repeaters in circuit with said transmitter, circuit-closing means for indicating loss of synchronism between said transmitter and one of said repeaters, said means including a pair of cooperating contacts, means whereby said transmitter actuates one of said contacts, and means whereby another of said repeaters actuates the other of said contacts.



1,629,237. METHOD OF PRODUCING ACTIVATED CARBONACEOUS SUBSTANCES AND THE PRODUCT OF THE METHOD. EDGAR ROUSE SUTCLIFFE, Leigh, England. Filed Jan. 27, 1920, Serial No. 354,468, and in Great Britain Feb. 1, 1919. 4 Claims. (Cl. 252—3.)

1. A method of producing an activated coke consisting in reducing coal to a substantially uniform condition of fineness, then compressing the coal into blocks without the addition of any binder and without the addition of any non-carbonaceous substance, to produce a stone-like block, then coking the block and then activating it, substantially as described.

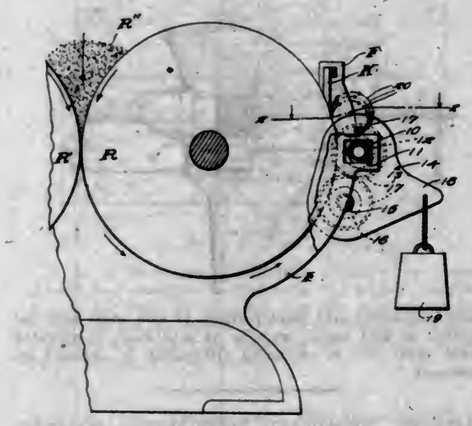


1,629,238. SUN DIAL. SYMPHORIAN TERRAS, Worcester, Mass., assignor to The Trustees of Assumption College, Worcester, Mass. Filed Sept. 7, 1926. Serial No. 134,104. 2 Claims. (Cl. 33—62.)

1. In a sun dial, a base, a standard, a fork adjustably mounted upon a horizontal pivot at the upper end of the standard, the arms of the forks being disposed opposite each other and being swingable in a vertical plane about said pivot, an equinoctial dial structure disposed centrally between and in a plane transverse to the plane of the arms of the fork and secured thereto, said structure including a channel-shaped arcuate fixed part, a rack of a shape corresponding to said part, and mounted

for movement circumferentially in said channel, means for adjusting the rack, both of said parts being provided on their inner surfaces with cooperating graduations, and there being an indicator mounted on and between the free end portions of the fork cooperable with said graduations.

1,629,239. PERMUTATION LOCK. GEORGE M. THOMAS, Wayland, Ky., assignor of one-third to Peter Garzoni and one-third to Joe Grahonia, Wayland, Ky. Filed Oct. 13, 1926. Serial No. 141,377. 7 Claims. (Cl 70—53.)

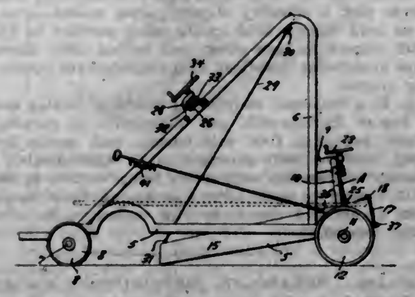


1. In a permutation lock, a plurality of coaxially rotatable discs having registrable oblong openings, one end of each opening being in line with the axis of rotation of the discs at all times, and a stem projecting through the openings, said stem being capable of a rocking motion when the oblong openings are fully registered and prevented from rocking motion when one or more of the openings are out of full registry.

1,629,240. UNLOADING DEVICE FOR RUBBER REFINERS. ROY S. TROWBRIDGE, Butler, N. J. Filed Dec. 21, 1926. Serial No. 156,216. 10 Claims. (Cl. 18—2.)

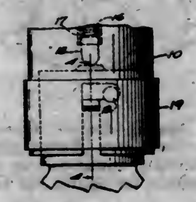
1. The combination with the sheet forming roll of rubber refining apparatus and the knife for separating

the sheet from the roll, of means adjacent the roll supporting the separated sheet and directing the same toward the surface of the roll at a point adjacent to and



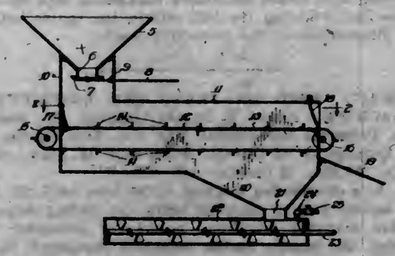
in advance of the knife whereby the rotation of the roll serves to rotate the separated end and form a roll therefrom.

1,629,241. PROCESS OF TREATING FIBERS FOR SPINNING PURPOSES. LEO UBBELOHDE, Karlsruhe, Germany. Filed June 26, 1925. Serial No. 39,868, and in Austria Feb. 23, 1925. 8 Claims. (Cl. 19—66.)



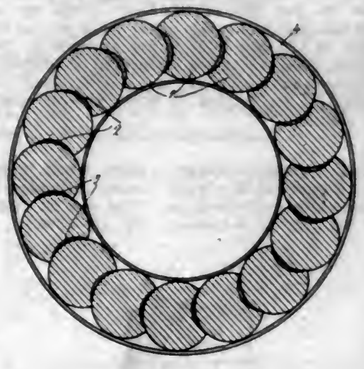
1. The process of treating and increasing the spinning qualities of fibers, which consists in incorporating loose textile fibers with particles, adapted to exert an abrasive action upon the said fibers.

1,629,242. FOUR-WHEELED SCRAPER. ALBERT ROY VAN ALSTINE, Clearwater, Fla. Filed May 24, 1926. Serial No. 111,807. 2 Claims. (Cl. 37—128.)



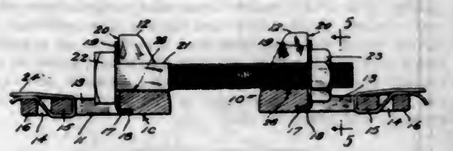
1. A contrivance of the class described including a chassis, a front axle on the chassis, wheels journaled on the ends of the front axle, a super-structure rising from the chassis, a rear axle having an intermediate inverted U-shaped portion journaled on the rear of the super-structure, wheels journaled on the ends of the rear axle, a scoop having guides fixed thereto slidable on the arms of the intermediate portion of the rear axle, means for raising and lowering the rear end of the scoop, a shaft journaled on the superstructure, pulleys mounted at the top of the super-structure, cables windable on the shaft and trained over the pulleys and fixed to the forward end of the scoop, means for rotating the shaft, eyes provided on the rear wall of the scoop, means for hinging the rear wall of the scoop at the top thereof, a cable anchored to one side of the scoop trained through the eyes of the rear wall, a rod attached to the last mentioned cable and having a plurality of notches in one end thereof, and a pin on the super-structure for engagement by the notches to hold the rear wall in a closed position.

1,629,243. LAMP SOCKET. OTTO WEST, Cleveland, Ohio, assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Apr. 27, 1925. Serial No. 25,988. 6 Claims. (Cl. 173—356.)



1. In a lamp socket, in combination, a cylindrical shell having bayonet slots adapted to receive the laterally extending pins of an electric lamp base, and a sleeve slidably carried on the shell and having two positions in one of which the lamp base may be inserted or removed freely and in the other of which the lamp cannot be removed, the sleeve having the device movable into and out of the path of movement of one of the pins as the sleeve is slid along the shell.

1,629,244. DUST RECEIVER. FREDERICK H. WILLCOX, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed May 16, 1921. Serial No. 470,214. 2 Claims. (Cl. 209—10.)

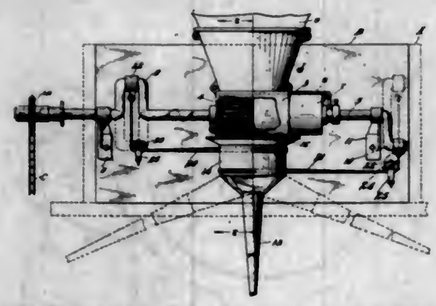


1. Dust treating apparatus comprising a substantially closed chamber adapted to be located below the discharge opening of a dust catcher, a plate located in said chamber below said opening, a grizzly located in prolongation of the plate, a drag conveyor associated with the plate and grizzly and adapted to move material deposited in said plate over said grizzly, a hopper below said grizzly, and a plug mill located at the lower end of said hopper.

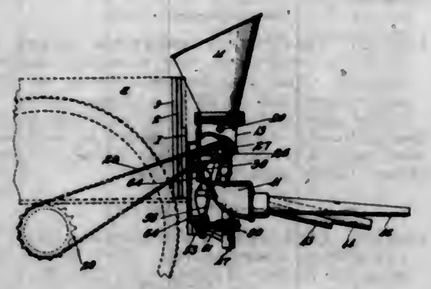
1,629,245. SECTION FOR STOVES OR THE LIKE. GUSTAF ALBERT ARONSON, Stockholm, Sweden. Filed May 3, 1926, Serial No. 106,250, and in Sweden Jan. 26, 1925. 2 Claims. (Cl. 126—144.)

1. A ceramic heating furnace formed of individual superimposed sections, each thereof comprising vertical juxtaposed substantially round bars of ceramic material, and a binding medium for uniting one bar to another.

1,629,246. CLAMP. JOHN ARRINGTON, Seattle, Wash. Filed Nov. 13, 1926. Serial No. 148,189. 3 Claims. (Cl. 24—19.)



1 A clamp comprising a band of flexible material, a head piece secured to each end of the band, each of said head pieces having a base element and a bifurcated post element disposed in substantially rectangular relation to each other, a headed screw bolt, a nut therefor, and devices provided with apertures to receive the bolt and provided with means detachably engageable with the head pieces for retaining the bolt within the spaces between the bifurcations of the respective posts.

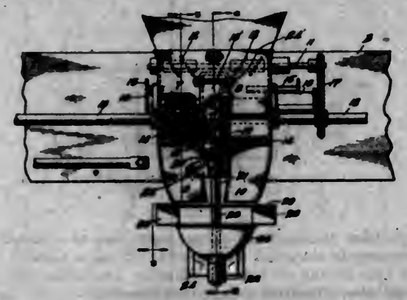


1,629,247. SEED OR FERTILIZER DISTRIBUTING MACHINE. JAMES G. BAILEY, Delevan, Ill., assignor to Universal Broadcaster Mfg. Co., East Peoria, Ill., a Corporation of Illinois. Filed Sept. 13, 1924. Serial No. 737,461. 3 Claims. (Cl. 275—7.)

1. In a distributing machine of the type set forth, feeding means, a spout disposed below the feeding means to receive material therefrom, means for swingably supporting the spout, flexible members connected to the spout and extending in opposite directions therefrom, means to operate the feeding means, and means to connect the flexible members to said operating means, whereby upon movement of the operating means, one of the flexible members will positively swing the spout in one direction, while the other flexible member idles, and vice versa.

3. In a distributing machine of the character described, in combination, an end-gate, a feeding means supported by said end-gate, a spout swingably supported on said end-gate and having a receiving casing immediately below the feeding means, a shaft for operating said feeding means and provided with crank-portions diametrically positioned with respect to each other, and flexible members connecting said crank-portions of said shaft with the casing of said spout, whereby as said shaft is operated said spout will be oscillated alternately in opposite directions.

1,629,248. BROADCAST DISTRIBUTING MACHINE. JAMES G. BAILEY, Delevan, Ill., assignor to Universal Broadcaster Mfg. Co., East Peoria, Ill., a Corporation of Illinois. Filed Dec. 31, 1925. Serial No. 78,561. 3 Claims. (Cl. 275—7.)

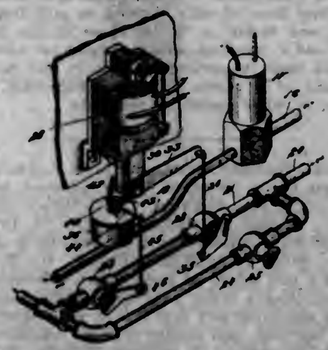


1. In a broadcast distributing machine, in combination, feeding means, a hopper supported beneath the feeding means and a plurality of distributing spouts extending from said hopper, said spouts being variable in length with respect to each other, and having their discharge ends at different elevations with respect to the surface being treated.

3. In a broadcast distributing machine, feeding means, a hopper therebeneath, and a plurality of distributing spouts extending from said hopper, said spouts having their receiving ends arranged in an approximately triangular relationship, said spouts being variable in length with respect to each other and having their discharge ends at different elevations with respect to the surface being treated.

1,629,249. BROADCAST DISTRIBUTING MACHINE. JAMES G. BAILEY, Delevan, Ill., assignor to Universal Broadcaster Mfg. Co., East Peoria, Ill., a Corporation of Illinois. Filed Apr. 12, 1926. Serial No. 101,263. 3 Claims. (Cl. 275—13.)

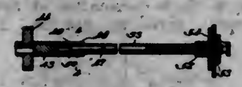
1. In a broadcast distributing machine for distributing grains and seeds, or lime or phosphate, or the like, a wagon end gate, distributing means on the end gate, a material receiving hopper on the end gate disposed over the distributing means, and means to movably mount the wall of the hopper which confronts the source of supply, whereby upon movement of the wall, phosphate or lime, or the like may be shoveled into the hopper and past the end gate in substantially a horizontal plane.



3. In a broadcast distributing machine, a hopper, spaced feed channels leading from the hopper, distributing means receiving material from the channels, driving mechanism for the distributing means located between the channels, and means for inclosing the remaining exposed parts of the driving mechanism.

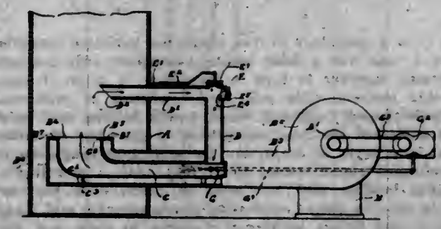
1,629,250. PRODUCTION AND UTILIZATION OF DICHROIC INKS. CHARLES BITTINGER, Duxbury, Mass. Filed Jan. 3, 1925. Serial No. 465. 10 Claims. (Cl. 134—28.)

9. The process of producing color effects including the step of applying to the background a composition embodying a dye and a pigment, which is capable of changing its color under manipulation, and manipulating the composition to produce such a color change.



1,629,251. GAS CONTROL FOR OIL BURNERS. HAROLD S. BLAKE, Attleboro, Mass. Filed Aug. 4, 1926. Serial No. 127,047. 8 Claims. (Cl. 158—28.)

1. In a liquid fuel burner, an electric circuit, separately actuated means in the circuit for supplying air and oil to the burner, main and auxiliary conduits for supplying gas for fuel ignition, a normally closed and a normally open valve in said main, electromagnetic means for first opening said closed valve, and a resistance unit interposed between said open valve and said electromagnetic means for controlling a subsequent closing of this second valve after a predetermined open period.

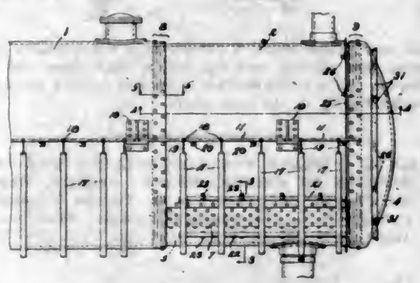


1,629,252. SYNCHRONIZING MECHANISM FOR TALKING AND MOTION-PICTURE MACHINES. VICENTE BOUZA, Highland Park, Mich. Filed May 21, 1923, Serial No. 640,386. Renewed Jan. 6, 1927. 2 Claims. (Cl. 64—90.)

1. In combination with a pair of devices to be operated in unison, a common drive means for said devices, and synchronizing means therefor including a pair of shafts alined with one another, one of said shafts being hollow and the other projecting thereinto, a rod slidable in

the last named shaft, a pin on said rod engaging in a spiral slot entered into the hollow shaft from the end thereof, and a screw engaged with said rod for moving it longitudinally in the said shaft.

1,629,253. MEANS FOR CONTROLLING THE COMBUSTION OF HYDROCARBONS. JAMES L. BREESE, Jr., Chicago, Ill., assignor to Oil Devices Corporation, Chicago, Ill., a Corporation of Illinois. Filed Nov. 9, 1926. Serial No. 147,218. 10 Claims. (Cl. 158—5.)



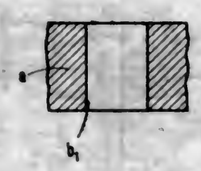
9. In a heating device a combustion chamber, an air inlet passage in communication therewith, a return connection adapted to direct a return circuit of exhaust gases into the stream of inflowing air, a fuel inlet member, an inlet opening in communication with said air inlet passage, control means for said air inlet passage and for said return connection adapted, at the initiation of combustion, to permit the flow of a minimum of exhaust gases and a maximum of air, adapted automatically to decrease the flow of air to a predetermined minimum and increase the return circuit of exhaust gases to a predetermined maximum after a predetermined period of combustion.

1,629,254. FLAME ARC LAMP WITH INCLOSED ARC. TITO LIVIO CARBONE, deceased, late of Berlin, Germany; by Ernst Mommsen, executor, Charlottenburg, Germany. Filed Nov. 25, 1922, Serial No. 603,358, and in Germany Apr. 24, 1922. 2 Claims. (Cl. 176—52.)

1. A globe for arc-lamps of the inclosed arc type comprising in combination a substantially tubular part of glass, the upper part of which incloses the arc, a deposit-condensing chamber located at the upper end of the said tubular part and formed in the same piece with and as an integral enlargement of the said tubular part, the said chamber having an annular bottom, and a jacket surrounding the arc-inclosing portion of the said tubular part, the said jacket contacting at its upper edge with the annular bottom of the said chamber and at its lower edge fitting closely around the said tubular part, substantially as described.

1,629,255. INSULATION CONSTRUCTION FOR CONTAINERS. JOHN S. CARROLL, Yonkers, N. Y., assignor, by mesne assignments, to Johns-Manville Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 28, 1923. Serial No. 683,239. 2 Claims. (Cl. 154—44.)

1. In a container of the character indicated comprising a body and a head having overlapped edge portions secured together to form a plate-joint, a layer of insulating material over said head consisting of preformed pieces shaped to fit said head, means holding said layer in place on the head comprising a plurality of radial bands, a layer of insulation on said body consisting of preformed pieces shaped to fit said body, a plurality of bands holding said body-layer in place, each provided with take-up means, insulating pieces covering said plate-joint, and means holding said pieces in place and permitting ready removal thereof without disturbing the insulation either of the body layer or the head layer.



1,629,256. PLAYING CARDS. FLORENCE COHEN, Liverpool, England. Filed Nov. 28, 1925. Serial No. 71,936. 4 Claims. (Cl. 273—152.)

1. A pack of whist cards in which the pips are displayed on a black background which is the same for each suit and are so coloured that the pips of each suit can be distinguished from the pips of any other suit by means other than external shape.

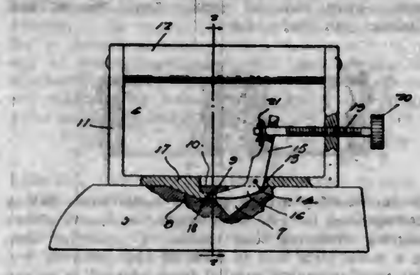
1,629,257. PROCESS OF MANUFACTURING BLANK MOVEMENTS OF WATCHES. HENRI COLOMB, Tavannes, Switzerland. Filed Aug. 11, 1924, Serial No. 731,536, and in Switzerland Feb. 1, 1924. 8 Claims. (Cl. 29—177.)

1. The herein described process of preparing a part of the frame of a watch movement which comprises the following steps: forming a working hole in said part of a diameter larger than that of the working portion of the fastening member designed to be ultimately placed therein; using said hole as a work hole for adjusting said part

in position in machines to the operation of which it is subsequently subjected and, finally, forcing a bushing into said hole having an internal diameter approximately that of the above mentioned fastening member.

1,629,258. AMUSEMENT HOUSE. HOLLIS C. CONRAD, Beaver Falls, Pa. Filed Feb. 5, 1924. Serial No. 690,762. 5 Claims. (Cl. 272—2.)

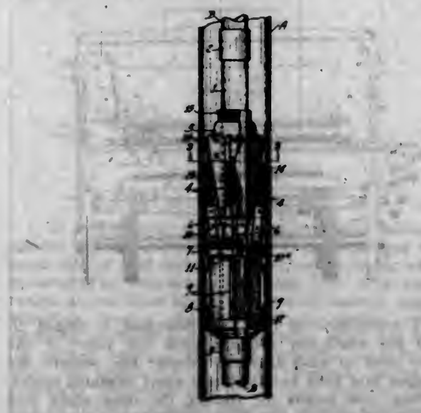
1. The combination with an amusement house having an inclined floor, of seats disposed on said floor, parallel thereto and facing in the direction of the inclination thereof and a circuitous passage through the house formed by hand rails in parallel relation to the floor within the reach of a person passing through the circuitous passage, or while seated on the seats.



1,629,259. WATERPROOF ABRASIVE FABRIC. FRANK JOSEPH CRUPI, Brooklyn, N. Y., assignor to Herman Behr & Co., Inc., Brooklyn, N. Y., a Corporation of New York. Original application filed Feb. 19, 1924, Serial No. 693,903. Divided and this application filed Aug. 25, 1926. Serial No. 131,538. 2 Claims. (Cl. 51—279.)

1. As a new article of manufacture a sandpaper product comprising a fabric base and abrasive material adhesively associated with said base by waterproof cellulosic coating material, said coating material containing a filler and also an emollient to maintain flexibility in the filler and the associated cellulosic material.

1,629,260. FLATIRON HANDLE. JAMES W. CUSTER, Westernport, Md. Filed Oct. 28, 1926. Serial No. 144,751. 1 Claim. (Cl. 68—26.)



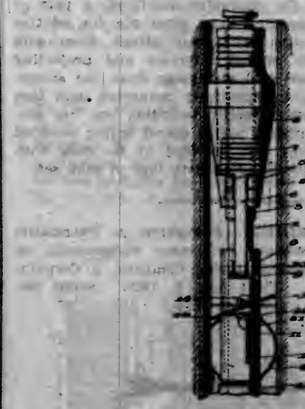
In a flat iron of the class described, a base having a pocket and a socket formed in the top side thereof, said base being further provided with a passage to afford communication between the pocket and the socket, a web extending transversely across said passage, a handle for arrangement upon the base, rigid means upon the handle for engagement within said socket and within the passage and beneath one edge of the web, a dog pivoted to the handle and having a locking nose for disposition within the pocket and for engagement beneath the opposite edge of the web for locking the handle to the base, means at

the rear of the handle for actuating the dog for moving the same to a locking or unlocking position, said last mentioned means comprising a threaded bolt extending

through the rear side portion of the handle, an actuating knob on the outer end of said bolt, the inner end of the bolt being connected to said dog.

1,629,261. AUTOMATIC CATCHING DEVICE FOR WELL TUBING. STEPHEN V. DILLON, Tulsa, Okla. Filed Feb. 8, 1926. Serial No. 86,846. 14 Claims. (Cl. 103—219.)

1. A catching device for well tubing, comprising a guide that forms a section of the tubing, an actuating member adapted to move logitudinally of said guide, gripping jaws adapted to be forced against the casing by said actuating member, means on said guide for sustaining said actuating member and jaws during the operation of introducing the device into the well, constructed so that a sudden drop of the tubing causes said actuating member to force the jaws against the casing, and an independent means that is inoperative when the device is being introduced into the well, constructed so as to temporarily sustain said jaws and prevent them from moving longitudinally with the actuating member when said actuating member is being operated to set the device.

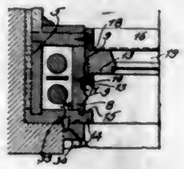


1,629,262. CATCHING DEVICE FOR WELL TUBING. STEPHEN V. DILLON, Tulsa, Okla. Filed Mar. 27, 1926. Serial No. 97,919. 15 Claims. (Cl. 103—219.)

1. A catching device for well tubing, comprising gripping jaws, an actuating member for said jaws slidably axially on the tubing, a friction means adapted to act on the casing or side wall of the well for normally holding said jaws in such a condition that a sudden downward movement of the tubing during the operation of introducing the device into the well will cause said actuating member to force the gripping jaws tightly against the casing, and an independent means that is adapted to be operated after the device has reached the

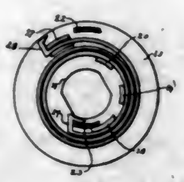
desired position in the well for causing the actuating member to normally hold the gripping jaws in gripping contact with the well casing.

1,629,263. CATCHING DEVICE FOR WELL TUBING. STEPHEN V. DILLON, Tulsa, Okla. Filed Jan. 19, 1927. Serial No. 162,044. 10 Claims. (Cl. 103—219.)



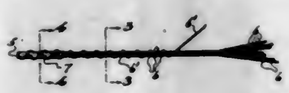
1. The combination with a well having tubing arranged therein, of a tubing catcher mounted on the tubing and including a wedge block, a slip assembly and means for retarding the downward movement of the slip assembly when the latter descends in the well beyond a predetermined speed, said retarding means normally assuming a position in which it is out of contact with the wall of the well and functioning under the influence of fluid pressure, and being partially retarded by friction exerted by contact with the wall of the well upon an abrupt drop of the tube.

1,629,264. WINDOW CONSTRUCTION. ALBERT ENTENMAN, Brooklyn, N. Y. Filed May 25, 1926. Serial No. 111,518. 2 Claims. (Cl. 20—52.4.)



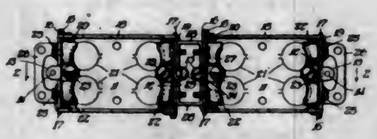
1. In a window construction, a frame, parting strips secured to the opposite sides of the frame, vertically

sliding sashes mounted in the frame at each side of the parting strips, each side of the frame on opposite sides of the parting strip being provided with spaced vertically



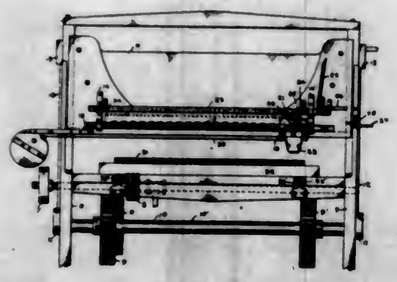
extending beads of semi-circular form in cross section with which the respective sashes have sliding bearing contact.

1,629,265. STABILIZING DEVICE. ARNO A. EWALD, Oakfield, Wis. Filed Nov. 19, 1921. Serial No. 516,499. 3 Claims. (Cl. 16—180.)



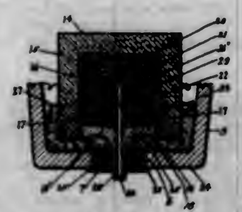
1. In a device of the character described, a pair of stampings axially connected by a pivot pin for relative rotation, in combination with lugs struck from said stampings at radially spaced intervals and projecting into the space between said stampings from the stampings to which they are respectively connected, said lugs being arranged in sets normally including one lug connected with each stamping, and a spiral spring confined between said stampings and provided at its ends with hook elements normally engaging both lugs of each set.

1,629,266. FUSE MEDIUM. FREDERICK A. FELDKAMP, Newark, N. J., assignor, by mesne assignments, to Economy Fuse & Manufacturing Company, a Corporation of New York. Filed Apr. 4, 1923. Serial No. 629,808. 1 Claim. (Cl. 200—135.)



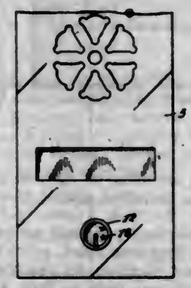
An electric fuse medium comprising a main element consisting of a plurality of comparatively fine metallic wires of high specific conductivity and comparatively high melting point disposed in longitudinally grouped arrangement, said main element having in enveloping relationship therewith a body of metallic material which under normal temperature is inactive and under higher temperature combines with the metal of said wires to form therewith an alloy of lower melting point, said wires being arranged to form pockets for said body of metallic material, whereby the net effect of surface tension under conditions of fusion is relatively great, said coating being so intimately associated with said fine metallic wires that upon the attainment of said higher temperature a comparatively high proportion of said enveloping metal combines with said metallic wires to form said alloy.

1,629,267. OUTLET-BOX CONNECTION. ALBERT C. FISCHER, Chicago, Ill., assignor to Roach-Appleton Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 28, 1923. Serial No. 677,543. 2 Claims. (Cl. 247—15.)



1. In combination with a pair of outlet boxes having threaded openings in their sides adapted to receive screws for securing attaching lugs thereto, a connecter comprising a metal strip bent to form an approximately rectangular member having parallel faces adapted to engage the adjacent faces of the outlet boxes and having threaded openings adapted to register with the lug attaching threaded openings in the boxes to receive screws to secure the connecter to the boxes.

1,629,268. DIE PRESS. HARRY GREENBERG, Brooklyn, N. Y. Filed Jan. 16, 1924. Serial No. 686,502. 5 Claims. (Cl. 164—23.)

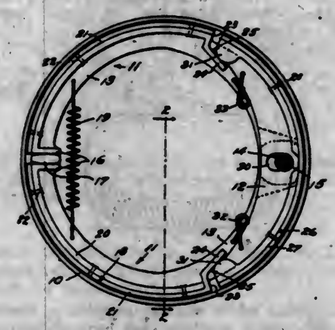


1. In a machine of the class described, a hinged U-shaped bar resiliently retained upon the front of the plunger head of said machine, another bar beneath the same upon said head having spaced apart engaging means, a carriage and means for feeding the same along said other bar and beneath said first mentioned bar, and means in combination with said carriage adapted to be operated by said first mentioned bar for engaging and disengaging said engaging means, and in combination with said first mentioned bar, means for operating the same with each movement of said plunger head.

1,629,269. WATER FILTER. VIRGIL B. HAGG, West Hollywood, Calif. Filed Oct. 7, 1925. Serial No. 61,007. 3 Claims. (Cl. 210—31.)

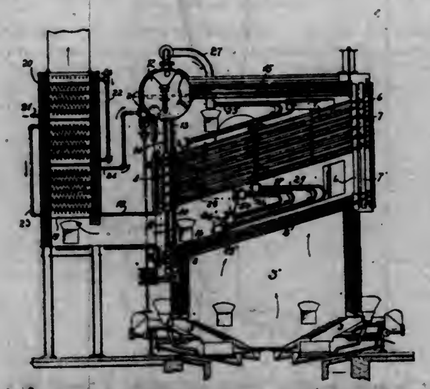
1. A filter comprising a water receptacle, a filter element within said receptacle in position to be entirely surrounded by the water therein, said filter element comprising an outer wall of porous stone and having an internal chamber separated from said receptacle by said outer wall, a body of granular purifying material in said chamber, an inverted thimble of porous mineral material in the central portion of said chamber and having a central passage opening downwardly to permit exit of water therethrough, the lower portion of said thimble being more finely porous than the upper portion, and means below said filter element for receiving the water passing therethrough.

1,629,270. LOCK-ATTACHING MEANS. SAMUEL HAMMER, Brooklyn, N. Y., assignor to United Metal Box Co. Inc., Long Island City, N. Y., a Corporation of New York. Filed July 13, 1926. Serial No. 122,089. 5 Claims. (Cl. 70—16.)



1. In combination with a closure member having an opening therein, a lock attaching element secured to the inner side of said closure member, said opening adapted to receive an outwardly projecting part of a lock arranged at the inner side of the closure member, and said attaching element and the lock case having coacting relatively yieldable means to yieldably retain the lock in its applied position, and said yieldable means yielding upon the application of inward pressure against said outwardly projecting part of the lock whereby the lock may be forcibly detached from the closure member.

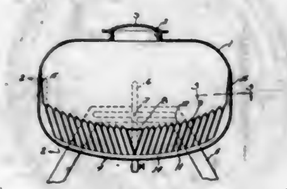
1,629,271. POST CONNECTION FOR VEHICLE BODIES. LEO I. HEINTZ, Philadelphia, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1926. Serial No. 83,954. 1 Claim. (Cl. 296—20.)



A bracket of the character described, comprising a base portion and a portion extending at right angles to the plane of the base portion, said bracket consisting of an integral piece of sheet metal and said extending portion being channel-shaped in cross-section and having substantially straight, flat outside surfaces adapted to lie flat against the interior of a sheet metal post portion, fitted closely about the vertical portion and embracing the edges thereof.

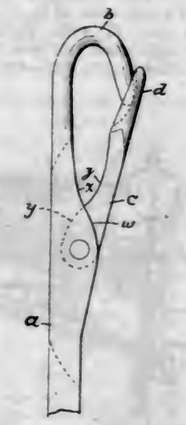
1,629,272. BRAKE. WILLIAM A. HUPPRICH, Seattle, Wash. Filed June 1, 1925. Serial No. 33,962. 4 Claims. (Cl. 188—78.)

1. In a brake, the combination of a drum, a fixed pin, a pair of brake members pivotally connected at one end of each to the pin, said members having intermediate their lengths inclined shoulder elements, a brake shoe slidable on the brake members and having its ends in engaged relation with the respective shoulder elements, springs tending to retract said shoe and members from the drum, and a cam for actuating the brake members to effect the setting of the same and the shoe.



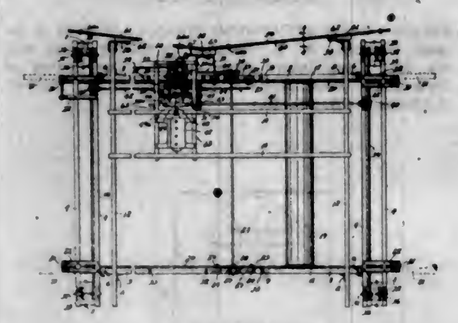
1,629,273. BOILER. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Original application filed Apr. 15, 1919, Serial No. 290,180. Divided and this application filed Nov. 18, 1920. Serial No. 424,856. 3 Claims. (Cl. 122—421.)

1. In combination, a flue having a vertical portion through which the heating gases from the boiler pass upwardly, an economiser having a plurality of sections located in said flue, each section comprising a plurality of rows of substantially horizontal tubes spaced uniformly from side to side of the flue through which the water



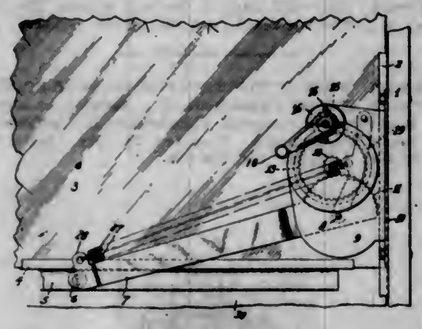
and any contained gases flow back and forth, first flowing in parallel through the lowermost row of tubes of each section and then back and forth in parallel through successive rows until it is discharged from the uppermost row of tubes of each section, and connections for causing the entire amount of feed water to flow first through the uppermost section and successively through the other sections and into the boiler.

1,629,274. TILTING WASHER. HARRY F. KEIFFER, Perrysburg, Ohio. Filed Feb. 18, 1926. Serial No. 89,067. 6 Claims. (Cl. 68—21.)



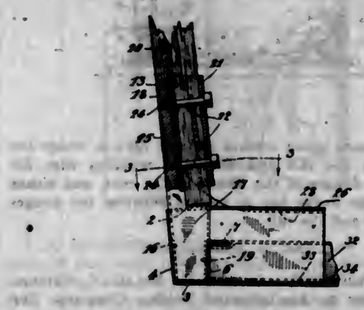
3. In a tilting fabric washing machine, a container, a plurality of cellular members each having a plurality of cells formed with open lower ends spaced from the bottom of said container thereby providing a channel and having openings in the upper ends of the cells, the cells being inclined in different directions from the center of the container, and a spacer member disposed between said differently inclined cellular members.

1,629,275. LATCH NEEDLE. EDWARD C. KENNEDY, Newark, Del., assignor to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Mar. 30, 1925. Serial No. 19,270. 6 Claims. (Cl. 66—121.)



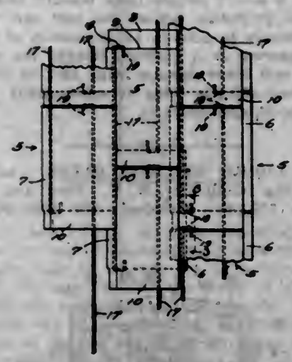
6. A latch knitting needle comprising a shank formed with a latch pivoting supporting portion and having an extension with a hooked end, a pivoted hook closing latch secured to said latch supporting portion of the shank and adapted to provide a substantially straight line loop escape guide, the inner face of the shank adjacent the intersection thereof in the inner face of the latch having a concavo-convex contour, and the inner face of the latch immediately above and below its point of intersection with the inner face of the shank being concave in contour whereby when the latch is closed, a relatively wide free yarn space between the latch and shank is formed.

1,629,276. CONCRETE-PAVEMENT-FINISHING MACHINE. ORIN L. KIPP, St. Paul, Minn. Filed Apr. 16, 1923, Serial No. 632,188. Renewed Apr. 4, 1927. 6 Claims. (Cl. 94—48.)



1. A machine for operating on concrete and other roads comprising a frame including spaced members extending transversely across the road, a roller for acting on the road movable longitudinally in said members across the road, means for moving said roller, guide means for said roller carried by said members for causing said roller to travel in a non-rectilinear path to form a crowned road surface, and means for adjusting said last mentioned means to vary the path of said roller to give different crown surfaces to said road.

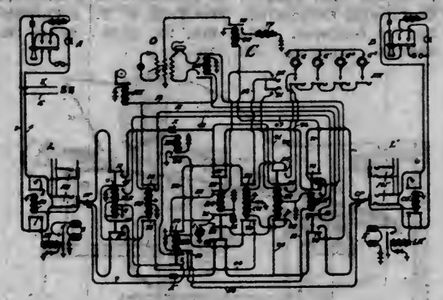
1,629,277. WINDOW REGULATOR. EMIL KOSS, Tuckahoe, N. Y., assignor, by mesne assignments, to Perfect Window Regulator Corporation, New York, N. Y., a Corporation of Delaware. Filed May 17, 1923. Serial No. 639,630. 18 Claims. (Cl. 192—8.)



5. In combination, a fixed cylindrical sleeve, a spring member normally expanded into frictional engagement therewith, and including inwardly extended engagement fingers, a rotatable hub, said hub being provided with an opening loosely receiving said fingers and having limited rotative movement relatively to said spring member, an operated member provided with an extension positioned within said opening and between said fingers and having limited rotative movement relatively to said spring member.

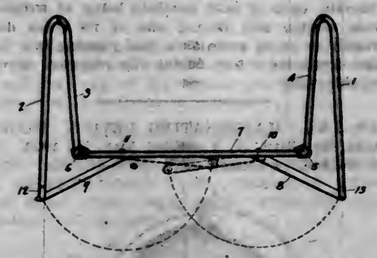
1,629,278. POST CONNECTION FOR VEHICLE BODIES. ALBERT L. LAMBERT, Philadelphia, Pa., assignor to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 27, 1925. Serial No. 25,968. 5 Claims. (Cl. 296—29.)

1. A post connecting member of the character described, comprising two complementary sections, each having post engaging wall portions, and having adjacent inwardly directed portions forming an exterior recess between said wall portions, said sections having at said recess overlapping portions secured together.



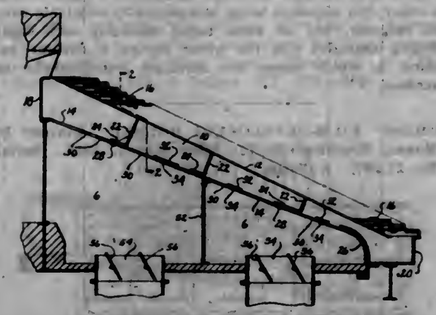
1,629,279. BUILDING BLOCK. WILLIAM E. LEMLEY, Taylor, Wash. Filed May 5, 1925. Serial No. 28,048. 3 Claims. (Cl. 72—51.)

3. In a wall section of the character described, a plurality of blocks arranged in rows and having inter-engaging ends and side edges, a tie-rod independently connecting each block with the next adjacent block at one end thereof, and a further tie-rod independently connecting the same block with the next adjacent block at the other end thereof, each tie-rod being extended through and having its ends anchored at the outer ends of a pair of adjacent blocks.



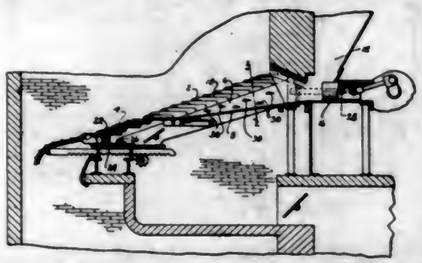
1,629,280. TELEPHONE SYSTEM. ELMER W. LINCOLN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 16, 1922. Serial No. 588,549. 12 Claims. (Cl. 179—35.)

11. In a telephone system including subscribers' telephone lines, link circuits for interconnecting said telephone lines in conversational circuit, automatic means operable to control contacts to complete a connection and for maintaining the same during conversation, said means also operable to disassociate a connected link circuit and



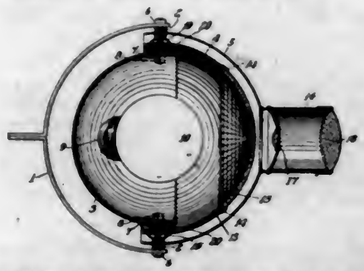
a calling and called subscriber's line when said subscribers are on different lines but inoperable if said subscribers are on the same line.

1,629,281. SWING STAND. BENJAMIN F. LINDSLEY, Mansfield, Ohio. Filed Apr. 23, 1926. Serial No. 104,120. 4 Claims. (Cl. 5—129.)



1. In a foldable stand for swings and the like, a pair of tubular standards which are provided with spaced apart integral leg members, a tubular floor member, elbow sockets attached to the floor member and adapted to receive one leg of each standard, brace rods pivoted to the floor member and adapted to be connected at their free ends to the other legs of the tubular standards.

1,629,282. UNDERFEED STOKER. EDWIN LUNDGREN, Frederick, Md., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 19, 1923. Serial No. 633,095. 8 Claims. (Cl. 110—44.)



1. An underfeed stoker having, in combination, a plurality of downwardly inclined fuel retorts and tuyère boxes alternately arranged, the tuyère boxes having fuel supporting tuyères, and means for relatively varying the supply of air to different groups of tuyères of one tuyère box independently of the other tuyère boxes.

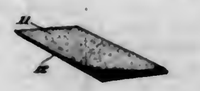
1,629,283. UNDERFEED STOKER. EDWIN LUNDGREN, Frederick, Md., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 23, 1924. Serial No. 694,484. 3 Claims. (Cl. 110—44.)

1. A furnace having, in combination, a downwardly and rearwardly inclined retort having side walls longitudinally movable, means for reciprocating said side walls longitudinally and for feeding fuel into the forward end of the retort, and members carried by said side walls and extending transversely of the retort for acting on the fuel therein, each of said members being of wedge-shape in cross section and having one of its faces directed rearwardly so as to serve as a fuel pushing face to feed the fuel down the retort during the rearward movement of the side walls.

1,629,284. ILLUMINATING DEVICE. ELLIOTT B. MABEE, Brooklyn, N. Y. Filed Mar. 18, 1924. Serial No. 699,985. 4 Claims. (Cl. 240—41.)

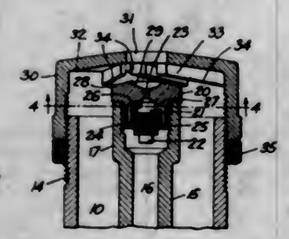
2. A device of the character described having three substantially hemispherical members spaced from each other, one of said members being a reflector and having an opening in its wall for fastening therein a light source, the other two members being independently rotatable over said reflector, one of them being equipped with light diffusing material and the other having a tubular extension in which lenses are mounted, substantially as described.

1,629,285. FILM-DEVELOPING HOLDER. ELLIOTT B. MABEE, Brooklyn, N. Y. Filed Apr. 7, 1925. Serial No. 21,267. 5 Claims. (Cl. 95—100.)



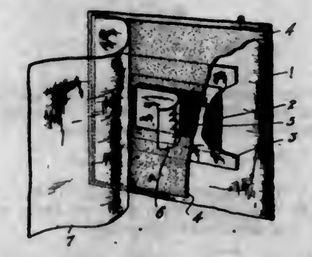
1. In a metal film developing holder, the combination of a frame having a plurality of openings therein, metallic means attached to the frame adjacent each of said openings for firmly holding films therein in a flat position while they are being developed, fixed, washed and dried.

1,629,286. REMOTE-CONTROL DEVICE FOR RAILROAD CARS. JOHN MCCALLUM, Walbridge, Ohio. Filed July 15, 1925. Serial No. 43,686. 5 Claims. (Cl. 188—62.)



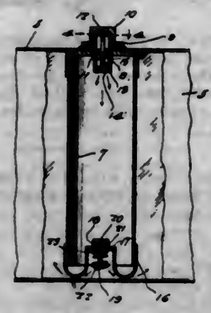
2. In a remote speed control for rail cars, a wedge bar located along the rail and having a wedging edge for engaging the flanges of the wheels of the cars, and means for raising the wedge bar to engage between the flanges of the wheels and the rail.

1,629,287. ROOFING. SEATON K. MILLIGAN, Chicago, Ill., assignor to Amalgamated Roofing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1924, Serial No. 744,377. Renewed Dec. 24, 1926. 6 Claims. (Cl. 108—8.)



2. A roof comprising a plurality of overlapping courses of shingles, the shingles of each course covering the joints between the adjacent shingles of the next lower course, and a second shingle lying beneath each of said shingles and projecting beyond the butt end thereof a sufficient distance to produce an impression of thickness but not appearing as a separate shingle, the projecting portions of said lower shingles being dark in color, each of said second shingles being of substantially the same width as the shingle above it.

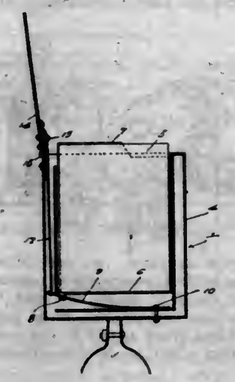
1,629,288. LIQUID AND GAS MIXER. ALBERT W. MORSE, Long Island City, N. Y. Filed Aug. 2, 1924. Serial No. 729,780. 2 Claims. (Cl. 158—76.)



1. In a liquid and gas mixer having a discharge opening, a nebulizer adapted to discharge a liquid from an outlet in form of a spray by tangential admission into a swirl chamber within it, an adjustable cap defining the said discharge opening, forming a gas passage surrounding the nebulizer adjacent its outlet, the said cap having vanes adjacent its discharge opening tangentially disposed with respect to the said spray for the purpose of directing a gas against the outside of the spray, the said vanes being in spaced adjustable relation to the said nebulizer for the purpose of admitting simultaneously a gas into the center of the spray.

1,629,289. TIRE PATCH. ELSIE A. MUELLER, Chestertown, N. Y., and CHARLES C. MUELLER, Jr., Newark, N. J. Filed Jan. 23, 1926. Serial No. 83,268. 5 Claims. (Cl. 152—26.)

3. A tire patch comprising a base layer of fabric, a layer of frictioned fabric arranged upon one side of said base layer, a layer of uncured rubber gum of less area than and substantially centrally between said layers of fabric, and a second layer of uncured gum of less area than the first-mentioned layer of uncured gum and disposed substantially centrally upon the exposed side of said layer of frictioned fabric.



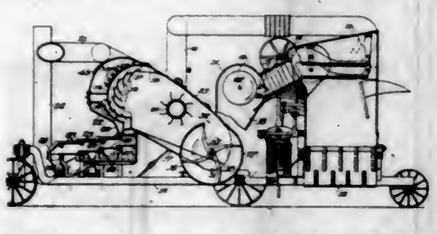
1,629,290. LIFE BELT. LEO MULLEN and JOSEPH JACKEVICH, Collingdale, Pa. Filed Feb. 7, 1927. Serial No. 166,438. 1 Claim. (Cl. 9—19.)

In a life belt of the character described, a flexible non-elastic air bag of predetermined diameter, means at the opposite ends of the bag for permitting of the securing of the same around the waist of a wearer, a compressed air tank arranged within the bag, means in the upper end of the container extending through the upper edge of the bag for normally closing the interior of the container to the atmosphere but to permit the injection of compressed air into the container, an inwardly directed socket within the lower end of the container having air escape openings in its inner end, a valve stem slidably disposed within a central opening in the inner wall of said socket, a head upon the inner end of the pin, a washer upon the inner face of the head for engagement over the air discharge openings, a finger button upon the outer end of the pin whereby the head may be forced inwardly of the openings to permit the passage of the air therethrough into the bag and an expansible coil spring surrounding the pin between the head and the inner wall of said socket for normally maintaining the valve closed.

1,629,291. AUTOMOBILE MEMO. A HENRY MUSCATE, Manitou, Colo. Filed July 16, 1926. Serial No. 122,903. 2 Claims. (Cl. 40—10.)

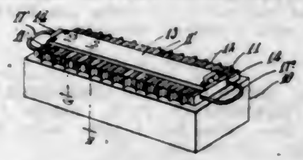
1. In a structure of the class described, a casing open at one end, a follower plate in said casing including a shelf upon which a pad is adapted to be supported, a tongue carried by the shelf equipped end of the follower plate, a spring arm anchored at one end to said casing and having its opposite end cooperable with said tongue, a hingedly mounted closure plate for the open end of the casing, and a connection between the closure plate and free end of the spring arm for sliding said follower plate in opposite directions.

1,629,292. METHOD OF AND APPARATUS FOR MAKING CEMENT-LINED PIPE. REEVES J. NEWSOM, Lynn, Mass. Filed Nov. 1, 1926. Serial No. 145,451. 8 Claims. (Cl. 25—38.)



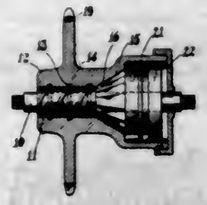
1. The method of making cement-lined pipe, which consists in moving a portion of a mass of cement within the pipe longitudinally thereof to form a tubular lining from the remaining portion of said mass, and moving a portion of the tubular lining thus formed circumferentially of the pipe to form a tubular lining of substantially uniform thickness circumferentially of the pipe.

1,629,293. REACTANCE COIL. EDWARD G. NEWTON, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 21, 1925. Serial No. 64,044. 2 Claims. (Cl. 175—359.)



1. The combination with a reactance coil of end frames having hubs with diverging arms secured to said coil, and insulating supporting means including plates fitting said hubs to support the end frames and coil.

1,629,294. THRASHING MACHINE. NEWELL J. NOBLE, Nobleford, Alberta, Canada, assignor, by direct and mesne assignments, to The Dustless Thresher Promotion Company, Limited, a Corporation of Alberta, Canada. Filed Oct. 4, 1923, Serial No. 666,549, and in Canada Sept. 24, 1924. 20 Claims. (Cl. 130—27.)



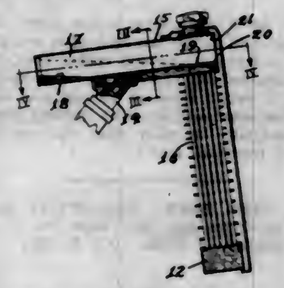
1. In a grain separator, two grain-blowing devices, an interposed separating compartment communicating with the outlet of the first device and with the inlet of the second device, an unthrashed grain inlet in the first device, a residual straw outlet in the second device, and a thrashed-grain outlet in the compartment.

1,629,295. COFFEE-RING-DOUGH DIVIDER. ALBERT OERTEL, Richmond Hill, N. Y. Filed Mar. 12, 1925. Serial No. 14,943. 4 Claims. (Cl. 107—21.)

1. A dough cutter comprising a dough container, a plurality of knives, blocks separating each pair of said knives, and having concave bottom edges, means for holding the knives and blocks assembled, comprising a common strip, springs for suspending said blocks from said strip and handles on said strip for permitting a lifting of knives and blocks simultaneously as a whole from said container after the cutting operation.

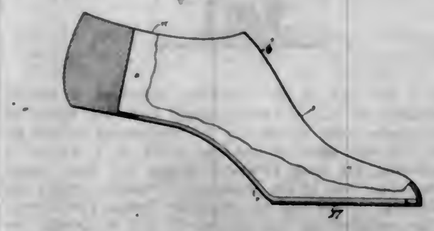
1,629,296. COASTER BRAKE. LOUIS GÉRARD OUELLET, St. Anaclet, Quebec, Canada. Filed June 24, 1926. Serial No. 118,175. 2 Claims. (Cl. 192—6.)

1. In a coaster brake of the class described, a driven member comprising a tapered portion formed circular at its smaller end and provided with a plurality of sides at its larger end.



1,629,297. COVER FOR CURATIVE MEDICINES. VINCENZO PELLEGRINO, Rye, N. Y. Filed June 22, 1925. Serial No. 38,658. 1 Claim. (Cl. 128—153.)

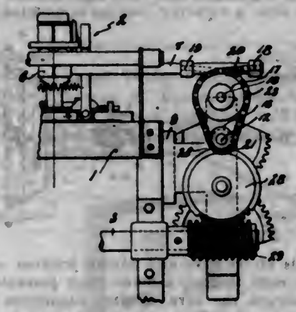
A holder for a corn remedy comprising a band having a centrally located opening formed therein, a socket in said opening for the reception of the corn remedy, a means for holding said socket to said band, a means for attaching said band to a part of the body, a cap hinged to said socket, said cap having a Z-slit formed therein, an auxiliary extension cap in said main cap, and a pin on



said auxiliary cap entering said Z-slit and guided therein for holding said auxiliary cap to the main cap and for guiding the same in its relative positions.

1,629,298. THERMOSIPHON RADIATOR. LAFE V. PENCE, El Paso, Tex. Filed Sept. 10, 1925. Serial No. 55,416. 4 Claims. (Cl. 251—125.)

2. In a radiator of the class described a top reserve tank, a water inlet into the bottom of said tank, a baffle slightly spaced from the bottom of the tank and extending to a point close to the front wall of the tank, the side and rear edges of said baffle being sealed to the walls of the tank.

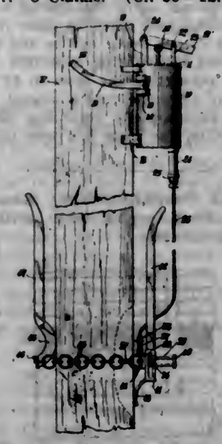


1,629,299. SHOE LAST. VICTOR V. PESSEMIER, Tacoma, Wash. Filed Aug. 24, 1926. Serial No. 131,238. 4 Claims. (Cl. 12—133.)

1. A shoe last comprising a last body formed with a chamber provided with a bottom wall, said chamber extending at a point between the transverse median and rear end of the last body to the front end of the last, the bottom wall of said chamber forming a portion of the sole of the last, said bottom wall having its sides throughout and its forward end slotted, and a flexible bottom member secured to the outer face of the forward portion of said bottom wall and registering with the inner wall of said slot.

1,629,300. TRAVERSE DRIVE FOR WINDING MACHINES. ANKER PETERSEN, Winthrop, Mass. Filed Sept. 8, 1923. Serial No. 661,713. 8 Claims. (Cl. 74—14.)

1. In a winding machine having a reciprocating traverse bar provided with a thread guide, an oscillatory shaft, intermittent gears for driving the oscillatory shaft, a freely turning guide drum to which the bar is substantially tangent, a spool secured to the shaft, and a pair of chains engaging the spool, one end of each chain being secured to the bar and the other end portions of

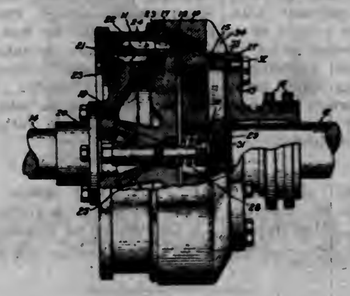


the respective chains being wrapped in opposite directions about the spool, the intermediate portions of the chains engaging opposite sides of the drum.

1,629,301. VEHICLE FRAME. WALTER F. PFANDER, Yonkers, N. Y., assignor to William C. Durant, New York, N. Y. Filed June 9, 1924, Serial No. 718,748. Renewed Jan. 22, 1927. 3 Claims. (Cl. 280—106.)

1. A vehicle frame which comprises, a cross beam member having an opening and integral tabs expanding at right angles to the surface of said member, and tubular torsion resisting member projecting into and closely fitting within said opening and riveted to said tabs and welded to said member between said tabs.

1,629,302. WOOD-PRESERVING SYSTEM. JOHN RUDOLF PRISTER, New York, N. Y., assignor of five per cent to Irving Kaufman and nineteen per cent to Ernest Brenner, New York, N. Y., and thirteen per cent to Meyer Boskey, Ira A. Schiller, Benjamin Marvin, and Maurice E. Serling, Copartners, practicing law under the firm name of Boskey, Schiller, Marvin and Serling, New York, N. Y. Filed Dec. 17, 1926. Serial No. 155,377. 5 Claims. (Cl. 99—12.)

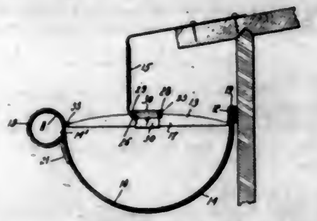


4. An apparatus for impregnating wood comprising a pump, means on said pump for attaching the same to an object to be impregnated, means adjustable on said pump to limit the stroke thereof, a block, a tubular connection between said pump and block, an injector slidable in said block, said injector including a longitudinally grooved, chisel-like shank and a cross-piece fixed on the larger end of the shank, and means removably secured on said block to insert said injector into the object to be treated.

1,629,303. TAP FOR FLUIDS. CLIVE SELSEY PHILLIPS, London, England, assignor of one-half to Frederick Richard Simms, London, England. Filed Feb. 5, 1927, Serial No. 166,033, and in Great Britain Nov. 11, 1925. 7 Claims. (Cl. 221—21.)

1. A tap for fluids comprising two telescopically fitted and relatively rotatable tubular members, one of said members having a discharge aperture, said members each having an inlet aperture, means for guiding the relative movement of said members, said guiding means permitting a limited relative rotative movement when the members are in extended position to bring the inlet apertures into register, and means for causing relative rotative movement between the members.

1,629,304. ELECTROMAGNETIC CLUTCH. EDGAR PRICE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 28, 1925. Serial No. 63,191. 5 Claims. (Cl. 192—84.)

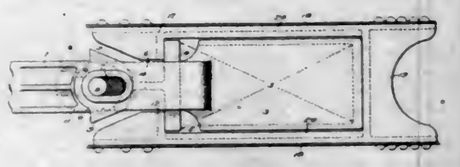


1. The combination in an electromagnetic clutch, of a pair of relatively movable frictional engaging clutch parts, a support for one of said clutch parts arranged for connection with the end of a shaft, the said clutch part and said support having corresponding slots in adjacent surfaces thereof, keys of resilient material disposed in said slots for forming a flexible coupling between said shaft and the shaft to which the other clutch part is arranged to be connected, said keys and slots forming a connection between said first clutch part and said support which permits movement of said first clutch part into engaging and disengaging relation with the second of said clutch parts, the said support and the first of said clutch parts having axially disposed conical engaging surfaces for centering the said first clutch part with reference to said support upon disengagement of the clutch, and resilient means for holding the said conical surfaces in engaging relation.

1,629,305. GUTTER HANGER. MAX RACHLIN, Brooklyn, N. Y. Filed Nov. 18, 1925. Serial No. 68,837. 2 Claims. (Cl. 108—29.)

1. A gutter hanger including a channel bar extending transversely between the upper edges of the gutter, said

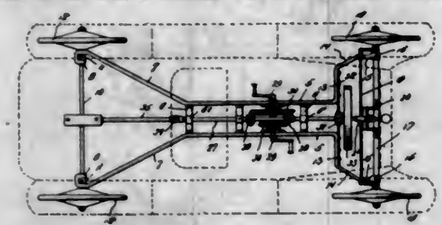
bar being centrally provided in each of its side flanges with a recess, a roof strap having its lower end resting upon said bar and being provided with flanges seated



in said recesses, and a clip straddling the lower end of said roof strap and said bar and thereby holding said roof strap in position upon said bar.

1,629,306. HEADREST FOR BARBER CHAIRS. JOHN J. REEDER, West Union, Iowa. Filed June 10, 1926. Serial No. 115,049. 2 Claims. (Cl. 155—177.)

1. In a head rest structure of the class described, a rack bar adapted to be adjustably mounted on a chair back or the like, a plate pivotally connected to the outer end of said rack bar, a head rest carried by said plate, arcuate arms pivotally connected to said plate, said arms being provided with longitudinally spaced shoulders, brackets carried by said rack bar, guides on said brackets between which said arms are slidably mounted, and releasable retaining means carried by said brackets and including spring pressed retaining bolts passing through the brackets and engaging the shoulders on said arms, whereby to permit said plate to be held in various adjusted positions.

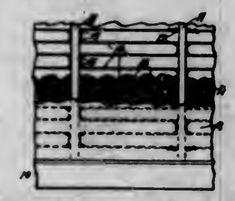


1,629,307. DRAFT GEAR. WILLIAM J. REGAN, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 9, 1923. Serial No. 637,807. 15 Claims. (Cl. 213—65.)

1. A draft gear involving a yoke device, a follower movable with respect to said yoke device and adapted to be actuated by and to be moved with respect to a car coupler associated therewith, and means extending through said follower for connecting the coupler to said yoke device, a portion of said coupler being adapted to be interposed between said follower and said yoke device.

1,629,308. MANUALLY-PROPELLED VEHICLE. THOMAS J. RILEY, Philadelphia, Pa. Filed Nov. 3, 1926. Serial No. 146,027. 3 Claims. (Cl. 208—113.)

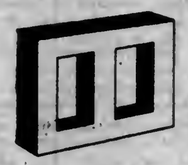
1. In a vehicle of the character described, a pair of frame bars having parallel spaced relation intermediate their ends, the rear ends of said bars being bent in outwardly converging relation, while the forward ends thereof are so bent as to provide a pair of widely separated arms, a stationary front axle secured between the ends of the arms, steering wheels pivotally mounted at the ends of the axle, a rotating rear axle mounted between



the rear ends of the bars and having traction wheels at the opposite ends thereof, a drive shaft journaled longitudinally between the bars, a drive connection between the rear ends of the shaft and the rear axle, and manually controlled means for rotating said drive shaft.

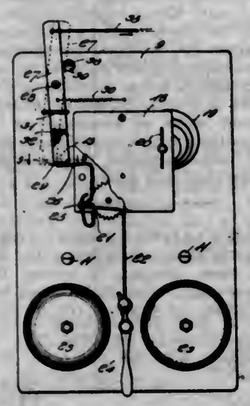
1,629,309. SANITARY CREAM SAVER. HUGO F. ROHRER, Ansley, Nebr. Filed Nov. 22, 1926. Serial No. 150,055. 5 Claims. (Cl. 210—51.5.)

1. A sanitary cream saver comprising a flexible disc adapted to be inserted in a bottle or other receptacle, and a stem connected at the lower end to the disc and provided with a spring constituting a portion of the length of the stem and permitting the stem to be flexed to arrange the disc at an angle to its normal position and capable also of automatically returning the disc to its normal position after the same has been introduced into a receptacle.



1,629,310. WALL CONSTRUCTION. WELLES ROKOSKI, Carlos, Minn. Filed Aug. 14, 1925. Serial No. 50,243. 2 Claims. (Cl. 72—50.)

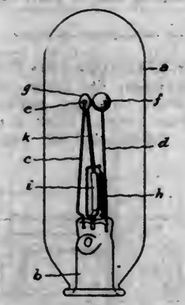
1. The combination with a house wall of plaster put thereon and a soft grass-like material secured in the wall and partly intermixed with the rear side of the plaster,



said soft material being twisted in the form of cables and as such projecting laterally outward into the plaster said wall having rigid bars and said cables being wound spirally about said bars.

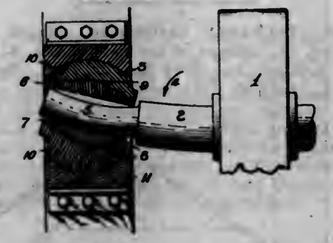
1,629,311. MAGNETIC CORE FOR ELECTRICAL MACHINERY. WILLIAM E. RUDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 12, 1925. Serial No. 15,048. 2 Claims. (Cl. 175—21.)

1. An article of manufacture comprising magnetic sheet material provided with a thin, adherent, electrical insulating, and heat resisting coating, said coating containing varnish and a substantial proportion of finely divided mica.



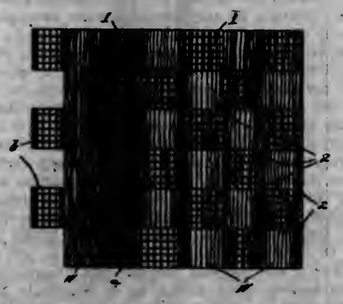
1,629,312. BURGLAR ALARM. ALFONS RUMRICH, Pittsburgh, Pa. Filed Aug. 5, 1926. Serial No. 127,412. 6 Claims. (Cl. 116—91.)

5. In a burglar alarm, a back plate, an alarm-sounding mechanism thereon, a lever fulcrumed between its ends to said back plate and having one end normally engaged with said mechanism to prevent functioning thereof, means connected to said lever to swing it about its fulcrum to a released position, said lever having a resilient portion permitting it to swing transversely of its plane of swinging movement to a second released position, said back plate having an opening normally covered by said one end of the lever, and a pin passing movably through said opening and projecting forwardly from said back plate to normally engage said one end of said lever and hold it against springing to said second released position.



1,629,313. INCLOSED ARC LAMP. ALFRED RÜTTENAUER, Berlin-Charlottenberg, Germany, assignor to General Electric Company, a Corporation of New York. Filed Apr. 30, 1925. Serial No. 27,100, and in Germany Sept. 13, 1924. 9 Claims. (Cl. 176—1.)

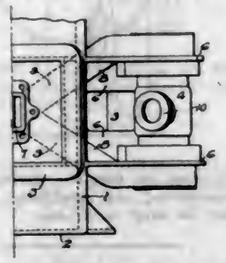
7. The method of establishing an arc between a large electrode and a small electrode within a sealed envelope which consists in first drawing the arc between the small electrode and a third electrode until the small electrode becomes heated and thereafter withdrawing the third elec-



trode from between the first two electrodes to cause the arc to be transferred and established directly between the small and the large electrodes.

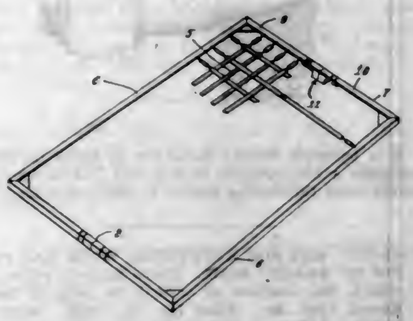
1,629,314. RADIAL BEARING. ALEXANDER E. SCHEIN, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 8, 1921. Serial No. 520,790. 3 Claims. (Cl. 308—73.)

1. A babbitted bearing for shafts in which the babbitt possesses a low modulus of elasticity and is thicker at points along the bearing subject to the greater loads.



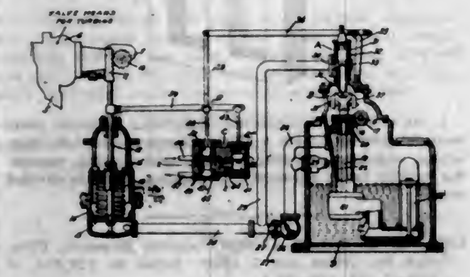
1,629,315. MAT FOR REVETMENT WORK AND PROCESS OF MAKING SAME. STRUS SHIRLEY SCOTT, Carrollton, Mo., assignor of one-half to Clark E. Jacoby, Kansas City, Mo. Filed Dec. 21, 1925. Serial No. 76,838. 8 Claims. (Cl. 28—1.)

1. The process of weaving a mat of mat material and wire fabric comprising the placing of a plurality of rows of rolls of fabric alternately unrolled a predetermined dis-



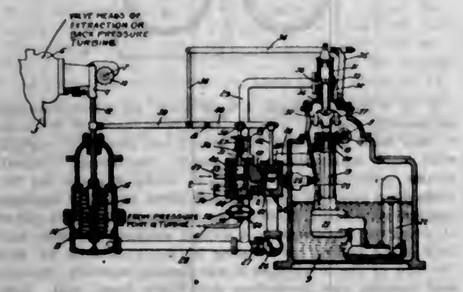
tance in opposite directions, compacting a quantity of mat material in the space thus provided between the rows, then alternately unrolling the rolls of one row over the mat material to bind the same in position, and removing the other row of rolls so that it shall not interfere with the process.

1,629,316. LOCOMOTIVE BED AND STEAM PASSAGE. WILLIAM M. SHEEHAN, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Apr. 30, 1926. Serial No. 105,789. 16 Claims. (Cl. 105—44.)



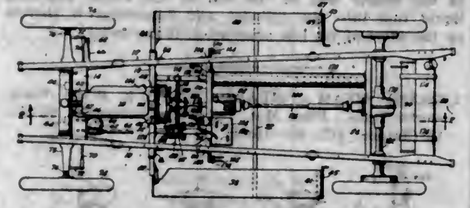
1. In combination, a locomotive bed, a boiler saddle with a centrally located exhaust steam outlet, a steam supply chamber, and an exhaust steam passage extending directly from the end of said chamber diagonally through a side wall of said bed to a point beneath said outlet.

1,629,317. FOLDABLE BEDSPRING. FRANK SMITH, Rockford, Ill., assignor of one-tenth to Mrs. A. G. Kerrison, Rockford, Ill. Filed Nov. 22, 1926. Serial No. 149,807. 1 Claim. (Cl. 5—202.)



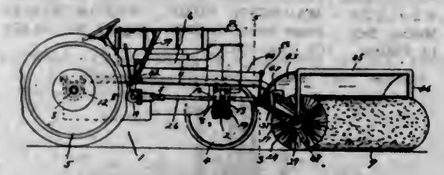
In a foldable bed spring, the combination with a pair of frame sections of angle cross section arranged to be detachably joined together, of a pair of blocks of rectangular cross section to fit within the angles of the angle frame sections, said blocks being relieved to provide attaching portions of angular cross section to be secured within the angle of the angle frame sections, the blocks providing alongside the relieved portions a pair of abutting head portions whereby the blocks may be detachably joined together, one of said portions having a rectangular inwardly tapering socket, the other head portion having a boss of complemental form for wedging engagement in said socket, openings provided in said head portions extending lengthwise with respect to said blocks and arranged to register when said head portions are interengaged, and a bolt passing through said registering openings and serving when drawn up to wedgingly interlock the head portions of said blocks and correspondingly secure the adjoining ends of the angle bed frame sections together, said bolt having the head thereof of reduced diameter to be free to turn in the relieved portion of one of said blocks, and provided with a screw driver slot whereby the bolt may be turned in tightening or loosening the same, and a nut in the relieved portion of the other block and threadedly engaged on said bolt and prevented from turning in the tightening or loosening of the bolt by reason of its engagement with the sides of the relieved portion of the block.

1,629,318. REGULATING MEANS FOR ELASTIC-FLUID TURBINES. REGINALD G. STANDERWICK, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 28, 1925. Serial No. 72,055. 8 Claims. (Cl. 264—14.)



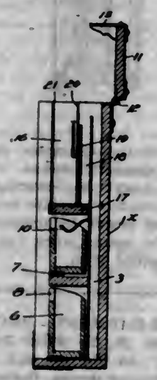
1. In a governing mechanism for prime movers, the combination of valve means controlling the admission of elastic fluid to the prime mover, a fluid-actuated motor, including a pilot valve structure for effecting movement of the valve means, a primary governor for actuating the pilot valve structure, a follow-up mechanism for restoring the pilot valve structure, correcting means to correct for the inherent width of regulation of the primary governor comprising a motor connected to the pilot valve structure, and means actuated by the follow-up mechanism for controlling said motor.

1,629,319. REGULATING MEANS FOR ELASTIC-FLUID TURBINES. REGINALD G. STANDERWICK, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 28, 1925. Serial No. 72,056. 10 Claims. (Cl. 60—67.)



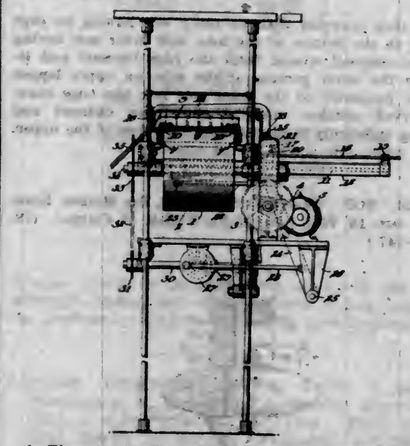
1. The combination with a turbine which supplies elastic fluid from a region beyond its admission end, of valve means which is operated to maintain the pressure in said region constant, a fluid-actuated motor including a pilot valve for moving the valve means, a movable member responsive to the pressure in said region, means including a follow-up connection connecting the movable member to the fluid-actuated motor and pilot valve, a pressure correcting motor, and means for effecting movement of the correcting motor to modify the action of said movable member on the valve means.

1,629,320. MOTOR-VEHICLE FRAME. ALFRED T. STURT, Flint, Mich., assignor to Durant Motors Incorporated, a Corporation of Delaware. Filed May 17, 1922. Serial No. 561,610. 7 Claims. (Cl. 180—64.)



1. A motor vehicle frame comprising a pair of longitudinal members, a transverse engine supporting member located below said longitudinal members and carried by brackets secured thereto, a transverse transmission supporting member secured to said longitudinal members, a battery supporting bracket secured to said transmission supporting member and longitudinal struts connecting said engine, supporting member and said transmission supporting member.

1,629,321. ROTARY SNOW-SWEEPER ATTACHMENT FOR TRACTORS. ROBERT SIMPSON, Detroit, Mich., assignor to Lew W. Shaw, Highland Park, Mich. Filed Feb. 18, 1922. Serial No. 535,982. 9 Claims. (Cl. 15—82.)



3. The combination with a tractor having a rear axle, of an attachment therefor including, a frame secured to said rear axle and projecting forwardly of said tractor, a rod connected to said frame, a rotary sweeper, arms connecting said rod and sweeper, and a concave shield extending adjacent the upper rear periphery of said sweeper, said shield being connected at its lower edge to said rod.

1,629,322. HANDY CASE FOR CAR AND BUS CONDUCTORS AND OTHERS. LEON SWARTHOUT, Rochester, N. Y. Filed Nov. 10, 1925. Serial No. 68,167. 2 Claims. (Cl. 211—7.)

1. A case comprising a body having a compartment and kerfs in the side walls of said compartment, and a plate removably seated in said kerfs, the said compartment being open at its upper end, and the body being combined with a top hingedly connected to the body and adapted in one position to rest above said compartment and be fastened to the body so as to maintain the plate against displacement.

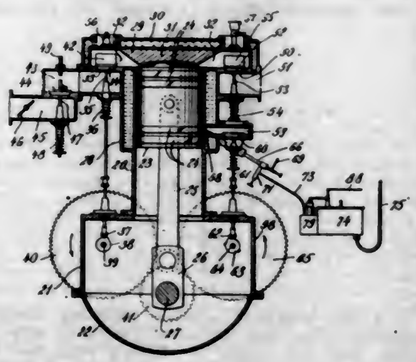
1,629,323. TRANSFER DEVICE FOR CONVEYERS. OBLO E. SWARTZ, Wadsworth, Ohio, assignor to The Ohio Match Company, Wadsworth, Ohio, a Corporation of Ohio. Filed Mar. 10, 1925. Serial No. 14,516. 3 Claims. (Cl. 198—24.)

1. The combination with a traveling conveyor adapted to carry a plurality of articles, of a stop member arranged in operative relation to said conveyor and adapted to arrest the travel of said articles in alinement, an oscillatory pusher member reciprocable relatively to said carrier and adapted to push the articles arrested by said stop member off of said carrier, means for imparting reciprocation to said pusher member, and friction controlled means for producing oscillation of said pusher member upon its pivot in response to its reciprocation.

1,629,324. RELAY-ARMATURE SUSPENSION. HANS THOMA, Munich, Germany, assignor to Neufeldt & Kuhnke Betriebsgesellschaft m. b. H., Kiel, Germany, a Corporation of Germany. Original application filed Mar. 14, 1924, Serial No. 699,348, and in Germany Dec. 4, 1922. Divided and this application filed July 6, 1926. Serial No. 120,831. 4 Claims. (Cl. 175—336.)

1. A relay responsive to energy variations having an armature mechanically moving in accordance with said energy variations, means for slidingly supporting said armature to permit it to perform its operating motions, the supporting surface of said means moving permanently in a direction at right angles to the direction in which the armature moves, and anti-friction means for preventing said armature from following said right angle movement.

1,629,325. SHOE. THOMAS TORIO, Corona, N. Y. Filed Oct. 16, 1925. Serial No. 62,803. 5 Claims. (Cl. 36—19.)



3. A shoe provided with an inner sole having an edge channel on the bottom of the sole, said inner sole having an inner channel spaced from the edge channel and located in the lower portion of the sole, an upper lapped over the perimeter of the inner sole into the edge channel, curved stitches entering the inner channel and emerging outwardly from the lapped portion of the upper, and an outer sole sewed to the upper.

1,629,326. TOP. FRANKLIN S. UPHAM, Des Moines, Iowa. Filed Oct. 19, 1925. Serial No. 63,319. 2 Claims. (Cl. 273—147.)

1. A top comprising a spinner member, a shank formed integral with said spinner and extending thereabove, a spindle above said shank, said spindle being of less diameter than the shank and a fly wheel of greater diameter than the spinner member received upon the shank, a plurality of rings adapted to extend around the spindle and be received upon said fly wheel and a pointer upon one of said rings and a series of indicating characters upon the fly wheel as and for the purposes stated.

1,629,327. INTERNAL-COMBUSTION ENGINE. GEORGE W. WALDO, Brooklyn, N. Y. Filed Feb. 26, 1921. Serial No. 448,034. 33 Claims. (Cl. 123—75.)

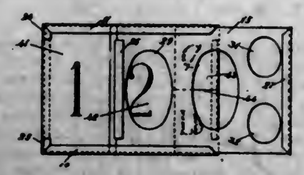
1. The method of charging a cylinder provided with a movable piston with a combustible mixture which consists in supplying air to the cylinder during a portion of the stroke of the piston, maintaining the cylinder out of communication with the air supply during substantially the remainder of the stroke of the piston to permit the air in the cylinder to expand to a pressure below that of the supply and at the end of the stroke injecting liquid fuel into the cylinder and vaporizing it therein by the effect of the low pressure in the cylinder.

1,629,328. BEAM COMPASS. RODNEY B. WARD, Wadsworth, Ohio. Filed Mar. 18, 1926. Serial No. 95,752. 16 Claims. (Cl. 33—158.)

1. In a beam-compass, rods, and clamps mounted on and connecting said rods, each of said clamps comprising a slide perforated to receive said rods, and having at the ends centering parts and threaded extensions, gripping rings centered by said parts and arranged to bear on said rods, nuts on said extensions, and springs interposed between said rings and said nuts.

1,629,329. MAGNETIC PUMP. WILLIAM WERNER, Mexia, Tex. Filed Sept. 5, 1925. Serial No. 54,679. 11 Claims. (Cl. 103—26.)

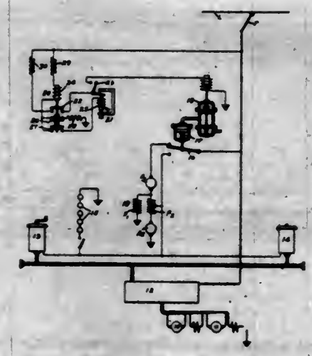
1. In a device of the character described, a hollow pump rod, electro-magnetic means to raise said rod, similar means to assist in lowering said rod, automatic means to alternately energize said raising and said lowering means, and means to automatically de-energize said electro-magnetic means when the fluid in the well reaches a predetermined level.



1,629,330. COLOR-HARMONY DEVICE. HAZEL H. ADLER, New York, N. Y. Filed July 12, 1924. Serial No. 725,596. 16 Claims. (Cl. 35—12.)

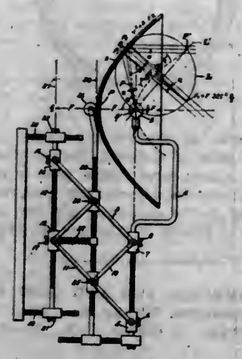
1. In a color harmony device, the combination with a mask, of a colored picture on the mask showing a group of colors, and a sheet movable relatively to the mask and variously colored in different areas each color harmonizing with the color group shown in the picture while

the mask conceals adjacent colors so that the sheet is adapted to selectively display any one of said areas through an opening in the mask adjacent said picture.



1,629,331. CARD HOLDER. ANTHONY AQUILA, Iselin, N. J. Filed Nov. 12, 1926. Serial No. 147,928. 4 Claims. (Cl. 40—17.)

1. In a card holder of the character specified, a body member having portions of three of its edges bent forwardly and inwardly to provide retaining flanges spaced from said body member to receive and retain display cards inserted between said flanges and said body member, said body member having furthermore portions of two opposite edges bent rearwardly and inwardly to provide flanges spaced from the rear surface of said body member, a stationary clamping member rearwardly extending from said body member, an additional clamping member also carried by said body member and rearwardly extending therefrom adjustably mounted between said spaced flanges and the surface of said body member, and means for locking said adjustable clamping member in position.

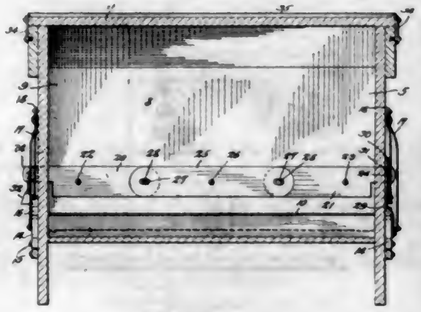


1,629,332. PROTECTIVE DEVICE FOR ELECTRIC CIRCUITS. CHARLES J. ARNELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 6, 1925. Serial No. 28,496. 10 Claims. (Cl. 171—97.)

1. A protective device for electric circuits operating on a plurality of voltages comprising a normally closed switch and a normally open switch connected to jointly control the circuits, and electromagnetic means connected to be energized respectively to the voltage impressed upon the circuit for electromagnetically opening said normally closed switch only when the impressed

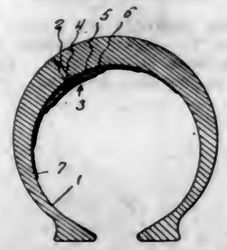
voltage exceeds a predetermined value and electromagnetically closing said normally open switch only when the impressed voltage is below said predetermined value.

1,629,333. LIGHT PROJECTOR. FRANK A. BENFORD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 28, 1922. Serial No. 609,469. 9 Claims. (Cl. 240—44.)



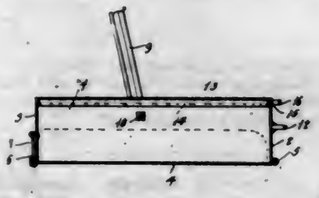
1. In combination a paraboloidal reflector, a source of light, and mechanical means for moving said source along a parabolic path in front of the reflector, the reflector and the path having a common axis.

1,629,334. AUTOMATIC FEEDER. CADWELL E. BENNETT, De Soto, Kans. Filed Oct. 6, 1926. Serial No. 139,898. 3 Claims. (Cl. 119—55.)



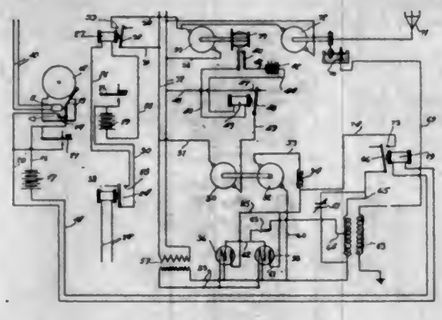
1. A poultry feeder including a hopper, a trough at each side of the hopper and arranged adjacent to the bottom thereof, said troughs being fed with material from the hopper, a hinged closure for each trough, a movable perch associated with each trough, connecting links for connecting the perches and closures, said

closures adapted to be moved by the movement of the perches, knockers carried by the closures and adapted to move to engage the hopper to jar material within the



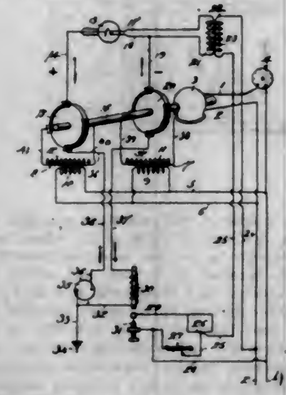
hopper, and agitating members mounted within the hopper and movable by the action of the perches to feed material to the troughs.

1,629,335. BALLOON-TIRE PATCH. JOHN F. BRADY and RICHARD B. OTT, Ritzville, Wash. Filed June 23, 1926. Serial No. 118,055. 2 Claims. (Cl. 152—24.)



1. A tire patch of the class described embodying a multiplicity of plies of material, the outer one of which is composed of a semi-cured rubber gum or plastic rubber to seal the rupture, the adjacent ply comprising a rubber fabric connected to the outermost ply, the next ply comprising a piece of leather to reinforce the rupture.

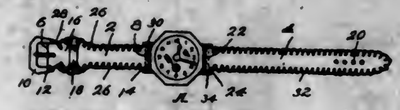
1,629,336. COMBINED ASH AND DUST PAN. WELLINGTON I. CLEMENTS, Norfolk, Va. Filed Mar. 6, 1926. Serial No. 92,982. 2 Claims. (Cl. 126—243.)



1. An ash pan comprising front, rear and lateral sides, a bottom hinged at its front end to the lower edge of the front and projecting beyond the rear flanges extending upwardly from the lateral edges of the bottom and contacting with the outer faces of the lateral sides, and means carried by the projecting portion of the bottom and the rear to secure the bottom against casual movement.

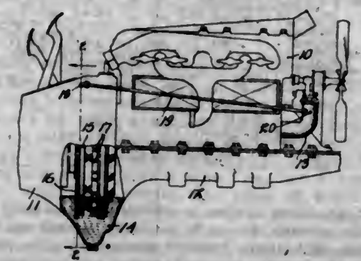
1,629,337. RADIO FIRE-ALARM SYSTEM. HENRY GARRETT, Dallas, Tex. Filed Oct. 14, 1925, Serial No. 62,482. Renewed Mar. 26, 1927. 3 Claims. (Cl. 250—17.)

1. In a fire alarm system, an alarm receiving apparatus, a high tension generator, radio transmitting apparatus connected to and fed by said generator and including an antenna circuit, means governed by the alarm receiving apparatus for interrupting the antenna circuit, a motor for driving the generator, a normally open local circuit including a relay, a power circuit connected to said motor and closed by said relay, a second local circuit including a relay, and a circuit including a motor and controlled by the last relay, said last circuit controlling through the action of its motor the normally open local circuit.



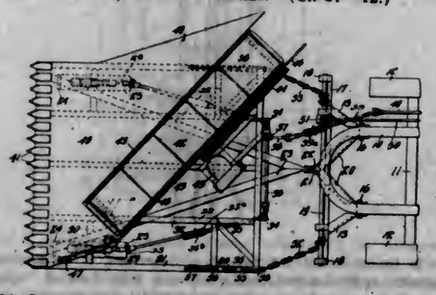
1,629,338. X-RAY SYSTEM. HARRY D. GARRETSON, New York, N. Y., assignor to Harry F. Waite, New York, N. Y. Filed Dec. 20, 1921. Serial No. 523,613. 1 Claim. (Cl. 250—34)

In a system of the class described, a milliammeter, a regulating device for regulating the flow of current through a hot cathode of an X-ray tube, an X-ray tube of the hot cathode type, means for connecting the hot cathode with a rectifying switch and means for connecting the rectifying switch with a step-up transformer, means for connecting the anode of the tube with a second rectifying switch and means for connecting the second rectifying switch with a second step-up transformer, means for energizing both transformers, means for driving both rectifying switches synchronously with each other and with the current passing through the step-up transformers, two wires running from two terminals of the rectifying switches, said wires being connected to the said milliammeter and the said regulating device, a step-down transformer for supplying a cathode heating current to



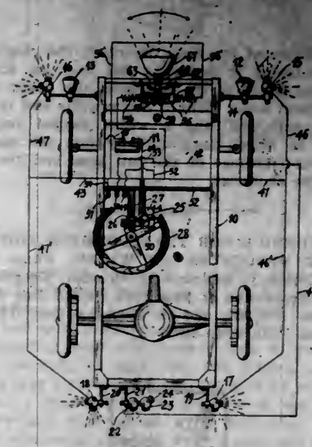
the cathode of the X-ray tube and means for connecting the primary of the step-down transformer with the regulating device, whereby the power of the tube may be regulated.

1,629,339. WRIST-WATCH STRAP. WESLEY HANKINSON and JACOB J. KNEBEL, Kansas City, Mo. Filed Aug. 9, 1926. Serial No. 128,189. 4 Claims. (Cl. 224—4.)



4. A strap provided at its narrow margins with laterally projecting shoulders, and lacings secured to the strap between said shoulders and projecting over the adjacent narrow margins of said strap.

1,629,340. OIL-CIRCULATING SYSTEM. FRED HUNGATE, Tampa, Fla., assignor of one-half to Lemuel G. Gillaspy, Indianapolis, Ind. Filed July 23, 1925. Serial No. 45,659. 2 Claims. (Cl. 184—11.)

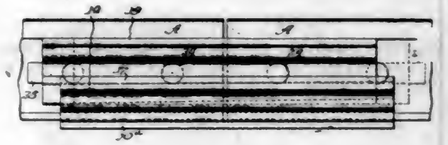


1. The combination in an internal combustion engine having a crank case with its forward and rear portions sloping gently downwardly to form an oil sump and having a fly wheel disposed between said sloping portions and a ring gear of slightly larger size than said fly wheel connected thereto, of an oil receiving nipple disposed in the fly wheel housing in the plane of the junction between the rear side of the fly wheel and the forward side of the ring gear and a pipe having one end connected to said nipple said pipe sloping slightly forward and downwardly and terminating in the breather pipe, whereby when the oil in the crank case is fanned by the magnets on the fly wheel said ring gear will obstruct or dam the oil and cause the same to be discharged through said pipe into the breather pipe, substantially as set forth.

1,629,341. SNOWPLOW. LORAN IBBELL, Little York, N. Y. Filed July 28, 1925, Serial No. 46,644. Renewed Apr. 14, 1926. 26 Claims. (Cl. 37—42.)

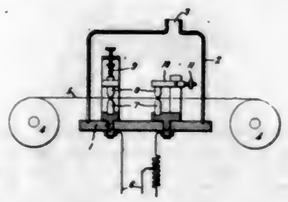
26. In a snow plow adapted to be pushed by a propelled vehicle, a plow frame structure provided with a side cutting blade, a single coupling means between the structure and the [illegible] frame with the [illegible] blade, and control means serving to adjustably raise or lower said blade, 1

1,629,342. VEHICLE SIGNALING [illegible]. JOHN JUHASZ, Dover, Ohio. Filed May 3, 1926. Serial No. 28,256. 4 Claims. (Cl. 177—337.)



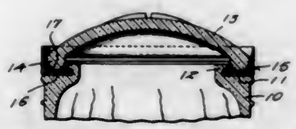
1. In a vehicle signal system, a vehicle, right and left turn signals, a circuit for each signal, means for selectively energizing said circuits to indicate a contemplated turn, a roadway illuminating lamp, means for mounting said lamp on said vehicle for movement in either direction from normal position, illuminating the roadway straight ahead, means operated by energization of either of said signal circuits for moving said lamp to illuminate the roadway in the direction of the contemplated turn, and means for returning said lamp to its normal position.

1,629,343. KEY-IDENTIFICATION DEVICE. JOHN A. KATZ, York, Pa., assignor to S. Forry Laucks, York, Pa. Filed Sept. 22, 1926. Serial No. 136,094. 2 Claims. (Cl. 40—10.)



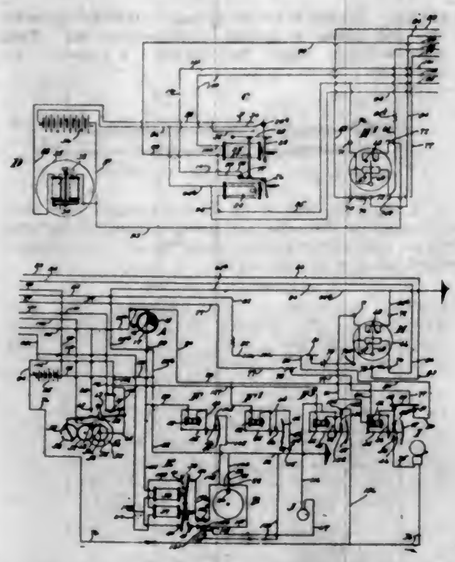
1. A key identifying device, comprising a key having a head with an opening therethrough and a recess, the wall of said recess intersecting the wall of the opening and provided with a continuous groove, a disk carrying identification indicia adapted to seat in said recess, a flange extending around the disk, a lug extending outwardly of said flange to extend into said opening, and resilient means adapted to engage the flange and in said groove to hold the disk from displacement from the recess.

1,629,344. RAIL-HOLDING DEVICE. CHARLES P. KIMMEL, Gary, Ind. Filed June 24, 1926. Serial No. 118,200. 8 Claims. (Cl. 238—208.)



8. In a device of the class described, the combination of a shoe adapted to receive a rail base, an abutment overlying one flange of the rail base, the upper surface of the abutment being inclined downwardly and inwardly toward the rail web, and a wedge shaped angle bar adapted to be driven longitudinally into the space between the undersurface of the rail head and the upper surface of the abutment.

1,629,345. DEVICE FOR TRANSFORMING THE CRYSTALLINE STRUCTURE OF WIRES. FRITZ KOREF, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed July 6, 1922. Serial No. 573,163, and in Germany July 13, 1921. 14 Claims. (Cl. 176—132.)



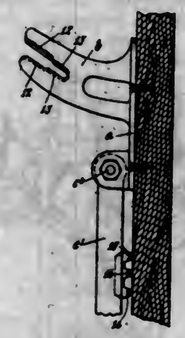
1. In apparatus for transforming the crystalline structure of wires and the like composed of high fusing metals such as tungsten by a continuous process comprising the heating of a portion of the wire to high incandescence, the combination with contacts of very high fusing material, such as tungsten or molybdenum and adapted to be connected to a source of current, of means for guiding the wire to be transformed over said contacts to heat the portion of the wire between them.

1,629,346. GASKET FOR FRUIT JARS. SAMUEL E. LARSON, Custer County, Nebr. Filed July 20, 1926. Serial No. 123,735. 3 Claims. (Cl. 215—37.)

1. The combination with a jar having a horizontal ledge on the mouth thereof and a cover having a depending peripheral flange, of a gasket having a lower flat face seated on the ledge and an upper peripherally grooved face receiving said flange, one wall of said groove being higher than the other wall, whereby to project above the periphery of said cover and cooperate with the latter to form a groove to receive a sealing material.

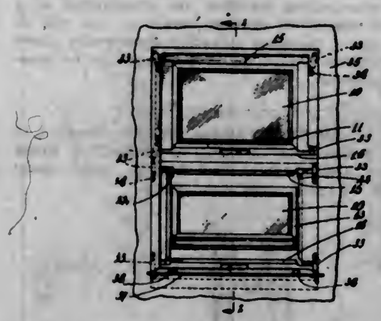
1,629,347. ALARM SYSTEM FOR VAULTS. EDWARD G. LAWRENCE, Minneapolis, Minn., assignor to O. B. McClintock Co., a Corporation of Minnesota. Filed Mar. 9, 1925. Serial No. 14,112. 6 Claims. (Cl. 177—314.)

1. In an alarm system, a plurality of normally open protective circuits, an alarm, normally latched means for operating said alarm through successive cycles of predetermined periods, means operated by the closing of any one of said protective circuits for releasing said latched means, said system also including means for opening the disturbed closed protective circuit at a point other than at the point of first closure and some time during each cycle.



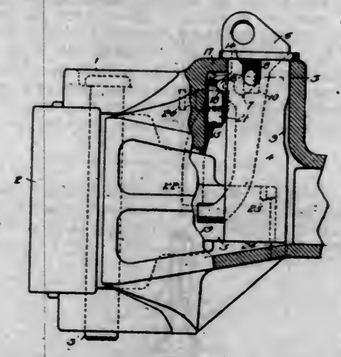
1,629,348. GAUGE-GLASS AND FEED-GLASS PROTECTION. JOHN LUDWIN and ANDREW HOWARD, Long Island, N. Y. Filed Sept. 19, 1925. Serial No. 57,273. 2 Claims. (Cl. 73—54.)

1. In an article of the class described, a transparent sheath split longitudinally at one side thereof, frame members secured along the upper and lower edges of said sheath, binding members having apertures lengthwise therein secured along the longitudinal edge of said sheath,



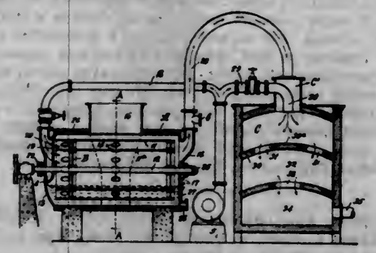
and a locking member having rod-like portions capable of being inserted in the said lengthwise apertures to secure the said binding members together in operative position, substantially as shown and described.

1,629,349. SINEW EXTRACTOR. JAMES A. MACDONALD, Boston, Mass. Filed July 28, 1926. Serial No. 125,413. 1 Claim. (Cl. 17—1.)



A sinew extractor including a base, a foot-holding arm projecting forward from the upper portion of the base and having a recess adapted to receive the bony portion of a fowl's leg adjoining the foot, said recess being composed of a relatively wide parallel sided outer portion, the edges of which form outer jaws adapted to have a non-wedging engagement with a larger leg, and a narrower parallel sided inner portion, the edges of which form inner jaws adapted to have a non-wedging engagement with a smaller leg, and a hand lever pivoted to the base below the arm, and provided with a multiple claw adapted to receive the bony portion of a leg adjoining the fleshy portion thereof, said claw having a larger recess, the edges of which form outer jaws, formed and positioned to cooperate with the outer jaws of the arm in extracting sinews from a larger leg, and a smaller recess, the edges of which form inner jaws, formed and positioned to cooperate with the inner jaws of the arm in extracting sinews from a smaller leg, the parallelism of the arm jaws preventing a wedging adhesion of a broken off leg and foot to the arm.

1,629,350. REVERSIBLE WINDOW. OTTO MATERNY, Bethlehem, Pa. Filed Nov. 27, 1926. Serial No. 151,041. 4 Claims. (Cl. 20—49.)

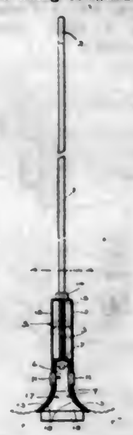


1. A rotatable window frame comprising a window frame proper, a pane of glass mounted therein, said window frame proper rotatively mounted in side members, said side members slidably engaged in upper and lower members, said side members and said upper and lower members, adapted to slidably engage in a window casing.

1,629,351. CAR COUPLER. WILLIAM MCCONWAY, JR., Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 7, 1925. Serial No. 48,898. 5 Claims. (Cl. 213—126.)

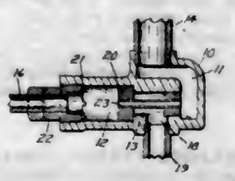
1. A car coupler involving a coupler head, a knuckle rotatably mounted on said head, a lock for said knuckle, a lock lifter, and a headed pivot pin for movably connecting said lock and lifter, said lifter having a shoulder for cooperating with said coupler head to prevent accidental unlocking of said lock and having a slot for receiving said pin, said slot extending at an angle to the direction of unlocking movement of said lock, said lock being provided with spaced walls perforated to receive said pin and being provided with a side wall having an opening through which the head of said pin is adapted to pass when in a given position, and the head of said pin when the parts are assembled being disposed inwardly of said side wall and in overlapped relation to the latter.

1,629,352. SULPHUR BURNER. HENRY F. MERRIAM, West Orange, N. J., assignor to General Chemical Company, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1923. Serial No. 678,098. 16 Claims. (Cl. 23—279.)



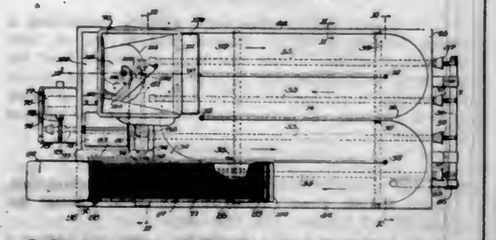
1. A sulphur burner (brimstone burner) comprising a casing forming a burner chamber and having an inlet for feeding sulphur to said chamber and another inlet for admitting compressed air to said chamber, and means for forming a permanent barrier to the passage of gases or such air from the burner chamber through the sulphur feed inlet.

1,629,353. ANCHORING DEVICE. FRED MICHALICEK, Cedar Rapids, Iowa. Filed July 13, 1926. Serial No. 122,165. 2 Claims. (Cl. 189—92.)



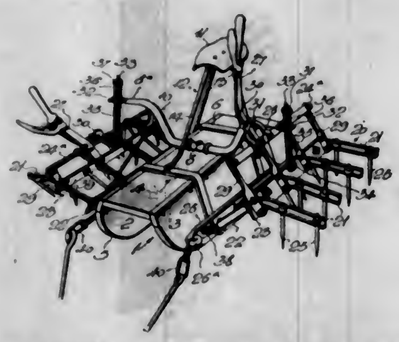
1. An anchoring device comprising a guy rod having a threaded portion and an eye remote from the latter, a pair of inverted substantially U-shaped members of dif-

ferent lengths, and inter-connected with each other, the ends of the members being outwardly curved, a base sta-



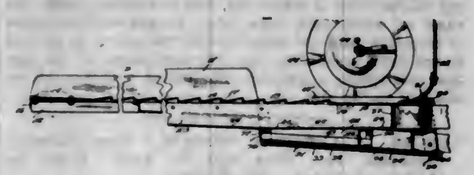
tionarily holding the smaller member to provide a guide for the other member, and means adjustably connecting the longer member to the guy rod.

1,629,354. CYLINDER DRAINAGE AND RELIEF VALVE. FRANK C. MILLER, Auburndale, Mass. Filed Feb. 17, 1922. Serial No. 537,288. 3 Claims. (Cl. 121—134.)



1. A drainage and relief valve comprising a valve casing having a chamber, a connection therefrom to the engine cylinder, a second connection therefrom to a supply of fluid under pressure, said chamber having a drainage outlet between said connections, and a differential piston freely slidable in said chamber between said connections and controlling said outlet, said differential piston having its smaller surface adjacent the cylinder connection, and said drianage and relief valve being provided with a much restricted passage permitting slow escape of fluid from said valve chamber and thereby providing a gradually decreasing fluid cushion for said differential piston.

1,629,355. AUTOMATIC POTATO-CHIP MACHINE. FORREST L. MORROW, Chicago, Ill. Filed Apr. 11, 1925. Serial No. 22,259. 6 Claims. (Cl. 53—7.)

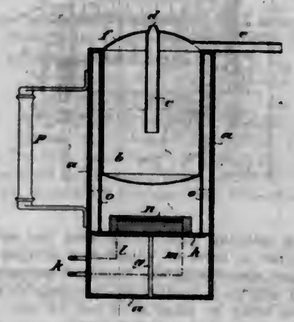


2. In a machine of the class described, the combination of a reservoir having a bottom and side walls, a plurality of posts mounted upon the bottom of the reservoir, a U-shaped partition disposed in the reservoir with its free ends mounted upon said posts and an intermediate partition lying between the legs of said first partition and removably mounted upon another of said posts.

1,629,356. HARROW. MILTON C. MYERS, St. Joseph, Mo. Filed Sept. 20, 1926. Serial No. 136,561. 8 Claims. (Cl. 97—140.)

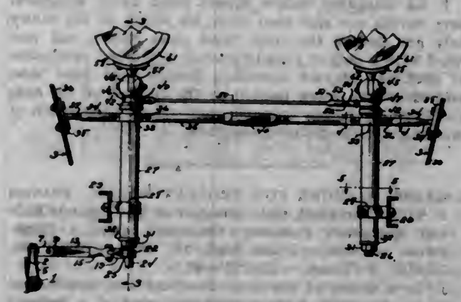
1. In a harrow, a sled, draw bars secured to the outer sides of the sled runners, tooth-carrying wings hinged to said draw bars and projecting from each side of said sled, means for tilting the teeth of said wings and locking them in adjusted position, and means for holding said wings down in operative position.

1,629,357. SHAKING-SCREEN MECHANISM FOR CORN-HUSKING MACHINES. THEODORE H. OPPENHEIM and BERNARD SELHORST, Coldwater, Ohio, assignors to The New Idea Spreader Co., Coldwater, Ohio, a Corporation of Ohio. Filed Apr. 6, 1925. Serial No. 21,064. 16 Claims. (Cl. 209—318.)



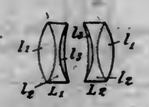
4. In a corn-husking machine, the combination of a reciprocatory screen, an exhaust blower at one side of the screen, and a conveyer operating transversely above the screen to move toward the blower waste matter passing from the screen.

1,629,358. DRINKING ATTACHMENT. POWELL D. PADGETT, Atlanta, Ga., assignor of one-half to Frank G. McCord, Atlanta, Ga. Filed Sept. 8, 1925. Serial No. 55,098. 1 Claim. (Cl. 215—100.)



In a protecting device for bottles, a hollow substantially cylindrical member open at one end and adapted to be positioned around the neck of the bottle, an annular flange extending inwardly from the opposite end of said member and an annular skirt extending downwardly from the inner edge of the flange and adapted to enter the mouth of the bottle, said skirt decreasing in diameter from its outer to its inner end and providing an annular neck receiving chamber having a cylindrical outer wall and a relatively inclined inner wall.

1,629,359. DEVICE FOR EFFECTING A STERILE CLOSURE FOR PRESERVE CONTAINERS. ERNST PAUSS, Cologne-Mulheim, Germany. Filed Mar. 30, 1926, Serial No. 98,630, and in Germany Feb. 14, 1925. 6 Claims. (Cl. 219—44.)



1. A device for effecting a sterile closure for preserve containers, comprising an outer container, an inner water-container spaced from said outer-container, a cover to said inner and outer containers, an electrical heating element supported within said outer container and spaced from said inner water container, means for supplying electric current to said heating element, a tube for delivering steam generated in said inner water container to the point required, and a tube dependent from said cover into the water space of said inner water-container, said tube being adapted normally to be immersed in the contents of said inner water container.

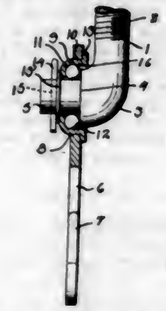
1,629,360. HEADLIGHT ADJUSTER FOR AUTOS. JOSEPH A. PIPER, Wiley Ford, W. Va., assignor of one-half to Louis Settle, Cumberland, Md. Filed Sept. 27, 1926. Serial No. 137,974. 6 Claims. (Cl. 240—62.)

2. The combination with an automobile, of dirigible head lamps therefor, a post for each head lamp, a supporting sleeve through which each post passes, means for adjustably connecting the sleeves to the sides of the frame and to the front mud guards of the automobile, adjustable means connecting the respective posts, throw means connected with one of the posts, said means comprising a member clamped on the post, a bifurcated head to which the member is pivoted, a stem extending longitudinally from the head, a sleeve in which the stem is received, spring means between the sleeve and stem influencing the head in the direction of the stem, a member having an end removably and adjustably secured in the sleeve, a link having its ends bifurcated in opposite directions, and in one of which bifurcations the said member is pivoted and an arm secured to the body of the axle spindle of one of the front wheels of the automobile and pivotally secured in the bifurcated end of the link.

1,629,361. HYPERCHROMATIC OBJECTIVE. ARON PLOLACK, Paris, France. Filed July 31, 1923, Serial No. 654,954, and in France Aug. 1, 1922. 2 Claims. (Cl. 88—57.)

1. An objective for obtaining distinct images with soft outline corrected for all geometrical and physical aberrations except the chromaticity of its focal plane which is amplified.

1,629,362. FOLDABLE WARDROBE. NELLY MARGUERITE ROBERT, Cleveland, Ohio. Filed Aug. 19, 1922. Serial No. 582,865. 7 Claims. (Cl. 45—118.)

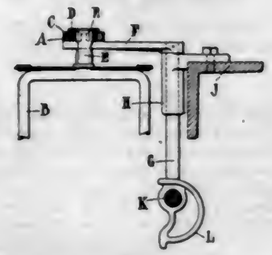


1. A foldable wardrobe comprising collapsible walls of flexible material, and top and bottom members to which said flexible walls are secured, said top and bottom members each formed of two rigid sections hinged together to fold inwardly, said walls being foldable between said top and bottom members when the same are folded inwardly to form therewith a compact bundle.

1,629,363. BALL-BEARING PORCH-SWING HOOK. WALTER ROSS, Louisville, Ky. Filed Apr. 9, 1926. Serial No. 100,919. 2 Claims. (Cl. 248—64.)

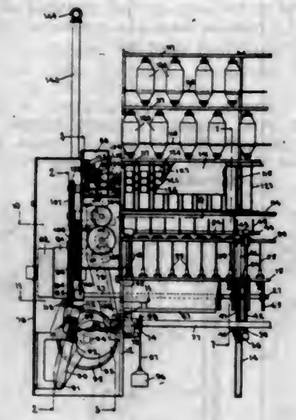
1. A ball bearing hook comprising in combination a threaded depending hanger, a reduced laterally offset

trunnion defining a shoulder at the inner end of the trunnion, a hook member provided for the collar having a raceway operatively engaged with the trunnion,



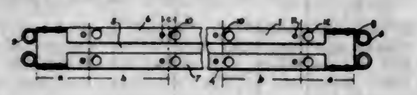
anti-frictional ball bearings between the raceway and the shoulder, and means carried by the trunnion to retain the collar in position.

1,629,364. BALL. FRANK C. SCHOLLY, Philadelphia, Pa. Filed Nov. 18, 1925. Serial No. 69,848. 1 Claim. (Cl. 273—58.)



As an article of manufacture, a throwing play ball constructed of relatively hard rubber and provided with a relatively thick wall and being hollow, the wall of the ball interiorally thereof formed with an integrally enlarged overbalanced portion extending inwardly of the ball at one side of the centre thereof, said enlarged portion being substantially semi-circular and adapted to cause the ball to take various drops, up, out and in-shoots, according to the position of the enlarged portion prior to leaving the thrower's hand.

1,629,365. SPINDLE OF FLIER SPINNING, ROVING, AND ANALOGOUS MACHINES. WILLIAM PRINCE-SMITH and JAMES ROBINSON, Keighley, England. Filed Aug. 26, 1926, Serial No. 131,728, and in Great Britain Nov. 21, 1925. 5 Claims. (Cl. 118—57.)

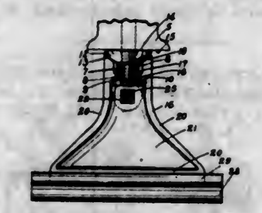


1. In flier-spinning, twisting, roving and analogous machines, overhead means offering support to the tops of the fliers during the spinning, roving or other operation, and means for withdrawing said support in order to permit said spindles to be doffed.

1,629,366. RING-SPINNING FRAME. EVERARD STUBBS, Springfield, Vt. Filed Feb. 2, 1922. Serial No. 533,507. 7 Claims. (Cl. 118—45.)

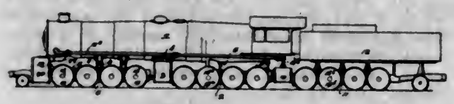
1. A ring spinning frame comprising two substantially parallel series or rows of spindles, a driving shaft for each row of spindles, gears mounted on each of said shafts and pinions mounted on the respective spindles, each pinion being in mesh with one of said gears, the shafts being below and parallel to the rows of spindles separated from one another a distance less than that between the rows of spindles, while the distance between the rows of spindles is less than twice the diameter of the gears, two series of spinning rings cooperating with the several spindles, a single rigid structure supporting both series of rings and mechanism operatively connected to raise and lower said structure and both series of said rings as a unit.

1,629,367. PARTITION UNIT AND CONSTRUCTION. URBAN C. THIES, Dayton, Ohio, assignor, by mesne assignments, to Robert E. Cowden, receiver, Dayton, Ohio. Filed Feb. 19, 1926. Serial No. 89,347. 23 Claims. (Cl. 189—34.)



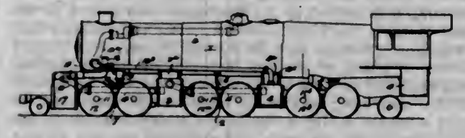
1. An elongated hollow square sheet metal structural part having one side open along its length at the center only and having the other three sides closed, and provided with a pair of parallel spaced cylindrical extensions at each end thereof extending toward said open side, said extensions being located at the corners of the ends and having a length approximately one-half the width of said part for the purpose described.

1,629,368. HANGER FOR TROLLEY WIRES. FRANCIS A. TICE, Cincinnati, Ohio, assignor to The Electric Railway Equipment Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 11, 1925. Serial No. 55,816. 5 Claims. (Cl. 191—43.)



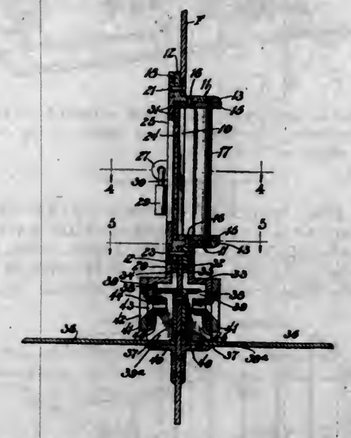
1. In a device of the class described the combination with an insulator having depending stud of a support collar adapted to be secured to the stud in abutment with the insulator, a rounded shoulder adjacent the abutment end of the collar, a flange on the opposite end of said collar for providing a second shoulder in spaced relation with the rounded shoulder on said collar, a pair of clamping jaws, having semi-circular grooves therein

for receiving the collar, semi-circular flanges disposed within the grooves and seating upon the second shoulder on the collar, inwardly tapered faces on each jaw abutting



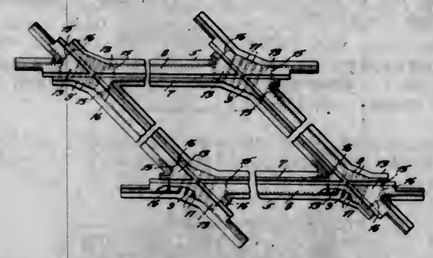
the rounded shoulder on the collar and means extending through the jaws for binding the jaws between the shoulders on the collar.

1,629,369. TRIPLE-EXPANSION MALLET LOCOMOTIVE. SAMUEL M. VAUCLAIN, Rosemont, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 25, 1925. Serial No. 71,406. 3 Claims. (Cl. 105—39.)



1. The combination in a triple expansion locomotive of the Mallet type, of a rear frame of the locomotive; a boiler secured to said frame; a forward frame connected by an articulated joint with the frame that supports the boiler, said boiler overhanging the said forward frame; low-pressure cylinders mounted on the forward frame; intermediate cylinders mounted on the frame that supports the boiler; a tender frame pivotally connected to the rear frame of the locomotive; high-pressure cylinders located at the forward end of the tender frame; pipe connections between the boiler and the high-pressure cylinders, between the high-pressure cylinders and the intermediate cylinders and the low-pressure cylinders; and an exhaust pipe connecting the low-pressure cylinders with a nozzle in the smoke-box of the boiler.

1,629,370. TRIPLE-EXPANSION MALLET LOCOMOTIVE. SAMUEL M. VAUCLAIN, Rosemont, Pa., assignor to The Baldwin Locomotive Works, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 25, 1925. Serial No. 71,407. 1 Claim. (Cl. 105—39.)

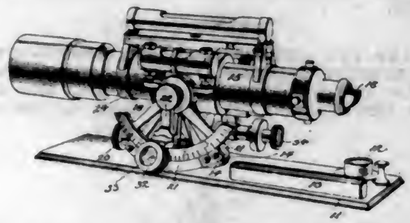


The combination in a triple expansion locomotive of the Mallet type, of a frame; a boiler to which the frame is rigidly secured; a forward frame connected by an articulated joint with the frame that supports the boiler, said boiler overhanging the said forward frame; low-pressure cylinders mounted on the forward frame; intermediate cylinders mounted on the forward end of the frame that supports the boiler and high-pressure cylinders mounted at the rear of the intermediate cylinders on the frame that supports the boiler; pipe connections between the boiler and the high-pressure cylinders, between the high-pressure cylinders and the intermediate cylinders, and between the intermediate cylinders and the low-pressure cylinders; and an exhaust pipe connecting the low-pressure cylinders with a nozzle in the smoke-box of the boiler.

1,629,371. OBSERVATION AND COMMUNICATION PERMITTING DEVICE FOR JAILS, ETC. DAVID FRANKLIN YOUNGBLOOD, San Antonio, Tex. Filed Aug. 4, 1926. Serial No. 127,137. 10 Claims. (Cl. 189—5.)

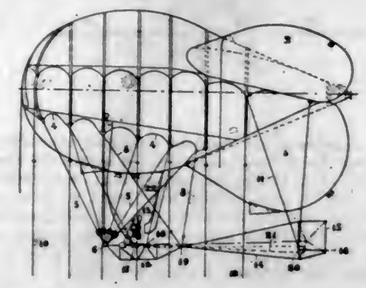
1. In a device of the character described, a wall having an opening therein, angle bars secured within the opening at the top and bottom thereof, vertical bars extending between and secured to said angle bars, a glass panel covering said opening, means for securing said glass panel in position, and means associated with the bottom angle bar and defining serpentine sound conducting passages for permitting communication through said wall.

1,629,372. TRACK STRUCTURE. VICTOR ANGERER, Ridley Park, Pa., assignor to William Wharton, Jr. & Company, Incorporated, Easton, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1926. Serial No. 93,645. 14 Claims. (Cl. 246—464.)



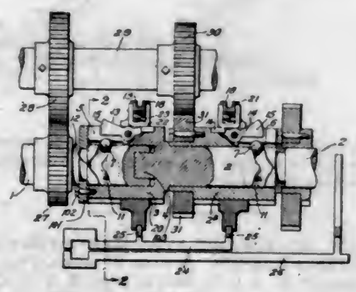
3. A track structure of the solid cast type whereof the head is tied to the base by a grid open to continuous fluid flow in heat treatment.

1,629,373. MICROSCOPE ATTACHMENT FOR SURVEYING INSTRUMENTS. EDWARD W. ARMS, Troy, N. Y., assignor to W. & L. E. Gurley, Troy, N. Y., a Corporation of New York. Filed Oct. 20, 1925. Serial No. 63,751. 3 Claims. (Cl. 88—39.)



1. The combination of a geometrical instrument including a graduated arc; a microscope for reading the graduations on said arc; an arm pivoted to swing on an axis

substantially concentric with said arc; a carrier member directly supporting said microscope; and a hinge connec-

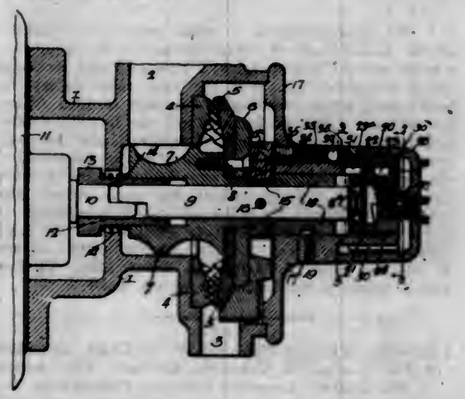


tion between said carrier and arm arranged to permit said microscope to swing into the space at the end of said arc when not in use.

1,629,374. BALLOON CAPABLE OF BEING EMPLOYED AS A CAPTIVE OBSERVATION BALLOON AND AS A DIRIGIBLE. LUIGI AVOGIO, Rome, Italy. Filed Nov. 11, 1925, Serial No. 68,403, and in Italy Nov. 29, 1924. 6 Claims. (Cl. 244—6.)

1. A transformable balloon to be employed as a captive balloon or as a dirigible comprising a gas bag, attachments for the car provided on said gas bag, in combination with two interchangeable cars, viz, an observation car and a propelling car, both provided with suspensions in correspondence with the attachments of the gas bag so that either one of them may be suspended from the gas bag.

1,629,375. COUPLING. HENRY E. BRICE, New York, N. Y. Filed Jan. 8, 1926. Serial No. 80,057. 8 Claims. (Cl. 192—30.)

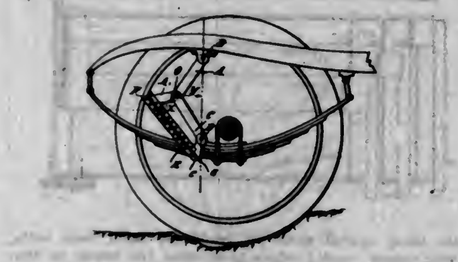


1. In a coupling for driving in either direction, the combination of a driving rotatable part, a driven rotatable part, a reciprocable member, movable in a plane parallel to the axis of said shafts, means on one of said parts for imparting reciprocation to said member upon rotation of said part, a swingingly mounted locking member, and means for holding said locking member out of the path of movement of said reciprocating member, to allow said parts to rotate independently of each other.

1,629,376. ATTACHING MEANS FOR MULTIGRAPH SIGNATURE PLATES. HOWARD T. BUCK, Cedar Knolls, N. J. Filed Nov. 13, 1926. Serial No. 148,250. 7 Claims. (Cl. 101—378.)

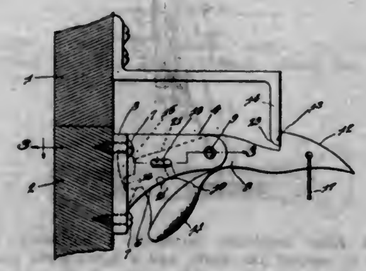
7. A device for detachably associating a type bearing element with a platen roll, said device including radially contractile means circumferentially embracing the platen roll and having a detent respectively engageable with the bearing element and platen roll.

1,629,377. FEED REGULATOR FOR GRINDING MILLS. JACOB S. BUCKWALTER, Philadelphia, Pa., assignor to The Enterprise Manufacturing Company of Pennsylvania, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 1, 1924. Serial No. 723,533. 4 Claims. (Cl. 83—7.)



1. The combination in a grinding mill, of a body portion; a fixed disk secured to the body portion; a rotating shaft; means for rotating the shaft; a feed screw; a grinding disk carried by the feed screw and driven by the said shaft; a cap plate mounted on the body portion and having an extension open at the end; a cam disk located in the extension of the cap plate; means for preventing said cam disk turning in the extension; a cam block back of the cam disk; means for allowing the cam block to have a limited rotary movement; a sleeve mounted on the extension of the cap plate and enclosing the end thereof and means for connecting the sleeve to the cam block so that on turning the sleeve the cam block will be turned and adjusted in respect to the cam disk.

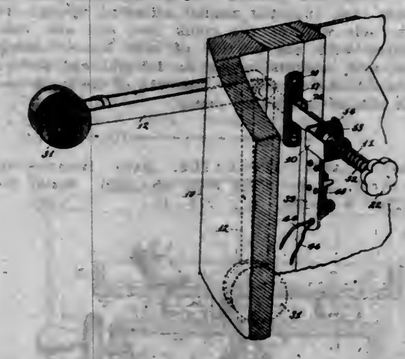
1,629,378. SHOCK-PREVENTING DEVICE FOR VEHICLES. EUGENIO CANTONO, Rome, Italy. Filed July 7, 1925, Serial No. 42,077, and in Italy July 29, 1924. 4 Claims. (Cl. 267—16.)



1. In a shock preventing device for vehicles in combination with a laminated spring, a frame, a pair of levers arranged between said spring and said frame, one

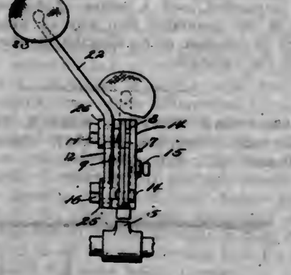
of said levers being pivoted at one end to the frame, the other of said levers being pivoted to the laminated spring and to said first lever, spring means combined with said

pair of levers and adapted to resiliently spread the two levers against approaching movements of the frame and the laminated spring.



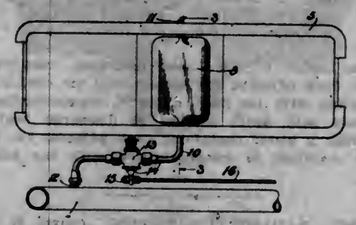
1,629,379. DOOR LATCH. MICHAEL M. DUDAS, Chicago, Ill. Filed July 17, 1925. Serial No. 44,325. 1 Claim. (Cl. 292—133.)

The combination with a stationary structural unit, and a structural unit movable relative to the stationary structural unit, of a bracket secured to the movable unit and having a recess formed therein and comprising spaced ears extending from the body of the bracket, a latch disposed between the spaced ears, said latch having an outer end portion provided with a shoulder, a stop bar carried by the stationary unit and adapted to be engaged by the shoulder, a projection on said latch extending into said recess and cooperating with said member to limit pivotal movement of the latch, a weight on said latch for normally retaining said latch in position to engage the stop bar, and a movable pin operable on said latch for releasably holding said latch in an inoperative position with respect to the bar.



1,629,380. SIGNALING DEVICE. MAX GOLDMAN and RUBIN KARABAN, Brooklyn, N. Y. Filed July 6, 1925. Serial No. 41,828. 2 Claims. (Cl. 176—54.)

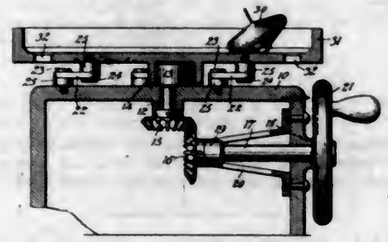
1. A signaling device including a mounting adapted to be fixed, a signal arm movably supported by said mounting, means for moving said arm, said means including a shaft mounted for turning and longitudinal movement on which said arm is mounted, a manipulator for effecting the turning and longitudinal movement of said shaft, holding means for holding the shaft against turning when brought to the signaling and non-signaling positions, said holding means comprising a member having spaced holes therein secured to said shaft, a relatively fixed pin adapted to be entered into either of



said holes by virtue of turning and longitudinal movement imparted to said shaft, and a spring serving to releasably maintain said pin in either of said holes.

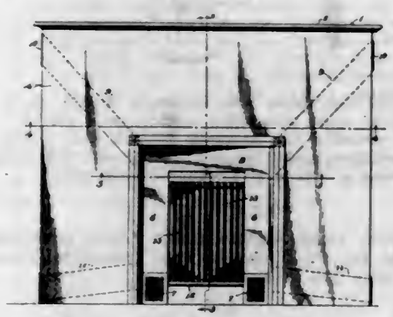
1,629,381. AUTOMOBILE PEDAL. WILLIAM H. HILL, Chattanooga, Tenn. Filed Dec. 4, 1926. Serial No. 152,630. 5 Claims. (Cl. 74—81.)

1. The combination with adjacently located pedals, of a lateral pedal attachment carried by a part of one pedal extending into operative position with respect to the remaining pedal for operation of both pedals from one pedal or individual operation of each pedal.



1,629,382. CRANK-CASE HEATER. FRANK H. HINKLEY, Erie, Pa. Filed June 23, 1926. Serial No. 118,105. 1 Claim. (Cl. 184—104.)

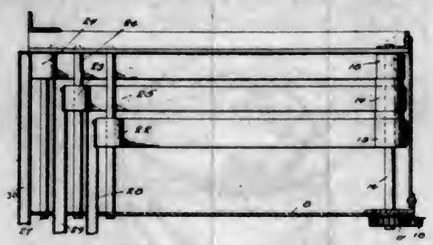
In a motor vehicle, the combination with the crank case and exhaust pipe, of a flat hollow casing normally covered by the oil in the crank case and having feet



to positively maintain it in spaced relation to the bottom of the crank case, a conduit affording communication between the exhaust pipe and the interior of said hollow casing and passing through one side wall of the crank case, an outlet conduit extending through the opposite side wall of the crank case and also communicating with the interior of said hollow casing, each of said conduits having an integral end portion which is threaded through the side wall of the crank case and the side of said hollow casing.

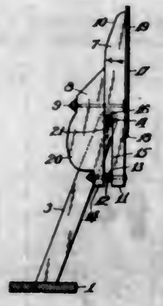
1,629,383. GAME APPARATUS. SATO HISANOSUKE, New York, N. Y. Filed Sept. 18, 1926. Serial No. 136,284. 6 Claims. (Cl. 273—10.)

1. A game apparatus including an eccentrically rotatable turntable upon which a movable member is adapted to be supported, and a series of devices adjacent the edges of the turntable into any of which the movable element is adapted to be directed by the eccentric rotation of the turntable.



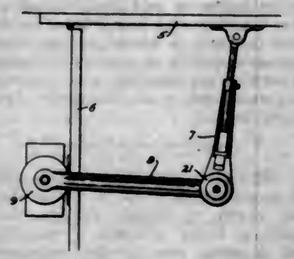
1,629,384. GAS HEATER. EARL R. HOLLAND, Mansfield, Tex. Filed Jan. 19, 1927. Serial No. 162,155. 4 Claims. (Cl. 126—134.)

1. A heater of the class described, comprising a burner, flues adjacent the burner, cold air conduits communicating with the flues, ducts in communication with the flues said ducts serving to discharge heated air therefrom, a water containing tank adjacent the burner, and a manifold in communication with the tank and ducts.



1,629,385. NAIL-SORTING DEVICE. OLIVER H. HOVDA, Billings, Mont. Filed Mar. 1, 1926. Serial No. 91,555. 2 Claims. (Cl. 209—102.)

1. A nail sorting device comprising a slotted framework having angle strips for diverting the nails to the slots, and a series of superposed belts having their adjacent runs disposed in the slots, the adjacent runs of the

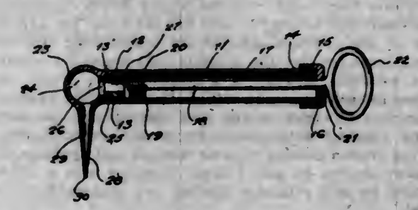


belts being spaced apart in graduated scale, said belts having upper beaded edges to receive the heads of the nails.

1,629,386. GAME APPARATUS. SAMUEL HUMMERSON, Clay Township, Carroll County, Ind. Filed Sept. 30, 1926. Serial No. 138,752. 5 Claims. (Cl. 273—102.)

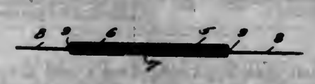
1. A game apparatus including a horisontal shaft, means to support the shaft, and a figure plate provided with a holder having a shifting pivotal connection with the shaft permitting overturning and vertical shifting of the holder.

1,629,387. DOOR HOLDER. NORMAN B. HURD, New Britain, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a Corporation of Connecticut. Filed Sept. 16, 1926. Serial No. 135,781. 8 Claims. (Cl. 16—65.)



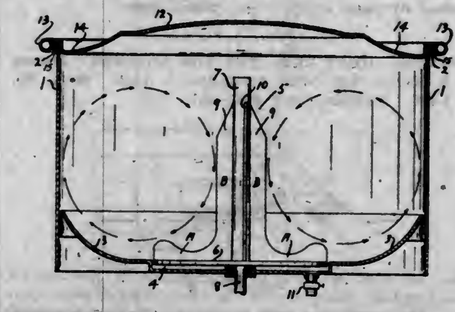
1. In a door holder, a pair of arms pivotally connected to each other, one of said arms having two arcuate cam surfaces on one side thereof, and wedging means coacting with said cam surfaces for limiting the swinging movement of said arms.

1,629,388. SEALED PADLOCK. ARTHUR C. JACKSON, Philadelphia, Pa., assignor to The Yale & Towne Manufacturing Co., Stamford, Conn., a Corporation of Connecticut. Filed Nov. 17, 1925. Serial No. 69,649. 2 Claims. (Cl. 70—97.)



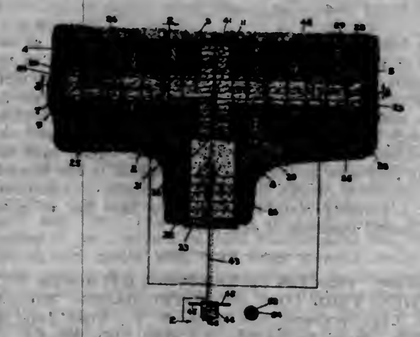
1. The combination in a padlock, of a casing having slotted front and back plates; a slotted locking-bolt and a slotted tumbler, the slots in said locking-bolt and tumbler being in line with the slots in the casing when the bolt is in the locking position; and a sealing band extending trough the casing slots and engaging the bolt and the tumbler.

1,629,389. FOUNTAIN COMB. ALBIN H. JOHNSON, Chicago, Ill. Filed Mar. 17, 1926. Serial No. 95,876. 1 Claim. (Cl. 132—13.)



In a device of the class described including a body defining a chamber, teeth formed integral with said body and depending laterally therefrom defining tapered passages in communication with said chamber, a handle comprising a barrel and having a reduced end portion externally threaded for threaded engagement with said body and provided internally with passage communication between said barrel and chamber, substantially as shown, said handle extending at lateral right angles to the body intermediate the extremities thereof, means comprising a piston and plunger snugly slidable lengthwise in said barrel, and oppositely disposed cup washers comprising said piston.

1,629,390. END-LOCKED SANITARY NAPKIN. ROBERT W. JOHNSON, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Dec. 29, 1925. Serial No. 78,187. 1 Claim. (Cl. 128—290.)

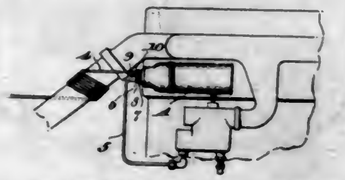


A single use sanitary napkin, comprising top and bottom gauze strips joined by transverse lines of stitching to provide a pad pocket open on two sides, the strips being continued to provide attaching means, and a pad adapted and arranged to be retained in said pocket without positive connection to the strips whereby it is capable of ready disposal.

1,629,391. WASHING MACHINE. CHARLES THOMAS KEMP and NORMAN EDWARD RYCKMAN, Hamilton, Ontario, Canada, assignors to The Coffield Washer Company of Canada Limited, Hamilton, Ontario, Canada. Filed May 3, 1926. Serial No. 106,490. 3 Claims. (Cl. 259—101.)

1. An agitator for a washing machine comprising a flat disc like base, a central standard upstanding axially therefrom, four fins, each fin comprising a lower portion upstanding from the base and an upper portion projecting laterally from the standard, the marginal edges of the lower portions merging into those of the upper portions, said fins disposed in opposed pairs about the agitator, the fins of each opposed pair being similar and lying in parallel planes perpendicular to the planes of the other opposed pair, and the planes of each opposed pair offset laterally on opposite sides of the diametrical plane parallel to said pair, the lower upstanding portions of all fins being similar and of concavo-convex profile with the convex portions outermost, the upper portions of one opposed pair being of substantially uniform lateral width throughout the greater portion of their height and the upper portions of the other opposed pair being of uniformly decreasing lateral width throughout their height, the upper portions of all the fins merging into the standard at substantially the same height thereon.

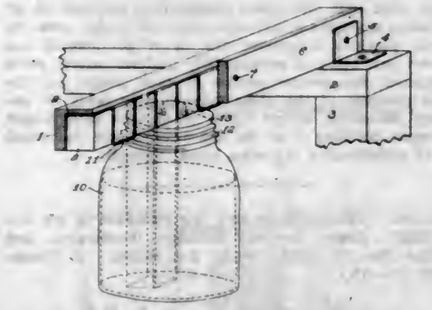
1,629,392. STORAGE PLANT TO PRESERVE BY NATURE. JAMES BALLARD KILLION, Washington, Ind. Filed Feb. 19, 1926. Serial No. 89,855. 12 Claims. (Cl. 72—11.)



9. A potato storage comprising an earth enveloped structure having a storage room floor and an irrigating floor under same; elevated bins for the potatoes, having

ventilated bottoms in conjunction with said storage room floor thru which the atmosphere rises by natural draft action, said storage room floor being otherwise draft tight to concentrate the atmospheric movement thru said bottoms.

1,629,393. COMPOSITION FOR USE IN MAKING SULPHATE OR KRAFT PULP AND PROCESS OF MAKING SAME. HERMAN B. KIPPER, Muskegon, Mich. Filed Nov. 26, 1924. Serial No. 752,465. 8 Claims. (Cl. 92—9.)

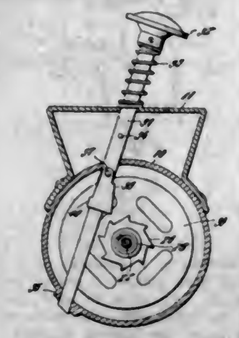


1. A composition for making kraft pulp comprising sodium hydrogen sulphate and "fished salts."

1,629,394. HEAT RETAINER FOR ENGINES. JOSEPH B. KITCH, Ely, Nev. Filed Jan. 9, 1925. Serial No. 1,466. 5 Claims. (Cl. 257—241.)

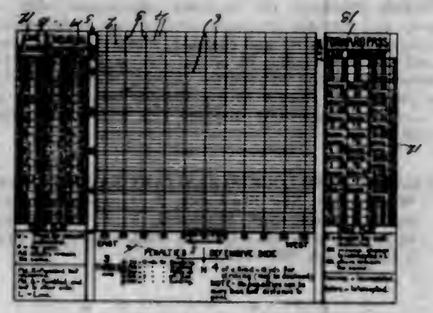
1. The combination with an internal combustion engine, and a source of fuel supply communicating therewith, of means for heating the fuel passing to the engine, and heat insulated means for receiving and retaining the heated fuel when the engine has stopped for use in assisting the starting of the engine.

1,629,395. VERMIN-DESTROYING HENROOST. JOSEPH KYLE, Greene, Iowa. Filed Oct. 16, 1926. Serial No. 141,922. 1 Claim. (Cl. 119—25.)



A roost bar having a longitudinal kerf opening at one side of the bar near its top and extending nearly to the opposite side, said bar having numerous transverse kerfs opening at the under face of the bar and opening upwardly into said longitudinal kerf, a porous wick-strip threaded through said communicating kerfs through the bar, and depending into a supply of vermicidal liquid, said bar being porous to be saturated by the liquid in the contacting wickstrip drawn thereinto by capillary attraction, and a covering plate mounted upon said bar to cover the lateral openings of said kerfs.

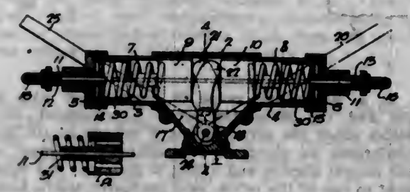
1,629,396. PROCESS OF REMOVING HYDROGEN SULPHIDE FROM COAL OR WATER GASES. WILLIAM E. LEUCHTENBERG, New York, N. Y. Filed July 20, 1925. Serial No. 44,925. 5 Claims. (Cl. 23—4.)



2. In a process for removing hydrogen sulphide from coal or water gases by treating the gases with an alkali carbonate solution to absorb the hydrogen sulphide, then activating the solution containing the hydrogen sulphide by passing the foul solution counter to a flow of air, the improvement which consists in removing the hydrogen sulphide from the air by passing the air through a body of iron oxide moving in the opposite direction.

1,629,397. HEADLIGHT-CONTROL SWITCH. EDWARD LEWIS and HARRY LEWIS, Chicago, Ill. Filed Feb. 13, 1926. Serial No. 88,089. 2 Claims. (Cl. 200—6.)

1. In a switch device of the character described, a cylindrical casing of metal having its ends closed with heads of insulating material, a shaft extending centrally through both heads and arranged longitudinally of the casing, a plurality of contact members carried by one head, a disk of insulating material rotatably mounted upon said supporting shaft and carrying contacts adapted to coact with said first-named contacts, spring means surrounding said shaft and bearing against one head and the adjacent end of the rotatable member for maintaining frictional engagement between the contacts, and means for rotating said rotatable member to a predetermined extent, said means comprising a supporting member secured exteriorly upon the cylindrical casing, said support and the casing being provided with openings arranged in alinement, a spring pressed plunger slidable through said openings, and a pawl pivoted on said plunger, together with a ratchet carried by said rotatable member and engageable by the pawl.



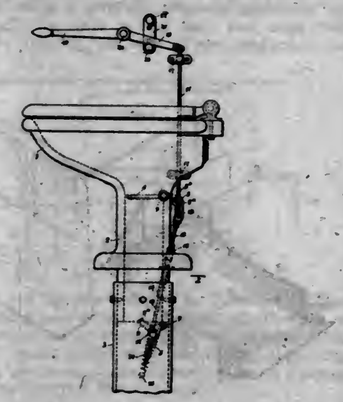
1,629,398. FOOTBALL GAME. THEODORE A. LINK, Chicago, Ill. Filed July 31, 1926. Serial No. 126,248. 1 Claim. (Cl. 273—94.)

A foot ball game board comprising a field having longitudinally and transversely disposed yard lines, one end of said board being the offensive end, and the other end of the board the defensive end, drop kick and goal columns at one side of the offensive board and under sub titles of

west, center and east, numbers beside said items of the columns punt and kick and return, and punt kick off columns at the offensive side of the board and having various values thereunder in an east and west and center relation to the board, said values being numbered, forward pass values under east, center and west columns at one side of the defensive portion of the board and having numbers beside the same, line plunge and end run values east and west and center at the opposite side of the defensive portion of the board, said values being numbered, the numbers of the values corresponding with the possible throws of a predetermined number of dice.

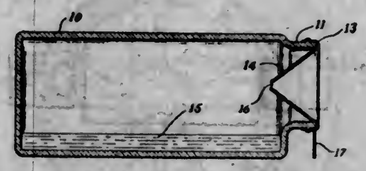
1,629,399. SPRING CONSTRUCTION. HARRY G. LORD, Philadelphia, Pa. Filed Jan. 14, 1922. Serial No. 529,107. 15 Claims. (Cl. 267—20.)

8. The combination of a casing; two spindles journalled therein; two plungers guided in the casing; springs operative on the plungers; cam arms fixed to the spindles respectively and projecting between the plungers; with load-supporting arms connected to the spindles.



1,629,400. AUTOMOBILE SEMAPHORE SIGNAL. CLINTON C. LOVEJOY, Long Island City, N. Y. Filed Sept. 2, 1926. Serial No. 133,240. 4 Claims. (Cl. 116—51.)

1. A semaphore signal for automobiles, including a signaling arm adapted to normally lie flat against the top of the automobile, and means for moving said arm to signaling position, said means including a rotatable element to which the arm is connected, the arm being disposed at approximately an angle of 135° to the plane of the rotatable element, and the rotating element rotating in a plane of approximately 45° to the roof of the car whereby rotation of the element through 180° swings the signaling arm from its normal inoperative position to vertical position.

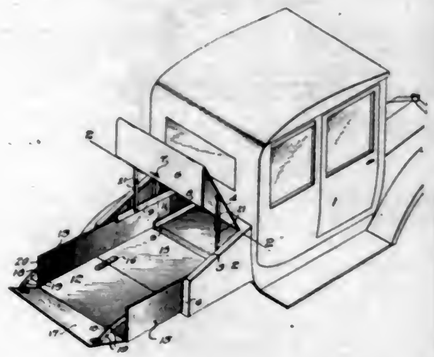


1,629,401. SANITARY ODORLESS TOILET. JAMES H. MCCALL, Huntingdon, Tenn. Filed Dec. 19, 1923. Serial No. 681,613. 2 Claims. (Cl. 4—8.)

1. In a toilet having a pair of pivoted cups controlling the outlet thereof, means for operating said cups whereby one cup is closed after which the other cup is opened, comprising cams connected to the respective cups, and a pivotally jointed rod, means for individually guiding

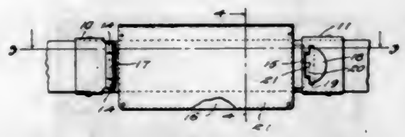
the sections to reciprocate longitudinally, said rod sections being provided with projections which cooperate individually with the respective cams.

1,629,402. TRAP. CARL MARCH, Chicago, Ill. Filed Sept. 8, 1926. Serial No. 134,317. 1 Claim. (Cl. 43—121.)



An insect trap comprising a jar of uniform diameter throughout the major portion of its length, and including a transparent portion and a roughened substantially opaque portion, said receptacle being adapted to be partly filled with liquid, a reduced neck formed on one end of the jar, a cap threaded on said neck and formed with a conical-shaped portion projecting within the jar and having an elongated slot along the reduced end thereof, and a wall depending from said cap at a right angle to said neck and terminating flush with one side of the jar to repose upon the support upon which the jar is mounted.

1,629,403. CONVERTIBLE VEHICLE BODY. CARL ANTON MARWAHN, Oshkosh, Wis. Filed Apr. 10, 1924. Serial No. 705,696. 2 Claims. (Cl. 296—26.)

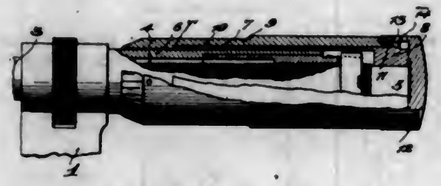


1. An extension body for motor vehicles having a rear storage compartment including side walls, comprising longitudinally extending guides adapted to be secured to the inner portions of the side walls of the storage compartment, said guides being provided with flanges at their upper and lower edges, and an auxiliary truck body adapted to be arranged in said compartment and slidable in said guides, said body being movable inwardly wholly within said storage compartment to inoperative position and movable rearwardly to partially extend outwardly from the storage compartment in an operative position, said body comprising a bottom and side walls, and an auxiliary bottom hinged at its rear end to the forward end of said bottom and normally forming a continuation thereof when said truck body is in operative position, a portion of the forward end of said bottom

when in operative position being arranged to contact with one of said lower flanges to prevent inward sliding movement of said truck body, said auxiliary bottom being

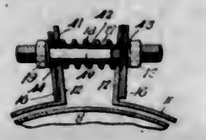
adapted to swing rearwardly to a position wholly above said first named bottom to permit said truck body to slide inwardly to inoperative position.

1,629,404. POCKET ATTACHMENT FOR BELTS. FRANK P. MITCHELL, Wilmington, Ill. Filed June 26, 1926. Serial No. 118,773. 6 Claims. (Cl. 224—26.)



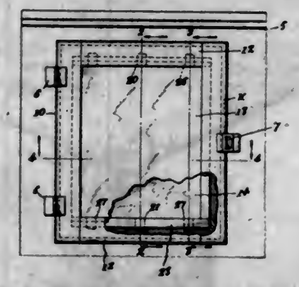
2. In combination with a belt, a plate hinged thereto and swingable about the hinges thereof to place either face of the plate in opposition to the belt, a pocket formed upon one face of the plate and means for locking the free end of the plate to the belt with said face of the plate in opposition to the belt.

1,629,405. HANDLE FOR ASSEMBLING PARTS OF ELECTRIC FIXTURES. HENRY T. PAISTE, Philadelphia, Pa., assignor to H. T. Paiste Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1924. Serial No. 703,201. 2 Claims. (Cl. 29—84.)



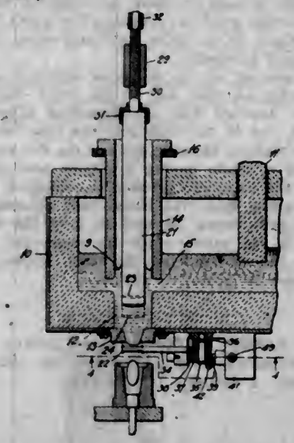
1. A handle for assembling parts of an electric lamp socket, said handle being tubular in form to receive the shell of a lamp socket, and having means for holding the shell of a socket while being applied to the cap of a socket.

1,629,406. MICROMETER GAUGE. JOHN W. PARKER, Barrington, R. I., assignor to Brown & Sharpe Mfg. Co., Providence, R. I. Filed Aug. 6, 1926. Serial No. 127,558. 3 Claims. (Cl. 33—164.)



1. In a micrometer gauge in combination with the barrel and the measuring screw a graduated sleeve rotatable about the barrel having a cut-out on its inner circumference, an elongated tube abutting the inner end of the cut-out portion and a ring at its outer end rigidly secured to end of the screw, said graduated sleeve having a peripherally reduced and exteriorly threaded outer end and a cap engaged over the threaded end of the sleeve for frictionally locking the latter onto the ring of the tube.

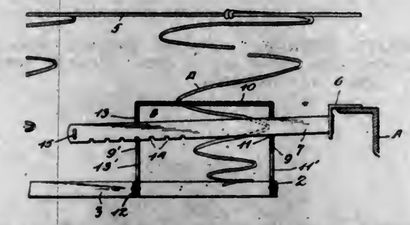
1,629,407. WHEEL BRAKE. ALEXANDER PATUS and LOUIS NAGY, South Bend, Ind., assignors of one-third to N. E. May, South Bend, Ind. Filed Nov. 26, 1924. Serial No. 752,326. 1 Claim. (Cl. 188—194.)



In a brake for the steering wheels of automobiles, a wheel, a brake drum carried thereby, a stub axle supporting the wheel, a disk plate associated with the drum and through which the stub axle extends, a split brake band enclosing the drum and having apertured end extensions, a bolt passing through the apertures of the end extensions, said bolt including an inner rod section having one end threaded and the remaining end provided with a transverse pin, an outer tubular section having a flanged end associated with the threaded end of the rod section and its remaining end externally threaded and associated with the remaining end of the rod section, the tubular section having diametrically opposed longitudinally extending slots within which the ends of said transverse pin are slidably arranged, and a nut on each threaded end; a pair of pivoted cross levers each having at one end a lateral extension which is apertured for the reception of said bolt and also being associated with the band ends, and manually controlled devices associated with the free ends of the cross levers to cause the lateral extensions of the same to shift the band extensions toward each other and move the band into engagement with the drum.

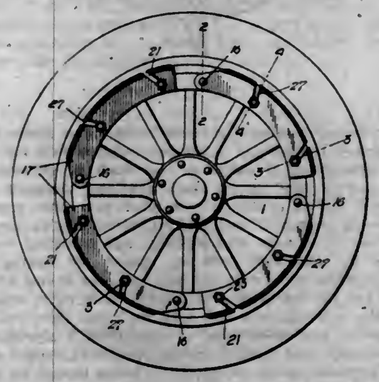
1,629,408. REFRIGERATOR DOOR. ALBERT ROGERS PEACOCK, Rome, Ga. Filed Jan. 17, 1925. Serial No. 3,091. 3 Claims. (Cl. 62—37.)

1. A refrigerator door comprising a door frame, a plurality of panes of glass mounted in said door in spaced relation with compartments therebetween, and means for permitting circulation of air from the interior of the refrigerator to said compartments.



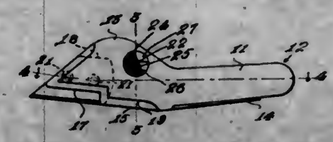
1,629,409. APPARATUS FOR SEPARATING MOLTEN GLASS INTO MOLD CHARGES. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 7, 1922. Serial No. 541,689. 11 Claims. (Cl. 49—55.)

3. In apparatus for segregating molten glass in mold charges, the combination of a container for the glass having a submerged discharge outlet, a member having a tubular end projecting into the glass in substantial alignment with the outlet and adjustable to different stationary positions, leaving a permanently open annular adjustable passage for the flow of glass to the outlet to regulate the weight of the mold charges, a plunger extending permanently past the said passage for effecting the periodic discharge of the glass admitted through the passage, and means for reciprocating the plunger to move its lower end toward and from said outlet from a position below the said passage.



1,629,410. ADJUSTABLE SUPPORT FOR BED BOTTOMS. CORNELIUS B. PLATT and WILLIAM S. BROWN, Carthage, Mo. Filed Nov. 2, 1923. Serial No. 672,302. 2 Claims. (Cl. 5—209.)

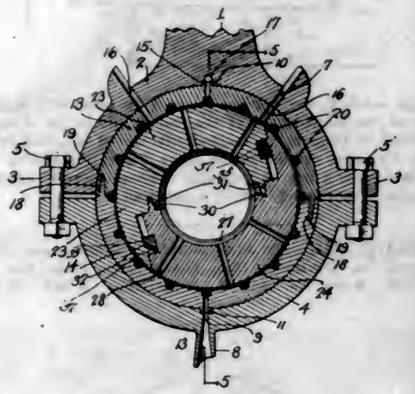
1. The combination with a bed bottom frame, of adjustable means for supporting the same in a bedstead consisting of an upwardly extending frame rigidly secured to the bed bottom frame and formed of a pair of narrow vertical bars spaced apart and united at their upper ends by a connecting piece, the bars having formed in them narrow vertical slots, a vertically disposed supporting bar passing through the slots in the bars and being held against turning thereby, one edge of the supporting bar



being notched, the notches adapted to selectively engage one of the slotted bars at the end of one of the slots to prevent it from being accidentally moved longitudinally, and a bracket carried at the outer end of the slotted bar formed with a flat horizontally disposed member adapted to rest upon the side rail of a bedstead.

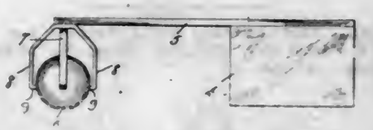
1,629,411. RIM. CHARLES JOSEPH RABIDOUX and WILLIAM M. EINHORN, Blue Island, Ill. Filed Nov. 5, 1926. Serial No. 146,450. 3 Claims. (Cl. 301—35.)

1. A tire carrying rim comprising a main section that has its inner edge formed with a depending flange, a plurality of equidistantly spaced pivotally supported levers on the flange, an auxiliary rim section having a depending flange designed to rest on the outer edge of the first mentioned flange, co-engaging means between the flanges for preventing independent circumferential movement thereof, said levers designed to be swung against the auxiliary rim section for holding both sections associated and removable locking means for the levers.



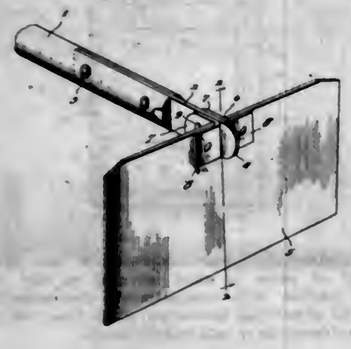
1,629,412. FUR KNIFE. KOSTA RELICH, New York, N. Y. Filed Mar. 17, 1926. Serial No. 95,889. 3 Claims. (Cl. 30—9.)

1. A knife comprising a pair of hingedly connected sections, a removable blade supported between said sections, and co-acting means between said sections engagable



when said sections are in a closed position for locking said blade therebetween, said co-acting means including a turnable member carried by one of said sections for passage through an opening in the other of said sections and for seating engagement in a recess in the outer face of said last mentioned section.

1,629,413. BEARING. CHARLES HERBERT REYNOLDS, Canton, Ohio. Filed Apr. 21, 1926. Serial No. 103,576. 1 Claim. (Cl. 308—237.)



The combination with a crank shaft and a piston connecting rod therefor, of a bearing between said rod and shaft, comprising an outer member fixed on the rod, an inner member fixed on the shaft, revoluble therewith and finding a bearing in the outer member, said outer member comprising segmental ring sections, interengaging tongues and grooves between said sections, anti-frictional rollers carried by said outer member, means for locking the outer member in the rod, said outer member having spaced ports, and the rod being also provided with ports aligning with the bearing ports and with cups that surround the said ports, said inner member comprising a plurality of ring sections, said sections having peripheral stepped overlying portions, spring influenced latching means for locking the inner bearing sections and for securing said sections on the crank shaft, and said inner bearing member having ports communicating with the center thereof and designed to register with the first mentioned ports.

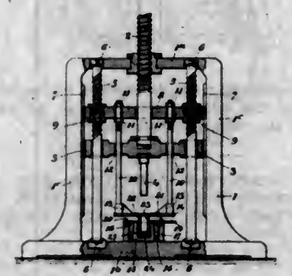
1,629,414. PAPER WEIGHT. ROY A. RIDDLE, New Orleans, La. Filed Oct. 4, 1926. Serial No. 139,450. 1 Claim. (Cl. 120—82.)

A movable paper weight arrangement, comprising a solid block, an arm projecting from said block, a downwardly projecting cage attached to said arm near the outer end thereof and provided with engaging claws, and a ball mounted in said cage and normally rotatably held therein by said claws but adapted to project beneath said claws when the said block is supported on a flat surface.

1,629,415. HOE. ALLEN H. ROGERS, Westmoreland Depot, N. H. Filed July 29, 1926. Serial No. 125,781. 2 Claims. (Cl. 97—70.)

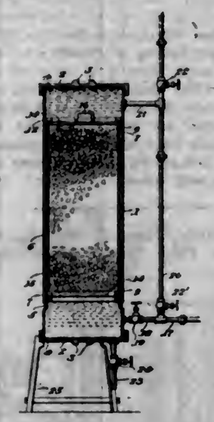
1. An implement of the character specified comprising a blade having an open slot in its upper edge portion, wings projecting from the blade in line with opposite sides of the slot, and a handle extending between the said wings and through the slot of the blade and pivoted to said wings to hold the blade substantially perpendicular to the handle when the implement is drawn rearwardly and to admit of the blade feathering when the implement is pushed forwardly.

2. An implement of the character specified comprising a blade having an open slot in its upper edge portion, angle irons disposed with corresponding wings passing through the slot of the blade and the other wings overlapping the blade at opposite sides of the slot and secured thereto, and a handle having a portion passing through the slot of the blade and between the wings of the angle irons projecting from the blade and pivoted to said wings, the parts being disposed to hold the blade perpendicular to the handle when the implement is drawn rearwardly and to admit of the blade feathering when the implement is pushed forwardly.



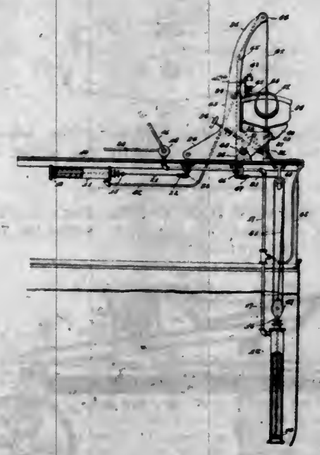
1,629,416. SAFETY RAZOR. JOSEPH ROMAN and MAX ROMAN, Brooklyn, N. Y. Filed Dec. 15, 1925. Serial No. 75,588. 2 Claims. (Cl. 30—12.)

1. A safety razor, including a blade having laterally spaced notches in its rear edge, and a holder therefor, said holder comprising a flat, wide handle portion and a transversely curved blade-supporting portion disposed at an obtuse angle from the free end of the handle, guard teeth formed at the free forward edge of the blade-supporting portion, a pair of upstanding front and side abutment lugs at the free corners of the blade-supporting portions,



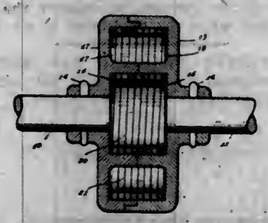
and resilient blade-engaging and retaining arms secured to the opposite side edges of the handle having hooked terminals engaging with the notched rear edge of the blade.

1,629,417. PRESS FOR PRESSING HOLLOW BRONZE OBJECTS. ALWIN SCHMITZ, Erfurt, Germany. Filed Sept. 8, 1925. Serial No. 55,114. 3 Claims. (Cl. 207—2.)



1. A press for forming hollow objects, comprising a matrix for determining the cross sectional dimension of the object to be formed, a counter-socket arranged within said matrix and adapted to rise against the pressure of the extruded material as the latter rises in the matrix under the pressure of a punch, and brake means exercising a retardative control upon the rise of said counter-socket and imposing a counter-pressure upon the extruding material so as to prevent said material from cracking and at the same time condensing it.

1,629,418. FILTER. SIDNEY L. SMITH, Pittsburgh, Pa. Filed Sept. 22, 1926. Serial No. 137,089. 1 Claim. (Cl. 210—144.)

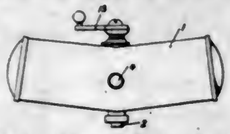


A filter of the class described comprising a casing, a screw cap closing each end thereof, a filtering medium in the casing comprising a cylinder containing filtering material, gaskets between the cylinder and the casing, a screen at each end of the cylinder, a ring fastened to each end of the cylinder for holding the screen in place, each ring having a rib and each end of the cylinder having a groove for receiving the rib and the edge of the screen and a handle on the top ring.

1,629,419. BOAT-LAUNCHING DEVICE. HENNING L. SORENSEN, Allentown, Pa. Filed Nov. 9, 1925. Serial No. 67,957. 6 Claims. (Cl. 9—22.)

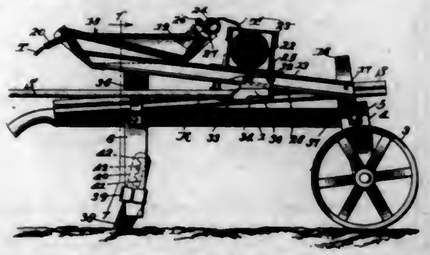
1. A boat launching device which comprises a pivoted davit supporting a boat and adapted to tilt due to the weight of the boat, fluid controlled means connected to the davit for controlling the speed of tilting and means loosely supported in the boat under the control of an operator for controlling said fluid means.

1,629,420. MULTIPLE-SPRING CLUTCH. WILLIAM CARLETON STARKEY, Indianapolis, Ind., assignor to L. G. S. Devices Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed May 25, 1925. Serial No. 32,622. 12 Claims. (Cl. 192—41.)



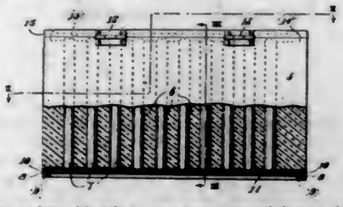
5. In combination, two relatively rotatable members, said members being provided with alined central recesses and with alined annular recesses, and two coil springs in said circular recesses and in said annular recesses respectively and adapted to engage the walls thereof so that when said two members tend to rotate relatively in a direction to unwind one of said springs such spring will expand and firmly grip the walls of its associated recesses.

1,629,421. FLUSH DEVICE FOR WATER-CLOSETS. ROBERT STICKDORN, Munich, Germany. Filed Feb. 27, 1926, Serial No. 91,126, and in Germany Mar. 7, 1925. 1 Claim. (Cl. 4—20.)



A device for controlling the flush in flush devices for water closets comprising an air reservoir adapted to communicate with the flush-pipe, a casing in said reservoir, a vertical differential piston the largest part of which is uppermost adapted to move freely in the casing and to close the communication of the air chamber on one hand with the casing and on the other with the flush pipe when it is respectively in its higher and lower position, a water supply pipe opening in the casing in front of the piston, threads provided on the

piston, a threaded spindle cooperating with the said threads and adapted to rotate without moving longitudinally, a crank controlling said piston, and means



for preventing the rotation of the piston whereby it is caused to move vertically under the action of the crank.

1,629,422. TOBACCO HARVESTER. JOHN C. TRULOVE, Shoals, N. C. Filed Oct. 20, 1924. Serial No. 744,725. 6 Claims. (Cl. 131—21.)

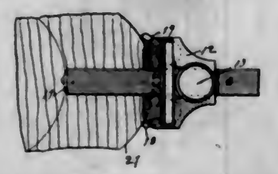
6. An implement of the character described comprising a wheeled frame including handles, legs carried by the frame extending above the handles, a trough for receiving tobacco leaves being mounted on top of said legs to space the trough above the handles, means for supporting a stick beneath the trough and in position to permit tying the tobacco leaves in bunches thereon, feet consisting of slotted and recessed plates carried by the legs, said feet having bands holding them in place on the legs, and pins on the legs occupying the slots being fitted in desired ones of the recesses to support the trough at various altitudes when the implement is set down.

1,629,423. SAFETY BLASTING-CAP BOX. ANTON TURK, Johnstown, Pa. Filed May 20, 1925. Serial No. 31,581. 2 Claims. (Cl. 206—3.)

1. A safety blasting cap box comprising a block having a plurality of vertical openings therethrough forming cap receiving wells, strips of yielding packing material secured on the top and bottom of the block and closing the ends of the wells, one of said strips being readily removable to permit opening of the wells and access to the caps, and open frames attached to the top and bottom of the block and engaging the margins of the yielding strips for securing the latter in place, one of said frames being readily movable to release the associated strip and permit opening of the wells and access to the caps.

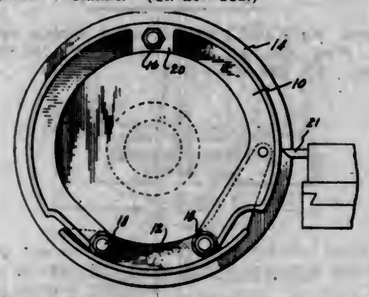
1,629,424. TOY OR DOLL HOUSE CONSTRUCTION. FLORENCE ROSENA WALKER, Marcellus, N. Y. Filed Nov. 3, 1926. Serial No. 146,060. 1 Claim. (Cl. 35—16.)

A house of the character described, comprising two hingedly connected sections each comprising a front, a back, an end and a gable roof having eaves at the ends and front of the house, the roof stopping flush with the outer face of the back in each section, and the said



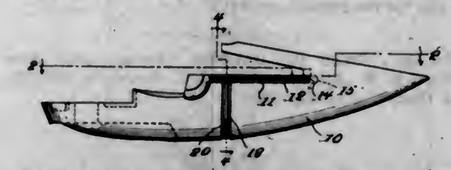
connection comprising hinges secured to the sections for movement of the sections relatively on an axis at the junction of the connected corners.

1,629,425. DIRECTION INDICATOR FOR AUTOMOBILES. RALPH WARDHAUGH, Brooklyn, N. Y. Filed Mar. 27, 1925. Serial No. 18,870. 2 Claims. (Cl. 177—329.)



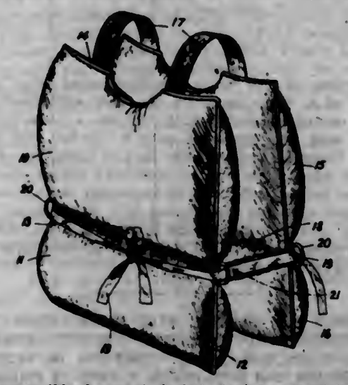
1. A casing for direction indicators for automobiles comprising a body having a plurality of arms radiating from a central point, means in each of said arms for supporting an electric lamp, a block fitted into the center of the body at the juncture of said arms, an electric lamp socket carried by said block and a plurality of contacts carried by said block, said contacts projecting to a point to be engaged by the respective center contacts of the lamps in said arms.

1,629,426. GAUGE. JOHN C. WELLER, Newark, Calif. Filed Apr. 16, 1926. Serial No. 102,497. 1 Claim. (Cl. 33—42.)



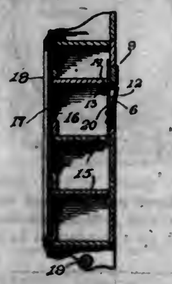
In a marker of the character described, a bar, a casting slidably positioned on said bar, a marker wheel secured to the end of said bar and extending below the lower surface thereof, a pair of freely pivoted members secured to said casting, said pivoted members being provided with arms formed at right angles to each other, said arms being adapted to contact the edge of a surface to be marked.

1,629,427. METHOD OF MANUFACTURING BRAKE SHOES. STANLEY WHITWORTH, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 15, 1926. Serial No. 148,372. 6 Claims. (Cl. 29—152.)



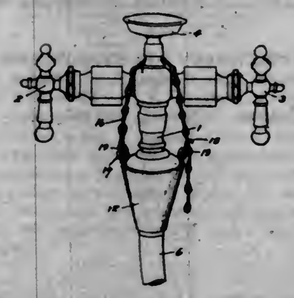
1. That method of manufacturing brake shoes which consists in casting as a unit two shoes adapted to be actuated by one cam, machining said shoes while a part of the unit and removing from the unit material approximating in extent the dimension of the cam adapted to be used to actuate the shoes.

1,629,428. SICKLE. JOHN C. ZELLER, Watford City, N. Dak. Filed June 20, 1925, Serial No. 38,494. Renewed Oct. 15, 1926. 2 Claims. (Cl. 56—311.)



1. In a mower, a guard finger, said finger having a ledger plate seat, a ledger plate, means at one end of the seat for engagement by the plate to prevent independent upward movement of said plate, means to prevent sliding movement of the plate upon the seat and means extending around the finger and detachably engaging the plate to removably hold the latter in position.

1,629,429. BUOYANT WEARING APPAREL FOR SWIMMING OR LIFE-SAVING PURPOSES. JOHN BALDWIN ADAMS, Berhampore, Wellington, New Zealand. Filed Oct. 4, 1926, Serial No. 139,523, and in Great Britain June 15, 1926. 9 Claims. (Cl. 9—17.)

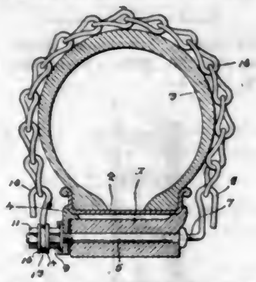


1. A reversible buoyant jacket device comprising two upper buoyant members, a lower buoyant member hingedly connected to each of said upper members, shoulder straps connecting the said upper members, and means for tying said upper members so as to leave the lower buoyant members free to swing about their connections thereto.

1,629,430. SUPPORT. ALEXANDER ALLEN, Providence, R. I. Filed July 30, 1926. Serial No. 126,056. 4 Claims. (Cl. 211—7.)

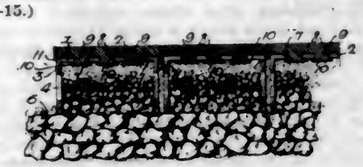
1. In combination, an article having a wall adapted to be disposed in contact with the wall of a room or the like and formed with a recess in the rear side thereof, inwardly projecting rigid flanges overlying the upper corner portions of the recess in spaced relation to the bottom wall of the latter, a bar adapted to be rigidly fastened to the wall of the room in a horizontal position and having reduced ends adapted to seat behind said flanges when the bar is seated in the upper portion of the recess, and a catch mounted in the recess and positionable to engage the lower edge of said bar for preventing its displacement in the recess from behind said flanges.

1,629,431. HOSE FASTENER. BENJAMIN W. BENNETT, San Francisco, Calif. Filed Oct. 21, 1924. Serial No. 744,990. 1 Claim. (Cl. 285—77.)



In combination, a hose terminating in a bead of increasing cross-section adapted to be slipped over the spout of a faucet, a sheet adapted to be folded around the bead so as to form a cone with overlapping edges and means for securing the near extremities of the edges to the body of the faucet causing the cone to contract and to be tightened upon the spout when the bead tends to recede, said sheet adapted to be unfolded from the bead when said securing means is released from said sheet.

1,629,432. ANTISKID DEVICE. GIUSEPPE BONACCORSE, Lawrence, Mass. Filed Feb. 28, 1925, Serial No. 12,398. Renewed Oct. 15, 1926. 1 Claim. (Cl. 152—14.)

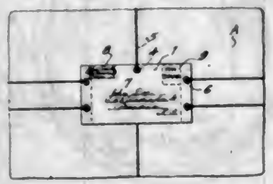


A device of the class described including a bolt having a central threaded bore, a hook having a shank at right angles thereto and threaded within said bore, a nut threaded upon the end of the bolt opposite the bore, an attaching lug loosely supported thereby, a second nut on

the bolt in alignment with the first nut, a washer between said nuts, a reduced part on the inner end of the second nut, a flange on the second nut between the body

thereof and the reduced part whereby to form a channel between the washer and said flange and a second hook member formed with an eye adapted to be mounted upon said reduced part.

1,629,433. PAVING BLOCK AND TILE. WILLIAM T. BONNER and JOSEPH W. THROPP, Trenton, N. J. Filed Mar. 10, 1923. Serial No. 624,227. 4 Claims. (Cl. 94—15.)



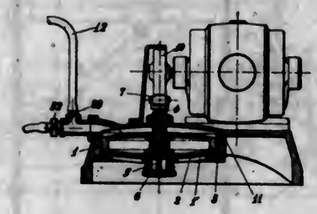
1. The combination in a paving block, or tile, of an open, flanged, metallic block, shaped to be imbedded in the face of a pavement and having perforations in its upper surface; and a series of buttoned projections extending through the perforations and engaging the block.

1,629,434. ATTACHMENT FOR HYDROMETER UNITS. LEON S. BRACH, East Orange, N. J., assignor to L. S. Brach Mfg. Co., Newark, N. J. Filed Mar. 6, 1926. Serial No. 92,666. 7 Claims. (Cl. 265—45.)

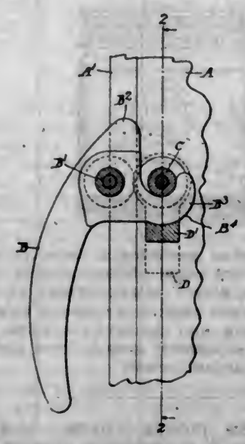
1. An attachment for a hydrometer receiving barrel comprising: a closure for one end of the barrel, a hollow stem carried by said closure and adapted to be inserted into a vessel containing a liquid, the specific gravity of which is desired to be measured, means attached to said closure and extending downwardly therefrom and a receptacle supported by said means substantially below the stem, said means being adapted to be moved so as to carry the receptacle away from its position below the stem so said stem may be inserted into said vessel.

1,629,435. PACKAGE CARD. ORUM T. BRIGGS, Indiana, Pa. Filed Aug. 27, 1924. Serial No. 734,502. 1 Claim. (Cl. 229—74.)

A shipping card comprising a blank formed of a major and a minor part, the minor part having its ends terminating short of the major part, the point of junction between the two parts scored so that one part can be folded over onto the other part to form a pocket, the outer marginal edges of each part having an eyelet, which eyelets are adapted to align when the parts are folded and the major parts having spaced eyelets at each end with all of said eyelets adapted to receive a tieing string therethrough for retaining the pocket in a closed position as and for the purpose set forth.



1,629,436. SWAB OR DAUBER. PETER CAPRI, New York, N. Y. Filed Sept. 24, 1926. Serial No. 137,539. 1 Claim. (Cl. 128—269.)



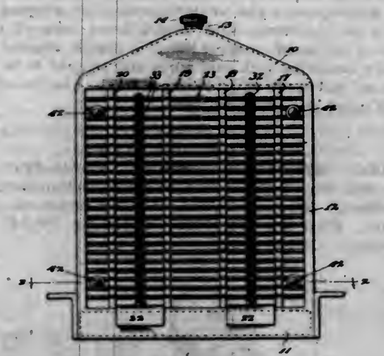
A device of the class described comprising a stem formed of a single piece of relatively stiff flexible wire having one of its ends bent to provide a hook, the other end of said wire provided with a handle, and a cone-shaped clamping jaw slidable on said stem for clamping the free edges of a wad of absorbent cotton about said stem for holding said wad of absorbent cotton over said hook, said clamping jaw formed of a single piece of wire helically wound to form said cone-shaped jaw, said wire being wound spirally about said stem substantially as and for the purpose specified.

1,629,437. APPARATUS FOR GENERATING, CONTROLLING, AND UTILIZING AIR CURRENTS. ERNESTO CURTI, Milan, Italy. Filed Dec. 28, 1923, Serial No. 683,254, and in Italy Jan. 8, 1923. 4 Claims. (Cl. 125—34.)

1. A generator for producing gas currents in different phases comprising a rotatable cam member, a cylinder, a piston reciprocating in said cylinder, a pipe communicating with the cylinder for placing the cylinder in communication with a gas operated tool, and means including the cam for moving the piston forcibly and rapidly in one direction and for moving it gradually and slowly in the opposite direction.

1,629,438. HOOK DEVICE. CHARLES W. DAKE, Chicago, Ill., assignor to The Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Original application filed Aug. 11, 1922, Serial No. 581,081, Patent No. 1,569,215, dated Jan. 12, 1926. Divided and this application filed Mar. 7, 1924, Serial No. 697,457. 2 Claims. (Cl. 292—136.)

1. In a hook device including in combination a casing and a door hinged thereto, a pin on said casing and a latch pivoted on said door and provided with a hook for engaging said pin, a locking member pivoted on said pin and adapted when in one position to engage said hook to prevent its withdrawal from the pin, the lower face of said hook member being eccentric with relation to said pin and adapted to be wedged against the inner face of said locking member when in locking position.



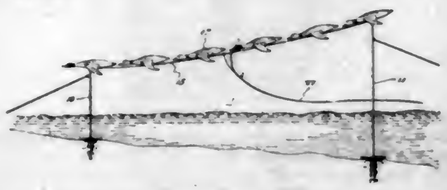
1,629,439. WINDSHIELD CONSTRUCTION. CARL E. DAWSON, Lakewood, Ohio, assignor to The Ohio Body & Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 4, 1924. Serial No. 690,341. 6 Claims. (Cl. 296—89.)

2. In automobile body construction, the combination with frame members defining the windshield opening, of a sheet metal covering for said members having its edge portion extended over the inner sides of said members and then inwardly in a plane substantially parallel with that of the windshield, an angle piece having one of its flanges underlying said extended edge portion and its other flange spaced from and substantially parallel to the inwardly extended portion of the covering to effect therewith a channel, a glass pane having its edge

within the channel, and a binder of sealing material interposed between the edge portion of the pane and the opposed walls of the channel.

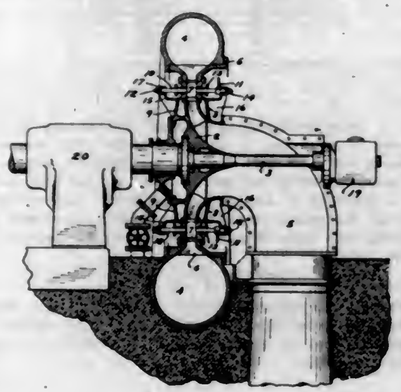
1,629,440. RADIATOR. ALBERT P. ECKHART, Shohola, Pa. Filed Feb. 18, 1925. Serial No. 10,071. 2 Claims. (Cl. 257—129.)

1. A radiator including a shell and having rows of vertical water tubes, a radiating plate unit removably fitting in the shell and formed to accommodate said tubes, and means securing the unit in position, said unit including a plurality of superposed plates, tie rods extending through the plates, and yieldable spacing members surrounding the rods between the plates and spacing the plates apart.



1,629,441. LEVER-TOP CAN. ROBERT OLIVER GEARY, Rockdale, Australia. Filed Jan. 29, 1924, Serial No. 689,289, and in Australia Feb. 17, 1923. 1 Claim. (Cl. 220—42.)

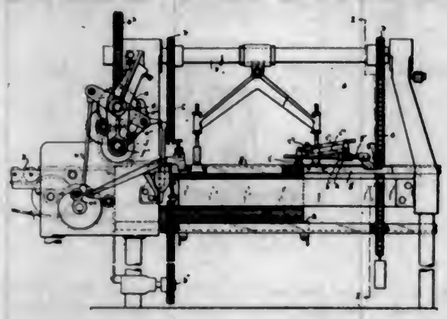
A container of cylindrical form, comprising a body, a top of circular form secured to the upper edge of said body, and formed with a central circular aperture, said top being also formed with an annular channel between said aperture and the outer edge of the top, the bottom of said channel inclining upwardly towards the centre of the top of the container, said top having also a down turned flange constituting the wall of said aperture, and a dished cap fitted within said down turned flange and having a



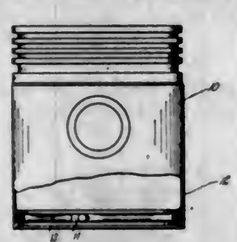
horizontal flange extending partly over said annular channel, the bottom of said channel being formed with radially disposed and upwardly pressed deformations extending under the flange of the cap to resist buckling of the top under pressure required to force the cap into the aperture.

1,629,442. FLYING-DUCK DECOY. JOSEPH R. GEISINGER, Grand Island, Nebr. Filed Sept. 22, 1923, Serial No. 664,298. Renewed Oct. 18, 1926. 2 Claims. (Cl. 43—3.)

2. A decoy comprising a supporting structure including spaced parallel strands of wire arranged on an inclined plane, a plurality of images representing ducks or geese mounted on said wires to afford the appearance of flying downwardly and about to light, means for securing said images to the wires, said images being adapted to be actuated by wind pressure, and a flexible element terminally connected with said wires and adapted to be used to cause movement of said images in the absence of sufficient wind for this purpose.



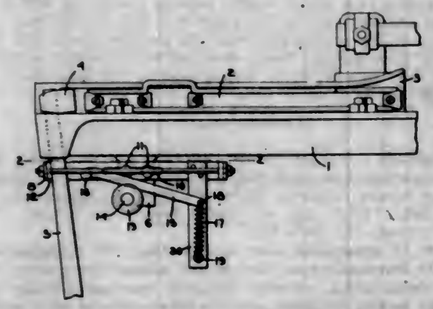
1,629,443. HYDRAULIC TURBINE. ARNOLD PFAU, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 31, 1922. Serial No. 548,543. 14 Claims. (Cl. 253—122.)



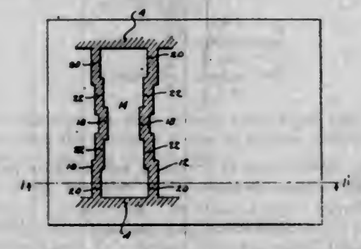
1. In a turbine, a movable guide vane, a movable stem supporting said vane, and a stationary stay bolt longitudinally penetrating said movable stem, said stem functioning to support said vane independently of said stay bolt.

1,629,444. SHEET-FEEDING MECHANISM. LESLEY R. TUTTS, Cleveland, Ohio, assignor to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 13, 1925. Serial No. 22,659. 2 Claims. (Cl. 271—18.)

1. In sheet feeding mechanism of the class described, the combination with a sheet-supporting table, means for vertically adjusting the same from time to time, and a rearwardly positioned drag, comprising terminally pivoted links, a drag-member pivoted at the free ends of said links, and an adjustable weight associated with said drag, substantially as set forth.



1,629,445. METHOD OF BALANCING PISTONS. CORNELIUS W. VAN RANST, Detroit, Mich. Filed July 7, 1925. Serial No. 41,997. 14 Claims. (Cl. 74—108.)



1. The process of producing a piston having a predetermined standard weight which consists in forming the piston below the desired weight, forming an engageable member on the piston adapted to support a weight member and then engaging with the said engageable member a weight member of sufficient mass to bring the piston up to the desired standard weight.

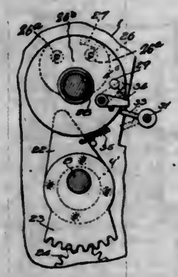
1,629,446. LOOM PICKER CHECK. NEM WILLIAM BRANNON, Greer, S. C., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 10, 1926. Serial No. 147,399. 4 Claims. (Cl. 139—165.)

1. A loom picker check comprising a picker loop mounted to be reciprocated bodily longitudinally on the lay by the picker stick and a lever and a lever engaging abutment located the one on the lay and the other on the picker loop and forced together to produce an accelerated braking action during the latter portion of the outward movement of the picker loop and a quick release during the latter portion of the inward movement of the picker loop.

1,629,447. FURNACE. OTTO DE LORENZI, Maplewood, N. J., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,404. 5 Claims. (Cl. 110—1.)

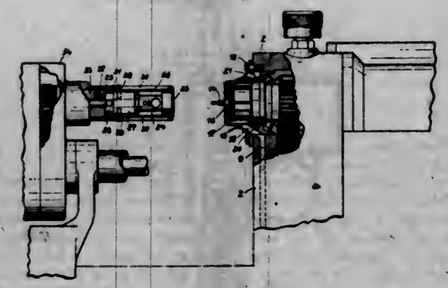
1. A boiler furnace having a combustion chamber having longitudinally extending side walls, and a roof having a relatively narrow gas pass extending transversely thereof and leading to the boiler, and increasing in width from substantially its center toward said side walls.

1,629,448. PROCESS OF MAKING LIGNO-TANNING MATERIAL FROM WASTE SULPHITE LIQUOR. VIGGO DREWSEN, Brooklyn, N. Y., assignor to West Virginia Pulp & Paper Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 14, 1919. Serial No. 277,094. 7 Claims. (Cl. 149—4.)



1. The process of producing a tanning material, comprising cooking waste sulphite liquor with lime at a temperature of about 130° C. until the ligno sulphonic components of the sulphite liquor are partly desulphurized and the sugary components of the sulphite liquor are converted into organic acids, with the formation of a complex precipitate, percolating carbon dioxide through the mass until it is neutralized, thereby precipitating calcium carbonate and calcium sulphite and redissolving various organic precipitated constituents, filtering to remove the precipitate, concentrating and treating the filtrate with an amount of sulphuric acid equivalent to its calcium content, thereby precipitating calcium sulphate and forming a soluble tanning material comprising ligno sulphonic acid in combination with organic acids.

1,629,449. VALVE-OPERATING DEVICE. GEORGE BETHUNE DUFFIELD, Detroit, Mich., assignor to Detroit Lubricator Company, of Detroit, Mich, a Corporation of Michigan. Filed Aug. 25, 1926. Serial No. 131,340. 14 Claims. (Cl. 251—45.)

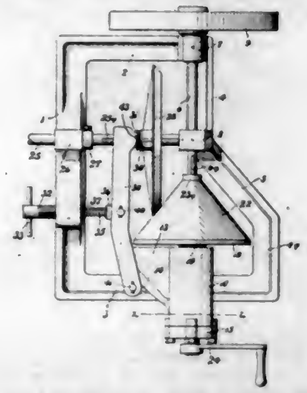


1. A device of the character described comprising a valve stem, a cap-piece on said stem and having a transverse bore, a handle member seated in said bore, and a fastening device extending through said cap-piece and engaging said member and stem to secure said member to the stem.

1,629,450. ENVELOPE FEEDER. CLAUDE L. POST, Chicago, Ill. Filed Mar. 19, 1924. Serial No. 700,403. 10 Claims. (Cl. 101—233.)

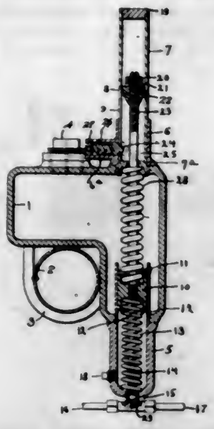
1. The combination with a pair of rolls, of means for separating said rolls whenever there is no material being fed thereto, a rotatable cam for actuating said separating means, yielding means for bringing said cam into a position wherein it will actuate said separating means, and means outside of said rolls and controlled by the material passing to said rolls for preventing said yielding means from bringing said cam into said position.

1,629,451. LUBRICATION FOR SCREW MAKING AND TURNING LATHES. LORENZ KONRAD BRAREN, Munich, Germany, assignor to the Firm Friedrich Beckel, Fabrik für Präzisionsmechanik und Maschinenbau, Munich, Germany. Filed June 9, 1924, Serial No. 718,724, and in Germany July 2, 1923. 9 Claims. (Cl. 29—53.)



1. In a lubricating system, a holder for a work piece, a casing surrounding the holder including an end wall having an opening slightly larger than the work piece through which the latter is adapted to project, a lubricant supply source, and a pump adapted to force the lubricant to said casing and axially therefrom through said opening in a relatively thin stream upon that portion of the work piece projecting from the casing.

1,629,452. FRICTION DRIVE MECHANISM. ALFRED A. DENNIS, Grand Rapids, Mich. Filed Oct. 20, 1925. Serial No. 63,583. 5 Claims. (Cl. 74—26.)



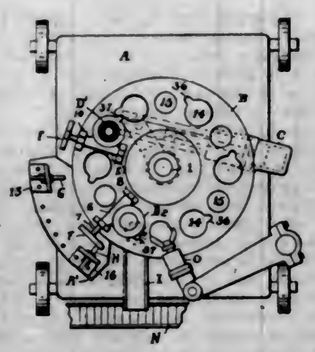
1. In combination, a driving shaft, a driven shaft, a cone pulley splined on the driving shaft, a cone pulley splined on the driven shaft and frictionally engaging the first pulley, means for shifting the said pulleys on their shafts for changing the speed of the driven shaft with respect to the speed of the driving shaft, a member mounted to bear against the driven pulley to force

it into frictional engagement with the driving pulley, spring means acting on said member and means shiftable with the driving pulley against which the member bears

for maintaining the force of the spring against said member constant at all positions of the pulleys with respect to each other.

1,629,453. AUTOMOBILE CHASSIS-LUBRICATING DEVICE. FREDERICK H. GLEASON, New York, N. Y. Filed Sept. 6, 1921. Serial No. 498,740. 16 Claims. (Cl. 184—7.)

14. A lubrication system for chassis bearings comprising such bearings, a reservoir for lubricant, a piping system connecting the reservoir to such bearings, a cylinder adapted to receive lubricant from the reservoir, a piston movable in the cylinder, a spring constituting the sole means for actuating the piston to expel lubricant from the cylinder through said piping system to the bearings, and a member for compressing the spring whereby the latter will actuate the piston to expel lubricant.

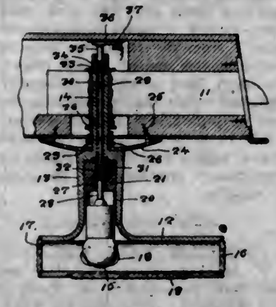


1,629,454. LATCH KNITTING NEEDLE. HARRY E. KATZENMOYER, Rosedale, Pa., assignor, by mesne assignments, to The Torrington, Company, Torrington, Conn., a Corporation of Connecticut. Filed Nov. 18, 1925. Serial No. 69,773. 3 Claims. (Cl. 66—121.)

1. A latch knitting needle comprising a shank formed with a latch-pivoting jaw and having a reduced extension with a hooked end, and a pivoted hook-closing latch adapted to provide a substantially straight line loop escaped guide, the portion of said extension which is adjacent to said latch-pivoting jaw being spaced away

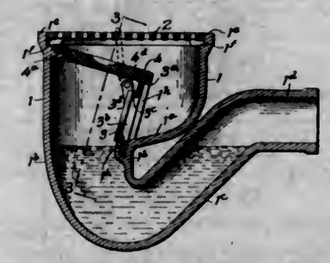
from the closed latch to provide a substantially parallel-sided yarn space between them adjacent their intersections.

1,629,455. GLASS-FABRICATING APPARATUS. WILLIAM J. MILLER, Swissvale Borough, Pa., assignor, by mesne assignments, to William J. Miller, Inc., Swissvale, Pa., a Corporation of Delaware. Filed Sept. 10, 1923, Serial No. 661,812. Renewed Dec. 3, 1926. 15 Claims. (Cl. 49—35.



1. In a machine for fabricating articles of glass, the combination of a movable mold support provided with an aperture for the downward discharge therethrough of the fabricated article, a mold hingedly mounted on said support in such a manner that it may be inverted into registration with said aperture for discharging the article, means for inverting said mold after each fabricating operation, and means for returning the mold to its upright position before the next fabricating operation.

1,629,456. PARKING LIGHT. JOSEPH A. PELLEGRINI, Pittsburgh, Pa. Filed Oct. 23, 1925. Serial No. 64,426. 2 Claims. (Cl. 240—7.)

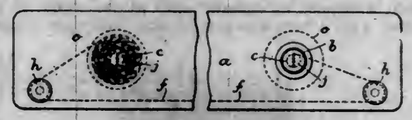


1. In combination with a door lock, a door handle comprising a hollow grip having glass covered openings therein and a hollow shank extending from the grip, a sleeve carried by and extending into the lock and adapted to operate the latter when the handle is operated, an insulated sleeve extending through the shank carried sleeve, a contact pin arranged within and insulated from

the shank, an electric bulb located within the handle and engaging the contact pin, a second contact pin carried by the door and extending into the insulated sleeve and

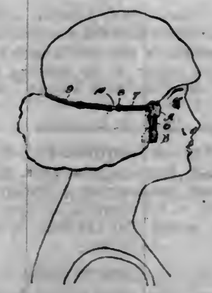
means engaging the door carried contact pin and extending through the insulated sleeve to provide electrical connection between the contact points.

1,629,457. COMBINED FLOOR-DRAIN AND BACK-PRESSURE WATER TRAP. WILLIAM V. BULMAN, Philadelphia, Pa. Filed Dec. 14, 1925. Serial No. 75,309. 2 Claims. (Cl. 182—15.)



1. A combined drain and trap, comprising a body portion having an open upper end; a trap extending from the lower end of said body, the inlet to said trap being offset from the vertical axis of the body; a flange in said body over the trap inlet; a transversely disposed partition in the said body connecting with the ends of the flange, the upper edge of the partition lying in the plane of the face of said flange; said partition having a slot, and the edges of said slot being grooved; a valve plate in said slot having its edges packed into the grooves, the upper edge of the valve plate forming a continuation of the upper edge of the partition; and a cover removably seated on the flange, partition, and plate.

1,629,458. AUTOMOBILE MIRROR. BERN JASSEN, Brooklyn, N. Y. Filed Nov. 3, 1923. Serial No. 672,523. 14 Claims. (Cl. 45—97.)



1. A device of the character described comprising a supporting member, mirrors carried by said member, and means associated with said member for mounting said mirrors whereby each can be independently adjusted with respect to the other on substantially vertical and horizontal axes.

1,629,459. MEMORANDUM APPLIANCE. WILLIAM LIONEL JENKINS, London, England. Filed Oct. 27, 1926. Serial No. 144,420, and in Great Britain Nov. 2, 1925. 2 Claims. (Cl. 2642—68.)

1. A memorandum appliance comprising a casing, a pair of winding rollers rotatably mounted in the casing, a band of paper adapted to be wound from one roller on to the other, idle rollers rotatably mounted in said casing over which the band of paper passes and is guided thereby part of the band being exposed and lying flat on the face of the casing, the said winding rollers being of a spindle-like form made in two longitudinal pieces between which the ends of the band of paper is held, the ends of the said two longitudinal pieces being tapered and located and held together by cup-shaped sockets, one of said sockets for each roller being mounted on the casing and the other on an axially-movable spring-pressed winding spindle positioned in and passing through the casing.

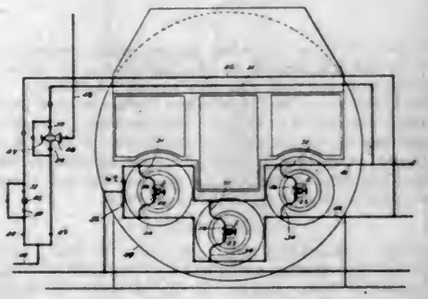
1,629,460. FACIAL-WRINKLE-REMOVING DEVICE. HARRY A. SKINNER, New York, N. Y. Filed Dec. 20, 1924. Serial No. 757,291. 2 Claims. (Cl. 128—76.)

1. In a wrinkle removing device, which comprises a pair of patches adapted to be disposed closely adjacent each other on the flesh and each having a foundation surface of cloth or fabric, an adhesive surface on each patch, resilient connections between said patches, a resilient connection to one of said patches having a loop in its end, and a band of resilient material adapted to pass around the head of the user, a hook on the end of said band adapted to be connected to said loop.

1,629,461. CHEWING GUM. WILLIAM H. BERG, South Orange, and RAYMOND C. WHITMAN, Chatham, N. J., and ERNEST F. AAB, Astoria, N. Y., assignors to Health Products Corporation, Newark, N. J., a Corporation of New Jersey. Filed Apr. 22, 1926. Serial No. 103,969. 5 Claims. (Cl. 99—16.)

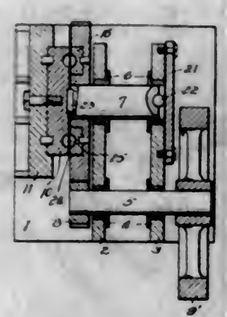
1. A chewing gum comprising a chewing gum base having incorporated therein a medicinal preparation in the form of pellets distributed in a substantially uniform manner throughout the chewing gum base.

1,629,462. WINDING FOR ELECTRICAL APPARATUS. KONSTANTIN K. PALUEFF, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 18, 1926. Serial No. 149,263. 2 Claims. (Cl. 175—356.)



1. An electrical apparatus winding comprising a layer of at least four parallel connected strands, said strands being transposed at three points along the winding, two

of the transpositions being alike and of one type and the third transposition being of a different type and located between said first two transpositions, one of said types of transposition comprising a transposition of the two groups of strands at opposite sides of the center of the winding and a transposition of the individual strands



of each group to reverse their relative positions in the winding, and the other of said types of transposition comprising a transposition of the two groups of strands at opposite sides of the center of the winding with the relative positions of the individual strands of each group unchanged.

1,629,463. SYSTEM OF LIQUID-FUEL-SUPPLY CONTROL. GEORGE P. HAYNES, New York, N. Y., assignor to Todd Dry Dock Engineering & Repair Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1924. Serial No. 733,641. 4 Claims. (Cl. 158—45.5.)

1. The combination with a boiler having a plurality of liquid fuel burners and a source of liquid fuel supply under pressure, of a main supply line of piping extended from said source, an auxiliary supply line of piping also extended from said source, branch pipes leading from said main and auxiliary lines respectively to each of the burners, said burners being provided each with means for atomizing the supplies of liquid fuel received either separately or jointly from the respective main and auxiliary lines, individual master control means respectively in the main and auxiliary lines of piping to equally control the flow of liquid fuel to all the burners supplied by the respective lines of piping, air supply control means, and means operable to actuate the master control means in the main line of piping and the air supply control means for the proportionate regulation of the respective liquid fuel and air supplies.

1,629,464. METALLIC-BALL-MAKING MACHINE. MERRITT W. MAGANN, St. Louis, Mo., assignor to St. Louis Steel Ball Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 11, 1923. Serial No. 667,895. 2 Claims. (Cl. 80—21.)

1. In a ball forming machine structure, a base, a standard directed upwardly from said base, a pair of spaced supports directed upwardly from said base, a front bearing carried by each support, a rear bearing carried by each support, a stationary die plate having a facial annular ball forming groove having a slug inlet passage and a ball outlet passage removably fixed to the inner side face of the standard, a driven shaft journaled in the front bearings, a driven gear having an annular groove in its inner face fixed to the inner end of said driven shaft, a ring shaped die member having a facial annular ball forming groove removably fixed in the annular groove of the gear and disposed in opposed relation to the ball forming groove of the stationary die plate, a flat spring member fixed at opposed ends to one of the supports and closing one end of one of the front bearings, a ball bearing disposed between the outer end of the driven shaft and the spring member, a drive shaft journaled in the rear bearings and a pinion fixed to one end of said drive shaft to mesh with said gear for revolving the same.

Patents Nos. 1,620,465 to 1,630,246.

OF THE
United States Patent Office.

Vol. 358—No. 4. TUESDAY, MAY 24, 1927. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Classification.

Order No. 3,011, May 9, 1927, directs:

In *class 45, Furniture* (Division 3), abolish the following subclass, the patents formerly contained therein having been placed for the most part in existing subclass 68, Covers, in class 45, Furniture, and in subclasses 68.1, 68.2, 68.3, and 68.4, indented thereunder, established in this order:

Tables
Sewing machine
120 Covers.

In *class 45, Furniture* (Division 3), establish the following subclasses, the patents contained therein having been taken for the most part from class 45, Furniture, subclass 120, Tables, Sewing machine, Covers, abolished in this order, with the exception of subclass 68.4, the patents in which have been taken for the most part from class 65, Kitchen and Table Articles, subclass 53, Trays:

Covers
68.1 Sewing machine and typewriter
68.2 Carrying case.
68.3 Table and counter
68.4 Mats and pads.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,573,664, R. W. Wetherill, Storage and reclaiming system, decided April 12, 1927, claim 1.

Pat. 1,596,157, Fritz Seibel, Apparatus for spinning artificial silk, decided April 2, 1927, claims 1, 2, and 4.

Final decisions in interferences have been rendered against the following trade-marks:

T. M. 156,608, Edible vegetable cottonseed oils, The American Cotton Oil Company, Union Township, Hudson County, N. J., and New York, N. Y. Registered July 11, 1922. Decided April 12, 1927.

T. M. 210,266, Wheat flour, Stoddard Mill & Grain Company, Advance, Mo. Registered March 9, 1926. Decided April 14, 1927.

ERRATUM.

Notice in GAZETTE of May 3, 1927 (358 O. G. 1), that final decision had been rendered against registration 195,466, of Tingue, Brown & Co., was erroneously given. The decision was in favor of the registrant and adverse to the applicant.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, May 12, 1927.*

Engineering Products Corporation, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of O'Neil Duro Company, of Milwaukee, Wis., to effect the cancellation of the trade-mark registration of Engineering Products Corporation, Newport News, Va., No. 107,818, dated December 28, 1915, and the notice of such proceeding sent by registered mail to the said Engineering Products Corporation at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Engineering Products Corporation, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Service of Papers in Contested Cases.

Attention is called to Rule 168 (c), which requires that "every paper" filed in a contested case in the Patent Office must be served upon the other parties.
This includes all appeals in such cases.

Condition of Applications Under Examination at Close of Business May 13, 1927.

(Total number of applications awaiting action, excluding Trade-Mark Division, 80,108; Trade-Mark Division, 1,902. Oldest new case, Sept. 27, 1926; oldest amended, Oct. 1, 1926. The dates given are 1926 except where † indicates 1927.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application awaiting office action. New.	Oldest new application awaiting office action. Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

In re Templeton.

No. 1,879. Decided February 7, 1927.

Invention—Unpatentable Subject Matter.

Applicant's lifting jack being old in the art and the process of lifting by an adjustable handle inserted in a socket being also old, *Held* that there was no invention in making the socket oval in cross section with the greater transverse axis in a vertical plane, so that the handle in position has the grain of its wood arranged to offer maximum strength, in view of the similar arrangement of axe handles, hammer handles, and tool handles generally, and that there is nothing patentable in applicant's device.

Appeal from the Patent Office. Affirmed.

Mr. Samuel N. Pond for Templeton.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before Martin, Chief Justice, and Ross and Van Orsdel, Associate Justices.

Van Orsdel, *J.:*

This appeal is from the decision of the Commissioner denying appellant's application for a patent for a construction relating to a socket and wooden handle for a lifting jack.

The jack is admittedly old in the art, and the process of lifting by an adjustable handle inserted in a socket is old. Appellant discovered that a round wooden handle used for lifting purposes would break when the pressure was imposed across the grain of the wood. Appellant's claims are for a pole shaped with respect to the claim so that it can be inserted in the socket in only one of two positions, and when inserted the direction of the grain is lengthwise of the pole, and thereby gives to the pole or lever its maximum strength.

To accomplish this result the socket is made in oval form in cross section, the greater transverse axis being in a vertical plane. The handle thus constructed to fit the socket has its major axis in a vertical plane, and being capable of insertion only in this determined position the grain of the wood can be so adjusted that when the handle is in position it will be capable of resisting to its maximum strength. But this method of constructing axe handles, hammer handles, and tool handles generally, in this strain-resisting shape is old. There is, therefore, nothing patentable in appellant's device.

The decision of the Commissioner is affirmed.

Supreme Court of the United States.

Postum Cereal Company, Incorporated, v. California Fig Nut Company.

Decided January 3, 1927.

1. Appeals—Judgments of Court of Appeals, District of Columbia, on Appeals Under Section 9 of the Act of February 20, 1905, and Under Section 4914, Revised Statutes—Not Judicial Judgments.

Decisions of the Court of Appeals, District of Columbia, under section 9 of the Trade-Mark Act of February 20, 1905, 33 Stat. 728, and in patent proceedings under section 4914, Revised Statutes, are not judicial judgments, but mere administrative decisions, and hence appeal does not lie therefrom to the Supreme Court.

2. Trade-Marks—Appeals—Dismissal of by Court of Appeals, District of Columbia—Not Reviewable.

Where the Court of Appeals, District of Columbia, dismissed an appeal from the decision of the Commissioner of Patents for lack of jurisdiction under the act of March 19, 1920, 41 Stat. 533, *Held* that whatever the form of the action taken in respect of such an appeal, it is not cognizable in the Supreme Court upon review, because the proceeding is a mere administrative one.

Appeal from the Court of Appeals of the District of Columbia.

Mr. Edward S. Roberts, Mr. Frank F. Reed, and *Mr. William J. Hughes* for Postum Cereal Co., Inc.

Mr. Chief Justice Taft delivered the opinion of the Court.

The Postum Cereal Company and its predecessors in title have for years manufactured a cereal breakfast food to which they applied, as a trade-mark, the word "Grape-Nuts," for which they secured registrations under the Trade-Mark Registration Act of February 20, 1905 (33 Stat. 727) and amendments. They filed a petition of opposition to the registration by the California Fig Nut Company of the trade-mark "Fig-Nuts" which that company had registered under the act of March 19, 1920, sec. 1, par. b, 41 Stat. 533.

Section 2 of the same act provides that when any person shall deem himself injured by the registration of a trade-mark under the act, he may apply to the Commissioner of Patents to cancel it. Upon due notice to the registrant, a hearing is to be had before an Examiner of Interferences in the Patent Office, with an appeal to the Commissioner. The California Fig Nut Company, the registrant, filed an answer denying that the petitioner was injured and taking issue within the averments of its petition. The Examiner of Interferences held against the petitioner and recommended that the registration be not canceled. An appeal was taken to the Commissioner of Patents, who affirmed the holding of the Examiner of Interferences.

An appeal was then taken from the decision of the Commissioner to the Court of Appeals of the District of Columbia. That court held [324 O. G. 964; 54 App. D. C. 285; 297 Fed. 544] that under the act of March 19, 1920, 41 Stat. 533, there was no jurisdiction given to that court to hear an appeal from the Commissioner of Patents. This holding was in accordance with a previous decision of the same court in *United States Suppression Inner Tube Company* v. *Climax Rubber Company,* 312 O. G. 400, 53 Appellate Appeals, D. C. 320, 290 Fed. 340. Accordingly the appeal was dismissed. The present appeal to this Court was allowed by the court of appeals.

The Trade-Mark Act of 1920, c. 104, 41 Stat. 533, is entitled "An act to give effect to certain provi-

sions of the Convention for the Protection of Trade-Marks and Commercial Names made and signed in the city of Buenos Aires in the Argentine Republic, August 20, 1910, and for other purposes." The first section provides that the Commissioner of Patents shall keep a register of all trade-marks communicated to him by the international bureaus as provided for by the Convention upon which a certain fee has been paid. Par. b of section 1 provides that all other trade-marks not registerable under the act of February 20, 1905 (with certain exceptions not here relevant), but which have been in bona fide use for not less than one year in interstate or foreign commerce, upon or in connection with any goods of a proprietor upon which a fee of $10 has been paid to the Commissioner of Patents, may be registered under the act, provided that the trade-marks which are identical with the known trade-marks owned and used in interstate commerce by another, and appropriated to merchandise of the same descriptive properties as to be likely to cause confusion or mistake in the mind of the public or deceived purchasers, shall not be placed on the register.

The chief objection of the petitioner to the registration of "Fig-Nuts" as a trade-mark for a cereal breakfast food is that it is likely to cause confusion or mistake and deceive purchasers into thinking they are buying the petitioner's breakfast food marked and widely known as "Grape-Nuts."

Section 6 of the act of 1920 adopts provisions of certain sections of the act of February 20, 1905 33 Stat. 728. But those sections do not include section 9 of the older act by which provision is made for an appeal from the decision of the Commissioner of Patents to the District Court of Appeals, and for this reason the District Court of Appeals dismissed the appeal. The contention of the appellant here is that section 9 of the act of 1905 does apply to the proceeding here taken under the act of 1920, and that the court of appeals in holding otherwise denied a right which the appellant here is entitled to have vindicated. It asks this Court to reverse the dismissal by the District Court of Appeals and in effect enforce the jurisdiction of that court to entertain its appeal from the Commissioner of Patents.

The first difficulty the appellant has to meet is the question whether this Court has jurisdiction to consider such an appeal. The argument the appellant makes is that this appeal was allowed July 1, 1924, to the judgment of dismissal by the court of appeals of April 7, 1924, that the act of February 13, 1925 (43 Stat. 936, 941) amending section 250 of the Judicial Code left the old section applicable to such pending appeal, that by the old section 250, any final judgment or decree of the court of appeals [illegible]ht be re-examined in this Court upon error or appeal in cases in which the construction of any law of the United States is drawn in question by the defendant, that this appeal draws in question the construction of the Trade-Mark Act of 1920 given by the court of appeals, by which that court dismissed the appeal taken to it from the Commissioner of Patents, and that the dismissal from which this appeal was allowed was a final judgment under the cases of *Shaffer* v. *Carter*, 252 U. S. 37, 44, and *Baldwin Co.* v. *Robertson*, 327 O. G. 5, 265 U. S. 168. The case of *Baldwin* v. *Howard*, 256 U. S. 35, in which certiorari to this Court from a similar trade-mark proceeding was denied is explained by the appellant as resting on the sole ground that the judgment below was not a final one.

We do not think this course of argument can be sustained. Assuming for the purposes of this discussion, that the District Court of Appeals was wrong in not holding that section 9 of the act of 1905 did apply to the Commissioner of Patents' decision under the act of 1920, even so, an appeal can not be taken to this Court to remedy the error. The decision of the court of appeals under section 9 of the act of 1905 is not a judicial judgment. It is a mere administrative decision. It is merely an instruction to the Commissioner of Patents by a court which is made part of the machinery of the Patent Office for administrative purposes. In the exercise of such function it does not enter a judgment binding parties in a case as the term case is used in the third article of the Constitution. Section 9 of the Trade-Mark Act of 1905, applies to the appeal taken under it the same rules which under section 4914, Revised Statutes, apply to an appeal taken from the decision of the Commissioner of Patents in patent proceedings. *Butterworth* v. *Hoe*, 29 O. G. 615, 112 U. S. 50, 60; *Gaines* v. *Knecht*, 123 O. G. 657, 27 Ap. D. C. 530, 532; *Atkins* v. *Moore*, 142 O. G. 57, 212 U. S. 285, 291. Neither the opinion nor decision of the court of appeals under section 4914 Revised Statutes, or section 9 of the act of 1905, precludes any person interested from having the right to contest the validity of such patent or trade-mark in any court where it may be called in question. This result prevents an appeal to this Court which can only review judicial judgments. This Court has so decided in *Frasch* v. *Moore*, 137 O. G. 230, 211 U. S. 1, in an appeal as to patent proceedings, and in *Atkins* v. *Moore*, 142 O. G. 571, 212, U. S. 285, as to appeals in trade-mark proceedings. This was the ratio decidendi of *Baldwin* v. *Howard*, 256 U. S. 35, already referred to, where both appeal and certiorari were denied in a similar trade-mark proceeding.

It was said in these cases that the appeal was denied because the action of the court of appeals was not a final judgment. This reason was a true one, but it should not be understood to imply that in such a proceeding, circumstances might give it a form that would make it a final judgment subject to review by this Court. That is the error that the appellant here has made in pressing its appeal. Appellant relies on *Shaffer* v. *Carter*, 252 U. S. 37, 44, holding that a judgment of dismissal for lack of jurisdiction is a final judgment for purposes of appeal. But the citation has no application in such a case as this. For here the action of the court of appeals in its dismissal was dealing with something which even if it should have been received, was not in the proper sense a judgment at all. Whatever the form of the action taken in respect of such an appeal, it is not cognizable in this Court upon review, because the proceeding is a mere administrative one.

The distinction between the jurisdiction of this Court, which is confined to the hearing and decision of cases in the constitutional sense and that of administrative action and decision, power for which may be conferred upon courts of the District is shown in the case of *Keller* v. *Potomac Electric Company*, 261 U. S. 428, 440, 442, 443. There it is pointed out that while Congress in its constitutional exercise of exclusive legislation over the District may clothe the courts of the District not only with the jurisdiction and powers of the Federal courts in the several States but also with such authority as a State might confer on her courts, *Prentis* v. *Atlantic Coast Line Company*, 211 U. S. 210, 225, 226, and so may vest courts of the District with administrative or legislative functions which are not properly judicial, it may not do so with this Court or any Federal court established under Article III of the Constitution. Of the jurisdiction of this Court, we said, at p. 444:

> Such legislative or administrative jurisdiction, it is well settled, can not be conferred on this Court either directly or by appeal. The latest and fullest authority upon this point is to be found in the opinion of Mr. Justice Day, speaking for the Court in *Muskrat* v. *United States*, 219 U. S. 346. The principle there recognized and enforced on reason and authority is that the jurisdiction of this Court and of the inferior courts of the United States, ordained and established by Congress under and by virtue of the third article of the Constitution is limited to cases and controversies in such form that the judicial power is capable of acting on them; and does not extend to an issue of constitutional law framed by Congress for the purpose of invoking the advice of this Court without real parties or a real case, or to administrative or legislative issues or controversies. See also *Liberty Warehouse Co.* v. *Grannis*, decided this day.

With this limitation upon our powers, it is not difficult to reach a conclusion in the present case. We should have had no power to review the action of the District court if it had heard the appeal and taken administrative jurisdiction, and by the same token have now no power to review its action in refusing such jurisdiction.

But it is said that this leaves the appellant without any remedy to review the decision of the District Court of Appeals and makes its conclusion final in respect to the construction of the Trade-Mark Act of 1920. Even if this be so, as to which we express no opinion, it can not furnish a reason for exceeding the constitutional powers of this Court.

The appeal is dismissed.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

ADJUDICATED PATENTS.

(C. C. A. Ohio.) The Fulton patent, No. 947,229, for metal bellows, *Held* not infringed. (*D. C.*) *Fulton Co.* v. *Bishop & Babcock Co.*, 17 F. (2d) 999; decree modified 17 F. (2d) 1006.

(C. C. A. Ohio.) The Fulton patent, No. 971,838, for process for making flexible corrugated-metal walls for collapsible and expansible vessels, *Held* valid and infringed. (*D. C.*) *Fulton Co.* v. *Bishop & Babcock Co.*, 17 F. (2d) 999; decree modified 17 F. (2d) 1006.

Disclaimers.

1,227,236.—*Glenn J. Barrett*, Grand Rapids, Mich. TYPEWRITING AND COMPUTING MACHINES. Patent dated May 22, 1917. Disclaimer filed April 21, 1927, by the assignee by mesne assignments, *Remington Typewriter Company.*

Hereby enters this disclaimer to said claims, which are in the following words, to wit:

"67. In a computing machine, the combination of a series of register wheels, means for turning said register wheels, means for setting the mechanism to cause said turning means to rotate said wheels in one direction or the other for addition or subtraction, means normally out of operation but capable of arresting said register wheels at zero when turned in one direction, re-setting mechanism for bringing said arresting means into operation and for causing said turning means to turn said register wheels against said arresting means, and means to prevent the operation of said re-setting mechanism when said setting means is set to cause the register wheels to be turned in the wrong direction.

"85. In a computing machine, the combination of a register, settable operating devices for said register normally out of gear with said register, means for bringing said register and its operating devices into gear, numeral keys for controlling the setting of said settable devices, and means for preventing the operation of said keys when said register and its operating devices are in gear.

"90. In a computing machine, the combination of a series of register wheels, operating devices for turning said register wheels in one direction for addition and in the other direction for subtraction, means for causing said operating devices to set said wheels to zero, and means to insure that said operating devices when controlled by said zero-setting means shall always turn said wheels in the same direction."

1,459,814.—*Glenn J. Barrett*, Grand Rapids, Mich. COMBINED TYPEWRITING AND ADDING MACHINES. Patent dated June 26, 1923. Disclaimer filed April 21, 1927, by the assignee by mesne assignments, *Remington Typewriter Company.*

Hereby enters this disclaimer to said claims, which are in the following words, to wit:

"82. In an adding machine, the combination of a register, keys, setting-up devices controlled by said keys and including a series of racks, means for allowing to any one of said racks an additional increment of motion to transfer, an operating mechanism including means for bringing said register and said racks into gear, means operating after the last recited means to operate said racks and register, means for holding said rack operating means in its extreme operated position until the register and the racks have been disconnected, and means for restoring said rack operating means to normal position after the register and rack have been disconnected.

"83. In an adding machine, the combination of keys, a register, setting-up devices controlled by said keys and including a series of racks, and operating mechanism including means for bringing said register and racks into gear, a device for operating said racks and the register, a link for operating said device, means for moving the said link to or past its dead center in order to retain said rack operating device in its extreme operated position until after the register and the racks have been disconnected, and means for restoring said link and rack operating device to normal position.

"85. In an adding machine, the combination of a register, means for operating said register in accordance with numbers to be added, spring operated transfer devices, means included in said operating means for permitting the springs of the transfer devices under tension, and means for momentarily holding said spring tensioning means in operated position and for then releasing said tensioning means.

"88. In an adding machine, the combination of a register including register wheels, drivers for said register wheels normally out of gear with said register wheels, means for actuating said drivers to set up a number to be added, and operating mechanism comprising means for first bringing said register wheels and drivers into gear and holding them in gear, for then operating said drivers in accordance with the number set up, for then moving said register wheels and drivers out of gear, and for then restoring said drivers to normal position, all in one operation of said operating mechanism.

"112. In an adding machine, the combination of a series of register wheels, a series of racks for operating said register wheels, means for imparting to any one of said racks on occasion an additional increment of motion to transfer, and means for splitting the machine comprising one or more abutments that can be interposed into the path of one or more of said bars and thus prevent transfer by the particular bar or bars affected."

1,818,061.—*Carleton Ellis*, Montclair, N. J. PROCESS OF MAKING MOTOR FUEL. Patent dated October 7, 1919. Disclaimer filed May 12, 1927, by the assignee by mesne assignments, *Standard Development Company.*

Hereby enters this disclaimer to that modification of the process set forth in lines 86–8 of page 4 wherein the gasoline is treated with acid between 70 and 85% of sulphuric anhydrid and disclaims from the scope of all the claims any process wherein acid employed is not diluted below the strength of ordinary oil of vitriol, *i. e.*, 93% H_2SO_4.

Des. 69,930.—*Anders H. Andersen*, Poughkeepsie, N. Y. A CLASS RING. Design patent dated April 20, 1926. Disclaimer filed May 6, 1927, by the patentee.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"The ornamental design for a class ring as shown," and adds thereto: *No claim is made to the seal shown on the stone of the ring in Figure 1.*

Des. 70,047.—*Anders H. Andersen*, Poughkeepsie, N. Y. A CLASS RING. Design patent dated May 4, 1926. Disclaimer filed May 6, 1927, by the patentee.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"The ornamental design for a class ring as shown," and adds thereto: *No claim is made to the seal shown on the stone of the ring in Figure 1.*

TRADE-MARKS

OFFICIAL GAZETTE, MAY 24, 1927.

[VOL. 358. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 134,206. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) JORDAN MARSH COMPANY, Boston, Mass. Filed June 25, 1920.

Avona

Particular description of goods.—Blankets, Bedspreads, and Comfortables. The Blankets Upon Which Said Trade-Mark has Been Used are Made Either of All Cotton, All Wool, or of Wool and Cotton Combined. The Bedspreads are Made of All Cotton, and the Comfortables are Cotton Covered, Silk Covered, or Satin Covered and the Filling is Cotton, Wool, or Down.
Claims use since Apr. 3, 1920.

Ser. No. 173,513. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LIONEL TRADING CO. INC., New York, N. Y. Filed Dec. 18, 1922.

LE BOSQUET DE VIGNY

Particular description of goods.—Perfumes.
Claims use since about October, 1921.

Ser. No. 174,588. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) O'KEEFE'S BEVERAGES, LIMITED, Toronto, Ontario, Canada. Filed Jan. 13, 1923.

6K

Particular description of goods.—Nonalcoholic, Noncereal, Maltless Beverages Sold as Soft Drinks, also Ginger Ale, Cream, Soda, and Table Water.
Claims use since about 1898.

Ser. No. 194,328. (CLASS 12. CONSTRUCTION MATERIALS.) THE BEAVER PRODUCTS COMPANY, INC., Buffalo, N. Y. Filed Mar. 24, 1924.

The trade-mark consists of a red stripe which is of indefinite length and which is displayed on the surface of the goods or packages containing the same.
Particular description of goods.—Wall Board.
Claims use since Feb. 24, 1923.

Ser. No. 201,675. (CLASS 39. CLOTHING.) OGUS, RABINOVICH AND OGUS, INC., New York, N. Y., assignor to Madelon Modes, Inc., a Corporation of New York. Filed Aug. 20, 1924.

Madelon

Particular description of goods.—Trimmed Hats for Women and Children.
Claims use since 1921.

Ser. No. 205,913. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) DIAMOND TOOL CO., Seattle, Wash. Filed Nov. 28, 1924.

Particular description of goods.—Wrenches, Punches, Cold Chisels, Screw Drivers, and Pry Bars.
Claims use since June 15, 1924.

Ser. No. 208,825. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE RED STAR MILLING COMPANY, Wichita, Kans. Filed Jan. 29, 1925.

Particular description of goods.—Wheat Flour.
Claims use since Sept. 9, 1922.

Ser. No. 209,073. (CLASS 38. PRINTS AND PUBLICATIONS.) DAVID BADER, doing business as Radium Adv. Co. of America, New York, N. Y. Filed Feb. 4, 1925.

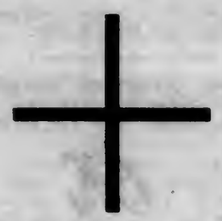
Radiumads

Particular description of goods.—Printed Advertising Signs.
Claims use since Dec. 1, 1924.

Ser. No. 222,023. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) H. H. FRANKLIN MANUFACTURING COMPANY, Syracuse, N. Y. Filed Oct. 20, 1925.

Particular description of goods.—Automobiles.
Claims use since Jan. 15, 1925.

Ser. No. 222,573. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ANGELO PARODI FU BARTOLOMEO SOCIETA ANONIMA, Genoa, Italy. Filed Oct. 30, 1925.



Particular description of goods.—Canned Sardines, Anchovies, and Tunny Fish.
Claims use since Jan. 1, 1885.

Ser. No. 225,700. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) C. M. BROOKE & SONS, South Melbourne, Victoria, Australia. Filed Jan. 9, 1926.

Particular description of goods.—Nonalcoholic, Maltless Beverages Used as Soft Drinks and Sirups for Making the Same.
Claims use since 1921.

Ser. No. 227,397. (CLASS 12. CONSTRUCTION MATERIALS.) CORK IMPORT CORPORATION, New York, N. Y. Filed Feb. 17, 1926.

Particular description of goods.—Cork Pipe, Cork Board, and Cork Tile.
Claims use since Sept. 26, 1924.

Ser. No. 227,898. (CLASS 12. CONSTRUCTION MATERIALS.) CORK IMPORT CORPORATION, New York, N. Y. Filed Feb. 17, 1926.

Particular description of goods.—Cork Pipe, Cork Board, and Cork Tile.
Claims use since Sept. 26, 1924.

Ser. No. 227,399. (CLASS 12. CONSTRUCTION MATERIALS.) CORK IMPORT CORPORATION, New York, N. Y. Filed Feb. 17, 1926.

Particular description of goods.—Cork Pipe, Cork Board, and Cork Tile.
Claims use since Sept. 26, 1924.

Ser. No. 228,107. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LEO HEINEMAN, New York, N. Y. Filed Mar. 4, 1926.

OIL-GO

Particular description of goods.—Liquid Cleaning Preparation Particularly Useful for the Removal of Oil, Grease, Tar, and Mildew Stains from Fabrics or Any Article of Apparel.
Claims use since on or about Feb. 1, 1925.

Ser. No. 228,409. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) CAPEWAY BAKERY INC., Braintree, Mass. Filed Mar. 10, 1926.

WALNUT BRUNETTS

No claim is made for the word "Walnut" except in connection with the word "Brunetts." The mark consists of the words "Walnut Brunetts."
Particular description of goods.—Cake.
Claims use since July, 1925.

Ser. No. 228,690. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) H. H. FEGELY, Limeport, Pa. Filed Mar. 16, 1926.

Applicant disclaims the use of the words "Dairies" and "Pasteurized" apart from the mark shown on the drawing.
Particular description of goods.—Dairy Products—Namely, Pasteurized Milk and Cream.
Claims use since June 1, 1924.

Ser. No. 228,713. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) VALLEY CITY COFFEE & SPICE MILLS, LEE & CADY, OWNERS, Saginaw, Mich. Filed Mar. 16, 1926.

BANCROFT HOUSE

Applicant disclaims exclusive use of the surname "Bancroft" except as associated with the mark herein shown.
Particular description of goods.—Coffee.
Claims use since Jan. 1, 1897.

Ser. No. 228,864. (CLASS 47. WINES.) SALVADOR BATALLA PLANA, Barcelona, Spain. Filed Mar. 19, 1926.

RAIMET

Particular description of goods.—Wine.
Claims use since December, 1925.

Ser. No. 228,037. (CLASS 12. CONSTRUCTION MATERIALS.) H. H. ROBERTSON COMPANY, Pittsburgh, Pa. Filed Mar. 20, 1926.

RPM

Particular description of goods.—Protected Metal Sheets for Building Constructions.
Claims use since Dec. 17, 1925.

Ser. No. 229,157. (CLASS 12. CONSTRUCTION MATERIALS.) CHICAGO PAINT WORKS, Chicago, Ill. Filed Mar. 25, 1926.

The words "Asbestos Roof Cement" appearing in the mark, as shown in the drawing, are disclaimed apart from the other features of the mark.
Particular description of goods.—Asbestos Roof Cement.
Claims use since Dec. 15, 1917.

Ser. No. 229,183. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) HERBERT F. KRUG, doing business as Diamond Product Company, Detroit, Mich. Filed Mar. 25, 1926.

Vaporine

Particular description of goods.—Cloth, Metal Goods, and Paper Cleaner.
Claims use since Feb. 15, 1926.

Ser. No. 229,426. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AMERICAN RETAILERS ASSOCIATION INC., New York, N. Y. Filed Mar. 31, 1926.

ARAWARM

Particular description of goods.—Blankets Made of Textile Fabrics.
Claims use since Mar. 1, 1926.

Ser. No. 229,530. (CLASS 24. LAUNDRY APPLIANCES AND MACHINES.) THE UNITED STATES HOFFMAN MACHINERY CORPORATION, New York, N. Y. Filed Apr. 1, 1926.

No claim is made to the words "Hoffman-Machines-Press-The-World" apart from the mark as shown.
Particular description of goods.—Garment Presses.
Claims use since Mar. 24, 1926.

Ser. No. 230,051. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ERNEST G. RUBUP, doing business as Scientific Laboratories of America, San Francisco and Roseville, Calif. Filed Apr. 12, 1926.

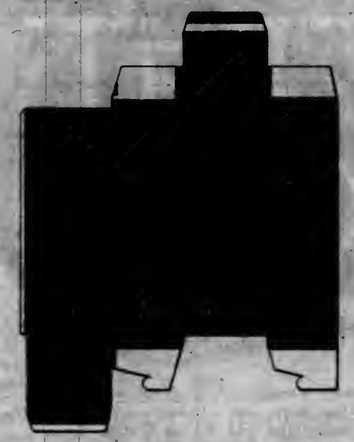
Particular description of goods.—Preparation for Reducing Weight.
Claims use since Sept. 2, 1924.

Ser. No. 230,808. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) STANDARD OIL COMPANY (NEW JERSEY), Bayonne, N. J. Filed Apr. 27, 1926.

"The yellow can with the black band"

Particular description of goods.—Liquid Cleansing and Polishing Compounds and Detergents for Use on Glass, Porcelain, Tile, and the Like, and Detergents for Use in Laundering Operations.
Claims use since Feb. 27, 1926.

Ser. No. 232,361. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) STANDARD OIL COMPANY (NEW JERSEY), Bayonne, N. J. Filed May 27, 1926.



No exclusive claim is made to any of the printed matter appearing in the drawing except as follows: "Flit, Standard Oil Company (New Jersey)." No exclusive claim is made to the words "Chemical Products Division" in connection with the present application.
Particular description of goods.—Liquid Cleansing Compounds and Detergents for Use on Glass, Porcelain, Tile, and the Like, and Detergents for Use in Laundering Operations.
Claims use since Feb. 11, 1925.

Ser. No. 232,363. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) STANDARD OIL COMPANY (NEW JERSEY), Bayonne, N. J. Filed May 27, 1926.

No claim is made to the following wording appearing on the drawing: "Destroys Flies, Mosquitoes, Moths, Ants, Bed Bugs, Roaches, Many Other Household Insects and Their Eggs. The Highest Quality Household Insecticide That is Made by the Bayonne, New Jersey, U. S. A. For Best Results Use Hand Sprayer, Pint Can and Sprayer. Made in U. S. A." No claim is made to the representation of the carton. No exclusive claim is made to the words "Chemical Products Division" in connection with the present application.
Particular description of goods.—Liquid Cleansing Compounds and Detergents for Use on Glass, Porcelain, Tile, and the Like, and Detergents for Use in Laundering Operations.
Claims use since Feb. 27, 1926.

Ser. No. 232,365. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) STANDARD OIL COMPANY (NEW JERSEY), Bayonne, N. J. Filed May 27, 1926.

No claim is made for the representation of the outline of a carton. The drawing is lined to indicate the color yellow.
Particular description of goods.—Liquid Cleansing Compounds and Detergents for Use on Glass, Porcelain, Tile, and the Like, and Detergents for Use in Laundering Operations.
Claims use since Feb. 27, 1926.

Ser. No. 234,849. (CLASS 37. PAPER AND STATIONERY.) KOH-I-NOOR BLEISTIFTFABRIK L. & C. HARDTMUTH, Budweis, Czechoslovakia. Filed July 21, 1926.

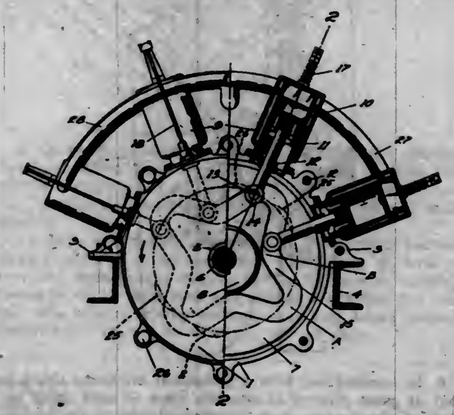
REISSUES

MAY 24, 1927.

16,628. ASH TRAY. ANDRE JANES, Flushing, N. Y. Filed Mar. 6, 1926. Serial No. 92,970. Original No. 1,549,257, dated Aug. 11, 1925, Serial No. 10,777, filed Feb. 21, 1925. 4 Claims. (Cl. 131—51.)

4. A tray comprising an ash receptacle formed of an outer rim rising from a flat base, a single dais wall integral with the base and rising above it and above the receptacle rim, a horizontal closing wall integral with the dais wall and disposed above the base and above the rim thereby forming an underneath concave hollow portion, and a cigarette supporting ridge included on the dais wall rising above said horizontal closing wall, said ridge and horizontal closing wall forming a shallow portion to prevent the accumulation of ashes therein.



16,629. FOOD-PRESERVING CAN. EDWARD M. LANG, Jr., 3d, Portland, Me. Filed Jan. 15, 1926. Serial No. 81,571. Original No. 1,540,406, dated June 2, 1925, Serial No. 494,667, filed Aug. 23, 1921. 7 Claims. (Cl. 220—81.)

1. A food preserving can having an outwardly turned flange at one end and a cover for said can having an upright portion immediately inside of said can body and having a cover sealing flange connected with said upright portion and a relatively rigid metal gasket interposed between said can flange and cover flange, the said can flange, metal gasket and cover flange being rolled or folded together to form an involute sealing joint, said gasket gripping the joint and being wide enough to extend down into the interior of the can between said upright portion and the side of the can to prevent by its gripping action the opening of the sealing joint.

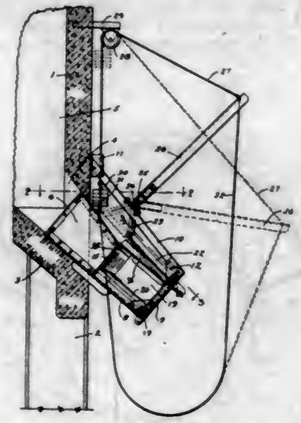
16,630. INTERNAL-COMBUSTION ENGINE. HENRY A. NORDWICK, Stockton, Calif., assignor to Duplex Motor Company, San Francisco, Calif., a Corporation of Nevada. Filed Apr. 5, 1923. Serial No. 630,171. Original No. 1,374,164, dated Apr. 5, 1921, Serial No. 339,279, filed Nov. 20, 1919. 2 Claims. (Cl. 123—55.)

1. A four cycle gas engine comprising a casing, a shaft turnably mounted therein, a plurality of cylinders secured to the casing in radial alinement with the shaft, pistons in the cylinders, spaced disks fixed to the shaft, means for moving the pistons in and out with the rotation of the disks, circular extensions projecting from the outer faces of the disks, each cylinder having valve tappets projecting radially toward the shaft and slidably mounted in the casing, and each tappet on a side being

in offset alinement from the remainder, and cams on the extensions positioned to fit each tappet at predetermined periods in the rotation of the disks.

16,631. METHOD OF REMOVING SULPHURETED HYDROGEN FROM GASES. WILHELM GLUUD, Dortmund, Germany, assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 7, 1927. Serial No. 173,594. Original application filed Sept. 11, 1922, Serial No. 587,581, and in Germany Sept. 20, 1921. Renewed July 24, 1926. Original No. 1,597,964, dated Aug. 31, 1926. 15 Claims. (Cl. 23—2.)

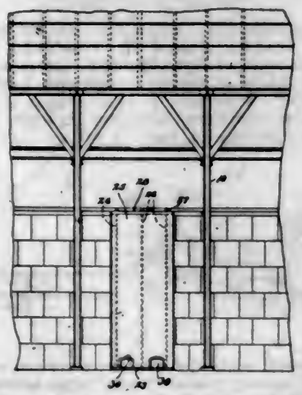
13. The process of removing sulphureted hydrogen from gases which comprises the use of a solution containing a nickel compound.



16,632. AUTOMATIC BRAKING MECHANISM FOR MOTOR CARS. JOSEPH C. SNODGRASS, Nashville, Tenn., assignor of three-eighths to Albert R. Tallman and two-eighths to Beverly R. McKinnie, both of Nashville, Tenn. Filed Apr. 2, 1927. Serial No. 180,600. Original No. 1,618,236, dated Feb. 22, 1927, Serial No. 123,725, filed July 20, 1926. 8 Claims. (Cl. 192—8.)

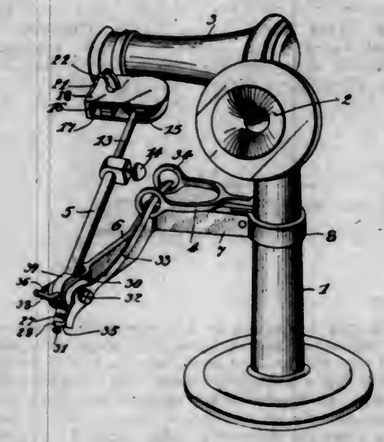
5. A braking mechanism for motor vehicles comprising a vacuum chamber connected with brake-setting and release mechanism and having a valve controlled port through which a vacuum is created in the chamber and a valve-controlled vacuum-breaking port, and means cooperatively connected with said valves to open the vacuum

creating port and close the vacuum breaking port in setting the brakes, and to close the vacuum creating port and open the vacuum breaking port in releasing the brakes.



16,633. COAL-CHUTE GATE. EDWIN A. TITUS, Moline, Ill. Filed Mar. 5, 1927. Serial No. 173,208. Original No. 1,583,031, dated May 4, 1926, Serial No. 14,910, filed Mar. 12, 1925. 11 Claims. (Cl. 221—144.)

5. In combination with a horizontal discharge chute, a pair of gates pivoted at opposite sides of said chute for rotation about axes generally perpendicular to the bottom of the chute and capable of transverse movement to or from each other, and means for actuating said gates.

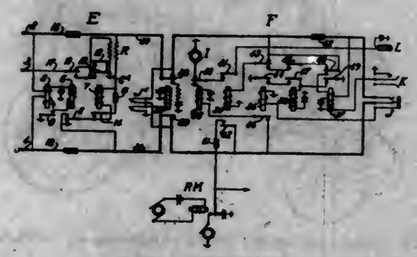


11. In combination with the discharge chute of a storage bin, a pair of opposed gates mounted adjacent said chute and adapted normally to close the passageway in said chute and capable of transverse movement to or from each other, plates, associated with said gates and adapted to form side walls of the chute when the gates are open, and means for actuating said gates.

16,634. PORTABLE SCOVING. CLAUD E. FULLER, New York, N. Y., assignor to New York Brick Handling Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1927. Serial No. 173,730. Original No. 1,548,794, dated Aug. 4, 1925. Serial No. 707,856, filed Apr. 21, 1924. 8 Claims. (Cl. 15—132.)

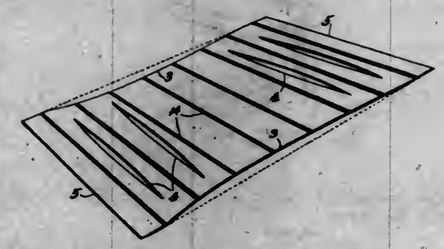
1. An improved portable scoving comprising a slab of insulating and fire-resisting material of suitable thickness and means for placing the material of the slab under compression.

16,635. TELEPHONE ATTACHMENT. FAIRFIELD W. HOBAN, New York, N. Y., assignor, by mesne assignments, to Holdaphone, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1927. Serial No. 173,729. Original No. 1,566,212, dated Dec. 15, 1925, Serial No. 444,415, filed Feb. 12, 1921. 13 Claims. (Cl. 179—140.)



2. In a telephone attachment, the combination with a bracket and means for holding it in associated relation with a telephone instrument, of a receiver carrying arm pivoted to the bracket, and a lever pivoted between its ends on the bracket and coaxially with the arm, one arm of the lever being in the path of the arm, the other arm of the lever engaging the telephone receiver hook of the instrument to operate the same when said lever is moved by the arm.

16,636. FISHING LURE. ALLAN D. SKELLY, South Lawrence, and DAVID M. SKELLY, Methuen, Mass. Filed Apr. 14, 1927. Serial No. 183,886. Original No. 1,594,798, dated Aug. 3, 1926. Serial No. 84,968, filed Jan. 30, 1926. 8 Claims. (Cl. 43—42.)

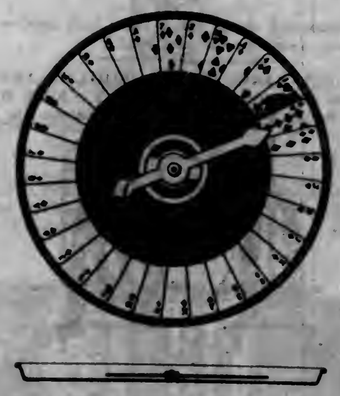


1. A fish lure comprising a body increasing in width from its front end to a point adjacent its rear end and having formed in such rear end an opening reducing the effective area of the widened portion of the body to a point where it is less than the effective resistance of the narrower portions of the body, hooks supported from the body and means at the forward end of the body for attaching a fish line thereto.

16,637. INTEROFFICE TRUNK CIRCUITS FOR TELEPHONE SYSTEMS. BERNARD D. WILLIS, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 30, 1926. Serial No. 85,034. Original No. 1,495,059, dated May 20, 1924, Serial No. 289,820, filed June 18, 1920. 14 Claims. (Cl. 179—27.)

9. In a telephone system, a called line leading to an operator's position, a signal lamp on the called line at the operator's position, means for initiating a call on the calling line whereby the lamp will responsively energize as a calling signal, means for responding to the call at the operator's position and for thereby deenergizing the lamp, and means controlled from the calling line for reenergizing the lamp over a new circuit path regardless of the responded state of the called line being maintained.

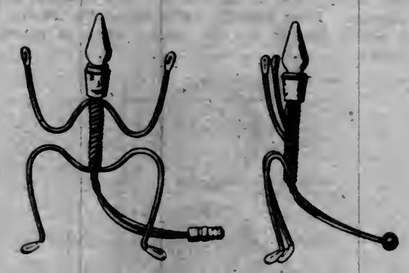
16,638. MATTRESS AND METHOD OF MAKING THE SAME. WALTER HARRISON KELSEY, Kansas City, Mo. Filed Oct. 11, 1926. Serial No. 141,007. Original No. 1,559,708, dated Nov. 3, 1925, Serial No. 705,910, filed Apr. 11, 1924. 11 Claims. (Cl. 5—355.)



1. In a mattress, a substantially rectangular boxing, ticking adapted to be secured to the boxing to form the mattress casing, and stuffing for filling the mattress casing, the said ticking having curves at the sides and ends thereof.

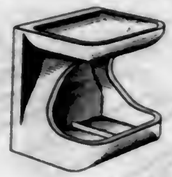
11. In a mattress, a substantially rectangular boxing, ticking adapted to be secured to the boxing to form a mattress casing, said ticking having the weave running crosswise of the mattress, and stuffing for filling the casing, said ticking having concave sides and seams formed transversely thereof to constitute curved ends.

DESIGNS



MAY 24, 1927.

72,689. FORTUNE-TELLING GAME BOARD. CHARLES G. AUCHTER, Pittsburgh, Pa. Filed Nov. 3, 1926. Serial No. 19,583. Term of patent 7 years.



The ornamental design for a fortune-telling game board, as shown.

72,690. DECORATIVE LIGHTING DEVICE. JAMES G. BALDWIN, New York, N. Y. Filed June 5, 1926. Serial No. 17,953. Term of patent 7 years.

The ornamental design for a decorative lighting device as shown in the accompanying drawing.

72,691. COMBINATION BATHROOM FIXTURE. JOHN H. BALMER, Maplewood, N. J. Filed Jan. 19, 1927. Serial No. 20,429. Term of patent 3½ years.

The ornamental design for a combination bathroom fixture as shown.

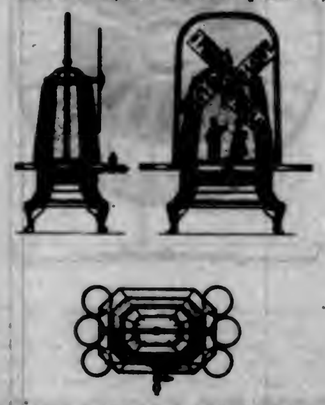
72,692. GOLF BALL. GEORGE WILLIAM BELDAM, Ealing, England. Filed July 16, 1925, Serial No. 14,118, and in Great Britain May 1, 1925. Term of patent 14 years.

The ornamental design for a golf ball as shown.

72,693. GOLF BALL. GEORGE WILLIAM BELDAM, Ealing, England. Filed Feb. 25, 1925, Serial No. 12,478, and in Great Britain Jan. 21, 1925. Term of patent 14 years.

The ornamental design for a golf ball as shown.

72,694. AUTOMOBILE TOY. SAMUEL I. BERGER, Newark, N. J. Filed Jan. 17, 1927. Serial No. 20,410. Term of patent 7 years.



The ornamental design for an automobile toy as shown.

72,695. RADIO LOUD-SPEAKER BODY. CLAYTON M. BOUDETTE, Revere, Mass. Filed Oct. 2, 1926. Serial No. No. 19,227. Term of patent 7 years.

The ornamental design for a radio loud speaker body substantially as shown and described.

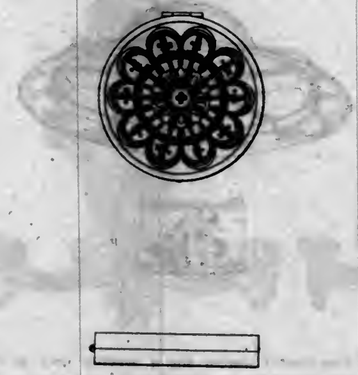
72,696. BEVERAGE URN OR SIMILAR ARTICLE. BERNARD BRANSTON, Brooklyn, N. Y. Filed Mar. 1, 1927. Serial No. 20,933. Term of patent 3½ years.

The ornamental design for a beverage urn or similar article as shown.

72,697. BEVERAGE URN OR SIMILAR ARTICLE. BERNARD BRANSTON, Brooklyn, N. Y. Filed Mar. 1, 1927. Serial No. 20,934. Term of patent 3½ years.

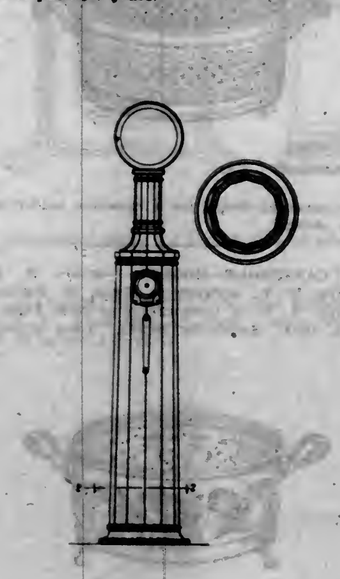
The ornamental design for a beverage urn or similar article as shown.

72,698. FLACON. RUBY T. BREWSTER, New York, N. Y. Filed Mar. 18, 1927. Serial No. 21,186. Term of patent 3½ years.



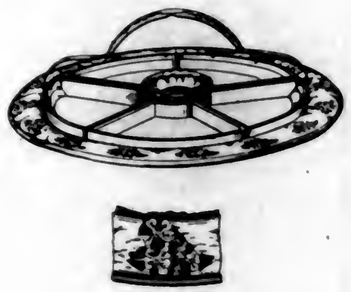
The ornamental design for a flacon, as shown.

72,699. RADIOCABINET. WILLIAM G. CRUMLISH and WALTER F. SCOTT, Wilmington, Del. Filed Mar. 9, 1925. Serial No. 12,650. Term of patent 3½ years.



The ornamental design for a radiocabinet, as shown.

72,700. COMPACT CASE. BERNARD D'ESCAYRAC, New York, N. Y., assignor to Suerlain Perfumery Corporation of New York, New York, N. Y., a Corporation of New York. Filed Mar. 15, 1927. Serial No. 21,147. Term of patent 14 years.



The ornamental design for a compact case as shown.

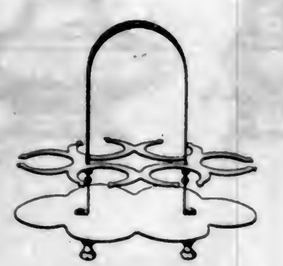
72,701. GASOLINE-PUMP CASING. EARL E. EICKMEYER, Dayton, Ohio, assignor to The Dayton Pump & Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 20, 1927. Serial No. 20,446. Term of patent 7 years.

The ornamental design for a gasoline pump casing as shown.

72,702. SERVING TRAY OR SIMILAR ARTICLE. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,970. Term of patent 14 years.

The ornamental design for a serving tray or similar article substantially as shown.

72,703. CASSEROLE HOLDER. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,972. Term of patent 14 years.

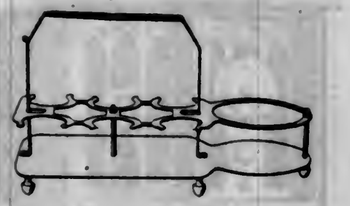


The ornamental design for a casserole holder substantially as shown.

72,704. CASSEROLE HOLDER. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,973. Term of patent 14 years.

The ornamental design for a casserole holder substantially as shown.

72,705. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,974. Term of patent 14 years.

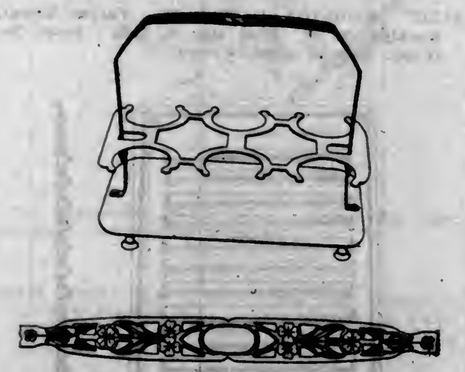


The ornamental design for a holder for glasses substantially as shown.

72,706. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,975. Term of patent 14 years.

The ornamental design for a holder for glasses substantially as shown.

72,707. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,976. Term of patent 14 years.

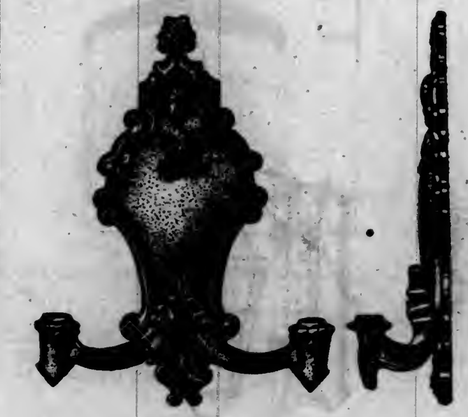


The ornamental design for a holder for glasses substantially as shown.

72,708. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,978. Term of patent 14 years.

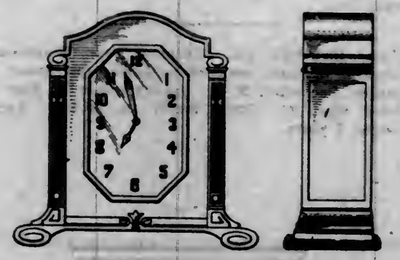
The ornamental design for a holder for glasses substantially as shown.

72,709. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y., assignor to Simon W. Farber, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 20,979. Term of patent 14 years.



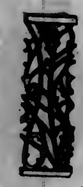
The ornamental design for a holder for glasses substantially as shown.

72,710. LIGHTING-FIXTURE STRAP. MICHAEL JONICK, New York, N. Y., assignor to Jonick-Sirken Co., Inc., a Corporation of New York. Filed Mar. 3, 1927. Serial No. 20,953. Term of patent 3½ years.



The ornamental design for a lighting fixture strap, substantially as shown.

72,711. LIGHTING-FIXTURE WALL BRACKET. MICHAEL JONICK, New York, N. Y., assignor to Jonick-Sirken Co., Inc., a Corporation of New York. Filed Mar. 3, 1927. Serial No. 20,954. Term of patent 3½ years.

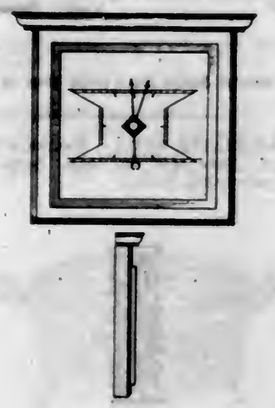


The ornamental design for a lighting fixture wall bracket, substantially as shown.

72,712. CLOCK CASE. JACK KATZ, New York, N. Y. Filed Jan. 13, 1926. Serial No. 16,040. Term of patent 3½ years.

The ornamental design for a clock case, as shown.

72,713. GAS-HEATER GRILL. WALTER KENNEDY, Cliffside, N. J. Filed Mar. 22, 1926. Serial No. 17,003. Term of patent 3½ years.

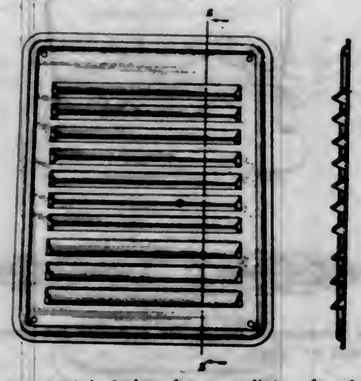


The ornamental design for a gas heater grill, as shown.

72,714. ELECTRIC LIGHT FIXTURE. GEORGE LIPSCHUTZ, Philadelphia, Pa. Filed Mar. 17, 1927. Serial No. 21,176. Term of patent 3½ years.

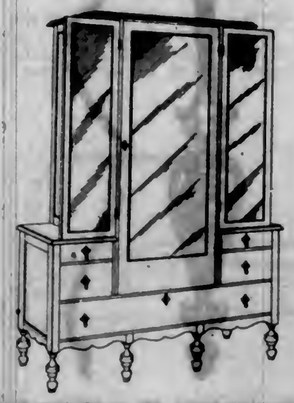
The ornamental design for an electric light fixture as shown.

72,715. BAROMETER. HERBERT LONG, Walthamstow, London, England, assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Sept. 27, 1926. Serial No. 19,181. Term of patent 7 years.



The ornamental design for a barometer, as shown.

72,716. BELT BUCKLE. MERRIL MASON, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 10, 1927. Serial No. 20,669. Term of patent 3½ years.



The ornamental design for a belt buckle, as shown.

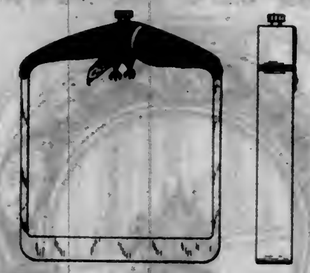
72,717. RADIATOR FACEPLATE. FRANK MAMMI, Brooklyn, N. Y. Filed May 4, 1926. Serial No. 17,565. Term of patent 14 years.

The ornamental design for a radiator faceplate as shown.

72,718. DESIGN FOR A COMBINED WARDROBE AND DRESSER. CORNELIUS G. MORROW and SHERMAN H. OAKES, Thomasville, N. C. Filed Jan. 31, 1927. Serial No. 20,506. Term of patent 7 years.

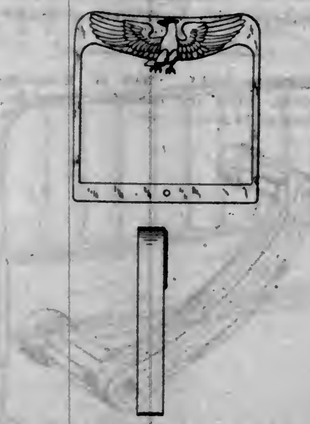
The ornamental design for a combined wardrobe and dresser, as shown.

72,719. RECEPTACLE FOR TOILET ARTICLES OR SIMILAR ARTICLE. FLORA MASON NICHOLSON, Washington, D. C. Filed Feb. 14, 1927. Serial No. 20,760. Term of patent 7 years.



The ornamental design for a receptacle for toilet articles or similar article, as shown.

72,720. TIRE. FRED A. NIED, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 19, 1927. Serial No. 21,215. Term of patent 14 years.



The ornamental design for a tire as shown.

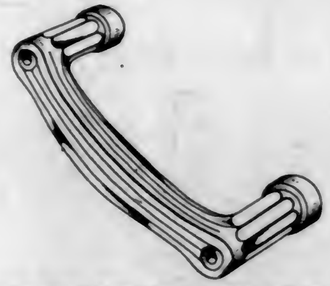
72,721. RADIATOR SHELL. ANDREW PALKA, Detroit, Mich. Filed Jan. 26, 1926. Serial No. 16,274. Term of patent 3½ years.

The ornamental design for a radiator shell as shown.

72,722. RADIATOR SHELL. ANDREW PALKA, Detroit, Mich. Filed Feb. 13, 1926. Serial No. 16,515. Term of patent 3½ years.

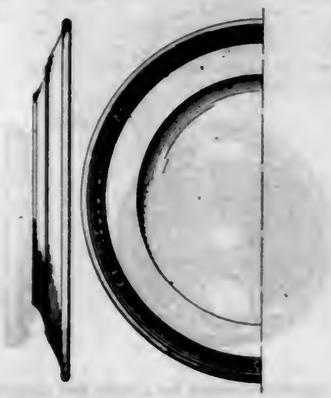
The ornamental design for a radiator shell, as shown.

72,723. RADIO-DIAL ESCUTCHEON PLATE. PYAM L. PENDLETON, Providence, R. I., assignor to Martin-Copeland Company, Providence, R. I., a trusteeship consisting of Edgar W. Martin, Barrington, R. I.; Laurence C. Martin, Providence, R. I.; and George W. Bleecker, Chicago, Ill. Filed Sept. 29, 1926. Serial No. 19,200. Term of patent 7 years.



The ornamental design for a radio dial escutcheon plate substantially as shown.

72,724. PLATE OR SIMILAR ARTICLE. JOHN E. PHILLIPS, Chicago, Ill., assignor to Albert Pick & Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1926. Serial No. 16,689. Term of patent 14 years.



The ornamental design for a plate or similar article, as shown.

72,725. DRAWER PULL. MAX H. ROSENTHAL, Los Angeles, Calif. Filed Apr. 16, 1926. Serial No. 17,319. Term of patent 14 years.

The ornamental design for a drawer pull, as shown.

72,726. PLATE. EMIL L. SCHNEFF, Trenton, N. J., assignor to Scammell China Company, Trenton, N. J. Filed Oct. 5, 1926. Serial No. 19,245. Term of patent 14 years.

The ornamental design for a plate, as shown.

72,727. LIGHTING-FIXTURE BACKPLATE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Mar. 24, 1927. Serial No. 21,316. Term of patent 7 years.

The ornamental design for a lighting fixture backplate substantially as shown.

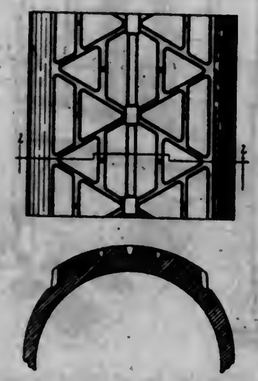
72,728. LIGHTING-FIXTURE BACKPLATE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Mar. 24, 1927. Serial No. 21,317. Term of patent 7 years.

The ornamental design for a lighting fixture backplate substantially as shown.

72,729. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 4, 1927. Serial No. 20,966. Term of patent 7 years.

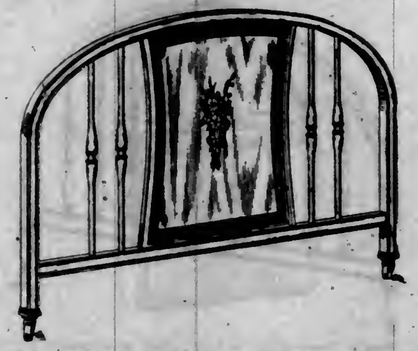
The ornamental design for a gas heater, as shown.

72,730. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 4, 1927. Serial No. 20,967. Term of patent 7 years.



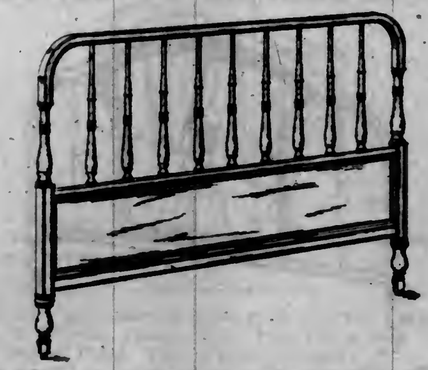
The ornamental design for a gas heater, as shown.

72,731. SHOE. MAUDE SIEGEL, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1927. Serial No. 20,457. Term of patent 3½ years.



The ornamental design for a shoe, substantially as shown.

72,732. TIRE. WARD W. SIGLER, Akron, Ohio, assignor to The Akron Standard Mold Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 23, 1927. Serial No. 20,855. Term of patent 14 years.



The ornamental design for a tire, as shown.

72,733. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,825. Term of patent 7 years.

The ornamental design for a bedstead end frame as shown.

72,734. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,826. Term of patent 7 years.

The ornamental design for a bedstead end frame as shown.

72,735. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,827. Term of patent 7 years.

The ornamental design for a bedstead end frame as shown.

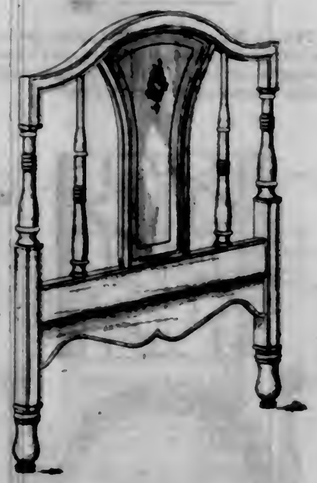
72,736. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,829. Term of patent 7 years.

The ornamental design for a bedstead end frame as shown.

72,737. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,830. Term of patent 7 years.

The ornamental design for a bedstead end frame as shown.

72,738. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,831. Term of patent 7 years.



The ornamental design for a bedstead end frame as shown.

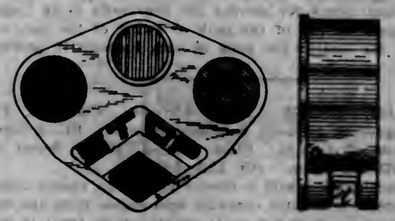
72,739. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,832. Term of patent 7 years.

The ornamental design for a bedstead end frame as shown.

72,740. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 20,833. Term of patent 7 years.

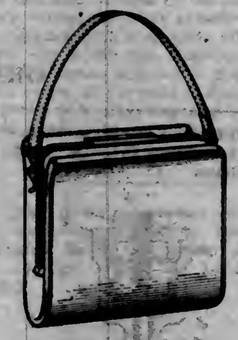
The ornamental design for a bedstead end frame as shown.

72,741. LIGHTING-FIXTURE BRACKET OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Mar. 17, 1927. Serial No. 21,170. Term of patent 3½ years.



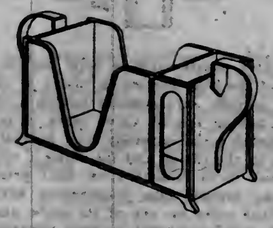
The ornamental design for a lighting fixture bracket or article of similar nature, as shown.

72,742. CHANDELIER OR ARTICLE OF SIMILAR NATURE. GUSTAVE E. VILLARET, Leonia, N. J., assignor to Globe Lighting Fixture Mfg. Co., Brooklyn, N. Y. Filed Mar. 17, 1927. Serial No. 21,171. Term of patent 3½ years.



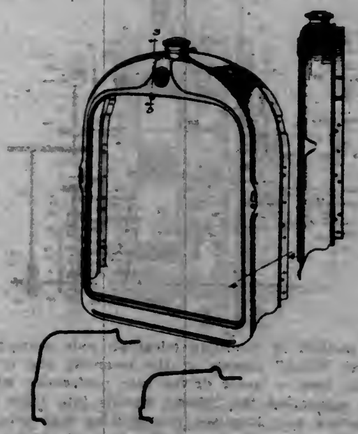
The ornamental design for a chandelier or article of similar nature, as shown.

72,743. AUTOMOBILE SIGNAL CASING. PAUL VONFELT, Hermosa Beach, Calif. Filed Aug. 23, 1926. Serial No. 18,814. Term of patent 14 years.



The ornamental design for an automobile signal casing, substantially as shown.

72,744. LADY'S HAND BAG. MORRIS WHITE, New York, N. Y. Filed May 8, 1926. Serial No. 17,610. Term of patent 14 years.

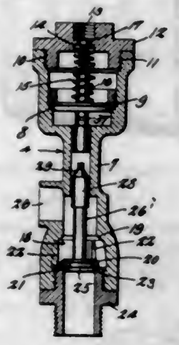


The ornamental design for a lady's hand bag as shown.

72,745. COMBINED MATCH HOLDER AND CIGARETTE CONTAINER. WALTER GEORGE WOLFORD, Cliffside, N. J. Filed Feb. 11, 1927. Serial No. 20,700. Term of patent 14 years.

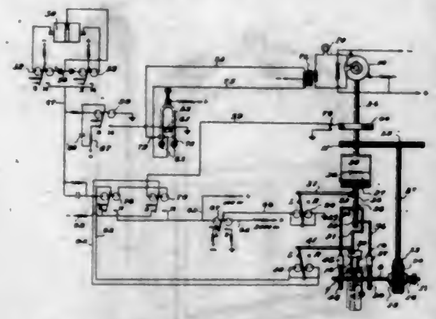
The ornamental design for a combined match holder and cigarette container, as shown.

72,746. AUTOMOBILE RADIATOR CASING. ERNEST W. SEAHOLM, Detroit, Mich. Filed Dec. 8, 1924. Serial No. 11,611. Term of patent 14 years.



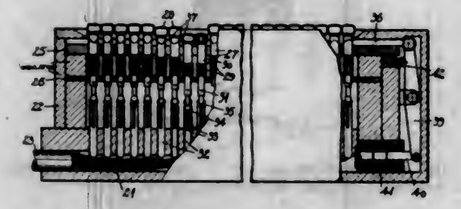
The ornamental design for an automobile radiator casing as shown.

PATENTS



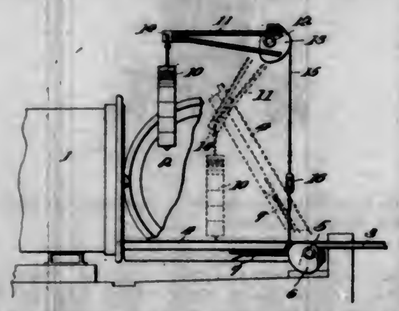
GRANTED MAY 24, 1927.

1,629,465. DRAIN VALVE. ANTISTENE ABBAMONTE, Cheyenne, Wyo. Filed Oct. 18, 1922. Serial No. 595,311. 3 Claims. (Cl. 121—134.)



3. In a valve construction, a body portion, a cylinder at one end of the body portion, a casing at the other end of the body portion, said cylinder having a shoulder, and said casing having spaced valve seats, a piston in the cylinder adapted to be normally held against said shoulder, a valve in the casing and including a valve rod, said valve adapted to be unseated by fluid pressure in the casing, spring pressed pins cooperating with the valve rod to hold the valve on one of its seats, and means for adjusting the tension of the springs to regulate the action of the pins.

1,629,466. RECEIVING PERFORATOR. HERBERT ANGEL, Brooklyn, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed July 21, 1925. Serial No. 45,002. 7 Claims. (Cl. 178—63.)

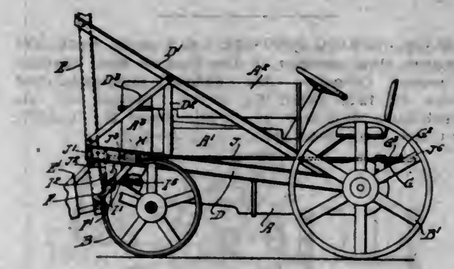


1. The method of recording telegraph code characters, received as "block" signals at the receiving end of an ocean cable upon a motor driven tape perforator, which comprises separating the "block" signals into their several component unit impulses, transmitting said unit impulses in sequence to the tape perforator and causing the received signals to control the speed of the driving motor to thereby maintain the perforator in synchronism with the signals.

1,629,467. ELECTRIC SIGN. FULGENCIO ARCHILA, Bogota, Colombia. Filed Apr. 3, 1924. Serial No. 703,901. 2 Claims. (Cl. 200—16.)

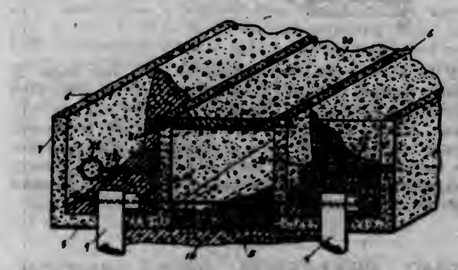
1. A controller comprising spring-retracted plungers, members for the frictional engagement of said plungers and arranged to frictionally hold the plungers in engagement therewith, and bars extending across said plungers and slidable longitudinally, said bars having individual cams to contact with the plungers, and the bars being so arranged with reference to the plungers that when the bars are slid longitudinally the cams thereof contact with the plungers and forcibly retract the plungers from said members.

1,629,468. RAIL-LIFTING DEVICE. HAROLD E. AUSTIN, Louisville, Ky., and JESSE C. COOK, Jeffersonville, Ind., assignors to American Creosoting Company, Louisville, Ky., a Corporation of Indiana. Filed Aug. 29, 1923. Serial No. 660,026. 8 Claims. (Cl. 104—131.)



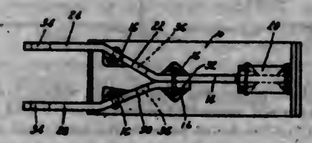
1. In combination with a timber-treating cylinder, a swingingly mounted door thereon, and stationary track rails, and means for moving the door rails to an inoperative position out of the path of swing of the door and means for locking the rails in such inoperative position.

1,629,469. CRANK. MARK ANTHONY, Clermont, Fla., assignor to Anthony Company, Streator, Ill., a Corporation of Illinois. Filed June 1, 1925. Serial No. 33,879. 1 Claim. (Cl. 123—185.)



In combination with a tractor having an engine mounted thereon, means for cranking said engine from the rear, said means including a shaft running from front to rear, said shaft mounted for rotary and longitudinal movement, and carrying at its forward end a pinion and at its rear end a crank handle, and means for holding the

shaft against movement in combination with a stub shaft carrying a sprocket wheel adapted to be driven from the pinion, a chain for driving the stub shaft from the

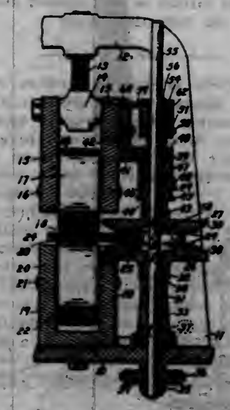


pinion, said stub shaft having upon one end means for engaging the engine to turn it over, the crank shaft adapted to be moved rearwardly whereby the stub shaft is moved into engagement with the engine shaft.

1,629,470. MARINE WALL CONSTRUCTION. JOHN P. BALL, Chicago, Ill. Filed Nov. 28, 1924. Serial No. 752,669. 7 Claims. (Cl. 61—46.)

1. In a marine wall construction involving piling, complementary precast reenforced concrete units, each consisting of a bottom and one side wall, the units being disposed on opposite sides of the piling with their bottoms arranged in abutting relation with opposite sides of said piling, and means intermediate of the side walls of the two units and disposed transversely of the piling whereby the complementary units are yieldingly secured together.

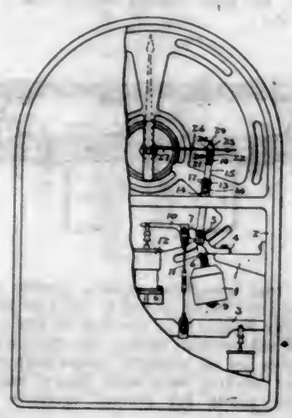
1,629,471. REENFORCED BRAKE SHOE. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1926. Serial No. 114,354. 10 Claims. (Cl. 180—250.)



5. A brake shoe comprising, in combination, an outer cylindrical member substantially rectangular in cross section, and an arcuate stiffening member engaging and welded to the inner face of the outer member along its outer edge, the two members forming a T-section shoe, the stiffening member being deflected to one side of the center of the shoe near one end of the outer member and then continued beyond the outer member to form a projecting arm, together with a separate stiffening member secured at one end to the first stiffening member where it is deflected and thence deflected in the opposite direction from the center of the shoe and continued beyond the outer member as a projecting arm spaced from the first arm, the outer member bridging across the inner end of said projecting arms to reenforce them.

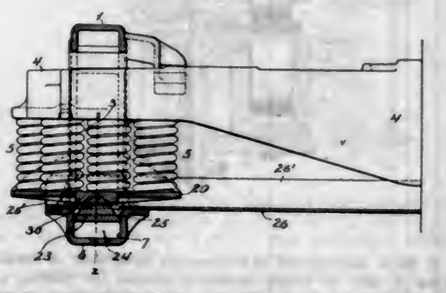
1,629,472. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1926. Serial No. 102,106. 3 Claims. (Cl. 108—5.)

1. A car roof comprising carlines, purlins on top of said carlines and having notches in the tops thereof, roof sheets movably supported on the tops of said purlins and having their side margins formed into channels that rest in said notches but are normally spaced slightly from the walls thereof whereby said walls permit limited movement of the sheets but prevent excessive movement thereof.



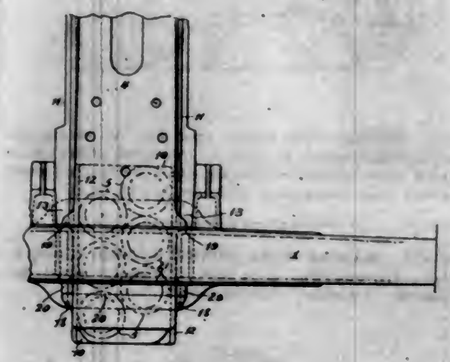
1,629,473. WIPER FOR STRIP-APPLYING MACHINES. EDWARD M. BRACKETT and FRED M. BRACKETT, Topeka, Kans. Filed June 21, 1926. Serial No. 117,624. 9 Claims. (Cl. 154—41.)

1. In a machine of the character described, a framework, a pair of rotary members, means for feeding an article with a strip in engagement therewith between said rotary members to compress said strip against said article, said framework having a portion movable relative to the remainder thereof to adjust said feeding means for



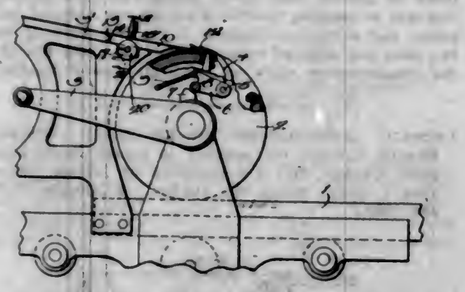
various thicknesses of articles, and means for rotating said rotary members substantially in unison comprising a pair of flexibly connected shafts, one of said shafts being mounted in the movable portion of said framework, a member on the movable portion of said framework mounted to rotate with said shaft and held against endwise movement on the movable portion of said framework and a member rotating with one of said rotary members and with said first mentioned member but axially movable relative thereto to connect said rotary member with said shaft.

1,629,474. SCALE-BEAM MECHANISM. GEORGE W. BRITTON, Hamilton, Ontario, Canada, assignor to James P. Steedman, Hamilton, Canada. Filed May 13, 1925. Serial No. 30,126. 3 Claims. (Cl. 265—62.)



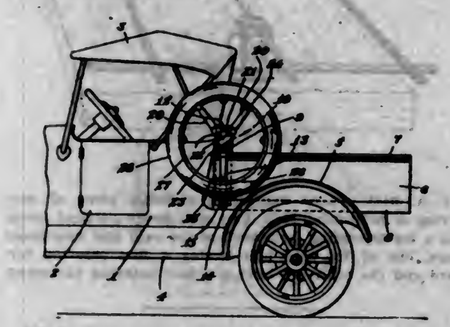
1. In a dial scale, the combination with the beam and a rotatable indicating finger, of a pendulum pivotally mounted, means connecting said pendulum with the beam, a bracket longitudinally adjustable on the pendulum, a member pivotally and slidably supported on said bracket, a rack adjustably carried in said member and operatively connected with the indicating finger.

1,629,475. SPRING SUPPORT. SAMUEL P. BUSH, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Original application filed Sept. 28, 1925, Serial No. 59,168. Divided and this application filed May 29, 1926. Serial No. 112,575. 4 Claims. (Cl. 105—208.)



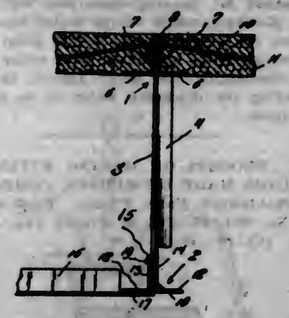
2. In a car truck, the combination of a side frame having a longitudinally extending pocket in its lower portion, a spring plank extending through the side frame and having an opening over the pocket in the frame, a saddle in the pocket rising through an opening in the spring plank, and a spring carrier extending over the opening in the spring plank and provided on its under side with a rocker engaging the saddle.

1,629,476. SPRING SUPPORT. SAMUEL P. BUSH, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Original application filed Sept. 28, 1925, Serial No. 59,168. Divided and this application filed May 29, 1926. Serial No. 112,577. 2 Claims. (Cl. 105—207.)



2. In a car truck, the combination of a side frame, a bolster engaged through the side frame and provided with spaced lugs on its sides, the inner lugs abutting the side frame, a group of springs supported in the side frame and supporting the bolster, and a U-shaped key passing across the bottom of the bolster and held thereto by the springs and having side portions fitting between the side frames and the outer lugs on the bolster.

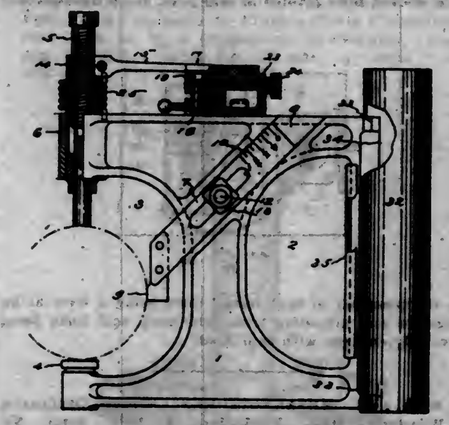
1,629,477. SHEET FEEDER. ALFRED C. CHRISTOPHERSON, Chicago, Ill., assignor to Hacker Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 2, 1925. Serial No. 6,410. 4 Claims. (Cl. 271—59.)



1. In a sheet feeder, the combination with a feed board; of a rotatable rod assembled with the board and arranged transversely of the board beneath the latter and accessible for operation at one side of the board; and a side guide at the opposite side of the board and in threaded connection with the rod and extending above the board within the side limits of the latter, whereby the rod, upon being turned, causes the side guide to be moved transversely of the board, there being a scale upon one of these latter two elements arranged transversely of the board and a cooperating index upon the other of these two elements to indicate the extent to which the side guide is moved by the rod transversely of the board.

1,629,478. TIRE CARRIER. WILLIAM F. CLARK, Wollaston, Mass. Filed June 17, 1926. Serial No. 116,565. 2 Claims. (Cl. 224—29.)

1. In combination with the wing body of an automobile truck, a brace extending approximately from the inner bottommost edge of said body upwardly and over the wing and having a vertical arm thereon at its upper end, a second brace extending approximately from the outer bottommost edge of said body outwardly and upwardly and terminating in a vertical arm, a tire carrier comprising a plurality of tire supporting arms, a clamp for said tire supporting arms, said clamp being secured to the vertical arms of said braces.



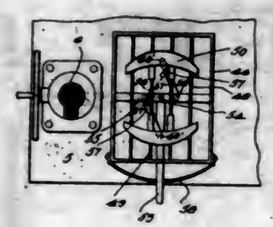
1,629,479. METAL JOIST. JAY DEVON CONNS, Huntington, W. Va. Filed May 6, 1926. Serial No. 107,135. 3 Claims. (Cl. 189—37.)

1. In a structure of the class described, upper and lower chords and connecting means therebetween, the upper chord comprising a pair of angle irons arranged in side by side relation with the vertical flanges disposed in spaced parallelism and the upper ends of the flanges directed outwardly into diverging relation.

1,629,480. MICROMETER CALIPER. PHILIP J. DARLINGTON, Brookline, Mass. Filed Sept. 28, 1925. Serial No. 59,028. 13 Claims. (Cl. 33—147.)

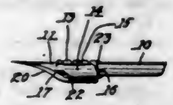
1. A micrometer caliper comprising a threaded adjustable measuring member, an indicating member clamped thereon and normally rotatable therewith, and means adapted to engage said member and coincidentally loosen said indicating member from the measuring member and hold it stationary during the adjustment of the measuring member.

1,629,481. WIRE BRUSH. WILLIAM W. DAVIDSON, Springfield, Ohio, assignor to The Ridgely Trimmer Company, Springfield, Ohio, a Corporation of Ohio. Filed May 4, 1925. Serial No. 27,734. 2 Claims. (Cl. 15—197.)



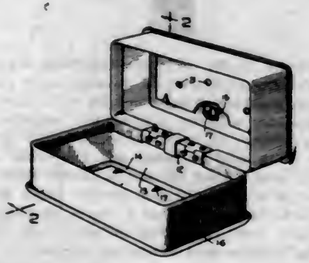
1. In a device of the character described, the combination of a cylindrical supporting member, said supporting member being provided at one end with an inclined surface and also provided with an intermediate shoulder, a rod-like holding member of metal having one end formed for engagement with said shoulder and the other end provided with a hook-shaped portion to receive tufts of wire, the free end of said hook-shaped portion being engageable with said inclined surface, and a sleeve member slidably mounted upon said supporting member and embracing said holding member and extending beyond the inclined end of said supporting member to embrace a portion of the tufts of wire.

1,629,482. CLAMPING MECHANISM FOR CAN OPENERS. STEVE A. DAVIS, Detroit, Mich. Original application filed Oct. 8, 1925, Serial No. 61,256. Divided and this application filed Feb. 12, 1926. Serial No. 87,887. 1 Claim. (Cl. 81—3.3)



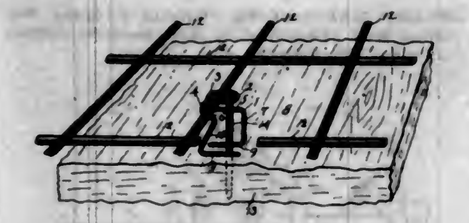
Clamping mechanism for a machine of the class described including a rectangular frame having a cross

bar, a pair of bars extending longitudinally of said frame, sleeves slidable on said bars, curved jaws mounted on said sleeves, links pivoted to said jaws, and a head pivoted



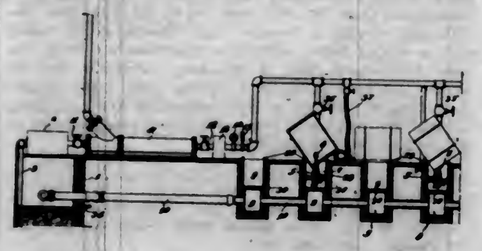
to the cross bar of said frame, there being a lever at an angle to and extending from said head, said links being pivotally engaged with said head.

1,629,483. RESERVOIR PEN. SABATO DELLAGALA, Worcester, Mass. Filed June 9, 1926. Serial No. 114,811. 2 Claims. (Cl. 120—114.)



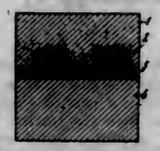
1. The combination with a pen having a raised surface across the back provided with a series of transverse perforations and having ribs extending therefrom to the edges of the pen at the rear, said pen having longitudinal slots at its forward slanting edges, of a reservoir for the pen comprising a substantially cylindrical body having an opening at its top for transmitting ink to the concave surface of the pen and having two opposite projections for fitting in the first-named slots to hold it in position and containing a filling of cotton fibre or other absorbent material to hold the ink therein.

1,629,484. BOX. JULIUS B. DE MESQUITA, New York, N. Y., assignor to American Safety Razor Corporation, Brooklyn, N. Y., a Corporation of Virginia. Filed Apr. 6, 1925. Serial No. 21,029. 7 Claims. (Cl. 220—23.)



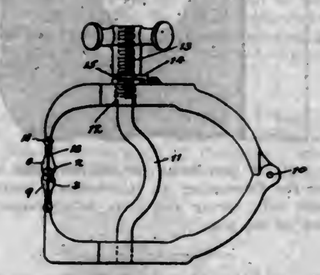
1. In a device of the character described, a plurality of superposed members, one member having portions struck up therefrom, an intermediate member having openings so positioned and dimensioned as to permit said struck-up portions to be passed therethrough, and another member having portions extending over said openings, whereby the struck-up portions can be bent down upon the portions last named.

1,629,485. HOLDING CLIP FOR CONCRETE REENFORCEMENT. CLARENCE L. DEWEY, Michigan City, Ind., assignor to Cement-Gun Company, Inc., Allentown, Pa., a Corporation of New York. Filed Dec. 26, 1923. Serial No. 682,737. 6 Claims. (Cl. 72—122.)



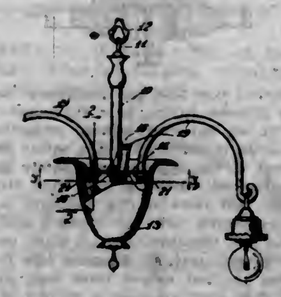
1. A mesh spacer comprising a single piece of wire having a horizontal loop, two contiguous vertical loops, and a leg depending from each of the said last mentioned loops, one of the said legs having a foot pointing forward and the other leg having a foot pointing backward.

1,629,486. METHOD FOR CLEANING CONTAINERS. DANIEL A. DOUGHERTY, Philadelphia, Pa. Filed Apr. 13, 1925. Serial No. 22,575. 2 Claims. (Cl. 141—6.)



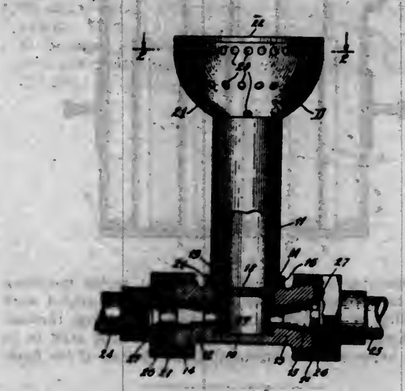
1. A method for cleaning containers with water consisting of placing pressure on the water, heating it to a temperature not exceeding its boiling point under said pressure but exceeding its boiling point under atmospheric pressure, discharging the water against the container, and conveying the discharge water to be placed under pressure again.

1,629,487. PROCESS OF MAKING PAVING BLOCKS AND SLABS MADE OF RUBBER COMPOUND. EDMOND DRAULLETTE, Paris, France. Filed Jan. 4, 1924, Serial No. 684,446, and in France Jan. 8, 1923. 4 Claims. (Cl. 18—48.)



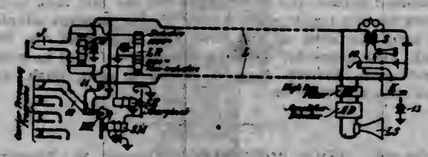
1. A process for the manufacture of paving slabs, comprising forming a plastic mass of rubber and a vehicle, forming several slabs of varying composition by incorporating into said plastic mass a vulcanizing agent and different amounts of mineral filler, arranging said slabs in successive layers, the upper layer containing the smallest quantity of mineral filler, and the bottom layer containing the largest quantity of mineral filler, heating said pile of slabs under pressure to form a unitary slab of desired shape.

1,629,488. HOLDING DEVICE. WILLIAM HAMILTON DUNNE, Toronto, Ontario, Canada. Filed Nov. 14, 1925, Serial No. 69,118, and in Canada Sept. 26, 1925. 1 Claim. (Cl. 51—228.)



A device of the class described embracing a pair of jaw members the outer faces of which are solely arc-shaped; hinged clamp members the inner surfaces of which are shaped to receive the outer arc-shaped faces of the said jaw members to provide bearings therefor; external vertically-disposed wire rods having each a horizontal portion extending into longitudinal holes opening through each end of each of the said jaw members; means whereby the vertical portions of said wire rods are coupled each to its associated clamp member, and means whereby one of said clamp members is moved around its hinge to permit of the opening and closing of said jaw members.

1,629,489. LIGHTING FIXTURE. ANTON DVORAK, Berwyn, Ill., assignor to Beardslee Chandelier Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 26, 1924. Serial No. 715,844. 2 Claims. (Cl. 240—78.)

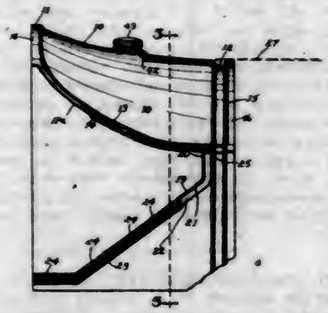


1. In a lighting fixture, a main supporting rod, an apertured plate or disc adapted to be secured to said rod, said plate or disc being provided with elongated radially arranged slots, one end of each slot being enlarged, lamp supporting arms, each having an end adapted to pass through the enlarged end of one of said slots, said arms having reduced portions adjacent to said ends to permit said end of the arm to slide into the restricted portion of the elongated slot.

1,629,490. MIXER AND DISTRIBUTOR FIRE-EXTINGUISHING APPARATUS. ORLANDO R. ERWIN, Forest Hills, N. Y., and WILLIS D. WITTER, Roselle Park, N. J., assignors to Foamite-Childs Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 9, 1922. Serial No. 527,880. 1 Claim. (Cl. 169—37.)

A distributor fitting for foam-type fire extinguishing systems adapted for uniformly distributing foam in places having a limited headroom, comprising a closed chamber, one end of said chamber constituting a distributing space and being provided with a plurality of individual, distributively-spaced jet orifices, said orifices being relatively restricted with reference to the flow capacity of said chamber and adapted to produce individual horizontal jets, the opposite end of said chamber being provided with two solution-pipe connection means constituting the support of said structure, and the length of said chamber being short enough to insure some solution liquid, as distinguished from foam, being delivered through said orifices, whereby the jets are squirted to a distance many times the length of said chamber.

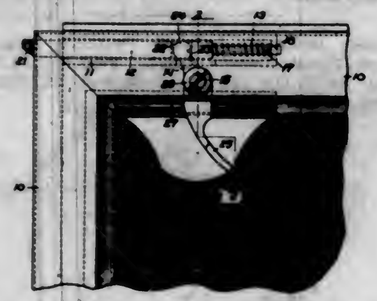
1,629,491. PROGRAM-SELECTING CIRCUITS. CHARLES H. FETTER, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,723. 10 Claims. (Cl. 179—2.)



1. In a program transmitting system, a subscriber's telephone line terminating in subscriber's telephone apparatus comprising the usual transmitter, receiver and switch hook at the subscriber's station, switching means at the central office whereby a connection may be established between said subscriber's line and another subscriber's line, a plurality of trunks at the central office upon which programs may be impressed, a directive switch independent of said first mentioned switching means at the central office, said directive switch being controlled by means at the subscriber's station when the receiver is on the switch hook for establishing a connection between said line and any desired trunk to the exclusion of other trunks.

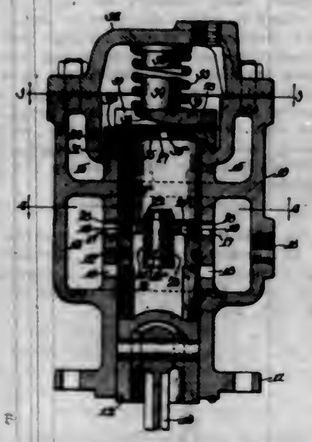
1,629,492. METHOD AND APPARATUS FOR MAKING SASH-WEIGHT MOLDS. JOHN J. FLEMING, Vineland, N. J. Filed Aug. 27, 1925. Serial No. 52,721. 6 Claims. (Cl. 22—102.)

2. Apparatus for making sash weight molds including a flask having an open top and a bottom provided with a plurality of openings, and patterns extending through the openings into the flask, thereby permitting sand to be rammed between the patterns through the top of the flask.



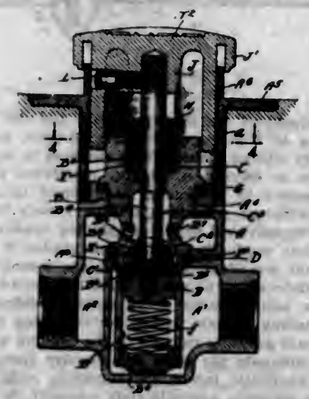
1,629,493. AUTOMOBILE BODY CONSTRUCTION. HENRY FORD, Dearborn, Mich. Filed Aug. 18, 1926. Serial No. 129,973. 3 Claims. (Cl. 280—5.)

1. In a combined cowl and fuel tank construction a top member adapted to form a top member for a cowl and a fuel tank, a second member designed to form a combined bottom and end member for the fuel tank and a brace for the top member, a pair of side members adapted to form the sides of the cowl and to support the fuel tank, and means for securing the edges of said members together to thereby form a combined cowl, dash, and fuel tank construction.



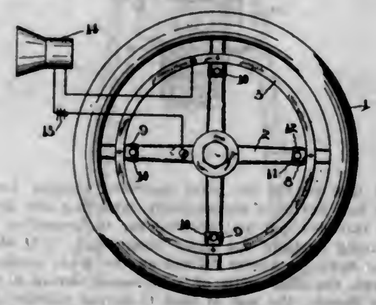
1,629,494. BOLT MOUNTING. GEORGE H. FORSYTH, Chicago, Ill., assignor, by mesne assignments, to The Adams & Westlake Company, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1924. Serial No. 727,401. 6 Claims. (Cl. 292—173.)

1. In a bolt mounting, a tubular frame member, a tubular guide positioned in the frame member and provided at its rear end with a constricted aperture, a bolt slidably mounted in the guide and provided intermediate its ends with a transverse shoulder and at its rear end with a reduced extension slidably mounted in the aperture, a helical spring encompassing the extension and acting between the rear end of the guide and the rear end of the bolt to project the front end of the bolt from the guide, a lever passing through slots in one wall of the frame member and the guide and provided interiorly of the frame member with an end portion for lateral engagement with the bolt and exteriorly of the frame member with a handle for oscillating the lever to operate the bolt, and an exteriorly accessible pin removably mounted in



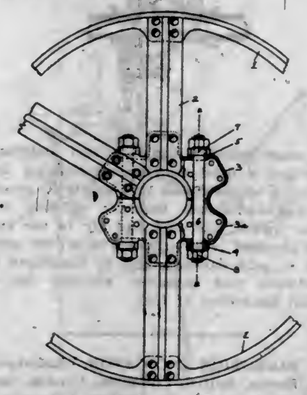
another wall of the frame in perpendicular relation to the lever for fulcruming an intermediate portion of the lever, said bolt, spring and lever being removable upon extraction of the pin.

1,629,495. FLUID-GAS COMPRESSOR. JULIUS FRANKENBERG, Milwaukee, Wis. Original application filed July 1, 1920, Serial No. 393,390. Divided and this application filed Sept. 13, 1924. Serial No. 737,566. 9 Claims. (Cl. 230—34.)



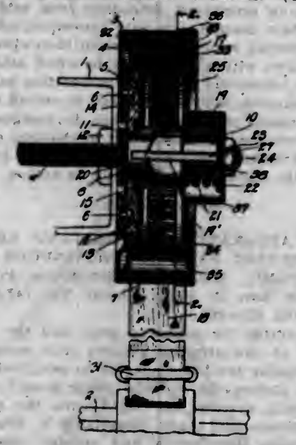
2. In a vertical type fluid gas compressor, the combination with a cylinder having near the upper end of its bore or cavity an upwardly tapered projection forming a narrow concentric valve seat, of a safety head resting upon said seat of the cylinder, said safety head having a depending tapered concentric projection fitting removably upon the said valve seat, a discharge port in said safety head concentric with the cylinder and said head, said discharge port terminating at its upper end in a narrow concentric valve seat, an elongated thin flexible plate valve covering the last named valve seat, at least one flexible thin steel plate covering a portion of said elongated plate valve to reinforce the same, a guard member secured to said safety head and clamping the outer ends of said plate valve and said reinforcing member between said guard member and said safety head, said guard member having a curved portion located above but spaced from said plate valve and said reinforcing member to limit the lift of said valve and to provide proper tension for the same, a heavy coil spring between said guard member and the cylinder head to hold the entire discharge valve mechanism upon the said tapered projection of the cylinder, a piston operatively located in said cylinder and having a cavity, said cylinder provided in the face of one of its ends with a plurality of suction ports, a thin flexible plate valve seated on the face of the piston and covering said ports, a valve stem centrally and movably located in said valve plate and piston end and having at its outer end a knob holding said valve plate upon its seat, said knob being tapered on its lower surface to facilitate the flexibility of said plate valve, said knob being tapered on its upper surface to fit in the discharge port of said safety head, a guide for said stem located centrally in said end of the piston and extended through said plate valve, a head on the lower end of said stem for the purpose of limiting the lift of said valve plate, and a coil spring surrounding said stem between its said head and the aforesaid end of the piston to flexibly hold the plate valve upon its seat.

1,629,496. FOOT-ACTUATED VALVE. JAMES FRASER, Edgemoor, Del., assignor to Speakman Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 23, 1922. Serial No. 538,444. 5 Claims. (Cl. 251—138.)



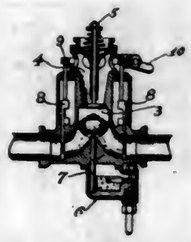
1. A foot valve comprising a valve casing and adapted to be imbedded in a floor and formed with an outwardly extending flange at the floor level and with a cylindrical portion projecting above said flange and open at its upper end, and a movable valve actuating member mounted in said casing and covering said upper end portion of said casing and comprising a depending cylindrical skirt portion which surrounds said upper end portion of the casing.

1,629,497. SWITCH. WILLIAM J. FRASER, Toronto, Ontario, Canada. Filed Jan. 24, 1924. Serial No. 688,321. 2 Claims. (Cl. 200—59.)



1. The combination with a steering wheel spider having radial arms, of a metal ring having a plurality of metal plungers secured thereto; insulating members adapted to slidably receive the plungers; and plates forming fixed contacts secured to said members and adapted to be engaged by the plungers, the said plates being formed of sheet metal and having integral lugs formed thereon extending parallel to the arms of the spider; and an adjustable clamping device connected to each lug and adapted to embrace one of the arms of the spider.

1,629,498. HUB FOR SPLIT PULLEYS AND THE LIKE. HENRY J. GILBERT, Saginaw, Mich., assignor to Saginaw Manufacturing Co., Saginaw, Mich., a Corporation of Michigan. Filed July 21, 1924. Serial No. 727,284. 3 Claims. (Cl. 64—18.)



1. A pulley comprising a pair of hub members, said members having alined openings therein to provide parallel bolt passages disposed substantially at right angles to the axis of the hub, a raised boss at one end only of each passage, said bosses arranged alternately upon said hub members, and bolts passing through said passages.

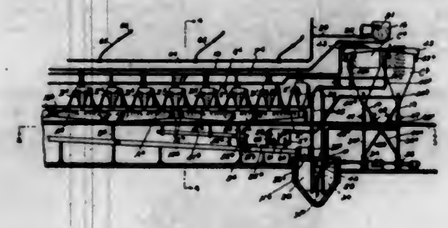
1,629,499. SHOCK ABSORBER. CHRISTOPHER W. GILDEA and WILLIAM H. FRY, Kansas City, Mo.; Sarah E. Fry, widow of, and by decree of court owner of the property of, said William H. Fry, deceased. Filed Aug. 17, 1925. Serial No. 50,638. 6 Claims. (Cl. 267—10.)

1. A shock absorber comprising, in combination with fixed and rotatable brake disk members, an actuator in cam relation to the rotatable brake disk member, a recoil spring connected with the rotatable brake disk member, and means restraining the actuator, said means being yieldable to permit camming movement on the rotatable brake member.

1,629,500. ENGINE FUEL SYSTEM. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., New York, N. Y., a Corporation of New York. Filed Mar. 16, 1918. Serial No. 222,828. 19 Claims. (Cl. 123—52.)

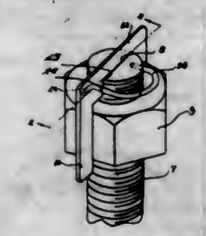
1. In a multi-cylinder engine, a fuel distribution system comprising a fixed distributing chamber having an air entrance, a single liquid fuel nozzle disposed in said chamber, and individual passages opening from said chamber to conduct the fuel and air to the engine cylinders, said chamber being arranged to deliver unsuspended liquid fuel to said passages and to distribute the same equally between said passages, whereby the cylinders receive equal quantities of fuel.

1,629,501. DIRECTION INDICATOR. ABRAHAM FRAHAT HADDAD, Fernie, British Columbia, Canada, assignor to Rosie Haddad, Cranbrook, British Columbia, Canada. Filed July 30, 1923. Serial No. 654,714. 3 Claims. (Cl. 177—329.)



2. A direction indicator of the character described including, in combination, an electric motor; a casing; a rod carrying an arrowhead, extendible from said casing; flexible members connected to said arrowhead adapted to form an indicating arrow in connection therewith; spring tensioned rollers within said casing to which said flexible members are connected; means for cooperating said motor with said indicating arrow mechanism to extend the same from said casing when said motor is energized; and means for receding said indicating mechanism after the same has extended a predetermined distance from said casing and the current to said motor is broken.

1,629,502. APPARATUS FOR GRADING ABRASIVE AND APPLYING SAME TO CONTINUOUS GRINDING SYSTEMS. HALBERT K. HITCHCOCK, Pittsburgh, Pa. Filed Nov. 3, 1924. Serial No. 747,582. 27 Claims. (Cl. 51—264.)

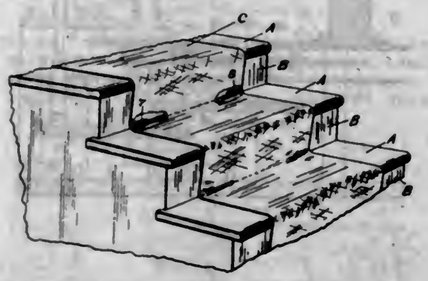


1. In apparatus for surfacing glass and the like, the combination of two grinding systems each comprising a series of grinding machines adapted to progressively and successively surface the material being ground, separate abrasive supply systems associated with the respective grinding systems and each comprising a plurality of liquid-suspension distributing and storage vessels, separate constantly operative means with each system to supply each of said vessels with graded abrasive, and connections for supplying each grinding machine with abrasive from a distributing vessel of its own series and from a distributing vessel of the other series.

13. In apparatus for surfacing glass and the like, by a series of continuous operations, the combination of a series of grinding runners arranged to act in succession on a sheet to be surfaced, grading apparatus comprising a primary grader and a series of secondary graders for dividing an abrasive in suspension in a liquid into various grades ranging from coarse to fine, means for conducting progressively finer grades of abrasive to successive grinding runners, whereby the successive runners produce a progressively finer and finer surface on the sheet, and means for supplying sufficient new abrasive to maintain approximately constant the various grades in the primary grader.

23. In apparatus for surfacing glass and the like, the combination of a series of grinding runners, means for continuously moving a sheet to be surfaced to said grinding runners in succession, grading apparatus for dividing an abrasive in suspension in a liquid into various grades, a series of secondary grading vessels located at intervals adjacent said series of grinding runners, means for separately conducting the various grades to different ones of said secondary grading vessels, means for separately withdrawing the grades from the secondary grading vessels and conducting the same to different ones of said grinding runners, means for returning the drainage from said grinding runners to the grading apparatus, means to eliminate the worn out abrasive from the system, and automatic means for supplying sufficient new abrasive to maintain approximately constant the quantity of abrasive in the primary grader.

1,629,503. LOCK NUT. FRANK HOFFMAN, Detroit, Mich. Filed Dec. 13, 1926. Serial No. 154,437. 3 Claims. (Cl. 151—27.)

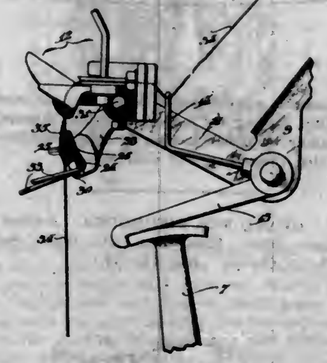


1. A lock nut of the class described adapted for use with a bolt having a diametrically extending slot formed on its threaded end and adapted for the reception of a nut having opposite flat faces, comprising: a U shaped member having a recess formed on the inner surface of its bight, the edge walls of said recess having a notch formed therein, the legs of said U shaped member being adapted for positioning in engagement with opposite faces of said nut and said bight engaging in said slot; and a separable pin adapted for driving into said notch engaging between threads of said bolt for preventing removal of said U shaped member therefrom.

1,629,504. METHOD OF MAKING VALVES. LORENZ IVERSEN, Pittsburgh, Pa. Filed Jan. 23, 1924. Serial No. 687,971. 10 Claims. (Cl. 29—157.)

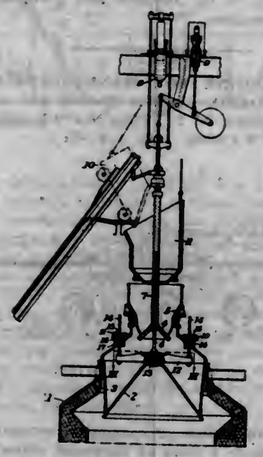
1. The method of making valves, which comprises cupping a blank to form a peripherally extending flange thereon, inserting the end convolution of a spring into position within said flange, and then bending the flange inwardly around said convolution, substantially as described.

1,629,505. STAIR-CARPET FASTENER. HAGOP A. JAMGOTCH, Minneapolis, Minn. Filed July 20, 1926. Serial No. 123,745. 5 Claims. (Cl. 16—12.)



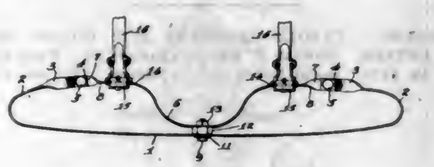
1. A device of the character described including a pair of anchor members adapted to be secured to a stair, and a pair of clasps adapted to be secured in a carpet and for engagement with said anchor members, one of said anchor members having a spring tending to spread the clasps apart.

1,629,506. CATOPTRIC LIGHT. HANS C. JENSEN, Port Clinton, Ohio. Filed Oct. 7, 1925. Serial No. 61,086. 2 Claims. (Cl. 240—1.)



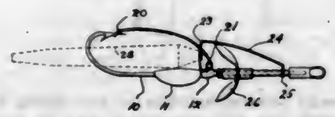
1. In an illuminating structure of the class described, a support including a cross beam at its top provided with a bearing, a shaft journaled for rotation in said bearing and depending below said beam, a circular plate carried by said shaft, a plurality of circumferentially spaced mirrors carried by the peripheral portion of said plate, brace rods connecting said mirrors together, and means for rotating said mirrors about a single source of illumination.

1,629,507. TANGLE ARRESTER FOR CONING MACHINES. EDWARD J. KELLY, Chester, Pa. Filed Oct. 14, 1925. Serial No. 62,387. 3 Claims. (Cl. 28—64.)



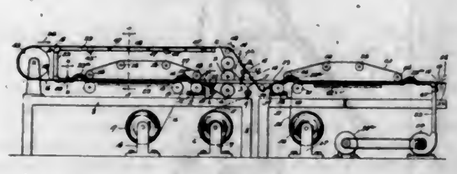
1. A tangle arrester including an arm having an aperture through one end whereby it may be adjustably mounted on a coning machine, a clamping plate removably secured to the other end of the arm, a holder clamped between the plate and the end of the arm, and a back, having a plurality of pins extending therefrom, secured to the holder.

1,629,508. BLAST FURNACE. JULIAN KENNEDY, Pittsburgh, Pa. Filed July 2, 1925. Serial No. 41,049. 3 Claims. (Cl. 214—36.)



1. In combination with a blast furnace having a big bell and its hopper, and laterally adjustable means carried by the hopper for guiding and centering the big bell.

1,629,509. AUTOMOBILE BUMPER. ROBERT W. KIRK, Adrian, Mich., assignor to American Chain Company, Inc., a Corporation of New York. Filed Aug. 28, 1925. Serial No. 53,015. 7 Claims. (Cl. 293—55.)

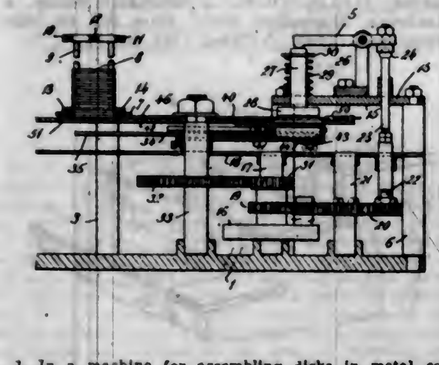


1. A bumper comprising a metal bar of rectangular cross-section, having its largest sectional dimension in a vertical plane, said bar having integral attachment portions twisted through ninety degrees.

1,629,510. GUARD FOR FISHHOOKS. JOSEPH KLIPEC, Cleveland, Ohio. Filed Nov. 21, 1924. Serial No. 751,212. 2 Claims. (Cl. 43—38.)

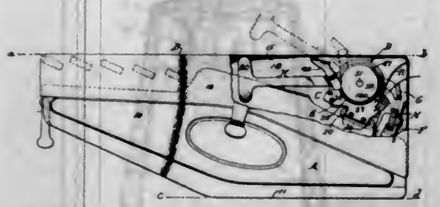
2. In combination, a fish hook having a shoulder thereon, a sleeve rotatable on the shank of the hook, said shoulder being adapted to limit movement of the sleeve longitudinally of the hook, a spinner on said sleeve, a weed guard carried by the sleeve and embodying a strip of flexible wire shaped in the form of a loop, said loop engaging beneath the point of the hook when in closed position and said guard having a portion thereof projecting forwardly of the shoulder and providing a weed guard for the spinner.

1,629,511. MACHINE FOR MANUFACTURING CORRUGATED BOARD. JOSEPH KRAMER and ALBERT H. ISRAEL, New York, N. Y. Filed Nov. 17, 1923. Serial No. 675,288. 8 Claims. (Cl. 154—31.)



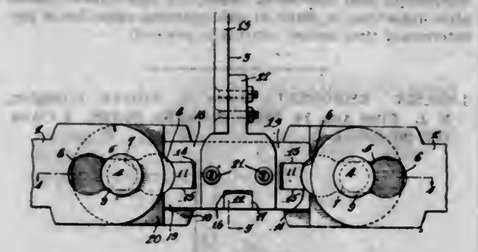
1. In the manufacture of composite corrugated board, means to corrugate a sheet of moistened material, means to direct a current of drying air on to the moist corrugated sheet, means to apply an adhesive to the crowns of the thus dried corrugations, means to apply a plain sheet of material to the adhesive coated crowns, and means to direct a current of drying air through the channels formed by the corrugations.

1,629,512. PROCESS FOR THE PRODUCTION OF COFFEE FREE FROM CAFFEINE. FRITZ KÜNDIG, Wallisellen, near Zurich, Switzerland. Filed May 1, 1925, Serial No. 27,318, and in Switzerland May 6, 1924. 2 Claims. (Cl. 99—11.)



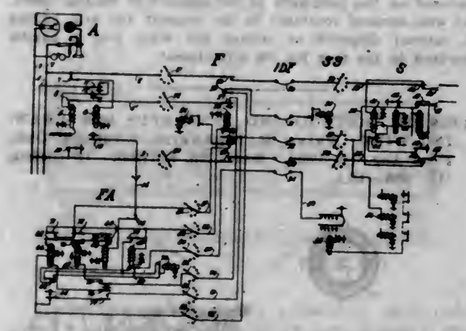
1. Process for the production of coffee free from caffeine, consisting in subjecting whole coffee beans to a pressure of about 15 atmosphere in the presence of a solvent for caffeine.

1,629,513. APPARATUS FOR INSERTING INSULATING DISKS IN METAL CAPS. LOUVERN G. LANOE, Passaic, N. J. Filed Jan. 27, 1925. Serial No. 5,151. 8 Claims. (Cl. 113—80.)



1. In a machine for assembling disks in metal caps, a rotary actuating shaft, a member mounted on said shaft for feeding the caps to the assembling position, a second member also mounted on said shaft and rotating unitarily with said first named member for feeding the disks to the assembling position and a plunger at the assembling position for forcing the disks into the caps.

1,629,514. TYPEWRITING MACHINE. EMMIT G. LATTA, Syracuse, N. Y.; First Trust and Deposit Company, administrator of said Emmit G. Latta, deceased, assignor to Underwood Typewriter Company, a Corporation of Delaware. Filed Mar. 18, 1920. Serial No 366,807. 21 Claims. (Cl. 197—186.)

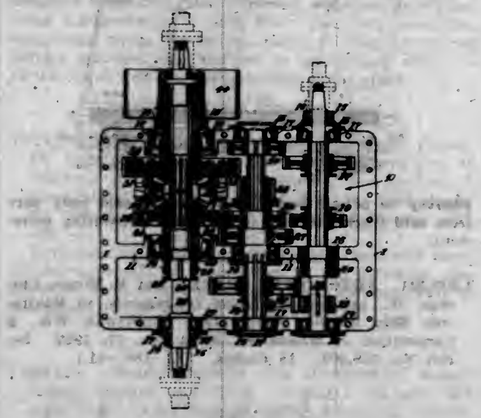


1. In a typewriting machine, a rotary platen provided with a journal which is movable longitudinally toward and from the end of the platen, and a carriage having an end part provided with a bearing for the journal and with a slot opening out of the bearing through which the journal can pass sidewise into and out of the bearing when the journal is adjusted longitudinally to a predetermined abnormal position, relatively to said platen.

1,629,515. CHAIN CONVEYER. LEWIS LOMANDO, Hazleton, Pa. Filed July 15, 1926. Serial No. 122,551. 8 Claims. (Cl. 198—175.)

1. In a chain conveyer, a link; a pair of opposed carrier attaching members mortised to the opposite sides of the link, said members being substantially flush with the outer sides of the link, and a carrier secured to the members.

1,629,516. TELEPHONE SYSTEM. FRED T. MADSEN, Maywood, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 28, 1924. Serial No. 702,506. 20 Claims. (Cl. 179—18.)



1. In a telephone system, lines, means including a plurality of backward hunting finder switches and a like number of forward hunting non-numerical switches for extending said lines when calling, said switches being connected together in pairs, each pair consisting of one backward hunting switch and one forward hunting switch, each of said switches having a stepping magnet and an operating circuit therefor, an allotter, means responsive to a call on one of said lines for operating said allotter to directly close the circuit of the stepping magnet of an idle finder to start it hunting for the calling line and to directly close the circuit of the stepping magnet of the associated forward hunting switch to start said forward hunting switch also.

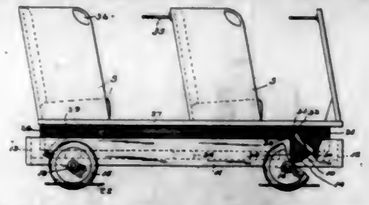
1,629,517. METHOD OF MAKING TIRE CASINGS. THOMAS C. MARSHALL, Mount Savage, Md. Filed Aug. 29, 1922. Serial No. 585,070. 7 Claims. (Cl. 154—14.)

1. The method of constructing a tire casing comprising the following steps: (a) sheeting a chemically toughened vulcanizable compound, (b) primarily heat treating the sheeted stock, (c) striating the surface of the primary heat treated stock in the direction of the sheeted grain, (d) bias cutting, and surfacing the stock with a vulcanizable unifying binder, (e) assembling the stock with the strips in obliquely disposed arrangement into casing form in superposed plies, (f) curing the assembled structure.

1,629,518. POWER-TRANSMITTING MECHANISM. DANIEL H. MARTIN, Los Angeles, Calif. Filed July 21, 1924. Serial No. 727,205. 1 Claim. (Cl. 74—57.)

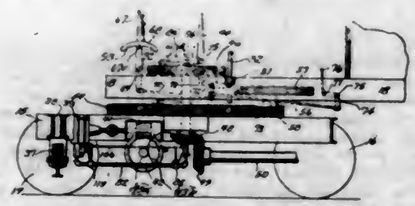
A variable speed gearing including a gear case, drive, counter, and split driven shafts all rotatably mounted therein, gears carried by said drive and counter shafts for selective engagement, said counter shaft gears including a pair of gears one keyed to slide thereon and one free to rotate on the shaft to interlock with said sliding gear, a differential gearing connecting the ends of the split driven shaft and including a housing rotatable on said shafts, a pair of gears carried by the differential gear housing, and with one of which said freely rotatable counter shaft gear is in engagement and with the other of which said sliding gear selectively engages.

1,629,519. TRACTION SHOE. JOHN MESSNER, Calumet, Mich. Filed May 11, 1925. Serial No. 29,505. 3 Claims. (Cl. 301—44.)



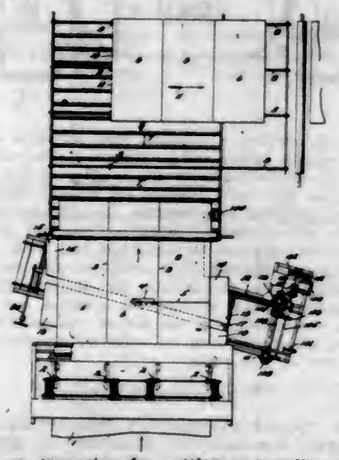
3. In combination, a traction shoe including a body defining opposite hollow end portions and elongated openings in communication with the interior of the hollow end portions, and calks adapted for passage within the hollow end portions for projection through the openings, said calks having wedge shaped end portions and said opening having opposite corresponding side walls tapered upwardly and outwardly for cooperation with the wedge shaped end portions of the calks for retaining the calks from complete passage through the openings, and means extending transversely of the hollow end portions and operatively associated with the calks for preventing self-displacement of said calks.

1,629,520. PLEASURE-RAILWAY STRUCTURE. JOHN A. MILLER, Homewood, Ill. Filed Nov. 27, 1925. Serial No. 71,580. 3 Claims. (Cl. 104—53.)



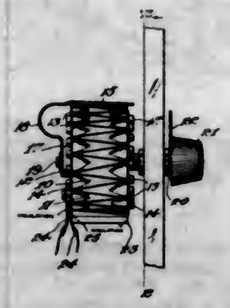
1. A car for pleasure railway structures comprising a truck part having track wheels and a body part having

passenger seats thereon, links connecting between said truck part and said body part, said links being slotted



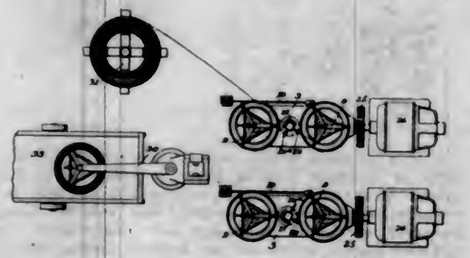
whereby to permit bodily separation of said body part from said truck part and to limit such separating movement.

1,629,521. AUTOMOTIVE CRANE. ROY S. MOORE, Chicago, Ill., assignor, by mesne assignments, to Manitowoc Ship Building Corporation, Manitowoc, Wis., a Corporation of Wisconsin. Filed Feb. 27, 1922. Serial No. 539,402. 18 Claims. (Cl. 180—81.)



1. The combination with an automotive truck having a steering mechanism, a swing body pivotally related to the truck by a pivotal member and a steam boiler supported by the swing body, of a steam engine carried by the truck frame, and operatively related to said steering mechanism, a steam conduit passing from the boiler through the pivotal member to the engine, and means carried by the swing body for controlling the throttle of the engine.

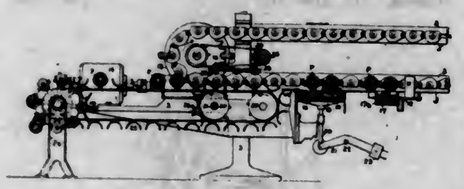
1,629,522. MEANS FOR SLITTING SHEET MATERIAL. TREADWAY B. MUNROE, Chicago, Ill., assignor to Dahlberg & Company, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 4, 1925. Serial No. 54,528. 16 Claims. (Cl. 164—68.)



1. In an apparatus for cutting a traveling sheet of material the combination of means for propelling a cutter transversely of the line of travel of said sheet and at an angle thereto proportional to the relative speeds of said cutter and sheet; automatic means to cause said cutter to return to its starting point after its severing operation is completed; and automatic means to cause said cutter after returning to dwell at said starting point for a predetermined time before starting a new cut.

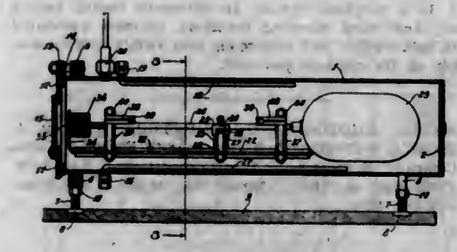
1,629,523. RHEOSTAT. JOHN A. NUGENT, Irvington, N. J. Filed Aug. 14, 1925. Serial No. 50,188. 1 Claim. (Cl. 201—55.)

A rheostat comprising a cylindrical support, a wire secured on the periphery of the support in zig-zag shape, an arm secured rotatably in the support, the arm having a contact disposed to engage the wire, and a handle secured to the arm for its adjustment.



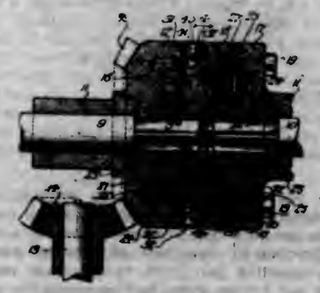
1,629,524. METHOD AND APPARATUS FOR DRAWING WIRE. FRANK H. NULLMEYER, Struthers, Ohio. Filed Aug. 16, 1923. Serial No. 657,705. 12 Claims. (Cl. 205—16.)

1. An apparatus for drawing wire, comprising a turret adapted to be rotated about an axis, a plurality of blocks for drawing and coiling wire rotatably mounted on said turret, the axes of the various blocks being equidistant from the axis of the turret, a holder for a reducing means between the blocks and in a line substantially tangent to the blocks, a driving shaft, and means for connecting the driving shaft to either of said blocks to draw the wire through the reducing means from another block.



1,629,525. CONVEYER, WRAPPING, AND LABELING MACHINE. PHILIP D. PARSONS, Swarthmore, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Dec. 2, 1926. Serial No. 152,104. 5 Claims. (Cl. 93—5.)

1. A machine of the character stated, comprising an endless conveyer having lateral pins at intervals along its length adapted for carrying in suspension rolls of paper to be enclosed with encircling wrappers which extend beyond each end of the rolls, combined with a magazine for containing the wrappers and having a width greatly wider than the length of the roll, means for feeding the wrappers toward the travelling pins which pass



over the magazine, means for centralizing the rolls carried by the pins when passing over the magazine whereby the wrappers extend a definite distance beyond each end of the roll, and paste applying means for cementing the wrapper about the roll while centralized therein.

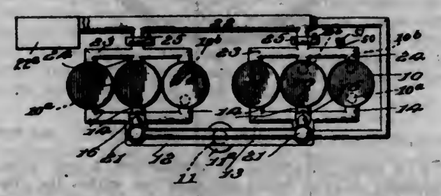
1,629,526. GAS GRAVITY BALANCE. HOMER ROLAND PIERCE, Bartlesville, Okla., assignor to Indian Territory Illuminating Oil Company, Bartlesville, Okla., a Corporation of New Jersey. Filed Feb. 19, 1926. Serial No. 89,340. 12 Claims. (Cl. 265—44.)

1. A portable specific gravity balance for gases comprising a gas container, a balancing beam having a displacement float, a pivotal support for said beam, and means independent of said support fixed interiorly of the container for removably mounting said support therein.

1,629,527. DIFFERENTIAL GEARING. LEO PONDELICK, Chicago, Ill. Filed May 22, 1922. Serial No. 562,573. 7 Claims. (Cl. 74—7.)

1. In differential gearing, the combination of axle sections, clutch members fixed to rotate with said sections respectively, a driving drum, separate driving members adapted to engage with and for driving the clutch members respectively, and separate stud and slot driving connections between the drum and each of the driving members respectively, said stud and slot connections operating independently of each other and each connection comprising means for automatically shifting one of the driving members into and out of engagement with one of the clutch members independently of the other.

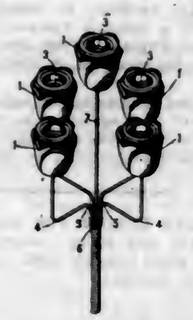
1,629,528. PREPARED SULPHUR. FRANCIS H. POUCH, St. Louis, Mo., assignor, by mesne assignments, to Southern Acid & Sulphur Company, Incorporated, a Corporation of Virginia. Filed Nov. 24, 1924, Serial No. 752,033. Renewed Apr. 8, 1927. 3 Claims. (Cl. 167—6.)



3. Finely divided sulphur having mixed therewith finely divided carbonate of magnesium in the following proportions: sulphur, 100 parts by weight, and carbonate of magnesium, from 2 to 10 parts by weight.

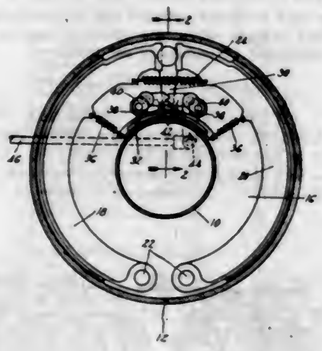
1,629,529. DRAFT EVENER FOR HARROWS. JORGEN ALFRED REIMER and HANS CHRISTIAN HANSEN, Elk Horn, Iowa. Filed June 24, 1926. Serial No. 118,353. 2 Claims. (Cl. 55—84.)

1. The combination with two sections of a multiple section harrow draft evener or draw-bar, of a joint comprising two plates attached to opposite sides of one of said sections and near the end thereof, and extending beyond said end, said plates being each provided with a slot, one of said plates having an inclined outer end and being provided at said end with an open notch above its longest part, and a U-shaped bolt one arm of which passes through said section and said slots, and the other arm of which passes through the other section of said draw-bar; whereby said last-named section may be held in working position or may be drawn outward and may then be turned upward and inward when the multiple section harrow is to be contracted in width, as set forth.



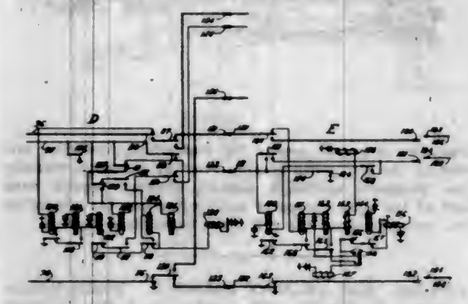
1,629,530. MULTI-CYLINDER INTERNAL-COMBUSTION ENGINE. CHARLES REINEKE, New York, N. Y., assignor to The Reineke Motor Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 7, 1925. Serial No. 48,750. 19 Claims. (Cl. 123—97.)

3. In a multi-cylinder engine having an exhaust gas conduit and exhaust valves for controlling the passage of gas from the cylinders into the conduit, auxiliary valve



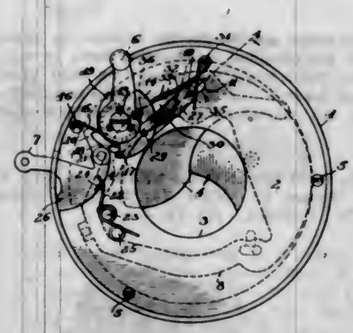
means associated with said conduit for preventing the exhaust gas from one cylinder passing through the conduit into another of said cylinders.

1,629,531. ORNAMENT. MATHIAS REISERT, Brooklyn, N. Y. Filed July 24, 1926. Serial No. 124,601. 3 Claims. (Cl. 67—25.)



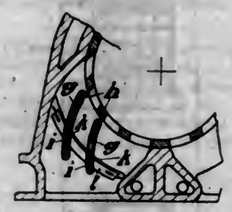
1. A miniature candelabrum comprising L-shaped wires having vertical stems twisted together and adapted to form a support to be inserted in a cake or the like and each wire having an offset portion terminating in a candle-receiving socket integral therewith at its upper end.

1,629,532. SERVO-EXPANDED BRAKE. EUGÈNE PROSPER RENAUX, Paris, France, assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Original application filed Mar. 14, 1923, Serial No. 625,072. Divided and this application filed Apr. 15, 1926. Serial No. 102,140. 6 Claims. (Cl. 188—135.)



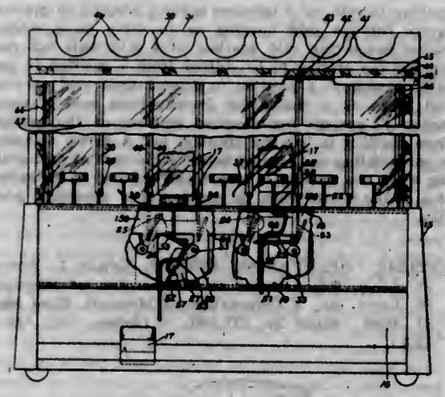
1. A brake comprising, in combination, a pair of substantially co-axial drums arranged one within the other, friction means engageable with the inner surface of the outer drum, and a servo shoe engageable with the outer surface of the inner drum and operable to force the friction means against the outer drum.

1,629,533. AUTOMATIC TELEPHONE SYSTEM. RODNEY G. RICHARDSON, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original application filed Nov. 23, 1920, Serial No. 426,011. Divided and this application filed Mar. 14, 1925. Serial No. 15,435. 26 Claims. (Cl. 179—18.)



1. In a telephone system, an automatic switch having group and trunk selecting functions, contacts associated with said switch, and wipers for said switch resting normally on the contacts last used.

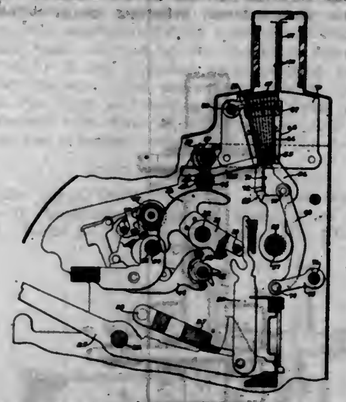
1,629,534. PHOTOGRAPHIC SHUTTER. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 5, 1925. Serial No. 48,381. 5 Claims. (Cl. 95—63.)



1. In a photographic shutter, the combination with blade mechanism including a blade controlling connection movable in one direction to open the blades and in the opposite direction to close them, of a master member, an actuator connecting the latter to the blade controlling connection and having a lost motion connection with the master member to permit setting movement thereof, and means for preventing lost motion between the master member and the actuator during the operating movement of the master member.

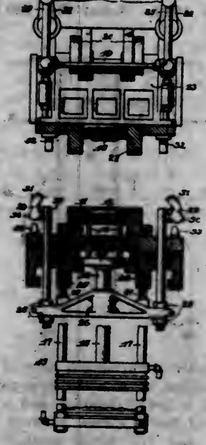
1,629,535. TWO-STROKE INTERNAL-COMBUSTION ENGINE. WILHELM RIEHM, Augsburg, Germany, assignor to The Firm: Maschinenfabrik Augsburg-Nuernberg Aktiengesellschaft, Augsburg, Germany, a Corporation of Germany. Filed Jan. 12, 1925, Serial No. 1,971, and in Germany Apr. 8, 1924. 3 Claims. (Cl. 123—65.)

3. A two-stroke internal combustion engine in accordance with claim 1 in which the guide blades are adjustable.



1,629,536. SELF-SERVICE MACHINE. JOHN RIIKONEN, Chicago, Ill. Filed Oct. 1, 1925. Serial No. 59,908. 9 Claims. (Cl. 211—8.)

1. In a device of the class described the combination with a pair of cross members having an open way between them, of a trap door pivotally mounted at one side of the way and forming a closure therefor, means for effecting movement of the trap door in one direction, spring means yieldingly resisting movement of the trap door, a clamp plate pivotally mounted at the opposite side of the way and a flange on the clamp plate provided with a notch and a cam face, the edge of the trap door normally seating in the notch and adapted to ride upon the cam face of the flange for moving the clamp into the way.

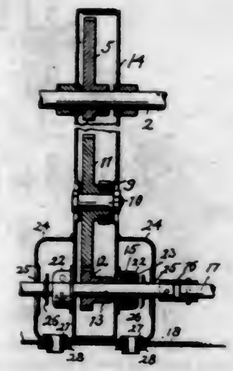


1,629,537. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed June 7, 1923. Serial No. 643,921. 15 Claims. (Cl. 235—23.)

2. In a machine of the class described, the combination of item entering means, a rocking member actuated by said item entering means, indicating elements, indicating elements supporting means adapted to be differentially moved, indicating elements selecting means, indicating elements elevating means, and means actuated by said

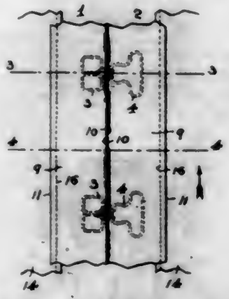
rocking member to move said indicating elements supporting means to a position corresponding to the position of said indicating elements selecting means.

1,629,538. PRESSURE-PAD-CONTROL DEVICE. FREDRICH J. RODS, Chicago, Ill., assignor to Marquette Tool & Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 20, 1925. Serial No. 24,695. 9 Claims. (Cl. 113—46.)



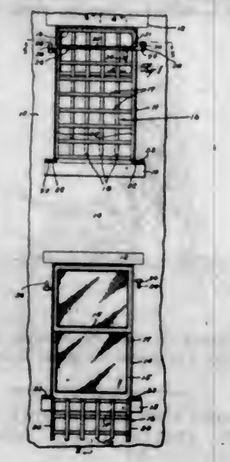
1. A draw press including a plunger, work holding and gripping means, a die, a pressure cushion for the die, and freely swinging means insertable between the cushion and work holder whereby the said work holding means will maintain the said die from following the upward movement of the plunger, the last recited means operating to permit the pressure cushion to return the die upon the return movement of the work holding means.

1,629,539. PROTECTED BEARING FOR POWDER-DISPENSING DEVICES. RALPH R. ROOT, Lakewood, Ohio, assignor to The Root Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 7, 1924. Serial No. 684,721. 6 Claims. (Cl. 43—148.)



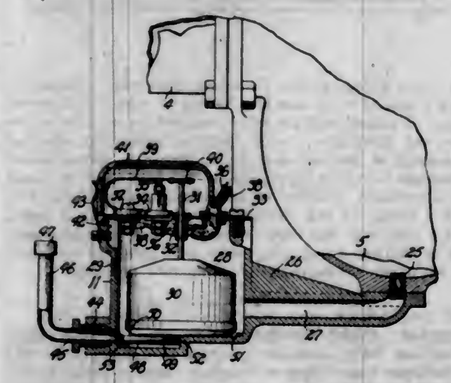
2. The combination with a container for powdered material, of a shaft extending into the container, a bearing for the shaft, a casing forming a chamber in which the

bearing is enclosed, said casing having an opening communicating with the interior of the container through which the shaft extends, deflecting means within the



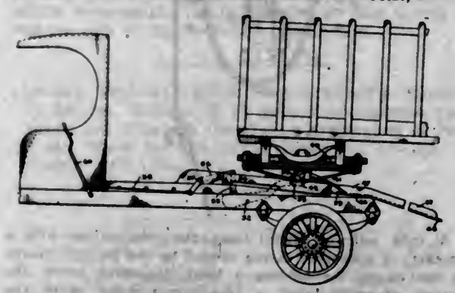
casing for preventing passage of powder from the opening to the bearing, and means for preventing accumulation of powder within the casing.

1,629,540. FASTENER STRIP OR FLY FOR GARMENTS. LEO ROSENMAN, Newark, N. J., assignor to R. K. M. Mfg. Company, a Corporation of New Jersey. Filed May 12, 1922. Serial No. 560,405. 1 Claim. (Cl. 2—265.)



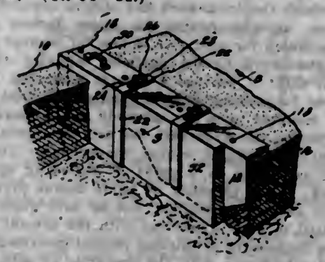
Flies for garments comprising a pair of fastener strips, each strip consisting of a main base-member made up of an upper and a lower element, and a facing-member, having a marginal fold disposed between said upper and lower elements, and the main portion of the facing-member being disposed upon the outer face of the upper element of said base-member, garment hooks arranged between the fold of the facing member and the lower element of the base-member of one of said fastener-strips with their hook-shaped portions projecting beyond the marginal edge of the fold of said strip, eyes arranged between the fold of the facing member and the lower element of the base-member of the other of said fastener-strips at points so that the eyes will not project beyond the marginal edge of the fold of said last-mentioned fastener-strip, and lines of stitching for securing said facing members, said lower and upper elements and the garment fasteners of the respective fastener-strips in assembled relation, said upper and lower elements, furthermore, being made of a fabric of greater strength than the facing members, all arranged to prevent pulling away of the garment-fasteners from said strips, and to hide said fasteners from view when the marginal edges of the folds of said strips are brought into abutting relation.

1,629,541. FIRE ESCAPE. GUSTAV SCHOLER, New York, N. Y. Filed May 19, 1926. Serial No. 110,054. 8 Claims. (Cl. 228—3.)



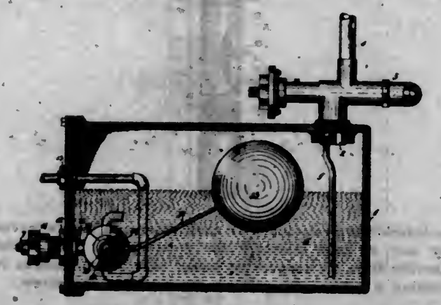
1. The combination with a building wall having an opening therein, of a prisoner grating adapted to prevent egress through said opening or to serve as a ladder, means connecting said grating with said wall but permitting the grating to be shifted from a position to bar said opening to a position to depend from said opening and serve as a ladder for descent from said opening, means to prevent unauthorized shifting of the grating from position to bar the opening, and a device attached to said grating and located between the ends of said grating when the grating is closed and serving as an extension of the ladder when the grating is in depending position.

1,629,542. OIL-BURNING SYSTEM. LEWIS L. SCOTT, St. Louis, Mo., assignor to Electrol Inc. of Missouri, St. Louis, Mo., a Corporation of Missouri. Filed May 31, 1924. Serial No. 717,190. 2 Claims. (Cl. 158—42.3.)



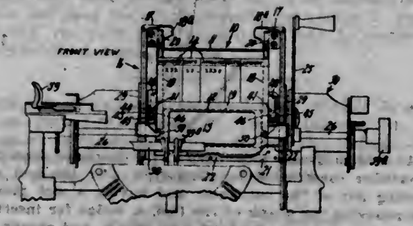
1. In an oil burning system of the class described, in combination with a chamber for receiving unignited oil, a float in said chamber, and a cut-out device adapted to be actuated on the rise of said float, to stop the operation of the system, means for draining said chamber comprising a tube rotatably mounted in the wall of said chamber, having an upward extension outside of the chamber and carrying a cam member projecting into the chamber and located beneath said float, whereby, upon turning said extension downward to drain the chamber, said tube will be rotated to cause the cam member to raise said float and thereby actuate the cut-out device or, if the float is in a raised position, will prevent its fall to normal position until said extension has been raised.

1,629,543. VEHICLE. WILLIAM OSCAR SHADBOLT, deceased, Brooklyn, N. Y., by Anna A. Shadbolt, executrix, Brooklyn, N. Y., and OTTO MARKLEIN, Brooklyn, N. Y.; said Marklein assignor of his interest to said Anna A. Shadbolt as executrix. Filed Aug. 23, 1923. Serial No. 658,952. 2 Claims. (Cl. 280—33.1.)



1. The combination with a trailer truck comprising a body provided with a pair of rear wheels, a swingingly mounted support upon its forward portion adapted to support the same when standing alone, and devices upon its forward portion adapted to co-act in coupling said trailer to a tractor, said coacting devices on the trailer comprising a fifth wheel provided with laterally extending arms; of a tractor provided with a portion adapted to be inserted under the front end of said trailer, lateral guides adapted to bring the trailer into proper lateral relation with the tractor when the tractor is introduced under the trailer, stops on said tractor against which said laterally extending arms are adapted to abut, and levers pivotally secured to said tractor, the rear ends of which are provided with hooks adapted to engage with said laterally extending arms when said levers are in one position and to be disengaged therefrom when said levers are in another position, the rear ends of said hooks being provided with rearwardly and downwardly extending members over which said laterally extending arms may pass, whereby said hooks are depressed, the ends of said levers opposite to said hooks being heavily counterweighted so as to cause said hooks to rise when permitted and thereby to engage with said laterally extending arms and to remain in such engaged and operative position.

1,629,544. APPARATUS FOR INSTALLING PAVEMENT SEPARATOR JOINTS. WILLIAM FOSTER SHAW, Detroit, Mich. Filed Sept. 2, 1924. Serial No. 735,829. 1 Claim. (Cl. 94—51.)



In a work support for a pavement separator joint, a supporting plate having a flange on one side along its upper edge, pins extending removably through said flange into the roadway to maintain the plate in the upright position during the laying of the pavement to make a break therein, said plate having a width and length substantially equal to that of the separator joint to be supported by it and provided with clamping means to hold the separator joint against the side of the plate opposite the flange and having openings along its lower edge whereby both sides of the separator joint are exposed to the pavement structure to be engaged thereby.

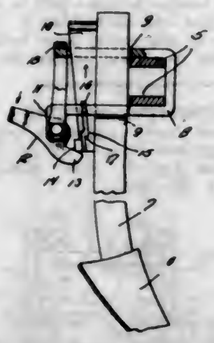
1,629,545. BALL COCK. JOHN A. SHERMAN and WILLIAM H. SHEPPARD, Worcester, Mass. Filed Nov. 3, 1925. Serial No. 66,549. 3 Claims. (Cl. 137—104.)

1. The float valve above described comprising a stationary member adapted to be mounted on a tank and a rotary member mounted to turn on said stationary member and means comprising a float for turning it, said stationary member having a fluid inlet port and outlet ports, said rotary member having a port in communication with said inlet port and connectible to either of said outlet ports, one of said outlet ports leading into said tank and the other to a point outside the tank.

1,629,546. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 21, 1925. Serial No. 51,552. 15 Claims. (Cl. 197—135.)

1. In a typewriting machine having a platen, a ribbon, and a stencil-card device, in combination, a stencil-card-holding frame arranged for being raised and lowered in front of said platen, means for automatically silencing said ribbon when said frame is raised, and stops mounted on said frame and arranged for supporting a stencil-card in said frame above the bottom edge thereof, whereby characters may be typed on the back of said card below the stencil-sheet thereof.

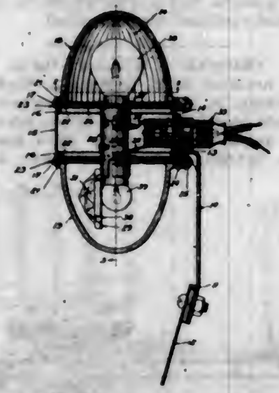
1,629,547. TOOL HOLDER. JOHN HUGO SMITH, Detroit, Mich., assignor to The Wesson Sales Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 19, 1925. Serial No. 3,255. 4 Claims. (Cl. 279—1.)



1. A tool holder of the character described, comprising two cooperating detachable interlocking members operating as a single unit, one of which has means adapted for

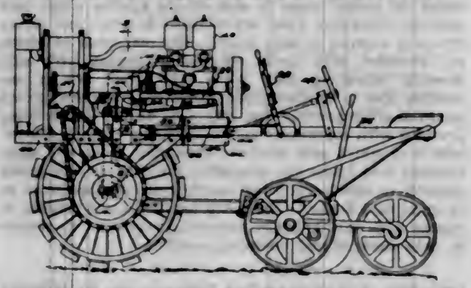
driving connection with a power operated machine also means to receive and support the other member,—in turn adapted to support a cutting tool; means adapted for longitudinally adjusting said members while remaining

in interlocking relation with each other and means carried by one of said members for forcing the tool carried thereby from its supporting socket each of said means including a screw and gearing for rotating the screw.



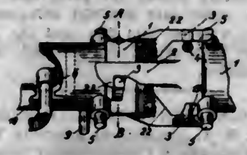
1,629,548. CULTIVATOR TOOL CLAMP. JACOB SPAHN, Hillrose, Colo. Filed Jan. 17, 1927. Serial No. 161,601. 6 Claims. (Cl. 97—193.1.)

1. In a cultivator tool clamp of the character described, a member constructed for disposition over the tool supporting bar of the cultivator and having a slot therein for receiving the shank of the tool, a wedge for insertion through the slot in back of said shank, and means associated with said member for engagement with one end directly beneath the wedge and adapted to receive a downward blow at its opposite end for releasing said wedge.



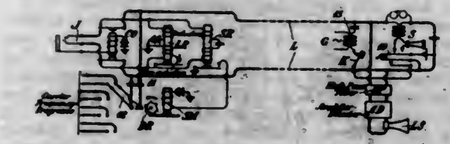
1,629,549. TAIL AND SIGNAL LAMP. JASON C. STEARNS, Worcester, Mass. Filed May 14, 1924. Serial No. 713,351. 4 Claims. (Cl. 177—329.)

1. In a tail and signal lamp, the combination with a cylindrical metallic casing having a pair of outwardly extending flanges at its top and bottom and provided with a partition across it, of a pair of hollow covers of glass, each having an open end provided with a bead therearound set against one of said flanges on opposite sides of the casing, a single ring of arcuate transverse section around each adjacent flange and bead for holding the covers against the bottom and top of the casing, electrical connections extending through the cylindrical wall of said casing horizontally, a lamp in each of said covers, means carried by the casing and extending vertically through the center of the casing for supporting said lamps on opposite sides of the partition, and means extending from said electrical connection for connecting the lamps with a source of power.



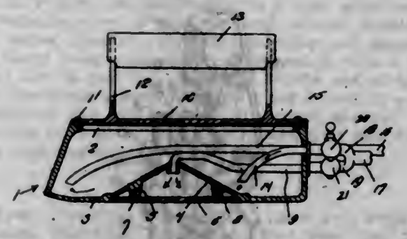
3. In a tail and signal lamp, the combination with a bracket, of a metallic casing carried by the bracket, means in the casing for holding a lamp depending below the bottom of said casing, a transparent cover below the casing supported thereby all around the upper edge of the cover spaced from the bracket and surrounding the lamp, and means between the lamp and the cover for coloring the rays projected rearwardly from the lamp.

1,629,550. CLUTCH CONTROL FOR TRACTORS. HENRY ALONZA STEWART and FRANK LENARD HOLT, Tullahoma, Tenn. Original application filed Apr. 1, 1925, Serial No. 19,978. Divided and this application filed Mar. 23, 1926. Serial No. 96,808. 1 Claim. (Cl. 180—77.)



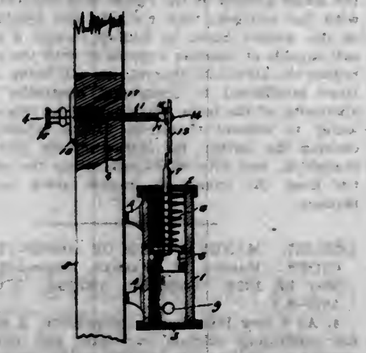
A tractor comprising a framework, wheels, an engine having a drive shaft, means for transmitting the engine driving power to the wheels including a clutch, a coupling bar with which the framework has pivotal connection; in combination, an arm having an upper forked end to engage the clutch for operation, a bracket secured to part of the frame work having portions receiving the arm below said fork to provide a pivotal mounting for the arm, a lever for rocking the arm upon said pivotal mounting being mounted upon the coupling bar, a flexible element connecting the lever with the arm at a point below the pivotal mounting, a spring connected at the same point and extending to a point of fastening upon the frame work, and a plurality of guide means over which the flexible element is trained, one of said guide means being located in axial alinement with the pivotal connection of the framework permitting pivotal movement thereof without interfering with the operation of said arm in the actuation of the clutch.

1,629,551. COUPLING FOR RAILWAY CARS. CARL STOLLBERG, Berlin, Germany. Filed Jan. 23, 1926, Serial No. 83,891, and in Germany Feb. 3, 1925. 3 Claims. (Cl. 213—76.)



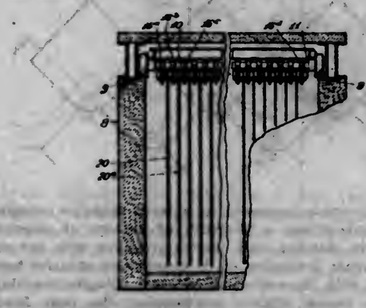
1. In combination with a pair of coupling heads, air couplers mounted therein comprising conduits, sleeves mounted on the conduits for partial rotation and locking devices interengaging in the rotation of said sleeves to lock the ends of the conduits in engagement.

1,629,552. PROGRAM-SELECTING CIRCUITS. MAURICE E. STRIEBY, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,721. 6 Claims. (Cl. 179—2.)



1. In a program distribution system, a subscriber's telephone line terminating in a subscriber's telephone apparatus at the subscriber's station, switching means at the central office whereby connections may be established between said subscriber's line and another subscriber's line, a plurality of trunks at the central office upon which programs may be impressed, a directively operated switch independent of said first mentioned switching means at the central office for establishing connections between said first mentioned line and any desired trunk to the exclusion of other trunks, an alternating current control device for operating said switch, and means to control the transmission of alternating current to said device from the subscriber's station over the two sides of said first mentioned line in series.

1,629,553. STEAM-HEATED IRON. LESTER SWENSON, Deerfield, Wis. Filed Sept. 22, 1926. Serial No. 137,052. 1 Claim. (Cl. 68—26.)



In a steam heated iron, a casting comprising a semi-ovate flat bottom surrounded by an upstanding marginal rim defining a main steam circulating and heating chamber, said chamber being open at its top, a cover plate for the open top detachably seated on the rim, said plate being provided with upstanding standards, a hand-grip carried by said standard, said bottom having an inwardly projecting hollow cone forming a supplemental moistening chamber, a removably mounted apertured closure disk forming the base of the cone, a plurality of valved steam supply pipes, one of said pipes being in communication with the interior of the cone, and one with the interior of the main chamber, and a steam discharge pipe leading from the said main chamber.

1,629,554. CONTROLLING MEANS FOR IGNITION CUT-OFFS. GEORGE W. THOMPSON, Cheboygan, Mich., assignor to Bifex Products Company, a Corporation of Delaware. Filed Jan. 22, 1920, Serial No. 353,174. Renewed Oct. 13, 1926. 1 Claim. (Cl. 251—75.)

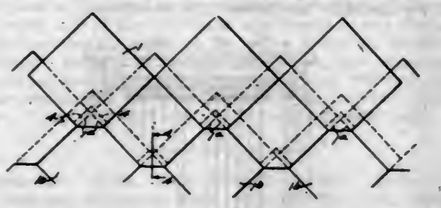
A device of the character described comprising a cylinder having an inlet adjacent its one end adapted to be connected to an oil pump of an internal combustion engine and having an outlet intermediate its ends, a spring-pressed piston within the cylinder adapted to normally prevent communication between the inlet and outlet of the cylinder, and adapted to move within the cylinder under influence of oil pressure from said pump and assume a position for establishing communication between the said inlet and outlet, a rotatable rod, a lever or arm extending from the rod, means associated with the rod whereby said rod will be yieldably held against rotation, a slotted link having one end pivotally connected to the piston, a pin carried by the arm upon said rotatable rod and slidable in said slot, and said slot being of such length that when the arm is in one of its adjusted positions and upon the piston assuming its normal or closed position the shaft carrying said arm will be rotated a predetermined degree.

1,629,555. CLAMPING MEANS FOR WALL BOARD OR THE LIKE. ALVA W. TYLER, Chicago, Ill., assignor to Universal Gypsum & Lime Co., Chicago, Ill., a Corporation of Delaware. Filed Oct. 3, 1923. Serial No. 666,393. 20 Claims. (Cl. 34—26.)

1. In clamping means for wall board and similar material, a facer strip and nonwarpable supporting means for said strip.

1,629,556. PROCESS OF OBTAINING GLUE AND GELATIN. GEORGE R. UNDERWOOD, Peabody, Mass., assignor to American Glue Company, Boston, Mass., a Corporation of Massachusetts. Filed May 10, 1924. Serial No. 712,440. 1 Claim. (Cl. 87—7.)

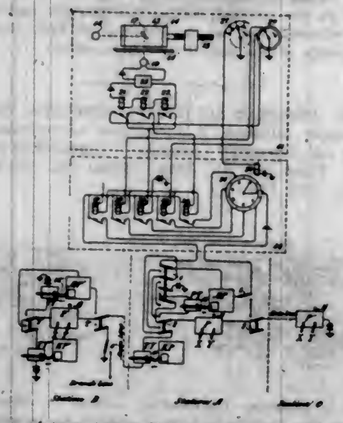
The process of extracting glue and gelatin from chrome tanned leather without disintegrating the leather or removing the chromium therefrom, which consists in the steps of liming the leather as ordinary glue stock is limed for such protracted period of time at atmospheric temperatures as will so change the condition of the collagen therein that it will give up its glue and gelatin on cooking, washing the limed leather with water to remove the major portion of the excess lime not having combined with the collagen, then reducing the residual alkalinity of the washed mass, by adding thereto a solution of a salt capable of reacting chemically with the excess lime to reduce the alkalinity thereof, the salt being used in quantities insufficient to completely neutralize the residual alkalinity of the mass, washing the so treated leather in water to remove therefrom excess soluble salts, then cooking the leather, for extracting the glue and gelatin therefrom, and afterwards separating the glue and gelatin from the exhausted leather stock in the known manner.



1,629,557. MANUFACTURE OF ARSENATE INSECTICIDES. HAROLD W. WALKER, Edgewood, Md. Filed May 14, 1926. Serial No. 109,162. 7 Claims. (Cl. 167—6.)

4. As a new insecticidal composition, a powdery product containing calcium carbonate and normal calcium arsenate, said arsenate existing as an exterior layer and said calcium carbonate as a core.

5. The process of making calcium arsenate which comprises treating particles of reactive calcium carbonate with arsenic-containing material capable of producing arsenites in situ and heating the materials in the presence of air until the arsenite formed is converted into arsenate, the temperature and conditions of heating being such as to preclude substantial calcination of said calcium carbonate.



6. The process of making calcium arsenate which comprises treating particles of reactive calcium carbonate with arsenic containing material capable of producing arsenites in situ and heating the materials in the presence of air until the arsenite formed is converted into arsenate, the temperature and conditions of heating being such as to preclude substantial calcination of said calcium carbonate, and the proportion of As_2O_3 being insufficient to react with all the calcium carbonate.

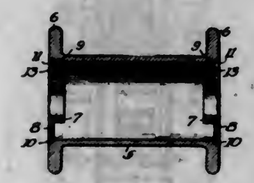
1,629,558. SHINGLE FASTENING. HENRY R. WARDELL, Daytona, Fla., assignor to Johns-Manville Incorporated, a Corporation of New York. Filed Nov. 3, 1925. Serial No. 66,524. 1 Claim. (Cl. 108—7.)

A roof covering composed of pointed shingles comprising, in combination, a plurality of courses of substantially square shingles, each course arranged with one set of the diagonal dimension of its constituent shingles horizontal and with the corners of adjacent shingles touching, each such course slightly overlapping the next lower course, the lower corner of each shingle being bent under from exposed position and forming a flap placed under it in the vertex of the angle between two adjacent shingles of the next lower course, and a thin quadrangular plate of stiff material, having one corner clipped off to an extent such that the cut edge approximates in length the line on which said flap is bent, fastened to said folded flap and extending beyond the point and both sides of said flap and under said adjacent shingles of the next lower course; whereby said flap, and the lower portion of the shingle to which it is connected, are firmly anchored in position.

1,629,559. SIGNALING SYSTEM. EDWARD F. WATSON, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 1, 1924. Serial No. 696,282. 18 Claims. (Cl. 178—5.)

2. In a picture transmitting system, means to test a restricted elemental area of a picture and give a response according to its degree of shade, means to shift the test to successive elemental areas of the picture, means to punch code combinations in a tape corresponding in order to the degrees of shade of the picture elements, means governed by such a tape to transmit corresponding electric currents, a receiver for said currents adapted to print successive impressions on a picture receiving surface determined in shade according to the said code combinations, and means to adjust the spacing of the said impressions.

1,629,560. LINING-TRIMMING MACHINE. CHARLES C. WEBSTER, Haverhill, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 1, 1924. Serial No. 710,440. 3 Claims. (Cl. 12—51.)

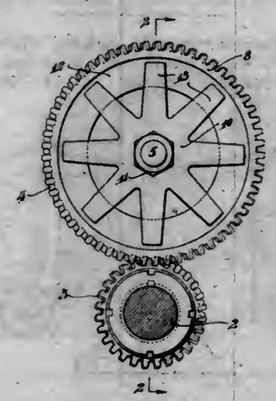


1. A lining-trimming machine comprising a work-supporting member having a shearing edge, a trimming cutter having a pilot portion and two cutting edges extending in opposite directions from said pilot portion, and mechanism arranged to reciprocate said cutter so that said cutting edges and said pilot portion will move across and in contact with said shearing edge of said work-supporting member.

1,629,561. GARMENT. ROSA R. WELLSTATTER, New York, N. Y. Filed Sept. 6, 1923. Serial No. 661,185. 7 Claims. (Cl. 2—213.)

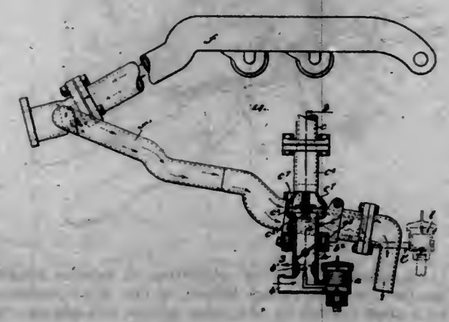
1. A combination garment comprising skirt and leg forming portions each including inner and outer leg members, a crotch portion extending from one of said inner leg members and having a free longitudinal edge substantially coextensive in length with said crotch portion and adapted for engagement throughout its length with the cooperating free edge of the contiguous inner leg member, and means for detachably securing said cooperating free edges together substantially throughout their entire length, substantially as specified.

1,629,562. SPOOL. HUGO H. WEHMINS, Chicago, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1923. Serial No. 672,697. 8 Claims. (Cl. 242—118.)



1. In a spool, the combination of a cast metal body comprising a barrel of relatively large internal diameter and having integral outwardly projecting end flanges, said barrel being counterbored in one end to form a recessed seat in said end, a bushing for the end of said body comprising a metal disk fitting and secured in said counterbore and provided with a central aperture of relatively small diameter, the outer margin of said disk being supported by said seat.

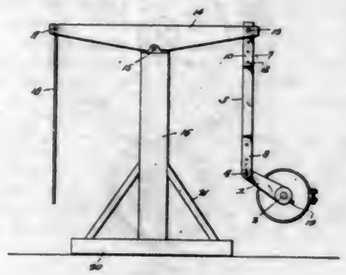
1,629,563. PROCESS FOR MAKING IRON AND STEEL. SIGURD WESTBERG, Germantown, Pa. Filed Oct. 21, 1924, Serial No. 745,010, and in Norway Apr. 14, 1924. 14 Claims. (Cl. 75—50.)



1. The process of making steel which comprises forming an aggregate of separate pieces of metal, heating to a welding temperature in a reducing gas containing hydrogen, thereby forming gaseous compounds with impurities in said metals forming nongaseous compounds of another metal and said impurities, and welding.

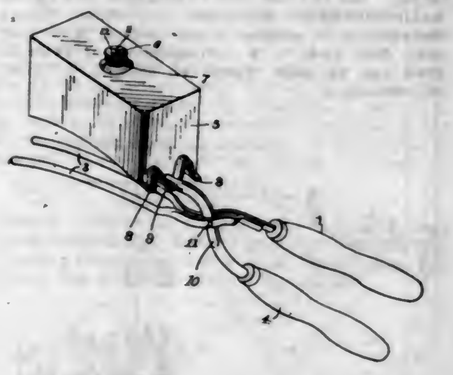
1,629,564. MEANS FOR PREVENTING BACKLASH IN GEARS. JESSEE MERCER WHITE, Philadelphia, Pa. Filed Aug. 3, 1925. Serial No. 47,763. 2 Claims. (Cl. 179—18.)

1. In combination with a driving shaft, having a driving gear thereon, and a driven shaft having a driven gear thereon; a friction gear mounted to rotate relatively to the driven shaft the friction gear and the driven gear having faces frictionally engaging each other; a pinion, fixed to the driving shaft and meshing with the friction gear, for rotating it at a different speed from that of the driven gear, a spider spring carried by the driven shaft and adapted to hold the friction gear in engagement with the driven gear, and a wearing ring between the spider and the friction gear.



1,629,565. SEPARATOR AND VAPORIZER FOR INTERNAL-COMBUSTION ENGINES. GOTTFRIED WIRRER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 21, 1922. Serial No. 555,845. 2 Claims. (Cl. 48—180.)

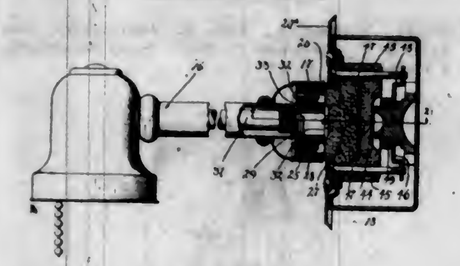
1. An apparatus for producing a dry fuel mixture comprising a conduit adapted to be connected at one end to a metering device and at the other end to the cylinders of a combustion engine, a stationary conical deflector mounted centrally of said conduit and spaced from the wall thereof to permit the on-flow of the gaseous mixture, an annular groove in the wall of the conduit to receive deflected particles, an evaporating chamber separate and remote from the conduit, means for connecting the groove in the conduit to the evaporating chamber to conduct the



liquid fuel collected in the groove to the evaporating chamber, a source of heat co-operating with the evaporating chamber to vaporize the collected liquid fuel, and means for returning the vaporized fuel to the conduit.

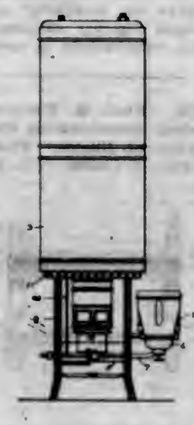
1,629,566. MOTOR-VEHICLE POWER ATTACHMENT. DAVIS LEVI WOLF, Olney, Tex. Filed Jan. 27, 1927. Serial No. 164,100. 3 Claims. (Cl. 74 -106.)

1. In a motor vehicle drive, the combination with a rear axle having a differential, of crank elements secured to the ends of the rear axle at opposite sides of the differential, and a connecting fork having spaced sides pivotally connected to the crank elements and adapted to cause the drive through the rear axle to be uniform when power is applied to the rear axle.



1,629,567. HAIR WAVER. MARION D. WORLEY, St. Stephen, New Brunswick, Canada. Filed Feb. 15, 1926. Serial No. 88,347. 5 Claims. (Cl. 132—32.)

1. A hair-waving device, consisting of handles hinged near their centres, prongs formed on one of the handles, and a tank carried by the other handle and adapted to contain a heating liquid.

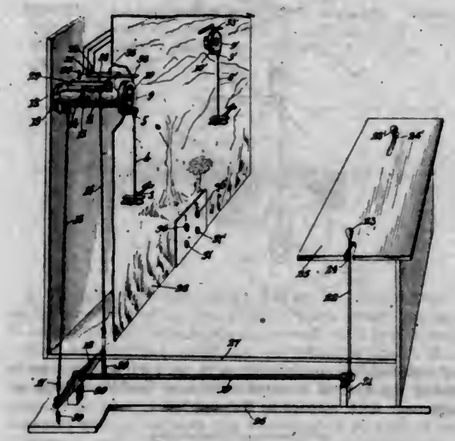


1,629,568. COMBINATION ELECTRICAL CONNECTER DEVICE AND FIXTURE SUPPORT. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 27, 1920. Serial No. 419,967. 4 Claims. (Cl. 173—338.)

1. The combination with a receptacle having contacts and a fixture for cooperation with said receptacle, of a combination electrical connecter and fixture supporting device comprising a sheet metal member having a pair of latch members having pivotal engagement with respect to said receptacle to swing about an axis extending trans-

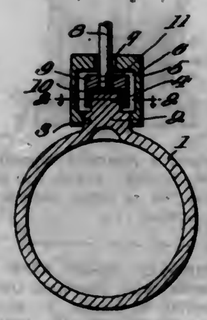
versely with respect to the axis of the receptacle, and a pair of stop members for limiting the pivotal movement with respect to said receptacle.

1,629,569. THERMOSTATIC CONTROL FOR OIL BURNERS, LEE S. CHADWICK, Shaker Heights Village, MARC REGEK and JOHN ALGER DAHLSTROM, East Cleveland, Ohio, assignors to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 26, 1923. Serial No. 664,855. 7 Claims. (Cl. 236—20.)



1. In combination with a liquid fuel burner of the wick type, wick adjusting means involving a spindle that is rotatable in one direction to raise the wick and in the opposite direction to lower the wick, a member rotatable with the spindle, an actuator for cooperation with said member and rotatable upon the axis of the member but independently thereof, means effecting a driving connection between the actuator and said member, and operative connections between the thermostat and the actuator.

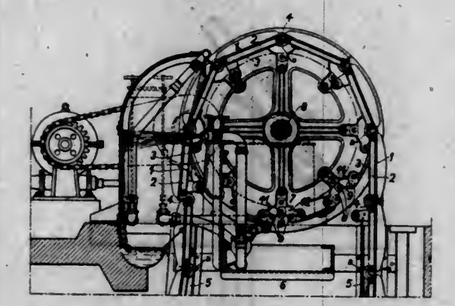
1,629,570. AMUSEMENT DEVICE. PAUL U. DANIEL, Brooklawn, N. J., assignor of one-half to Francis C. Rogers, Philadelphia, Pa.; Mina Daniel administratrix of said Paul U. Daniel, deceased. Filed Apr. 20, 1924. Serial No. 709,754. 17 Claims. (Cl. 273—86.)



17. In an amusement device the combination of a pendulum, a suspension pivot for said pendulum, said pendulum being mounted on said pivot for rotation there-

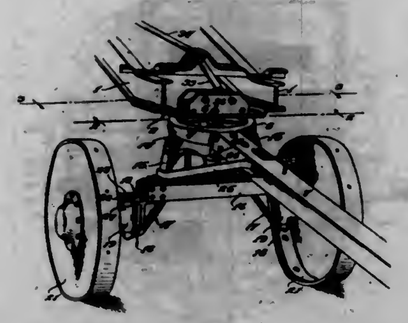
about in a substantially vertical plane, means for imparting limited successive impulses to said pendulum

directed in a substantially vertical plane, whereby said pendulum may be caused to loop in a substantially vertical plane.



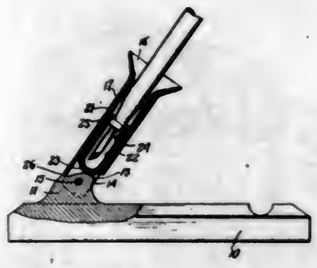
1,629,571. FLUSH-VALVE FLOAT. EDWARD L. DELANY, Brooklyn, N. Y. Filed Mar. 9, 1926. Serial No. 93,402. 4 Claims. (Cl. 4—56.)

1. A flush valve float comprising a body portion having a nipple at its upper end, and externally threaded, a cap screwed on the nipple and having an opening in its upper end, a member within the cap and held against rotation, and a lifting rod passing through the opening in the cap and detachably connected to the member within the cap.



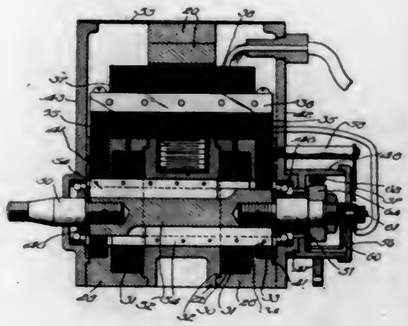
1,629,572. ROTATING ENDLESS SCREEN BELT FOR THE MECHANICAL PURIFICATION OF WATER. EUGEN GEIGER, Karlsruhe, Germany. Filed Mar. 25, 1926, Serial No. 97,395, and in Germany Apr. 2, 1925. 3 Claims. (Cl. 210—175.)

1. In a rotating endless screen belt for the mechanical purification of water, in combination with two endless chains carrying said belt and guiding rollers on both sides and running over two chain wheels mounted above the water, a number of gaps provided in the periphery of the rim of said chain wheels for the engagement of said guiding rollers, the radius of said gaps being somewhat larger than that of said rollers, and a number of bearing rollers rotatably mounted in the rim of said chain wheels



adjacent to each of said gaps and with their periphery somewhat projecting into the respective gap so that said guiding rollers in engaging with said gaps come to rest upon said bearing rollers at a certain distance from the face of the respective gap.

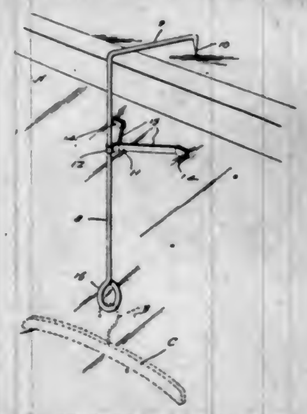
1,629,573. STEERING GEAR FOR ROAD GRADERS. EDWARD C. GLEDHILL, Galion, Ohio. Original application filed Aug. 28, 1923, Serial No. 659,763. Divided and this application filed Apr. 24, 1924. Serial No. 708,758. 2 Claims. (Cl. 280—96.)



1. In combination, a wheeled implement comprising a frame, a rigid rear axle and wheels carried thereby, a front axle, a turntable supported thereby, said frame having one end pivotally mounted on said turntable whereby said axle may be moved in a horizontal plane, spindles at the ends of said front axle, wheels rotatably mounted on said spindles, a vertical shaft extending coaxially of said turntable and that portion of the frame supported thereby, a gear housing mounted upon said front axle and partially inclosing said shaft, a worm gear mounted on said shaft within said housing, a second gear within said housing and meshing with said first gear, said second gear being operatively related to said spindles whereby horizontal movement of said housing and said front axle about its pivot causes corresponding movement of said spindles, and means for rotating said gears for causing movement of said spindles independently of said front axle.

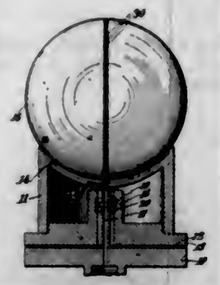
1,629,574. DESK SET. BENJAMIN W. HANLE, Elizabeth, N. J., assignor to Eagle Pencil Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 25, 1926. Serial No. 131,343. 9 Claims. (Cl. 120—108.)

1. In a device of the character described, the combination of a base, a cap into which the pen carrying portion of a fountain pen may be inserted, devices supporting the cap for movement relative to the base, and means whereby movements of the cap on the base will seal and unseal the portion of the pen within the cap.



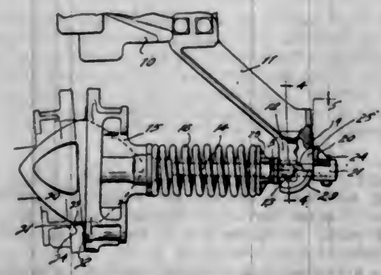
1,629,575. IGNITION MAGNETO. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Mar. 11, 1922. Serial No. 542,928. 12 Claims. (Cl. 171—209.)

1. In a magneto, a rotor, magnet pole pieces, a coil, a core for said coil having extensions in proximity to said rotor, an inductor element on said rotor arranged to complete successive paths from said pole pieces to said core, and a fixed generator coil encircling said rotor between said pole pieces and said core extension.



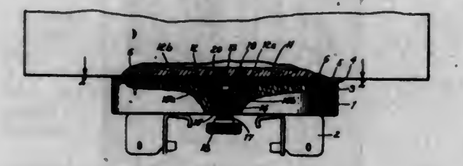
1,629,576. DISPLAY HOOK. WILLIAM F. IRISH, Anderson, S. C. Filed Dec. 14, 1925. Serial No. 75,302. 1 Claim. (Cl. 248—22.)

In a hook of the class described, a single length rod, the upper portion thereof being bent laterally to provide an elongated vertical arm portion, and a relatively short finger portion, the outer free end of said finger portion being disposed downwardly and terminating in a point adapted for engagement with a support, an eye formed on the lower free end of said vertical arm adapted to provide a support for a garment hanger, said eye being disposed in substantially the same plane as the aforementioned finger portion, and a brace slidable on the arm portion



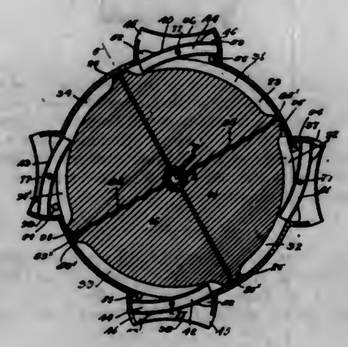
and adapted for engagement with said support for maintaining the arm in a vertical manner and in spaced arrangement with respect to its support.

1,629,577. ART OF SUSTAINING BODIES IN SPACE. EMIL KLAHN, New Vernon, N. J. Filed Oct. 1, 1917, Serial No. 194,211. Renewed Oct. 20, 1926. 16 Claims. (Cl. 74—78.)



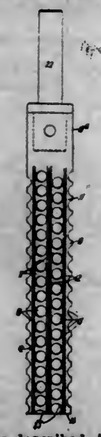
1. In a gyroscope: a rotatable support member having an upper bowl portion; and a free, spherical member adapted to rest and to rotate therein and solely air supported during rotation.

1,629,578. AUTOMATIC TRAIN-PIPE CONNECTER. CHARLES A. KOTHE, East Cleveland, Ohio, assignor, by mesne assignments, to Martin A. Barber, Cleveland Heights, Ohio. Filed Sept. 19, 1921. Serial No. 501,529. 7 Claims. (Cl. 285—24.)



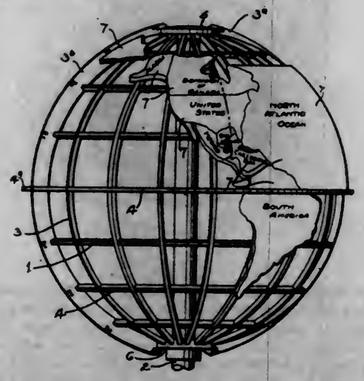
1. In an automatic train pipe coupling, a supporting bracket having spaced arms depending therefrom, a coupling head having a shank thereon, and a stop block on said shank having wings to engage the rear edge of the arms, the lower edge of said wings being above the center line of the shank.

1,629,579. CAMERA-SUPPORTING MEANS. HERMAN OSBORN LANGLEY, St. Albans Gardens, N. Y. Filed Nov. 21, 1925. Serial No. 70,540. 6 Claims. (Cl. 248—46.)



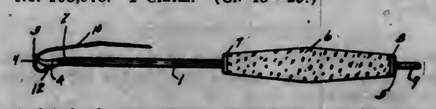
1. In instrument supporting means, the combination of an instrument and a base member upon which the same is adapted to be detachably supported, said base member having an undercut guide-way extending laterally thereof and terminating in a semi-circular portion, and said instrument having a circular stepped plate fixed thereto, adapted to be inserted in said guideway with the larger diameter thereof beneath the overhanging portion of said guideway, said plate being adapted to rotatably fit in said semi-circular guideway portion, said base member having an upwardly extending opening therethrough, and clamping means manually operable in said opening, to press upwardly against said stepped plate to bind the same firmly against the overhanging portion of said guideway.

1,629,580. ROTARY ENGINE. NELSON P. LETHANDER, Brandon, Manitoba, Canada. Filed Nov. 6, 1924. Serial No. 748,150. 2 Claims. (Cl. 123—15.)



2. On a rotary internal combustion engine inner and outer rotors forming therebetween a plurality of similar separate working chambers, means causing the rotors to rotate in opposite directions, a plurality of similar separate working chambers, a plurality of rocker members forming transfer chambers and corresponding in number to the number of working chambers and carried by the outer rotor, and inlet and an outlet port associated with each rocker member and controlled thereby and means for rocking each rocker member to permit of the entrance through the inlet port of a charge to a working chamber, the subsequent compression and expansion of the said compressed charge in the said latter transfer chamber and the following working chamber and the exhausting of the spent charge through the exhaust port of the following transfer chamber, and timed means for firing the expanding charges in the transfer chambers.

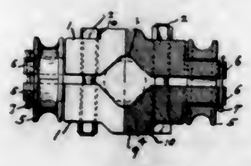
1,629,581. TOOL FOR DRILLING CONCRETE, ETC. ADOLPH W. MACHLET, Elizabeth, N. J. Filed Oct. 27, 1923. Serial No. 671,086. 13 Claims. (Cl. 255—63.)



1. A drill of the class described, in the form of a hollow tool of the same diameter throughout and having a self-renewing wearing edge or nib thin enough to produce a cut in the material when the tool is hammered and provided with straight longitudinal ribs at intervals around its periphery, the tool having rows of chisel-forming perforations between the ribs, the perforations having an echelon arrangement around the tool.

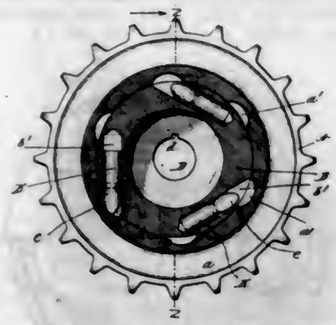
1,629,582. SECTIONAL-MAP APPARATUS. GEORGE C. MCCLINTOCK, San Diego, Calif. Filed July 30, 1925. Serial No. 47,064. 11 Claims. (Cl. 35—6.)

1. In an apparatus of the class described, a spherical supporting means provided with substantially vertical and horizontal ribs corresponding with the meridians and parallels of a map of the world, and map sections formed as sections of a sphere adapted to be supported at the outer portions of said ribs.



1,629,583. FISHHOOK EXTRACTOR. MELVEN EDWARD NELSON, Fremont, Nebr. Filed Apr. 28, 1926. Serial No. 105,075. 1 Claim. (Cl. 43—29.)

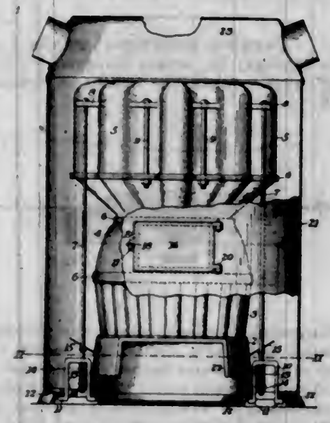
A fish hook extractor, as described, comprising a wire rod, flattened and forked at the forward end; said forked end being slightly curved in a plane opposite to said



flattened portion; a handle of a floatable material or substance, capped at both ends, on said wire rod, adjacent the rear end; and an eyelet formed in said rear end to permit securing said extractor to the body of the user.

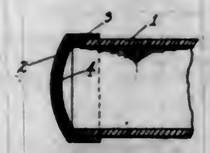
1,629,584. POLISH-ROD CLAMP. THOMAS O'BOYLE and REX G. HAMAKER, Houston, Tex.; said O'Boyle assignor to said Hamaker. Filed Sept. 18, 1923. Serial No. 663,459. 2 Claims. (Cl. 24—243.)

1. A polish rod clamp including a pair of clamp jaws, one side of each jaw being provided with a vertical groove, said grooves registering when the jaws are clamped together, and forming a bearing for the polish rod, bolts securing said jaws together, each jaw having a projection at each end, said projections cooperating when the jaws are secured together and thus forming pintles, one at each end of the jaw and a cable bearing on each pintle.



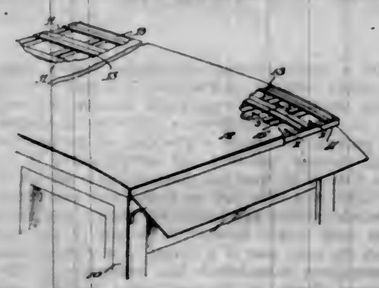
1,629,585. ONE-WAY CLUTCH. DANIEL L. OULTON, Everett, Mass., assignor to Oulton Manufacturing Corporation, a Corporation of Vermont. Filed May 25, 1925. Serial No. 32,639. 1 Claim. (Cl. 192—46.)

In a device of the character specified, the combination of an annular member provided with a pocket in its inner periphery, a member rotatably mounted within said annular member, said member being provided with a hole in its outer periphery, said hole being located in the alignment of a chord with respect to the circular periphery of said member rotatably mounted within said annular member, and a plunger slidably mounted in said hole, said plunger being provided with a rounded head one side of which is adapted to fit closely against and to be embraced by the opposed surface of said pocket, said plunger being adapted to emerge partially from said hole and to enter said pocket and to be retained therein by a driving force actuating one of said annular members in one direction and to be ejected from said pocket by a driving force actuating said member in the opposite direction.



1,629,586. FURNACE. WALTER J. PEES, Meadville, Pa. Filed May 3, 1924. Serial No. 710,784. 2 Claims. (Cl. 126—99.)

1. A furnace comprising a plurality of separable sections including a base and a radiator, a yoke detachably cooperating with the base and whose cross-bar is above the base, a tie rod connected to said radiator and extending through the cross-bar of said yoke, and an

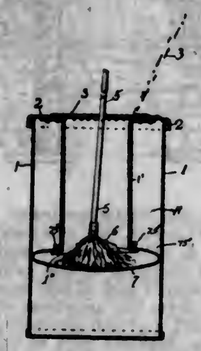


adjustable resilient connection between said yoke and said tie rod between the legs of the yoke, substantially as described.

1,629,587. AUTOMOBILE BUMPER. WILLIAM RAHE, Cincinnati, Ohio. Filed Sept. 29, 1926. Serial No. 138,505. 4 Claims. (Cl. 293—55.)

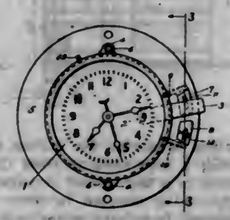
1. In combination with a tubular element of a hollow bumper bar, a cap for fitting over the end of the tube, said cap having sleeve-like portions for engaging the outer surface of the tubular element, and a disc of equivalent diameter to the inner diameter of said sleeve-like portions, said disc adapted to reinforce the cap against a collapsing strain.

1,629,588. VEHICLE TOP. CHARLES A. ROTTHOUSE, Brandywine Hundred, Del., assignor of one-half to Edward G. Cook, Wilmington, Del. Filed Aug. 28, 1925. Serial No. 53,179. 4 Claims. (Cl. 296—137.)



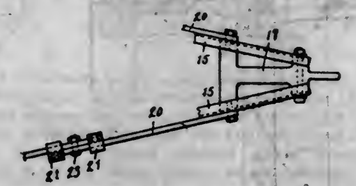
1. In a vehicle top, cross bows including front, rear and intermediate bows, and a metallic stringer secured to the front and rear bows and having a depending flange engaged with the intermediate bows.

1,629,589. PASSENGER-SHIP CONSTRUCTION. GEORGE G. SHARP, Wyoming, N. J. Filed Apr. 15, 1925. Serial No. 23,225. 4 Claims. (Cl. 114—189.)



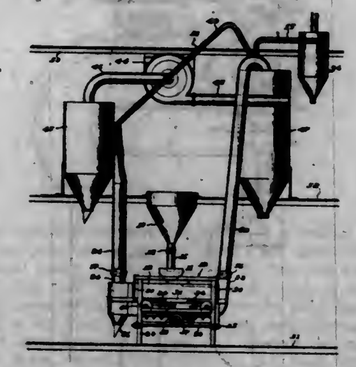
1. Means for increasing the passenger carrying capacity of a ship, which consists of arranging the staterooms in groups with one bulkhead common to all the rooms of one group and arranging the opposite bulkhead of other said rooms on an angle with a portion projecting beyond the angularly disposed bulkhead of the next adjacent room.

1,629,590. DRY-MOP DUST COLLECTOR. IDA L. SMITH, Portland, Me. Filed Apr. 23, 1925. Serial No. 25,402. 3 Claims. (Cl. 15—142.)



1. A drp mop dust collector comprising, in combination, a receptacle adapted to receive a dry mop and having a cover with central opening and a removable lid therefor; a shell depending inside the receptacle from the edge of said opening forming an annular dead air space between the shell and the receptacle wall; a grille supported at the lower end of said shell, and spaced above the receptacle bottom; said grille having wires extending across and beyond the bottom of the shell and being bent upward and back toward the shell edge whereby upon the mop head being drawn across said wires floating dust can escape into the said annular space.

1,629,591. BASE FOR TIME-CONTROLLED SWITCHES. FREDRICK B. SOMMERSTEIN, Jacksonville, Fla. Filed May 4, 1925. Serial No. 27,721. 1 Claim. (Cl. 200—35.)

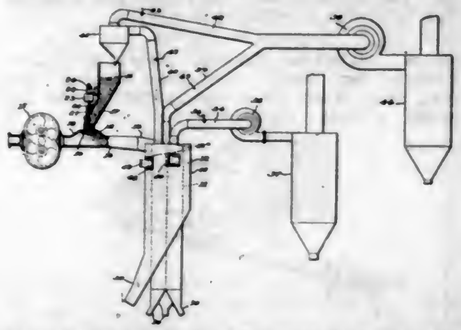


An annular apertured member composed of insulation material mounted on a conventional alarm clock, said alarm clock being provided with oppositely disposed attaching pins, said member having oppositely disposed slotted attaching lugs adapted to engage said pins, stationary contacts on said ring, adapted to be bridged by a bridging contact, the latter being mounted on the alarm arbor of said clock, each of said contacts comprising a tubular current conductor attaching portion, a contact portion and an anchoring portion, said anchoring portion adapted to be embedded in said ring.

1,629,592. WRECKING CRANE. JOSEPH H. STALEY, Columbus, Ind., assignor to National Standard Company, Niles, Mich. Filed July 20, 1925. Serial No. 44,888. 1 Claim. (Cl. 212—144.)

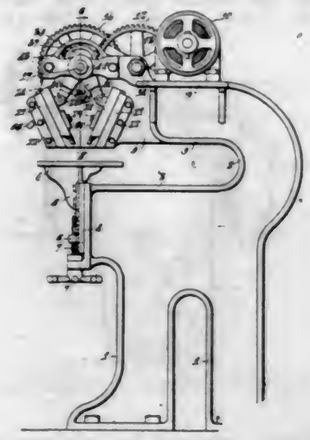
The combination of a frame, a boom pivotally mounted on said frame, a tackle carried by said boom, a strut connecting said boom to said frame and comprising a pair of sections connected to the boom and frame, each section having a slide loop embracing the coacting section, one of the sections having a series of holes therein, and a pin selectively engageable with said holes for adjustably supporting the boom.

1,629,593. DUST-EXTRACTING UNIT. ALBERT H. STEBBINS, Los Angeles, Calif. Filed June 9, 1925. Serial No. 35,913. 4 Claims. (Cl. 209—144.)



1. A material separating and dust extracting unit, comprising a combination, at least three separate receptacles connected in a closed circuit and including a suction dust extractor, a blast dust extractor and a separator positioned between the two dust extractors, means for delivering the materials to be treated to the separator, a fan included in said circuit at a point between the two dust extractors and operable to force the air repeatedly around said circuit through the different receptacles, and a by-pass conduit arranged to by-pass part of the air from one side of the closed circuit to the other without passing through said separator.

1,629,594. AIR CLASSIFIER. ALBERT H. STEBBINS, Los Angeles, Calif. Filed Jan. 5, 1926. Serial No. 79,459. 11 Claims. (Cl. 209—144.)

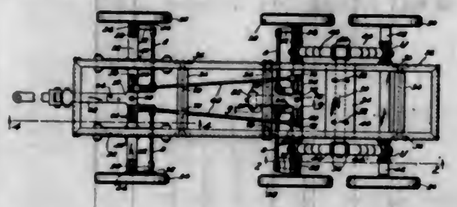


2. An air classifier, comprising in combination, an outer casing and an inner casing having an annular air passage between them and the inner casing having a plurality of longitudinally extending slots formed through its side walls in angularly spaced relation to each other,

means for introducing air into the annular passage through the wall of the outer casing at points opposite said slots, means for delivering air bearing the materials to be treated into said annular passage with a whirling movement, and suction means for drawing air from the

openings in the outer wall of the casing across the passage into said slots at right angles to the path of the air traveling in said passage to thereby draw into the inner casing the lighter particles whirling in the annular passage.

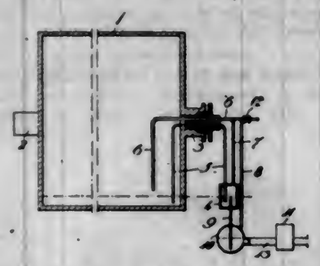
1,629,595. DEFECT-REMOVING AND PATCH-CUTTING MACHINE. MARVIN EARL STEGER, McCleary, Wash. Filed Jan. 22, 1925. Serial No. 4,093. 20 Claims. (Cl. 144—2.)



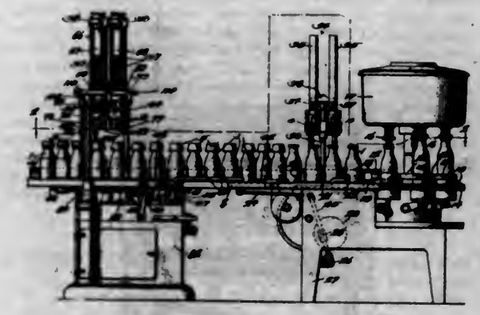
1. A machine for cutting defects out of the top ply of multi-ply veneer stock, a pair of concave cutting elements having their concavities opposed and the cutting edges of which lie in a plane to which the axes of the curvature of their concavities are oppositely inclined, means for moving said elements alternately on converging lines substantially parallel to the inclination of said axes of curvature toward, and from a common plane in which the ends of the cuts made by said edges meet so that their combined cuts sever a portion of the top ply defined thereby.

1,629,596. DOOR CLOSER. ERNST STOCKER, Lucerne, Switzerland. Filed Sept. 8, 1925, Serial No. 54,972, and in Switzerland Sept. 11, 1924. 1 Claim. (Cl. 16—80.)

A door closer including a member to be fixed to one of the relatively movable parts to be operated, a plate rotatably mounted on the member and having an upstanding hollow stud, a casing rotatably supported on the upper end of the stud, a spring arranged between the stud and casing, and means for adjustably holding the plate in desired rotative relation to the member to correspondingly tension said spring, said means comprising a pin cooperating with a hole formed in the member and with any one of a series of annularly arranged holes formed in the plate.



1,629,597. HEAVY-DUTY TRAILER FOR TRUCKS. ALEXANDER E. STOCKFORD, Los Angeles, Calif. Filed Aug. 7, 1926. Serial No. 127,749. 10 Claims. (Cl. 280—33.55.)

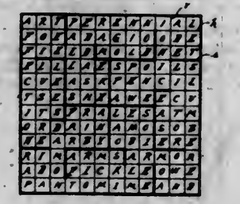


1. In a heavy duty trailer for trucks, in combination, a channel iron framework, sets of wheels associated with said framework, an axle for each of said sets of wheels, means associated with each of said axles for permitting a resilient movement of each of said wheels in a number of directions, a draw bar associated with said framework for permitting a pivotal movement with respect to one of said axles, duplicate pairs of tie rods and arms connected with said draw bar and said axles, whereby one set of said wheels may be moved in unison, and duplicate pairs of tie rods and arms connected with said draw bar and the axles of another of said sets of wheels whereby both of said sets may be operated in unison.

1,629,598. CONDENSATION EXHAUST FOR DRYING CYLINDERS AND SUCH LIKE. PER OTTO THEODOR SYLWAN, Forshaga, Sweden. Filed Dec. 11, 1926, Serial No. 154,244, and in Sweden June 25, 1925. 2 Claims. (Cl. 34—4.)

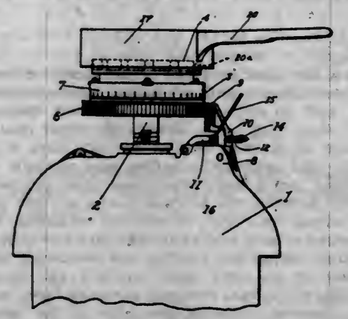
2. A condensation separator for drying cylinders and the like comprising a pipe running from the interior of the drying cylinder to a water seal arranged outside the cylinder, said pipe being adapted to serve as a siphon, a second pipe issuing from said water seal for conducting off the fluid from said water seal, the upper mouth of said second pipe being situated at a higher level than the mouth of the pipe issuing from the cylinder, said second pipe opening into a second fluid seal, said second fluid seal being provided with an overflow outlet, and a tube issuing from steam chamber in the drying cylinder and serving as a steam and air outlet, said tube being in communication with the upper part of both water seals so that the same pressure will be prevalent on the fluid surfaces in said drying cylinder and in said water seals.

1,629,599. BOTTLE-CAPPING MACHINE. OLOF N. TEVANDER, Chicago, Ill., assignor to Standard Cap & Seal Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 2, 1923. Serial No. 649,159. 5 Claims. (Cl. 226—80.)



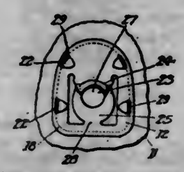
1. A bottle capping machine including a movable magazine for holding rings and formed to permit rings to drop therefrom; a jaw carrier surrounding and assembled with said magazine and mounted to be movable therewith, this jaw carrier being formed to catch and position a ring falling from the magazine; a plurality of jaws mounted upon the jaw carrier and having ring holding formations in the zone in which the ring is positioned; a cam surrounding said jaw carrier and in contacting relation to said jaws to cause the jaws initially to hold the ring positioned upon the jaw carrier and thereafter to contract this ring; mechanism for causing initial movement of the cam with respect to the jaws to initially hold a ring; and means for positioning a bottle to be surrounded by the ring to engage the magazine to enable relative movement of the jaw carrier and cam to move the jaws further to contract the ring.

1,629,600. ROLLER BEARING. DIEDRICH WILLIAM TIETJEN, North Milwaukee, Wis., assignor to E. R. Wagner Mfg. Company, North Milwaukee, Wis., a Corporation of Wisconsin. Filed May 19, 1924. Serial No. 714,272. 3 Claims. (Cl. 308—217.)



1. A roller-bearing comprising a tubular member, a sleeve spacer member positioned within the tubular member to form a recess between contiguous portions of the tubular member and sleeve member and constitute a lining to the tubular member throughout its major portion from its middle towards both ends, a cage member rotatively mounted in said recess, and roller bearings mounted in the cage for rolling contact with the inner surface of the sleeve member and carried by the cage in its rotation in its recess.

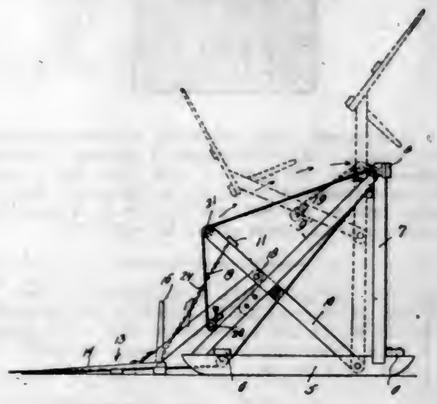
1,629,601. CROSS-WORD PUZZLE. NIKOLA TRBOJEVICH, Highland Park, Mich. Filed Mar. 8, 1926. Serial No. 93,287. 2 Claims. (Cl. 283—1.)



1. A cross-word puzzle comprising a series of crossing lines forming a pattern containing a plurality of similar inclosed spaces, one space for each letter, and a series of lines distinguishable from the first mentioned lines inserted between adjacent inclosed spaces forming the boundaries of the words spelled by said letters.

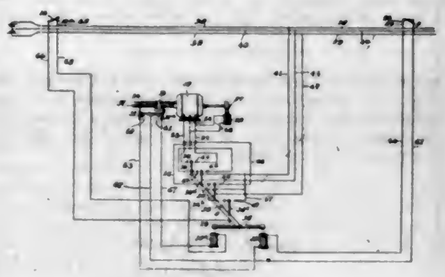
1,629,602. ROLLING-MILL SCREW-DOWN. JOHN B. TATUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Apr. 11, 1925. Serial No. 22,273. 8 Claims. (Cl. 80—56.)

6. In combination with the screw of a rolling mill, a head for said screw having means for preventing its movement under stresses imparted by the mill and having its top face formed with spaced teeth, a head rotatably mounted on the screw above the head first mentioned, a lever pivoted in said head, and having a lug thereon, said lever so pivoted as to permit its lug to be swung down between the teeth on the head, and said lug being of less width than the space between the teeth.



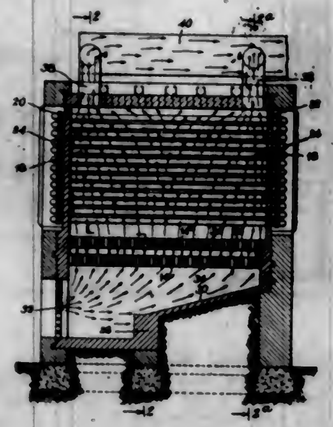
1,629,603. CURTAIN FASTENER. JOHN VODICKA, Chicago, Ill., assignor, by mesne assignments, to Cinch Manufacturing Corporation, Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1924. Serial No. 693,973. 3 Claims. (Cl. 24—216.)

1. A curtain fastener for use with a headed post, comprising a catch plate having a pair of resilient tongues formed therefrom, the end portions of both of the tongues



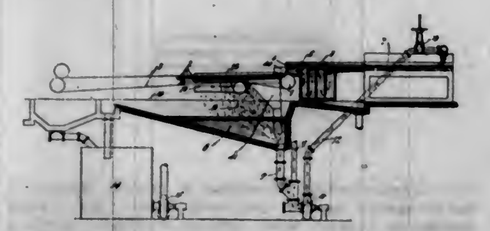
being recessed to form a post hole between them, one of said tongues being extended on opposite sides of its recess and embracing the end of the other of said tongues.

1,629,604. HAY-STACKING DEVICE. GEORGE W. VOELKEL, Nashville, Ill., assignor of one-half to Harry I. Stevens, Tamarea, Ill. Filed May 22, 1926. Serial No. 111,029. 2 Claims. (Cl. 214—131.)



1. In a hay stacking device of the character described, a skid including a pair of spaced interconnected skid bars, a pair of vertical posts at the rear thereof, and inclined connecting beams between the upper ends of the posts and the forward ends of the skid bars, a pair of forwardly and upwardly extending bars pivotally secured to the skid bars adjacent their rear ends and extending forwardly between the inclined beams of said skids, a hay receiving carriage, rearwardly extending inclined bars secured to said last mentioned bars forwardly of the skid beams, means for limiting the downward swinging movement of the bars upon the skid and means for facilitating the upward swinging movement upon said bars and the vertical swinging movement of the bars upon said skid for discharging the hay from said carriage.

1,629,605. RAILROAD-CROSSING GATE. WILLIAM BEDFORD WATSON, Jacksonville, Fla. Filed Mar. 30, 1926. Serial No. 98,567. 5 Claims. (Cl. 246—125.)

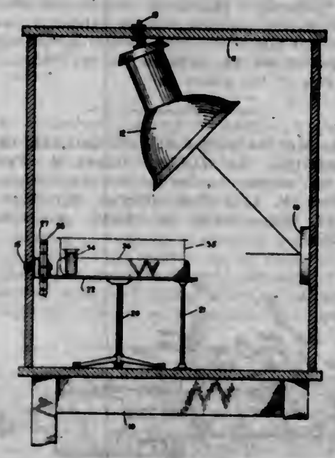


1. Protective means for a railroad crossing comprising a gate, operating means for the gate including an electric motor, an electrically operated brake for the motor, a current supplying circuit for the motor and brake, an electrically operated automatic switch for closing the circuit through the motor and the electrically operated brake mechanism to simultaneously start the motor and release the brake, and electrically actuated means for operating the said automatic switch contained in a circuit deriving current from the same source as the motor and including a train operated switch.

1,629,606. FURNACE. GEORGE DAVIS WHITE, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Sept. 7, 1923. Serial No. 661,337. 2 Claims. (Cl. 110—97.)

1. A furnace comprising a coil chamber, a coil disposed therein, a combustion chamber disposed beneath the coil chamber, a double checkered wall separating the coil chamber from the combustion chamber and provided with a plurality of staggered openings increasing in size from the center towards the front and rear to produce an even distribution of heat in the coil chamber, outlet flues disposed in the upper corners of the coil chamber, a main gas conduit communicating therewith, and adjustable dampers disposed in said flues for controlling the distribution of heat throughout the coil chamber.

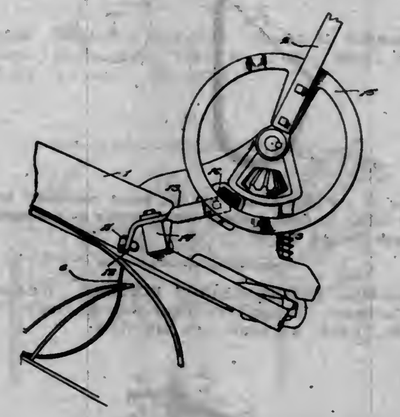
1,629,607. FOURDRINIER MACHINE AND PROCESS OF PAPER MAKING. GEORGE STANFORD WITHAM, Jr., Hudson Falls, N. Y. Filed Sept. 8, 1926. Serial No. 134,284. 29 Claims. (Cl. 92—44.)



1. In a Fourdrinier machine, the combination with a wire, of means spaced above but in close proximity to the upper surface thereof for momentarily restraining the lateral flow of stock after it strikes said wire.

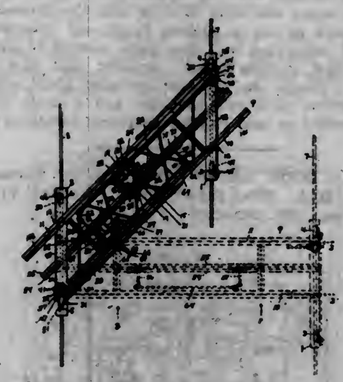
1,629,608. TOY GUN. LOUIS V. ARONSON, Newark, N. J. Filed May 31, 1924. Serial No. 717,049. 2 Claims. (Cl. 46—46.)

1. A toy gun comprising, in combination, a tubular barrel, a reciprocating member within the barrel and having a portion protruding from the rear thereof adapted to be grasped by the hand of the user for retraction of said member, a spring in the barrel urging said reciprocating member forwardly to normal position, a trigger for holding the reciprocating member retracted and for sudden release of the same, a friction element mounted upon said reciprocating member, a pyrophoric element slidably mounted in the wall of said barrel, means for pressing said pyrophoric element against said friction element actuated by said spring.



1,629,609. COLORIMETER. JOSEPH P. BADER, New York, N. Y., assignor to The Texas Company, New York, N. Y., a Corporation of Texas. Filed Dec. 21, 1921. Serial No. 523,819. 7 Claims. (Cl. 88—14.)

3. A colorimeter comprising a plurality of rotatable disks, each provided with color screens of varying characteristics, means for projecting a plurality of light rays from a common source, means for controlling the direction of projection of said rays whereby some rays pass through the object being tested and others pass through one or more of the color screens, and means for converging by reflection all of said light rays in proximity.

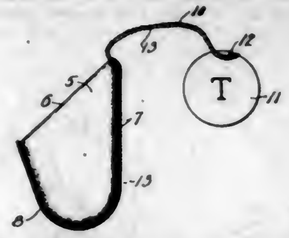


1,629,610. ATTACHMENT FOR GRAIN BINDERS. BENJAMIN H. BURA, Kremlin, Okla. Filed June 24, 1925. Serial No. 39,333. 2 Claims. (Cl. 289—10.)

2. An attachment for a binder comprising a bracket adapted to be secured upon a knotter supporting breast plate transversely of a twine slot formed longitudinally therein, a twine supporting pin slidable through said bracket and having a projected end portion to extend across the twine slot, a cam adapted to be secured to a kicker arm concentric to a rotary shaft carrying the kicker arm, a fulcrum adapted to be secured to said breast plate, and a rocker arm pivoted intermediate its

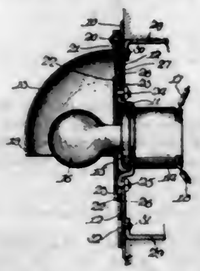
length upon said fulcrum and having one end engaged with said pin and its other end adapted to engage said cam whereby said pin may be moved into and out of a twine supporting position in timed relation to movement of the kicker arm.

1,629,611. CONCRETE-ROAD MACHINE. EDWARD G. CARR, Chicago, Ill. Filed Feb. 19, 1921. Serial No. 446,271. 11 Claims. (Cl. 94—48.)



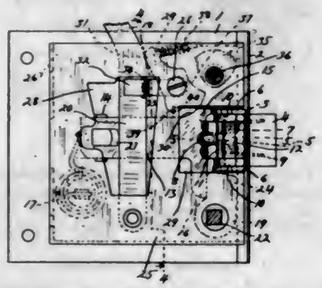
2. In a concrete road machine, the combination with supporting members, of a frame, a tamper carried by the frame, and clamping means to retain the frame at a selected angular position with respect to the supporting members.

1,629,612. TEA BAG. SIMON COOPER, Brooklyn, N. Y., assignor to Cooper Tea Packet Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 23, 1921. Serial No. 454,707. 10 Claims. (Cl. 53—3.)



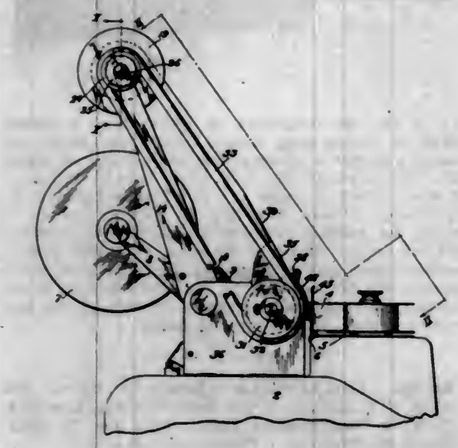
1. A device for extracting essence from tea leaves or coffee, comprising a strip of textile fabric folded on its center line to form two plies contacting all around their

free edges, a line of stitches extending close to and in parallel relation to said free edges for uniting said two plies, the thread of said stitches being carried over the



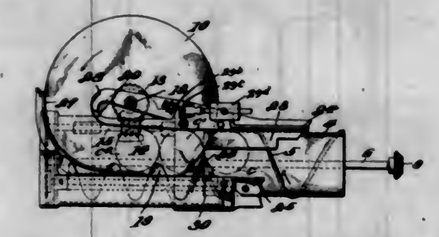
edge of the fabric, said stiches being continued beyond the fabric to form a chain which serves as a suspending means for the device.

1,629,613. ELECTRIC-LIGHT FIXTURE. WILLIAM P. CROCKETT, Chicago, Ill. Filed Nov. 27, 1925. Serial No. 71,603. 3 Claims. (Cl. 245—73.)



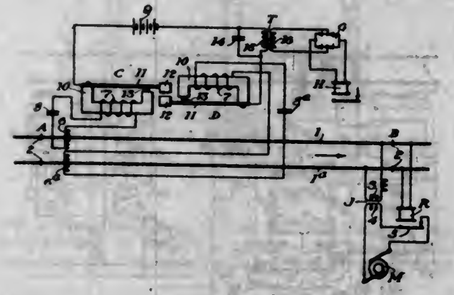
1. In an electric light fixture the combination of a receptacle formed with an aperture to receive an electric light socket and lamp therefor, and also formed with an extension having a guiding flange and shoulder, an apertured supporting wall face plate secured to said extension, said guiding flange, shoulder, and face plate forming a groove, an annular apertured plate rotatable in said groove upon said shoulder, and a shade secured to and carried by said annular apertured rotatable plate.

1,629,614. DOOR LATCH. WILLIAM C. DEVERBAUX, Detroit, Mich. Filed June 2, 1924. Serial No. 717,349. 20 Claims. (Cl. 292—226.)



1. In a latch, the combination with a latch bolt, of a shank in rear thereof having a lateral projection operatively connected to the bolt for retracting the same, a member engageable with a projection on the shank for operating said bolt, and a pivoted dog positioned adjacent to said operating member and adapted to be moved thereby into locking engagement with said shank.

1,629,615. ADDING MACHINE. WILLIAM E. DUNNING and JACOB BACHOFEN, Alliance, Ohio, assignors to The McCaskey Register Company, Alliance, Ohio, a Corporation of Ohio. Filed May 22, 1922. Serial No. 562,653. 4 Claims. (Cl. 101—93.)



1. A printing mechanism for an adding machine or the like, including a platen roll and an ink ribbon, and a bracket having depending hooks extending downward in front of the face of the roll for receiving and supporting a sales bill or the like between the ink ribbon and the forward face of the platen roll.

1,629,616. MECHANISM FOR FEEDING FILLED CANS TO CLOSING MACHINES. HENRY A. FINK, Oak Park, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 17, 1925. Serial No. 56,922. 4 Claims. (Cl. 198—22.)

1. In a closing machine, the combination of means for feeding filled cans in predetermined spaced relation to the closing devices, traveling means for receiving the filled cans at random and for delivering said cans one at a time to the feeding means, and a rotating timing screw associated with said traveling means and operating on the filled cans carried thereby for timing the cans, said timing screw having the delivery end thereof so shaped that said timing screw operates to time the cans by retarding the forward movement thereof through the movement of the traveling means and to actively force a can forward as it is delivered to the feeding means so as to insure the proper spacing of the delivered cans from those following thereafter whereby the feeding means can get behind the delivered can without tilting or jostling the same.

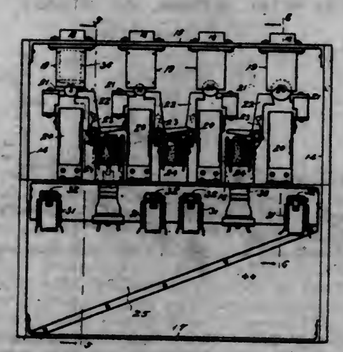
1,629,617. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. LARS O. GRONDAHL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 11, 1924. Serial No. 719,332. 11 Claims. (Cl. 246—63.)

11. In combination, a railway, a source of alternating current connected across the track rails thereof, two train carried windings in inductive relation with said two track rails respectively, two relays receiving energy from said two windings respectively, and each including an armature tuned to mechanical resonance at the frequency of said alternating current, a contact controlled by said relays and closed when both relays are energized due to an alternating current flowing through said two rails in series but not when both relays are energized, due to an alternating current flowing through the two rails in multiple, and train governing mechanism controlled by said contact.

1,629,618. PROCESS OF TRANSFERRING VITAMINES. SIGURD GRØNNINGSÆTER, Brooklyn, N. Y., assignor of one-half to Fischer Hollinshed Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 2, 1926. Serial No. 145,915. 8 Claims. (Cl. 99—11.)

8. The process of transferring vitamines, which consists in reacting a vitamine containing substance with sodium hydroxide in the presence of an excess of alcohol at a temperature of approximately 80° C., adding oil to the reacted mass, and adding water to the said mixture to cause the transfer of the vitamines to said oil.

1,629,619. PRIMARY STRAINER FOR CELLULOSE, WOOD PULP, ETC. CHRISTIAN MARTIN HANSSEN, Mjondalen, Norway, assignor to A/S. Thunes Mek. Verksted, Skoyen, near Oslo, Norway. Filed Nov. 18, 1926, Serial No. 149,224, and in Norway Nov. 26, 1925. 4 Claims. (Cl. 92—29.)

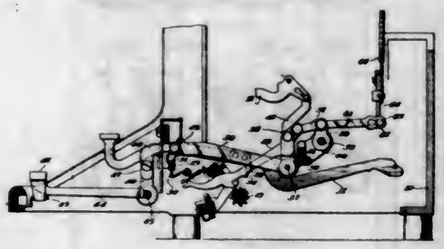


1. Coarse-straining apparatus for sorting cellulose, wood pulp and the like, comprising a pulp channel, a scooping wheel, the shaft of which is arranged transversely to the pulp channel and the scoops of which are made as coarse strains or gratings corresponding approximately to the cross section of the pulp channel, so that the scoops during their movement through the pulp in the pulp channel sweep with them knots and impurities but allow the fine pulp to pass.

1,629,620. MAIL-BOX STATION. MINNIE M. HARMONY, Canton, Ohio. Filed Apr. 28, 1926. Serial No. 105,117. 4 Claims. (Cl. 232—24.)

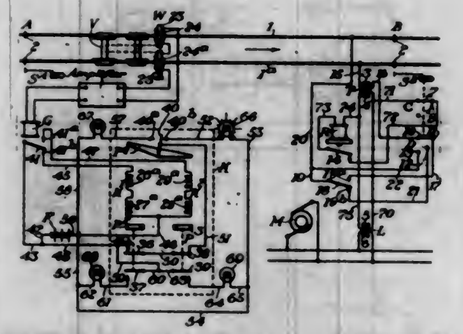
4. A mail box station including a section having a closure panel including plural walls, one of the walls having apertures therein and being spaced from the other wall, and the other wall being imperforate opposite the apertures, a plurality of box compartments in the section, each compartment having a pair of opposite open ends, a mail box having a slotted end and a lockable door end opposite each other, the box interchangeably fitting in any of the compartments, and a catch operable from the interior of the box for cooperation with one of the apertures in one of the walls for retaining the box in any compartment.

1,629,621. CHANGE MAKING AND EJECTING MECHANISM. FRANK HEDLEY, Yonkers, and JAMES S. DOYLE, Mount Vernon, N. Y. Filed Aug. 8, 1923. Serial No. 656,416. 27 Claims. (Cl. 194—7.)



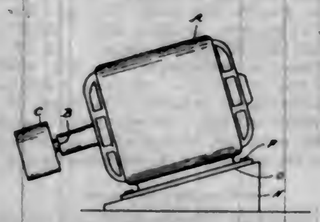
1. In a change-making and ejecting apparatus, the combination with ejector devices and manually controlled means to actuate the same of coin receiving and retaining mechanism and means controlled by the actuation of the ejector devices for tripping said receiving and retaining mechanism, said manually controlled means being ineffective to actuate the ejector devices until a coin is deposited in said coin receiving and retaining means.

1,629,622. CONSTRUCTION OF CONCRETE PILES OR COLUMNS. ALFRED HILEY, Rickmansworth, England, assignor of one-half to Edward Le Bas, London, England. Filed Jan. 25, 1923, Serial No. 615,432, and in Great Britain Feb. 17, 1922. 3 Claims. (Cl. 61—57.)



1. The method of constructing concrete piles or columns in situ, which comprises filling a tube in the hole for the pile with concrete and imparting upward and downward impacts to the tube to cause the tube to vibrate vertically whereby a portion of the concrete is freed by the upward motion of the tube caused by the upward impact and falls by gravity, and the deposited concrete is then tamped and consolidated by the downward movement of the tube under the influence of gravity and the downward impact, and the pile is thus built up in successive operations.

1,629,623. LETTER-SPACING MECHANISM FOR TYPEWRITERS. OTTO A. HOKANSON, Woodstock, Ill., assignor to Woodstock Typewriter Company, Woodstock, Ill., a Corporation of Illinois. Filed Nov. 2, 1925. Serial No. 66,140. 5 Claims. (Cl. 197—82.)

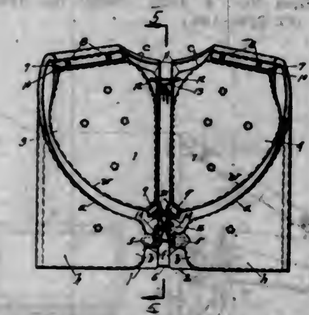


1. The combination with a typewriter having escapement mechanism, of electrically energized means for operating said escapement mechanism, a rock shaft journalled in the frame of said typewriter, arms projecting forwardly from said rock shaft, a letter space bar supported on said arms, an arm extending upwardly from said rock shaft, a pair of toggle links extending rearwardly from said upwardly projecting arm and connected therewith, and switch mechanism for controlling said solenoid, said switch mechanism being operated by said toggle links when said space bar is depressed.

1,629,624. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HAROLD O. HOLTE, Pittsburgh, Pa.; Halvor Holte, special administrator of said Harold O. Holte, deceased, assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 19, 1926. Serial No. 95,923. 24 Claims. (Cl. 246—63.)

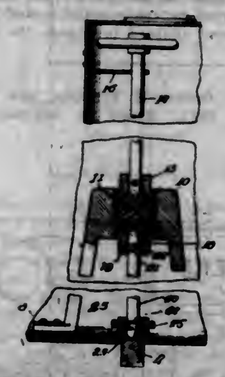
1. In combination, a relay comprising two magnets, means for alternately energizing said magnets in such manner that the two magnets are energized for different proportions of a given interval of time, and a member constrained to occupy a first or a second position depending upon which magnet is energized for the larger proportion of such time interval.

1,629,625. COIN-WRAPPER CRIMPER. WILLIAM B. HOWARD, Detroit, Mich., assignor to Sattley Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 29, 1923. Serial No. 615,620. 10 Claims. (Cl. 93—5.)



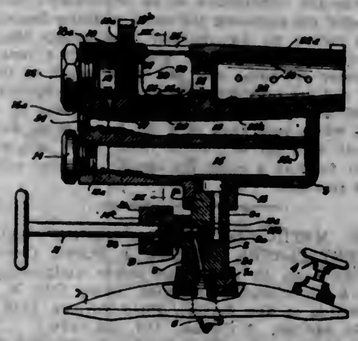
1. The combination of an electric motor having a rotatable shaft, a base having an inclined face to which said motor is attached thereby inclining said shaft at an angle to the horizontal crimping means for closing the end of a coin wrapper directly mounted upon the end of said shaft to rotate therewith, said crimping means being otherwise unsupported.

1,629,626. HOT-WATER VEST. JOHN JIRASEK, Detroit, Mich. Filed May 10, 1926. Serial No. 107,852. 3 Claims. (Cl. 128—259.)



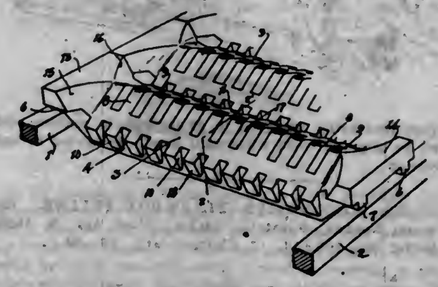
1. A water vest retainer adapted for fitting and inclosing the shoulders and upper portion of a human body for applying artificial temperatures, hot or cold, thereto, comprising two separated, flat front water receptacle sections, and two separated flat, back water receptacle sections, each formed, with a separate neck opening therein and each section made of a double walled construction of flexible waterproof material and capable of retaining water therein throughout, means for inserting

water in each of the front and back sections, said sections being so designed in their outer contour lines to



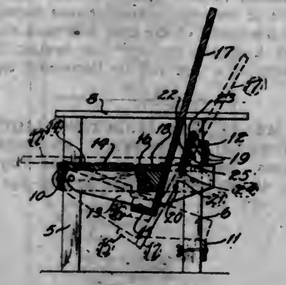
fold over the shoulders and fit together along the side section edges for forming a complete vest inclosure, and means for connecting said sections together when folded.

1,629,627. VALVE-CONTROL MECHANISM. GEORGE D. KAISER, Chicago, Ill. Filed Aug. 2, 1920. Serial No. 400,842. 8 Claims. (Cl. 137—21.)



1. In combination with a vessel having flexible walls, a valve therein, a valve opening and closing member therefor, a control rod for the latter, and a threadedly supported member universally connected to both said rod and said valve opening and closing member.

1,629,628. BLOWTORCH AND POT. JAMES D. KELVIE, Jr., Massillon, Ohio. Filed Aug. 1, 1924. Serial No. 729,507. 14 Claims. (Cl. 158—33.)

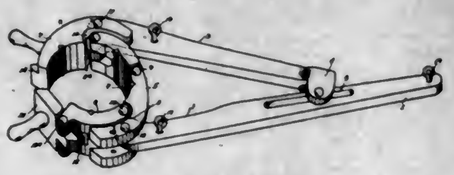


1. A blow torch for burning liquid hydrocarbon fuel and the like, including in communication with each other a tank for the fuel and a fuel control valve, and a burner nozzle having a plurality of apertures for selective communicating connection with the fuel control valve and the tank.

1,629,629. GRATE BAR. JOHN DANIEL MCDONALD, Winnipeg, Manitoba, Canada. Filed Jan. 5, 1926, Serial No. 79,381, and in Canada Sept. 22, 1925. 1 Claim. (Cl. 126—167.)

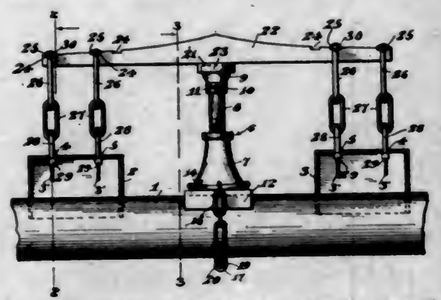
In a grate, the combination of a pair of parallel, spaced, upstanding, side bars having their ends terminating in horizontally disposed supporting lugs and their upper faces converging upwardly, a plurality of equispaced, vertically set, inverted V-shaped, cross bars carried by the side bars, said cross bars having the upper tips thereof centrally located and elevated in respect to the side bars and longitudinally aligned and their upper converging faces flush with the converging faces of the side bars and horizontally disposed spacing heads connecting the ends of the side bars and having their inner sides tapered to merge with the adjacent converging faces of the end cross bars.

1,629,630. CHAIR. ADOLPH MILLER, Kirkwood, Mo. Filed Apr. 27, 1925. Serial No. 26,053. 2 Claims. (Cl. 155—55.)



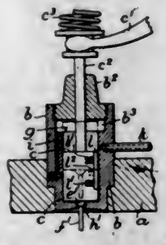
1. A chair comprising a pair of side members provided with legs, means for detachably securing said members together in spaced apart relation to each other, seat members pivotally secured at their forward ends to certain of said legs, their rear ends being free and unattached, a forward seat portion carried by said seat members, a cross piece pivotally carried by and between said seat members, a rear seat portion carried by said cross piece, a back secured intermediate its ends to said cross piece, and means for adjustably raising and lowering the rear ends of said seat members, said means also holding said members in adjusted position.

1,629,631. TONGS AND THE LIKE. GEORGE E. NIX, Electra, Tex. Filed July 12, 1926. Serial No. 121,859. 7 Claims. (Cl. 81—66.)



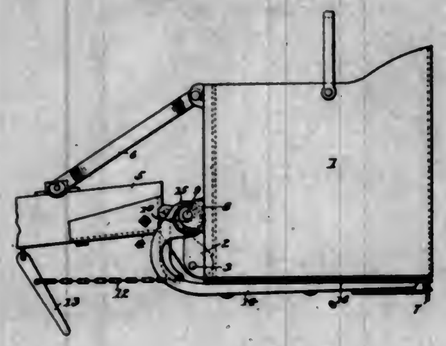
1. A wrench having a collapsible work engaging element comprising a series of curved pivoted jaws and a latching means; a handle having eccentric pivotal en-

gagement with a pair of said jaws; an arm having eccentric pivotal engagement with another pair of said jaws and having sliding engagement with said handle, said



engagement being arranged to co-operatively contact said jaws to grip the work when said handle is moved in one direction.

1,629,632. LOCOMOTIVE-CELLAR-BOX PULLER. EDWARD NOBLES, Pocatello, Idaho. Filed Apr. 9, 1926. Serial No. 100,843. 7 Claims. (Cl. 29—84.)



1. In a pulling device for the purpose set forth a coupling plate adapted to be carried by a vertically movable element, a yoke having the upper ends of the arms thereof connected to said plates, a link depending from the lower end of the yoke, a hook shaped member depending from the lower end of the link, said hook shaped member being of L-shaped contour and having its vertical leg in the form of a link and its horizontal leg solid.

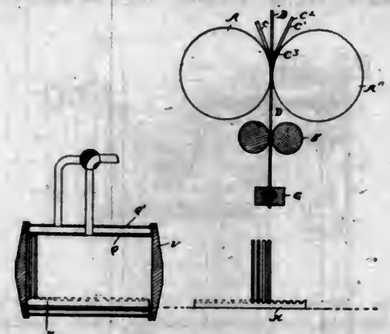
1,629,633. MEANS FOR INJECTING LIQUID FUEL INTO INTERNAL-COMBUSTION ENGINES. SIMON DOKK OLSEN, London, England. Filed July 25, 1925, Serial No. 46,147, and in Great Britain Apr. 30, 1924. 8 Claims. (Cl. 123—33.)

1. In a liquid-fuel injector, the combination of a double-ended injector chamber having an injection orifice directly between it and the engine cylinder, a plunger in said chamber, means for admitting compressed air from the engine into said chamber as the plunger retires, means for forming a mixture of air and fuel at one side of the plunger and completing such mixture at the other side, and a device for restricting said orifice during the injection, substantially as described.

1,629,634. DIPPER-DOOR LATCHING AND UNLATCHING MEANS. JAMES A. ORNDORFF, East Palestine, Ohio. Filed Nov. 4, 1926. Serial No. 146,118. 5 Claims. (Cl. 214—146.)

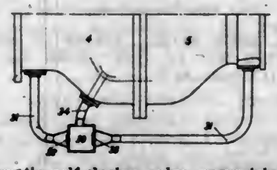
4. In combination with a dipper body having a keeper, a shaft journaled upon the body, eccentrics carried by the shaft, a door carried by the eccentrics, and a bolt carried by the door and adapted to engage the keeper.

1,629,635. TOY. GEORGE H. PARSONS, New York, N. Y. Filed June 18, 1923. Serial No. 646,162. 1 Claim. (Cl. 35—9.)



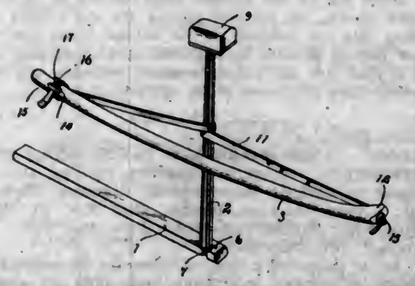
In a toy the combination of an annunciator, a pneumatic motor for operating the same, a device for actuating said motor, an air chamber intermediate the said device and said motor, cards which one at a time will form a cover extending over the entire length of the air chamber and are provided with a number of distinctively positioned air openings and a number of sets of other cards in which each card of a set has a cover for one of the air openings of one of those cards hereinabove named as forming a cover for the air chamber substantially as specified.

1,629,636. METHOD OF MANUFACTURING STORAGE-BATTERY PLATES. WILLIAM J. PLEWA, Cleveland, Ohio, assignor, by direct and mesne assignments, to Plewa & Hutchinson Corporation, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 24, 1919. Serial No. 340,386. 5 Claims. (Cl. 136—176.)



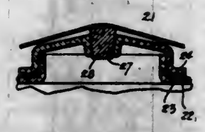
1. The method of producing storage battery plates, comprising the successive casting and advancement of the grids in continuous series, filling the grids with active

material during advancement, subjecting the filled plates immediately and before they have had time to dry to a



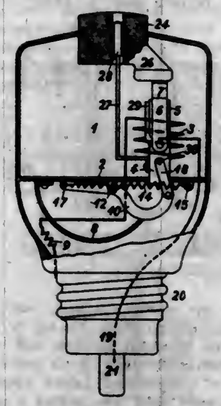
heated atmosphere under pressure, and subsequently relieving the pressure to effect drying of the active material in a porous condition.

1,629,637. AUTOMATIC SELF-CLOSING VALVE. OWEN ALFRED PRICE, Kilmarnock, Scotland. Filed June 26, 1926, Serial No. 118,852, and in Great Britain June 27, 1925. 5 Claims. (Cl. 137—139.)



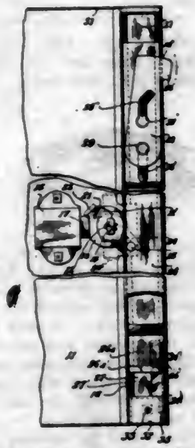
4. An automatic self-closing valve, comprising, in combination with a main conducting channel for fluid having a zone of restricted cross-sectional area, there being unequal pressures in said zone and in the main channel of unrestricted cross-sectional area, a valve-forming plunger movable in said channel in the vicinity of said zone, said plunger having its closing movement in the direction toward said zone, said plunger being exposed at its opposite ends to said unequal pressures, an annular body surrounding said plunger and spaced from the interior wall of said channel, a balancing piston movable with said plunger, said piston subject on its opposite sides to unequal fluid pressures, and means serving normally to hold said plunger stable in open position but adapted to be overcome on a variation of the differential pressure between said main channel and said zone occasioned by a given change of flow conditions to permit automatic closing movement of said plunger.

1,629,638. FRICTION FIRE STARTER. JAMES C. RAMSEY, Roswell, N. Mex. Filed Nov. 2, 1926. Serial No. 145,819. 7 Claims. (Cl. 67—3.)



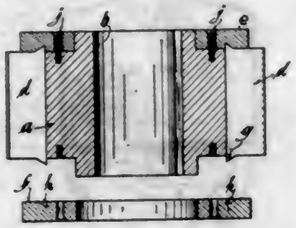
7. A drill actuating bow having an opening adjacent one end and adjacent its other end formed with openings spaced from each other longitudinally of the bow, and a bow string having one end portion passed through the first opening and held against withdrawal, the other end portion of said string being threaded through the other opening in opposite directions and wrapped about the bow and extending beneath a portion extending between the openings.

1,629,639. JAR CLOSURE. JOHN O. ROLLINS, West Los Angeles, Calif. Filed Dec. 26, 1924. Serial No. 758,190. 2 Claims. (Cl. 215—33.)



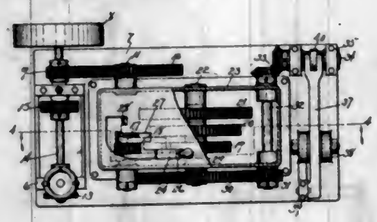
1. In combination, a jar having a neck provided with an annular shoulder, a gasket seating against the shoulder, a closure cap removably fitted on the neck and having a portion adapted to bear against the gasket, the cap being provided centrally with a tapered opening, a plug removably fitted in the opening and projecting above the plane of the cap, and means separable from the jar and adjustable vertically on the latter with respect to the cap operating when moved towards the cap to engage the projecting portion of the plug so as to force the latter into sealing engagement with its opening and as a result of the force exerted against the plug to simultaneously force the closure cap into sealing engagement with said annular shoulder.

1,629,640. AUTOMATIC ELECTRIC-CIRCUIT BREAKER. HEINRICH SCHACHTNER, Mannheim, Baden, Germany, assignor to Stotz G. m. b. H. Abt. der Brown, Boveri & Cie. A.-G., Mannheim, Germany. Filed Aug. 19, 1926, Serial No. 130,205, and in Germany Nov. 8, 1924. 3 Claims. (Cl. 200—88.)



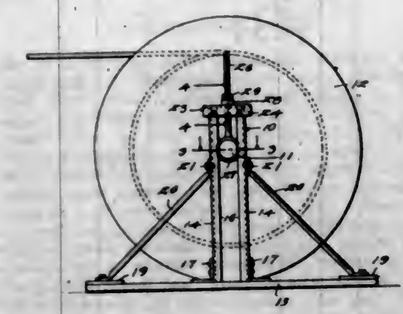
3. In an automatic electric overload circuit breaker in combination with two contact pieces normally pressed together by springs, a solenoid coil, a solenoid core, an insulating slide connected to said core and disposed below said contact pieces, a press button normally raised by spring action, a second insulating slide provided on said press button and disposed above said contact pieces opposite to and in alignment with the first said slide, a pair of metal arms, said springs and said metal arms bridging over said solenoid, the fixed ends of said arms being connected to those of said springs and the free ends of said arms being disposed adjacent to said contact pieces above said solenoid coil and said solenoid core.

1,629,641. LOCK. JULIUS H. SCHLAFLY, Canton, Ohio, assignor, by mesne assignments, to The Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 13, 1924. Serial No. 731,760. 9 Claims. (Cl. 292—110.)



7. A unitary lock assembly including a base bar, an operating bar movable endwise only on the base bar and provided with a cam pin, a lever bolt pivoted on the base bar and having a cam slot engaging the cam pin for swinging the lever bolt to and fro by alternate endwise movements of the operating bar, and trip means for maintaining the operating bar when moved fully one way.

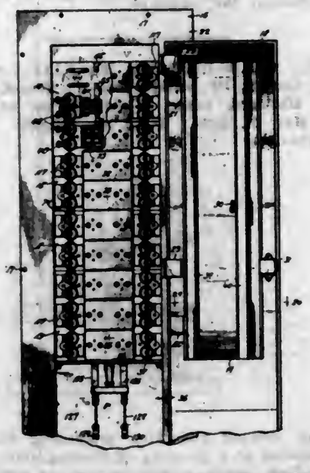
1,629,642. FEED ROLLER FOR SAWING, PLANING, AND LIKE MACHINES. THOMAS SHURMER, Stockport, England. Filed May 26, 1925, Serial No. 33,067, and in Great Britain Jan. 1, 1925. 1 Claim. (Cl. 144—250.)



A feed roller for sawing, planing and like machines comprising a cylindrical core having a central shaft receiving bore and provided at each end with a central boss, said core being provided in its outer portion with annular series of longitudinal slots extending to the periphery of the core, said core having a relatively large solid portion between the walls of the slots and the shaft receiving bore, detachable plates of approximately oblong form and mounted in the said slots and having the major portion of their side edges in flush relation with the end faces of the bore, said plates being provided at the inner portions of their ends with projecting wedge-shaped corner formations, the outer portions of the plates projecting from the core and constituting feeding teeth, annular detachable end plates fitted on the said bosses and of uniform diameter with the core and provided at their inner faces with annular grooves conforming to the configuration of and receiving the wedge-shaped formations of the plates, and fastening means piercing the annular plates and securing the latter to the core at a point between the slots and the bosses.

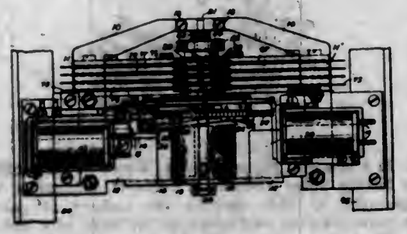
1,629,643. WIRE-CUTTING MACHINE. ELMORE F. SHUSTER, New Haven, Conn. Filed July 8, 1924. Serial No. 724,768. 3 Claims. (Cl. 140—140.)

1. In a machine for feeding wire and cutting the same into different lengths, said cutting means including a driven shaft, a second driven shaft, a plurality of gears of different diameters secured to the second shaft, a sleeve splined on the first shaft, a pinion fixed to the sleeve, a lever having one end pivotally supported on the sleeve and extending upwardly therefrom, a gear journalled on the lever in mesh with said pinion and movable by the lever to selectively mesh with the gears on the second shaft and a wire cutter driven by the second shaft.



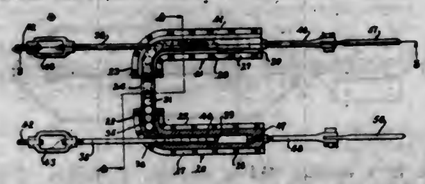
1,629,644. REEL JACK. ANDREW J. SPEIRS, Jenks, Okla. Filed May 15, 1926. Serial No. 109,423. 1 Claim. (Cl. 242—85.)

A wire line spool jack comprising a spool receiving shaft and standards for supporting the opposite ends of the shaft each comprising a base, a pair of parallel channel irons arising from the base having their channels opposed and the free edges of their flanges spaced apart a distance equal to the diameter of the shaft, a cap for the upper end of the channel irons having an opening formed therein, an eye bolt having the eye thereof extending into the channels of the channel irons and the shank thereof directed through the opening of said cap and a wing nut operatively engaged with the cap and threaded upon the shank of the eye bolt.



1,629,645. PANEL BOARD AND PANEL-BOARD CONSTRUCTION. HENRY F. STARRETT, Chicago, Ill., assignor to Starrett Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1919. Serial No. 337,068. Renewed June 16, 1924. 30 Claims. (Cl. 175—309.)

1. In a panel-board art, a structure comprising a plurality of portable interfitting basic units of varying capacities, circuit controlling apparatus mounted on each of said units, conducting plates positioned on said units having arms thereof on each side of said units, said conducting arms on the front of said units being electrically connected to said circuit controlling apparatus, and means adapted to be removably connected to the said conduct-

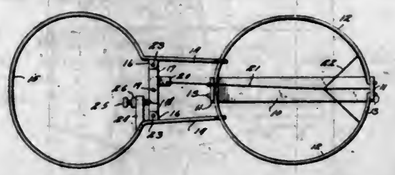


ing arms on the rear face of said units, whereby said circuit controlling apparatus can be interconnected in any one of a desired plurality of electric wiring systems.

1,629,646. AUTOMATIC SWITCH. FRITZ ALDENDORFF, Berlin-Wilmersdorf, Germany, assignor of one-fourth to Paul Kollsch, New York, N. Y. Original application filed Oct. 17, 1922, Serial No. 595,187, now Patent No. 1,592,323, dated July 13, 1926, and in Great Britain July 17, 1922. Divided and this application filed Oct. 28, 1925. Serial No. 65,304. 25 Claims. (Cl. 179—275.)

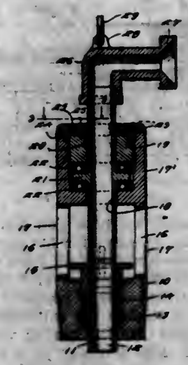
1. A finder switch comprising bank contacts, wipers that cooperate with said bank contacts, a rotary wiper carrier, and a carrier stopping member that moves parallel to the direction of the length of the carrier axis and arrests the carrier when the wipers have reached a desired position.

1,629,647. BRAKE-EQUALIZING MECHANISM. ALBERT F. ANDERSON, Pasadena, Calif. Filed May 4, 1925. Serial No. 27,708. 3 Claims. (Cl. 188—204.)



1. In a brake equalizing mechanism, in combination with a power propelled vehicle provided with a pair of wheel brakes and a brake operating pedal, a pair of brake pull rods divided into front and rear sections, the rear sections being pivotally secured to the wheel brake mechanisms and the front sections to the vehicle brake pedal, a frame member provided with a ball raceway rigidly secured to the free ends of the front pull rod sections, a plurality of balls disposed in said raceway, the space occupied by the balls being less than the length of the raceway, the free ends of the rear pull rod sections engaging the end balls in the raceway, whereby on a braking operation the pull exerted by the rear rod sections on the wheel brakes will be equalized.

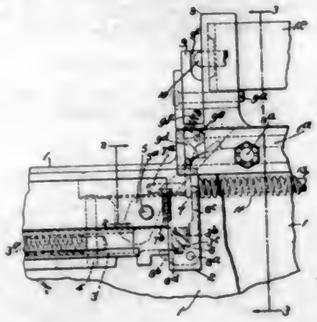
1,629,648. GLASS COMPOSITION. WARREN F. BLEECKER, Boulder, Colo. Filed July 22, 1922. Serial No. 576,886. 2 Claims. (Cl. 106—36.1.)



1. A transparent, henna colored lead glass resulting from a composition consisting of sand 75 parts, soda ash 80 parts, litharge 70 parts, borax 20 parts, nitre 30 parts, and uranium oxide from 4 to 24 parts.

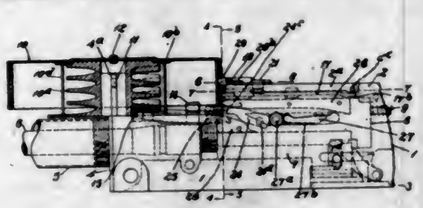
1,629,649. ANIMAL TRAP. CARL W. BORG, Aberdeen, Wash. Filed Dec. 4, 1926. Serial No. 152,641. 3 Claims. (Cl. 43—88.)

1. A trap comprising a base, opposed jaws pivoted upon the base for movement towards or from each other, an approximately U-shaped spring having legs engaging the jaws, the spring urging the jaws towards each other and means for holding the jaws apart comprising a pair of overlapping links pivoted to the legs of the spring and pivoted to each other, a stop for limiting the movement of the legs past their pivotal centers in one direction, and a trip connection connected to one of said links and when struck pulling the links past their centers in the other direction.



1,629,650. SWIVEL CIRCULATING HEAD. WALTER BRAUER, Seminole, Okla. Filed Nov. 20, 1926. Serial No. 149,718. 2 Claims. (Cl. 255—25.)

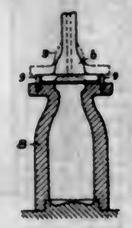
1. In a swivel of the type described and in combination with a wash pipe, a member exteriorly threaded to engage in a drill pipe coupling and having a bore for the passage of the wash pipe, the bore of the member being enlarged at its upper end to produce a packing chamber, a gland



for said chamber, columns arising from the member at diametrically opposed points, a cup supported by said column and having an opening in its bottom for the passage of the wash pipe, the wash pipe within the cup being provided with a flange, a nut surrounding the wash pipe and having threaded engagement with the interior of the wall of the cup, thrust bearings between the nut and said flange and between the flange and the bottom of the cup and means at the upper end of the wash pipe for attaching the wash pipe to hoisting apparatus and to a source of fluid under pressure.

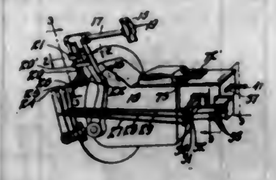
1,629,651. FIRING MECHANISM FOR AUTOMATIC FIREARMS. JOHN M. BROWNING, Ogden, Utah; John Browning executor of said John M. Browning, deceased. Filed Sept. 19, 1924. Serial No. 738,675. 8 Claims. (Cl. 89—2.)

4. In an automatic firearm, the combination of a spring-actuated firing member, means for automatically moving said member to cocked position, a sear for engagement with said firing member to hold the same in cocked position, and means whereby, in the cocking movement of said member, said sear is positively moved to its operative position.



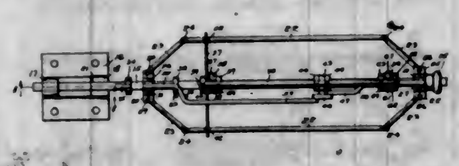
1,629,652. CARTRIDGE-FEEDING MECHANISM FOR AUTOMATIC FIREARMS. JOHN M. BROWNING, Ogden, Utah; John Browning administrator of said John M. Browning, deceased. Filed July 8, 1925. Serial No. 42,301. 16 Claims. (Cl. 89—2.)

11. In an automatic machine gun having a recoiling breech block carrying an extractor for successively removing cartridges in rearward direction from a position laterally of the barrel in the recoil of said breech block, the combination of a pivoted carrier mounted on said breech block and adapted to engage the cartridge being so rearwardly removed, said carrier having an integral projection thereon, and cams arranged on a side plate of the breech casing in co-operative relation with said projection to control the transverse movements of the carrier for bringing the cartridge engaged thereby into alignment with the barrel axis.



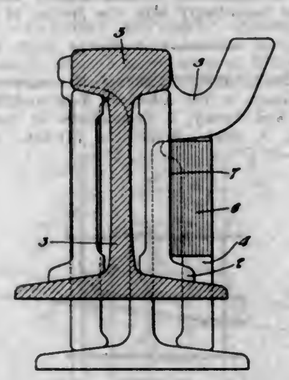
14. In an automatic firearm, the combination of a casing carrying a post, a magazine seated on said post and having a fixed member and a rotary member, a latch on said casing for releasably securing the magazine on the gun, and means on the magazine and separate from the latch for disengaging the said latch to permit the removal of the magazine.

1,629,653. GLASS-BLOWING MACHINE. CLINTON S. BUDD, Clarion, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Mar. 26, 1924. Serial No. 702,052. 11 Claims. (Cl. 49—18.)



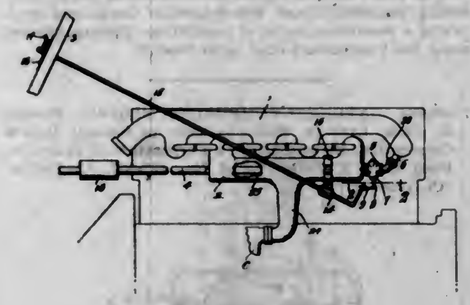
1. Glass blowing apparatus comprising blowing elements disposed at a plurality of blowing stations, a plurality of blow molds, means for moving said molds to said stations in succession, and means for automatically and selectively preventing a blowing operation on certain of said molds at one of said stations.

1,629,654. AUTOMATIC GEAR SHIFT FOR AUTOMOBILES. FOREST S. CARTWRIGHT, Indianapolis, Ind. Filed Nov. 6, 1925. Serial No. 67,450. 12 Claims. (Cl. 74—58.)



1. In a gear-shifting mechanism, a pair of gear shifting rods having yokes thereon, a rockarm engageable with either yoke, a table carrying the rockarm, a pair of slide bars, coacting abutments on the slide bars and the table for reciprocating the table, means for reciprocating the table in another direction, means for oscillating the rockarm, and manually operated levers for selectively shifting said slide bars, substantially as set forth.

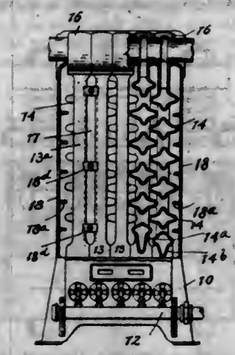
1,629,655. SAUSAGE-MAKING MACHINE. CLARENCE CURRY, Richmond, Va. Filed Mar. 22, 1927. Serial No. 177,386. 7 Claims. (Cl. 17—34.)



1. In a sausage linking machine, a support, a reel rotatable upon the support and embodying a smoke stick which is bodily removable from the other elements of the reel.

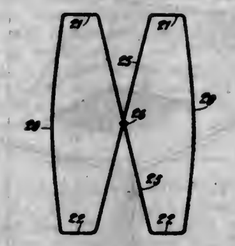
1,629,656. METHOD OF WELDING AND ARTICLE PRODUCED THEREBY. WILLIAM DISHONG, Johnstown, Pa. Filed Sept. 9, 1926. Serial No. 134,472. 3 Claims. (Cl. 238—164.)

1. The method of joining metal sections, the ends of which are not in alinement, which consists in welding a separate block of metal to the side face of one of said sections adjacent the end of said section and then butt-welding the other section to said separate piece of metal.



1,629,657. MANIFOLD HEATER. JESSE B. FORSHAY, Denver, Colo., assignor of one-half to B. E. Weldy, Denver, Colo. Filed Nov. 28, 1923. Serial No. 677,583. 1 Claim. (Cl. 257—241.)

The combination with the intake and exhaust manifolds of an internal combustion engine, of a conduit branched off from the exhaust manifold and extended through the intake manifold, the conduit being made up of a plurality of separate pipes so grouped with respect to each other, transversely, as to form, within the intake manifold, a recess in the bottom of the conduit, the walls of the recess diverging downwardly and laterally.

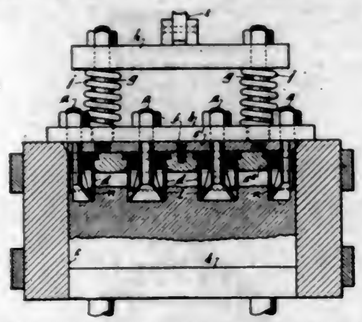


1,629,658. WATER HEATER. OTTO FOX, Lakewood, Ohio, assignor to The Bryant Heater Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 23, 1922. Serial No. 531,022. 7 Claims. (Cl. 122—210.)

1. A water heater comprising a series of water circulating elements arranged side by side and each comprising upright water conveying portions and transverse ducts extending between the same, burners arranged beneath

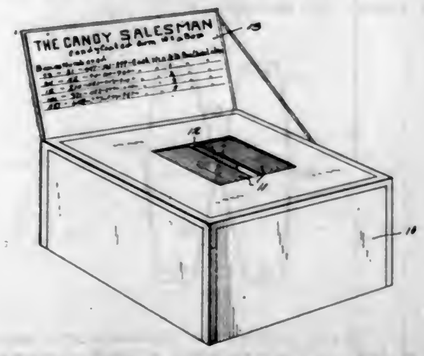
the elements, the ducts of adjacent elements being staggered, and the bottom portions of the lowermost ducts of said elements being at substantially the same level.

1,629,659. TROUSER STRETCHER. ROBERT FREY, Altoona, Pa. Filed July 8, 1925. Serial No. 42,181. 2 Claims. (Cl. 223—19.)



1. In a trouser stretcher the combination of a pair of flexible bows, each bow comprising a flexible crown member, flexible top and bottom members extending from the opposite ends of each crown member, and inclined straight connecting members connecting the top member of one bow and the bottom member of the other bow.

1,629,660. APPARATUS FOR FORMING DOVETAIL OR UNDERCUT RECESSES IN CLAY OR OTHER PLASTIC MATERIAL. LUCIEN GAISMAN, Audenshaw, near Manchester, and ARTHUR EDWARD BROWN, Brentwood, England, assignors to Universal Rubber Paviors (Manchester 1923) Limited, Audenshaw, near Manchester, England, a British Company. Filed Feb. 5, 1926, Serial No. 86,311, and in Great Britain Feb. 9, 1925. 5 Claims. (Cl. 25—44.)

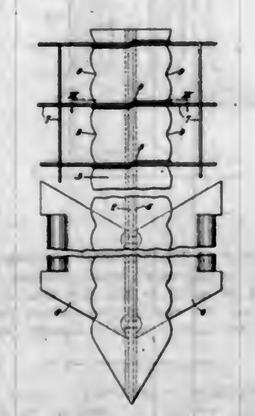


1. In means for forming dovetail or undercut recesses in plastic materials, a rod with enlargement at one end, such enlargement being part of a cone, and a rubber sleeve slidably mounted on said rod, the bore of the sleeve at the part nearest the rod enlargement being of like shape to the enlargement and the wall of the sleeve at such part being flexible, and adapted to spread out on engaging the rod enlargement, the outer diameter of the sleeve being similar to that of the larger part of the rod enlargement, means whereby the rod is held supported, further means whereby the sleeve is held supported and clear of the rod enlargement, and means whereby the said sleeve-supporting means may be yield-

ingly moved to force the sleeve against the rod enlargement and cause it to spread outwards and on the pressure being removed cause the sleeve to move clear of the

rod enlargement and to contract, the said rod supporting means, and sleeve-supporting means being movable, as one, as well as one being movable relatively to the other, as set forth.

1,629,661. CANDY-DISPENSING BOX. JOSEPH M. GERHARD, Sheridan, Wyo. Filed Nov. 23, 1926. Serial No. 150,316. 1 Claim. (Cl. 273—144.)



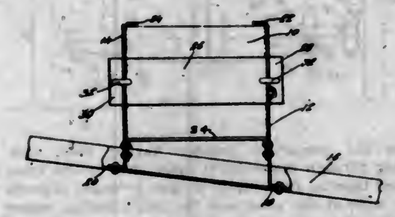
A dispensing device consisting of a box having an opening for the insertion of the hand, the opening being defined by elastic webs permitting the insertion of the hand but preventing observation of the contents of the box, the box containing relatively small packages, certain of the packages being numbered, and certain numbers drawing prizes.

1,629,662. JERK-LINE BREAK-OUT PULLEY. RICHARD D. HILL and WALTER W. FOSTER, Wichita Falls, Tex. Filed July 12, 1926. Serial No. 121,895. 8 Claims. (Cl. 192—31.)

8. An apparatus of the character described including in combination a revolving shaft; a fixed bushing; a member carried by said bushing having a line fixed thereto; a flanged member carried by said shaft, said flange arranged to operate freely within said pulley; stops spaced on said flange, and means carried by said pulley and co-operable with said stops to effect engagement and disengagement of said flanged member and first member accordingly with the motion of said first member.

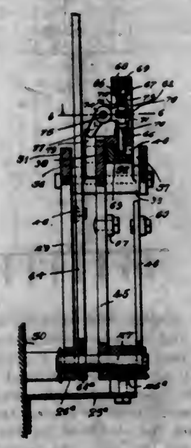
1,629,663. FENCEPOST. PERCY J. HINDMARSH, Lincoln, Nebr., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Oct. 3, 1924. Serial No. 741,421. 4 Claims. (Cl. 256—57.)

1. A rolled metallic fence post consisting of a T-bar having relatively broad flat flanges or back, said back having a continuous series of undulations forming notches along the longitudinal edge faces thereof.



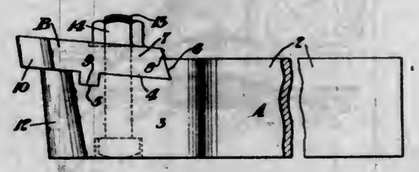
1,629,664. INTERNAL-COMBUSTION ENGINE. ROBERT K. JACK, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 2, 1921. Serial No. 497,957. 3 Claims. (Cl. 123—55.)

1. In an internal combustion engine, a crank case having two inclined supporting portions at its upper end; and two cylinder blocks identical in form with one another and having each a longitudinally extending cooling liquid



supply conduit located substantially midway between the ends of said block, and which conduit is open at both its ends, and the valves of which blocks are operated by a single cam shaft supported by said crank case.

1,629,665. BATTERY SUPPORT. ROBERT K. JACK, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 6, 1924. Serial No. 730,529. 3 Claims. (Cl. 180—68.5.)

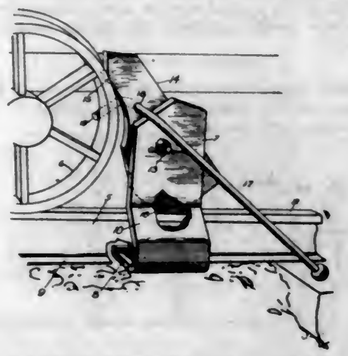


3. A storage battery support to be carried by one of the members of an automobile chassis frame, including a pair of spaced arms extending laterally from a chassis frame member, having their outer extremities inturned toward but spaced from each other to form alined terminal flanges, a U-shaped strap secured at its upper ends to said arms and adapted to support a battery upon the bottom cross portion, and a brace strap connecting the lateral arms and positioning the battery to be supported on the cross portion between said terminal flanges and brace strap.

1,629,666. TRANSMISSION CONTROL. RAYMOND W. KEELER, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed July 13, 1926. Serial No. 122,259. 16 Claims. (Cl. 74—89.)

1. In combination with a transmission mechanism including a clutch and direction selection mechanism having "forward," "reverse" and "neutral" positions, an operating control lever for the direction selection mechanism having a latch whereby it is locked against movement in each of the positions of the direction selection mechanism and a control lever for said clutch alignable with the first named control lever in any of the positions of said direction selection mechanism and when aligned therewith disengaging the sections of the clutch, said clutch control lever being operable to release the latch of the control member and when positioned to release the latch of the control member having engagement with the control member whereby the control member shifts therewith.

1,629,667. METAL-CUTTING TOOL. JAMES D. KNIPPLE, Johnstown, Pa. Filed Oct. 15, 1926. Serial No. 141,751. 2 Claims. (Cl. 29—96.)

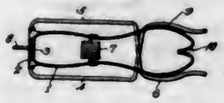


1. A tool of the class described, comprising a shank, an enlarged cutter supporting head formed integral with the lower end of said shank, said head having its forward face recessed from its lower end upwardly and inwardly to form a cutter bit seat, the rear wall of said seat being provided with a slot extending at right angles to the longitudinal axis of the tool and the top wall of said seat being undercut to provide an overhanging retaining flange, and a high-speed tool steel cutter bit mounted in said cutter seat, said bit having its upper end beveled so as to project and engage under said retaining flange, a supporting rib projecting from the rear face of said bit and engaged in said slot in the rear wall of said seat, and means for locking said bit against displacement relative to said seat.

1,629,668. FURNACE-ROOF CONSTRUCTION. GUS F. LENK, Dallas, Tex. Original application filed Aug. 1, 1924, Serial No. 729,652. Divided and this application filed Jan. 8, 1926. Serial No. 79,948. 1 Claim. (Cl. 110—99.)

The combination with a plurality of spaced parallel flanged beams, of a plurality of roof block hangers each carrying a single block and each comprising an upright angular U-shaped clip having its upper ends engaging over the bottom flanges of one of the beams and a bolt passing transversely through the clip immediately under said beam for preventing vertical displacement of the clip and for confining it on the beam, each hanger also comprising an eye bolt depending from the lower end of the clip and supported by a nut within the clip, a pair of parallel angular clamp bars having adjacent gears at their center between which the eye bolt is pivoted, the clamp bars extending along each side in the upper portion of each block and over the top of said block, whereby said block is suspended from its sides and not from its top.

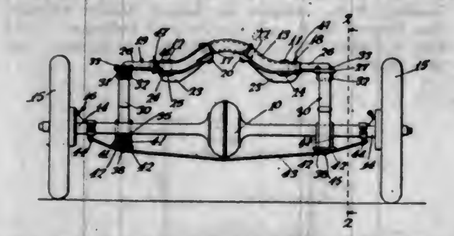
1,629,669. RAILWAY SAFETY BLOCK. JOHN LIPPIS, Brookside, and MATHEW E. SOMERVILLE, Canon City, Colo. Filed Apr. 13, 1926. Serial No. 101,746. 8 Claims. (Cl. 104—258.)



1. A safety block for railway cars comprising a stand having a foot to engage beneath a rail of a railway track, and a dog pivoted on the stand, the dog having a lever arm to be engaged by a car wheel on the rail, and a cam face for engagement with the head of the rail.

1,629,670. MOUNT FOR PHOTOGRAPHS AND THE LIKE. GUSTAVE A. MALME, Racine, Wis., assignor to Edward N. Lodge, Columbus, Ohio. Filed Jan. 12, 1926. Serial No. 80,782. 6 Claims. (Cl. 40—159.)

6. A mount for the purpose set forth having at its upper end an inverted pocket, the sides and upper edge of the pocket being attached to and overlying the face of the mount, the mount also having corner retaining slits at the lower end for receiving the corners of object while the upper end of said object is in the pocket.



1,629,671. AUTOMATICALLY-ADJUSTABLE SPRING BRACKET. NICK ALIKAKOS, New York, N. Y. Filed May 15, 1926. Serial No. 109,290. 2 Claims. (Cl. 248—22.)

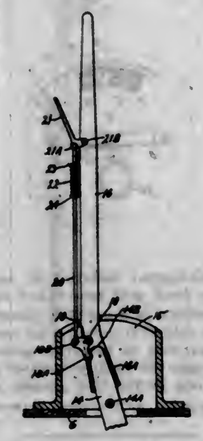
1. An automatically adjustable spring-clamping bracket comprising a unitary flat spring metal bent in the shape of a hair pin having the free ends thereof curved inwardly and from the center of the loop of the hairpin an extension, the end of which is folded on itself forming a socket in which socket is hinged a spring wire brace.

1,629,672. REAR-SPRING CONSTRUCTION. HERBERT ATHONS, Los Angeles, Calif. Filed Apr. 13, 1925. Serial No. 22,858. 3 Claims. (Cl. 267—36.)

1. In a vehicle wherein there is a rear transverse inverted channel shaped member and a rear axle housing, a rear spring construction comprising two arms mounted upon the ends of the transverse member, said arms having their ends projecting beyond the ends of the transverse member, ribs formed upon the top surfaces of the arms adjacent their outer ends which bear against the sides of the transverse member, said arms bearing against the underside of said transverse member and being widened adjacent their inner ends, U-bolts arranged

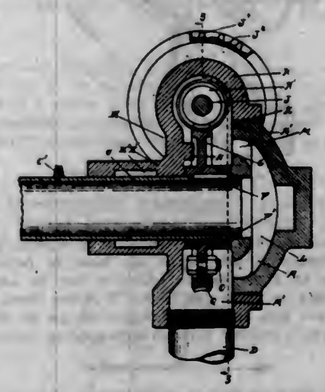
across the transverse member having their ends extending through the widened inner ends of the arms and secured thereto, full elliptic springs arranged between the outer ends of the arms and the axle housing, means for securing the upper leaves of each spring intermediate their ends to the outer end of their respective arm and means for securing the lower leaves of each spring intermediate their ends to the axle housing.

1,629,673. SANITARY DISPLAY AND VENDING DEVICE. CLINTON L. BELL, Decatur, and MORRIS S. KESSLER, Auburn, Ill., assignors, by mesne assignments, to Decatur Rotary Display Company, Decatur, Ill. Filed Mar. 8, 1924. Serial No. 697,942. 2 Claims. (Cl. 221—146.)



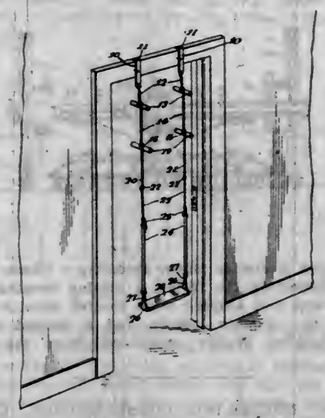
1. A sanitary display and vending device, comprising a standard, top and bottom bearings for the standard in which the same may be rotated, a plurality of bins connected in radial arrangement around the standard, a gravity discharge spout swingably connected with each bin, a valve for each spout to control the discharge therethrough, a rest on the standard for the free ends of the spouts, and means to hold the standard in adjusted positions.

1,629,674. SHAKER BAR FOR LOCOMOTIVE GRATES. VICTOR T. BJORK, St. Paul, Minn. Filed Mar. 7, 1925. Serial No. 13,928. 1 Claim. (Cl. 287—119.)



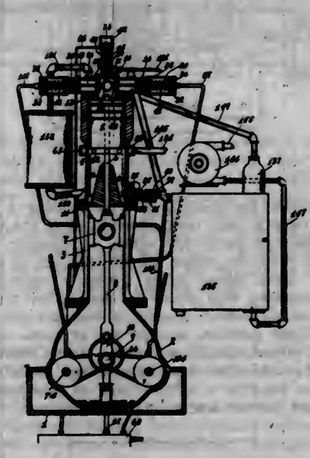
The combination with a grate bar lever oscillatable in a vertical plane and having a notch at its upper end, of a shaker bar adapted to removably engage the upper part

of said lever and means on said shaker bar for engaging said notch of the lever and further means intermediate the ends of said bar to disengage the bar from said lever, the part of the bar engaging the lever comprising an elongated socket adapted to slidably engage the stub lever, said means for engaging said stub lever comprising a dog pivoted on the shaker bar and adapted to



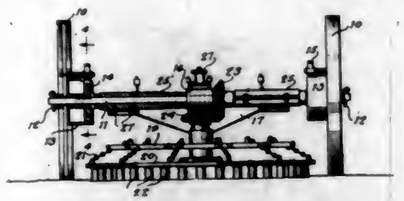
engage the notched portion of the stub lever said intermediate means comprising a finger lever pivoted on the bar above the dog, a rod connecting said finger lever and the dog, and further means holding said dog in said notch comprising a compression spring about said rod and under compression between a fixed arm on the lever and a washer on said rod.

1,629,675. BOILER-CLEANING DEVICE. FRANK BOWERS, Detroit, Mich., assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed Nov. 21, 1918, Serial No. 263,476. Renewed Sept. 16, 1925. 4 Claims. (Cl. 122—392.)



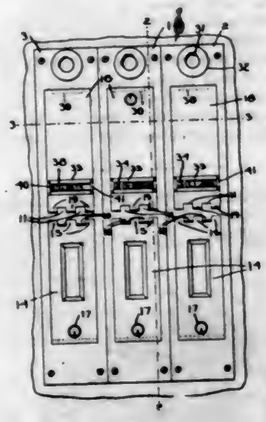
1. In a device for cleaning boilers, the combination with a rotatable blower unit and a steam supply pipe, of a fitting establishing a direct connection therebetween comprising a header into which both the steam supply and the blower unit open, said header having a removable cap, and said cap having passageways connecting the blower pipe with the supply pipe.

1,629,676. EXERCISING DEVICE. FRANK S. BUCKMINSTER, Pasadena, Calif. Filed June 22, 1926. Serial No. 117,716. 3 Claims. (Cl. 272—61.)



2. An exercising device comprising a pair of members which are adapted to be attached to the top of a door frame or the like, a rod for each member pivotally connected thereto and depending therefrom, a handle for each rod, each handle being secured centrally to the rod at its lower end, and a second pair of rods, each rod having a handle secured centrally thereto at the bottom of the rod, said rods having hooks formed on their upper end, said hooks having an off-set portion, thereby enabling them to be hooked about the lower ends of said first mentioned rods and to rest upon their respective handles.

1,629,677. COMBUSTION ENGINE. GEORGE L. BULL, Oakland, Calif. Filed Apr. 16, 1921. Serial No. 461,797. 5 Claims. (Cl. 60—16.)



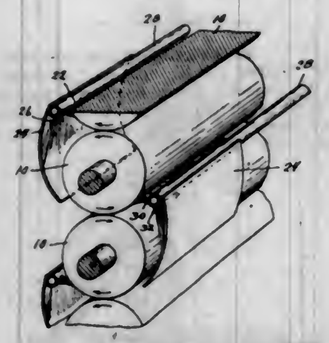
1. In a compound engine of the character described, a cylinder, a hollow piston reciprocable therein, means for alternately driving the piston from one end thereof by a combustible charge and by steam, the latter serving to cool the cylinder walls, and means for exhausting the used steam into the opposite hollow end of the piston for cooling the wall of the latter.

1,629,678. ROAD LEVELER OR PLANER. EDGAR A. BURROW, Brady, Tex. Filed Feb. 1, 1924. Serial No. 689,916. 7 Claims. (Cl. 97—43.)

1. A road leveler or planer including a frame, traction wheels supporting the frame, a driving member carried by the frame and adapted to be rotated about a vertical axis by the traction wheels, and a ground engaging driven member flexibly suspended from the driving member.

1,629,679. LETTER-BOX CONSTRUCTION. CLARENCE C. COLBY, Newton, Mass. Filed Dec. 5, 1923. Serial No. 678,563. 11 Claims. (Cl. 232—25.)

10. A device for holding mail comprising a plurality of compartments, said compartments each having a pair of openings one above the other, a plurality of doors adapted to close the upper set of openings in said compartments, said doors being pivotally mounted, and means connecting said doors to each other for causing simultaneous movement thereof, a lock for holding said doors in closed position, another set of doors for closing the lower set of openings in said compartments independent of each other and independent locks for these latter doors adapted to permit each of said latter doors to be opened independently of the others.



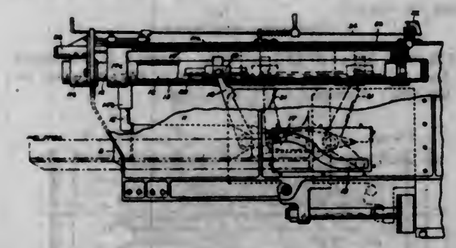
1,629,680. INSTRUMENT FOR LUMINOUS INDICATION OF QUANTITIES. GEOFFREY HASLEWOOD COOKE, London, England. Filed Mar. 30, 1926, Serial No. 98,596, and in Great Britain Apr. 3, 1925. 2 Claims. (Cl. 116—114.)

2. An instrument for luminous indication of quantities, comprising in combination a base board, a screen of opaque material fixedly supported therefrom, said screen having a through aperture, transparent material fixed to said screen to cover said aperture said transparent material on one side of the centre of said aperture being of a color different to and complementary to the color on the other side, a second similar screen the transparent material covering its similar aperture being of similar complementary colors but oppositely arranged to the

colors of the transparent material of said first screen, a pivot extending from said base board to pivotally support said second screen in a position opposite to, adjacent and parallel with said first screen, and means for adjusting one screen relatively to the other screen whereby the light visible through the similar colored portions of the transparent material of the two screens extends in proportion to the relative adjustment between the screens.

1,629,681. PAPER-MAKING APPARATUS. HERVEY G. CRAM, Millinocket, Me., assignor to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Jan. 15, 1926. Serial No. 81,533. 13 Claims. (Cl. 92—74.)

1. The combination of the calenders of a paper making machine, means to provide an air blast to detach the paper from an upper roll to which it may be adherent, a guide plate to guide the paper to move downwardly about a lower roll, and means to provide an air blast to move the paper forcibly through said guiding means.

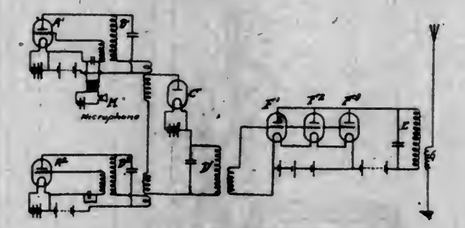


1,629,682. TICKET-HOLDING DEVICE. HARDY CROOM, Savannah, Ga. Filed Jan. 10, 1925. Serial No. 1,713. 4 Claims. (Cl. 211—37.)

1. A ticket holding device comprising a supporting plate for a ticket, a holding frame disposed above said plate and hingedly-connected therewith at one end, a knife blade carried by said frame transversely above said plate and having two stepped cutting edges and an intermediate diagonal connecting cutting edge, one or all of which cutting edges are disposed to act upon a ticket disposed therebeneath, said plate having a plurality of

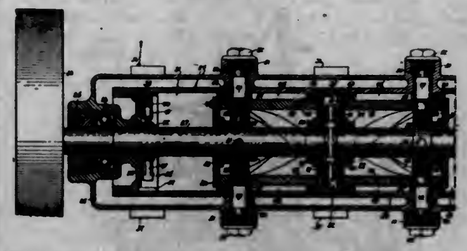
teeth in that portion disposed beneath said knife blade, and yielding means urging said frame and knife blade toward said plate.

1,629,683. SEMIAUTOMATIC RAMMER FOR GUNS. AUGUST DABRASKY, Washington, D. C. Filed Oct. 5, 1925. Serial No. 60,615. 11 Claims. (Cl. 89—4.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)



11. In combination with a gun, a rectilinearly movable rammer adapted to be energized for independent return to battery and a throw lever fulcrumed on the gun and releasably engaging the rammer, said lever adapted to be rotated whereby to increase the velocity of the rammer.

1,629,684. SHOE-STRING FASTENER. PAUL A. DE HAAN, Des Moines, Iowa. Filed Nov. 25, 1925. Serial No. 71,418. 1 Claim. (Cl. 24—117.)



A shoe string fastener of the kind described, comprising a body rectangular in outline of slightly greater length than width, provided with a single substantially central hole and a single slot of less width than the diameter of the hole extending from the hole to one of the narrow ends of the body adjacent to the corner thereof on a diagonal line.

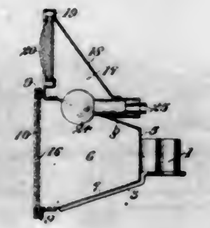
1,629,685. WIRELESS TELEPHONY. WILLIAM THEODORE DITCHAM, Twickenham, England, assignor to Radio Corporation of America, New York, N. Y., a Corporation of Delaware. Filed Dec. 18, 1920, Serial No. 431,584, and in Great Britain Feb. 28, 1920. 2 Claims. (Cl. 250—6.)

1. In a wireless telephone transmitter, the combination of two primary oscillatory circuits tuned to different frequencies, means for supplying continuous oscillations thereto, means whereby speech waves can vary the frequency of the oscillations in one of the circuits, and an oscillatory rectifying circuit tuned to a frequency substantially equal to the difference between the frequencies of the primary circuits and coupled to an aerial.

1,629,686. ENGINE. CHARLES A. DREISBACH, New Haven, Conn., assignor to Dreisbach Motors Inc., a Corporation of New York. Filed Aug. 12, 1926. Serial No. 128,752. 6 Claims. (Cl. 123—58.)

1. An engine comprising a cylinder, a plurality of coaxial reciprocating pistons located therein, means of limiting the said pistons to movement in a rectilinear path, a rotary shaft extending centrally through said pistons, helical cam grooves having reversely inclined reaches located within the said pistons, and transmission members secured to the said rotary shaft and engaging the said cam grooves whereby the rectilinear movement of the pistons acts to rotate the shaft.

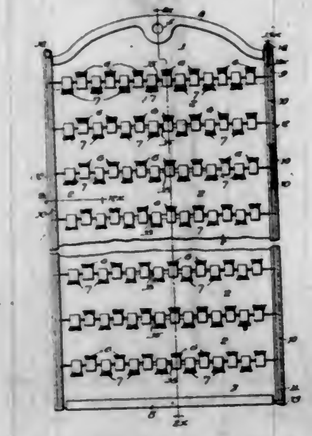
1,629,687. UNION SUIT. LEONARD J. DUFFNER, Lynchburg, Va. Filed Nov. 2, 1926. Serial No. 145,806. 1 Claim. (Cl. 2—78.)



A garment comprising a body portion having leg extensions, said garment having longitudinally extending front and back openings communicating through the crotch and defining side sections, one side section having its seat portion provided with a side extension overlapping the seat portion of the other side section and extended downwardly well below the crotch and forwardly between the leg extensions in overlying relation to the inner side portion of the upper portion of the leg extension of the second-mentioned side section to form a crotch closure and reinforcement for the portion of the leg extension covered thereby, means to releasably secure

said seat extension to the seat portion of the second side section, a flap formed from a separate piece of material secured along the forward edge of the forwardly extending portion of said seat extension in overlying relation to a front portion of the leg extension of the second-mentioned side section and extending upwardly above the

crotch and secured to an adjacent edge of the first side section, means to releasably secure the upper and lower end portions of said flap to the leg extension of the second side section above and below the crotch respectively, and means to releasably hold the said side sections closed at the front.



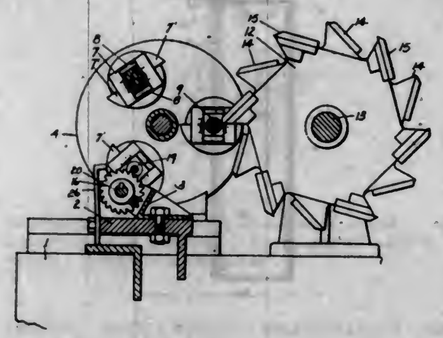
1,629,688. AUTOMOBILE LICENSE-PLATE HOLDER. GEORGE F. EDWARDS, Alameda, Calif. Filed July 29, 1925. Serial No. 46,726. 1 Claim. (Cl. 40—132.)

In combination with a plate provided on one face with character designs cut away to provide transparent portions; a reflector box having an open wall, said wall provided with opposing channeled edges for reception of said plate edges on its endwise movement thereinto to close said box wall opening; one of said channeled ends provided with an aperture; the end of the plate provided with an aperture adapted for alignment with the first mentioned aperture; a spring mounted upon said channeled end; a pin carried by said spring and adapted for yieldable holding thereby within said aligned apertures for detachably retaining the plate within the channeled edges; an attaching bracket secured to the box, said box provided with a lateral extension carried thereabove with its interior communicating with the interior of the box and provided with an opening parallel with the open box wall; a colored bull's-eye for closing the latter opening, and a single illuminating means within said box and common to said plate and bull's-eye.

1,629,689. HEAT-RESISTING DAMPER AND THE LIKE. FRANK A. FAHRENWALD, Chicago Heights, Ill. Filed Apr. 21, 1926. Serial No. 103,656. 11 Claims. (Cl. 126—285.)

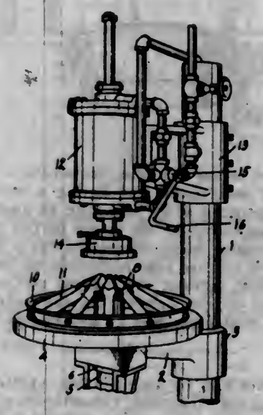
1. In a closing machine, the combination of means for feeding filled cans in predetermined spaced relation to the closing devices, traveling means for receiving the filled cans at random and for delivering said cans one at a time to the feeding means, and a rotating timing screw associated with said traveling means and operating on the filled cans carried thereby for timing the cans, said timing screw having the delivery end thereof so shaped that said timing screw operates to time the cans

by retarding the forward movement thereof through the movement of the traveling means and to actively force a can forward as it is delivered to the feeding means so as to insure the proper spacing of the delivered cans from those following thereafter whereby the feeding means can get behind the delivered can without tilting or jostling the same.



1,629,690. TRAVELING BLOCK. GEORGE E. FENTRESS, Los Angeles, Calif. Filed June 12, 1922. Serial No. 567,520. 6 Claims. (Cl. 308—208.)

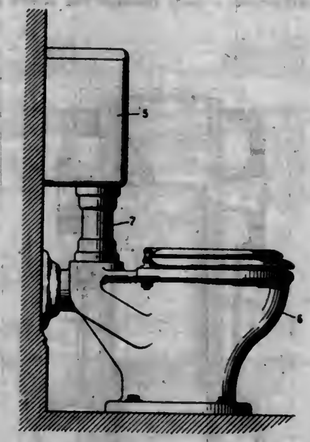
1. In a bearing of the class described, the combination of: inner and outer members presenting cooperating cylindrical faces, one of said members comprising parts, of equal radial thickness, which so interfit as to leave therebetween circular channels formed in the cylindrical face thereof; rollers between said cylindrical faces; and a central ring disposed in said channel and having projections arranged to extend between and to separate said rollers; and means for feeding a lubricant, under centrifugal force, toward said channel, said outer member being provided with a plurality of segmental chambers; and the walls of said chambers being provided with outwardly and inwardly extending holes at one end thereof.



1,629,691. SPOKE-TURNING LATHE. HENRY FLICK, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed Oct. 4, 1921. Serial No. 505,248. 4 Claims. (Cl. 142—3.)

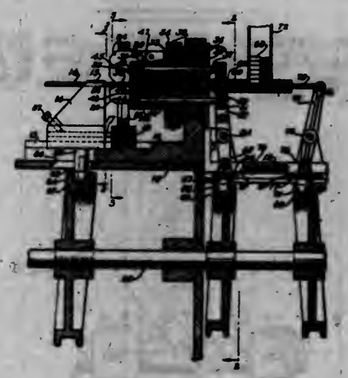
1. The combination in a spoke lathe with multiple chuck spindles on a revolving head, of chucks comprising transversely opposed rollers to receive the tapered end of a spoke, a cutter with curved blades to form the body of the spoke, and a rotary cutter disposed to form an annular groove to form the tenon of the spoke, the said last named cutter being fixed at a specific desired distance from the chucks longitudinally of the spoke and engaging and forming the tenon by cutting laterally or

from the periphery toward the axis of the spoke, so as to insure that the shoulder of the spoke shall be correctly spaced from a predetermined transverse dimension of the end of the spoke engaged by the chucks, coacting as specified.



1,629,692. WHEEL-MAKING MACHINE. HENRY FLICK, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed June 12, 1922. Serial No. 567,521. 2 Claims. (Cl. 157—1.)

1. In a wheel making machine, the combination of a suitable table support, guide means thereon for locating a metallic wheel rim, a yieldable central support with a central upwardly pointing tapered plug of dimension to fit and force the inner ends of the spokes to position, a spider with radiating guide arms for guiding the spokes and supporting them in correct radial relation and a press means to force the spokes to position, coacting as specified.

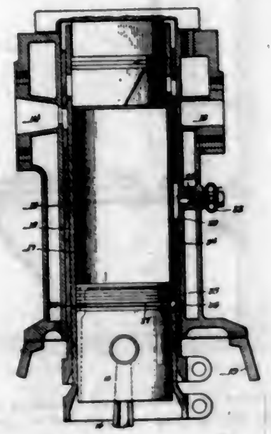


1,629,693. HOUSING FOR PIPE CONNECTIONS. ANDREW FOLTZ, Lambertville, N. J. Filed Oct. 4, 1922. Serial No. 592,217. 3 Claims. (Cl. 137—111.)

2. A housing for flush pipe connections comprising a hollow member open from end to end along one side wall thereof to detachably connect said housing to the pipe whereby the housing may be pressed transversely into housing relation to the pipe, and a U-shaped spring clamping member mounted in the housing and having its arms

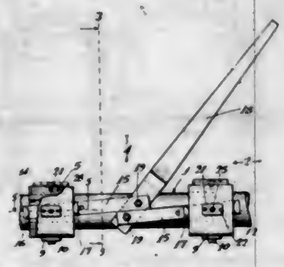
arranged to extend in flanking and clamping relation to the pipe to hold the housing in place and center it on the pipe.

1,629,694. APPARATUS FOR AND METHOD OF APPLYING TIPS TO CORES. BEN KING FORD, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1924. Serial No. 731,230. 11 Claims. (Cl. 153—1.5.)



1. In a mechanism for applying a tip to a core, a plurality of jaws forming a frustro-conical die which is adapted to compress and guide the end of the core into the tip, and means for forcing the core through the die formed by the jaws into the tip.

1,629,695. LUBRICATION OF INTERNAL-COMBUSTION ENGINES. RALPH C. GARLAND, Detroit, Mich., assignor to Skinner Automotive Device Co., Inc., Detroit, Mich., a Corporation of California. Filed Sept. 13, 1926. Serial No. 134,958. 3 Claims. (Cl. 123—196.)



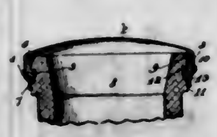
1. In an internal-combustion engine, the combination of an engine-cylinder having a port through its side-wall, a piston having an oil-collecting groove reciprocatory in

said cylinder, a movable sleeve between said piston and cylinder, means to lubricate said cylinder, piston and sleeve, said sleeve having a longitudinal groove of substantial size in its surface adapted to communicate with said cylinder-port, a port through the sleeve adapted to

register at least part of the time with said piston-groove, and a small-metered channel connecting said longitudinal sleeve groove and said sleeve port, whereby the contents of said piston-groove may be removed through said cylinder-port.

1,629,696. PIPE RIP AND CUT-OFF. JESS GOFF, Los Angeles, Calif., assignor of one-half to Louis M. Adams, Los Angeles, Calif. Filed Mar. 22, 1926. Serial No. 96,561. 9 Claims. (Cl. 81—189.)

1. A pipe rip and cut-off comprising in combination a pair of cutter blocks having cutter tools, means on said block to engage a pipe, and means interconnecting said blocks and operated to traverse said blocks in successive steps lengthwise of the pipe.



1,629,697. ILLUMINATED ADVERTISING DEVICE. ELMORE L. GOODLOE and GEORGE E. PENISTON, Kansas City, Mo. Filed May 4, 1925. Serial No. 27,767. 2 Claims. (Cl. 40—130.)

1. In a display device, the combination of an opaque background having a display surface, a translucent screen spaced a short distance in front of the background and provided with display matter, and illuminating means at

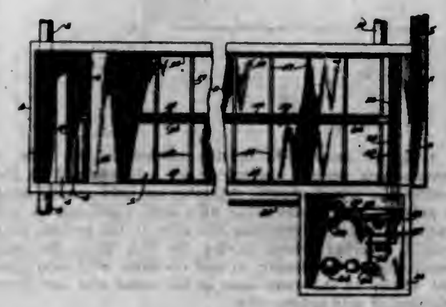
the front of said screen in position for illuminating the display matter of said screen and for illuminating said background through the screen.

1,629,698. CLOSURE FOR FOOD CONTAINERS. DANIEL M. GRAY, EDWIN HAUB, and JOHN J. WILLIAMS, Wheeling, W. Va., assignors to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed June 18, 1925. Serial No. 37,914. 6 Claims. (Cl. 215—38.)

5. In closure means for glass containers, a cap member formed of sheet metal and having a relatively flat body portion provided at its edge with an annular flange member adpated to receive the mouth portion of the container, said annular flange member having a reduced diameter adjacent its free edge to provide an internal gasket-receiving seat between the reduced portion and the body portion of the cap member, and the gasket-receiving seat having a reinforcing bead formed therein.

1,629,699. PROCESS OF IMPROVING ALUMINUM ALLOYS. WILLIAM GUERTLER, Charlottenburg, and WILHELM SANDER, Essen, Germany, assignors to the Firm: Th. Goldschmidt A.-G., Essen, Germany. Filed May 6, 1926, Serial No. 107,273, and in Germany Nov. 22, 1923. 4 Claims. (Cl. 148—11.)

1. A process for producing alloys of high tensile strength comprising alloying aluminum with $MgZn_2$, said compound forming from 4% to 26% by weight of the alloy, and subjecting the alloy to annealing, quenching, and ageing.

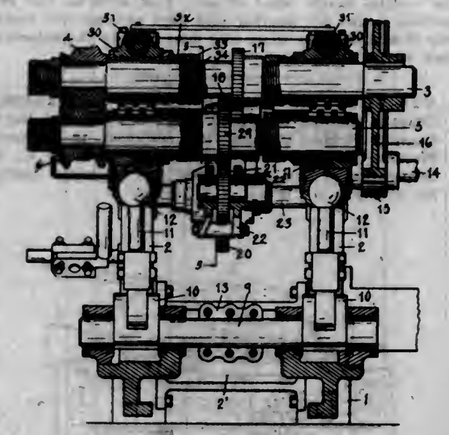


1,629,700. HOLSTER. CHARLES FRED HARTER, Denver, Colo. Filed Oct. 9, 1926. Serial No. 140,474. 3 Claims. (Cl. 224—2.)

1. A holster for supporting a revolver, said holster comprising an elongated, substantially flat base portion, means secured to one end of said base portion for supporting the same, the other end of said base portion being provided with a shallow pocket adapted to receive the muzzle of a revolver barrel, a spring having one end secured to said base portion at a point above said pocket, said spring being bent into a loop which lies in a plane

perpendicular to the base portion, the free end of said spring having an anti-friction device adapted normally to engage a portion of a revolver.

1,629,701. WHITE-WATER SELF-CLEANING SETTLING TANK. JOHN PAUL HASS, International Falls, Minn. Filed Dec. 21, 1925. Serial No. 76,855. 2 Claims. (Cl. 210—55.)



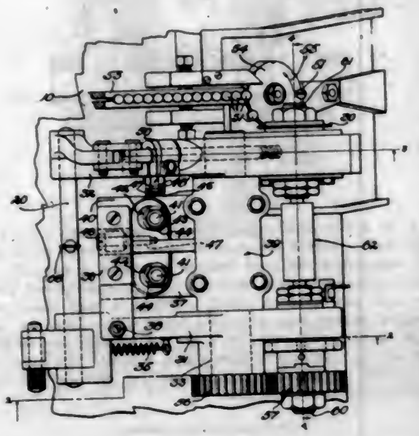
1. In combination, a tank having a head box, a perforated trough, and an overflow wall between the box and trough whereby a fluid from said box will pass over said wall and drop into said trough, a baffle inclining from a point adjacent said trough toward the bottom of said tank and an endless scraping device having its head portion arranged under said trough and said inclined baffle.

1,629,702. WALL CONSTRUCTION. JACKSON ROSS HAZELRIGG, Exeter, Calif. Filed Dec. 27, 1923. Serial No. 682,947. 2 Claims. (Cl. 72—48.)

1. A wall construction comprising a wall formed of a plurality of sections, each section having an inner concrete wall and an outer concrete wall spaced therefrom, a reinforcing column between said inner and outer walls, and a vertical channel on each section having slidable engagement with a complementary vertical channel on another section to form an expansion joint therebetween.

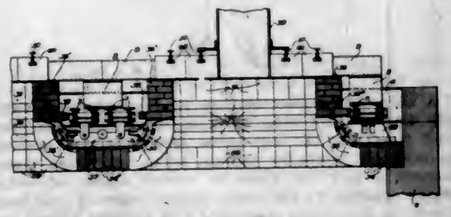
1,629,703. RIM-ROLLING MACHINE. EUGENE HIGGINS, Jackson, Mich., assignor to Hayes Wheel Company, Jackson, Mich. Filed Nov. 22, 1924. Serial No. 751,595. 8 Claims. (Cl. 80—5.)

1. In a rim rolling machine the combination of a fixed roll shaft, journal bearings at each end, cross pivot pins for supporting the said journal bearings, a movable roll shaft, suitable journal bearings at each end thereof, slides for each said movable shaft bearings, a rock shaft with suitable pitman and universal joint connections for each slide, a train of gears with rocker connections between the central portions of said shafts whereby the same will be driven in unison, and means for driving the fixed shaft, coacting as specified.



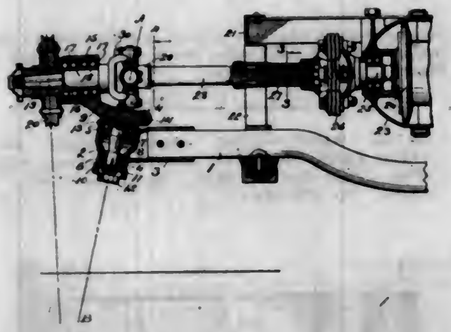
1,629,704. UNION OR ONE-PIECE UNDERGARMENT. OTELIA A. HOEGLUND, Cincinnati, Ohio. Filed Dec. 17, 1923. Serial No. 681,135. 1 Claim. (Cl. 2—76.)

A union or one-piece undergarment comprising a waist and drawers, said waist consisting of a front piece, two back pieces and two side pieces, said front piece secured to said side pieces by vertical seams, said back pieces secured to said side pieces by vertical seams, releasable means attached to the inner vertical edges of said back pieces for detachably connecting said garment around the body of the individual, means for supporting said garment on the body of the individual, the lower edge of said waist secured to the upper edge of said drawers consisting of a front section and two back sections, said



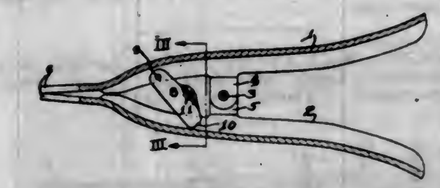
front section secured to said back section by vertical seams, said front section split part way from its lower edge thereof and vertical edges formed thereby stitched to the inside vertical edges of said back sections whereby legs are formed in said drawers, tapered flaps fixed to the vertical inside edges of said back sections and releasable means for securing said flaps adjacent the waist line of said garment when said flaps overlap the adjacent back section.

1,629,705. MATERIAL-WORKING MECHANISM. CHARLES GUNNAR HOLMBERG, Jr., Oak Park, and JOHN STANLEY STULL, Chicago, Ill., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1924. Serial No. 709,340. 6 Claims. (Cl. 10—6.)



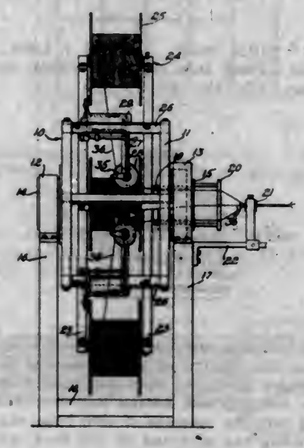
3. In an automatic screw slotting mechanism, a rocker arm, a block mounted to slide thereon, a rotary cutter mounted upon said block, means for rocking said arm to move the cutter to the depth of the slot to be formed, means for causing said block to slide longitudinally upon the arm to move said cutter across the surface to be slotted in a continuous plane parallel thereto, and means for continuously rotating said cutter during such movements.

1,629,706. FURNACE-ARCH CONSTRUCTION. LOUIS H. HOSBEIN, Winnetka, Ill., assignor to M. H. Detrick Co., Chicago, Ill., a Corporation of Illinois. Filed July 25, 1923. Serial No. 653,657. 14 Claims. (Cl. 110—99.)



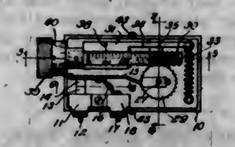
1. In furnace arch construction, in combination, supporting members pendulously suspended above the furnace chamber, refractories suspended thereon in courses to form flat top arch portions, said courses being interrupted to afford an opening through the arch, certain of the supporting members having upwardly diverted portions at said opening, and refractories suspended on said upwardly diverted portions to form a sloping wall for said opening as a continuation of the flat under surface of the arch.

1,629,707. AUTOMOBILE DRIVING MECHANISM. FINN S. HUDSON, Kansas City, Mo. Filed Sept. 28, 1925. Serial No. 59,145. 2 Claims. (Cl. 180—43.)



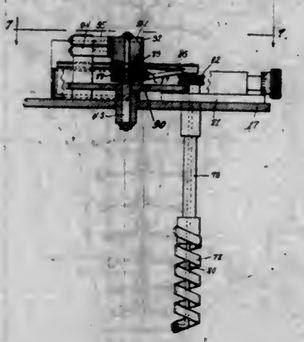
1. In an automobile driving mechanism, an axle, a spindle arm pivoted thereto on an axis inclined to the vertical, a wheel spindle rotatable on said spindle arm, a universal joint connecting with said wheel spindle and having its axes intersecting the axis of the spindle arm, and a carrying wheel having its hub fitted for substantially its full length on and revoluble with said spindle wholly at the outer side of the outer end and independent of said spindle arm.

1,629,708. VALVE LIFTER. FREDERICK C. JEWELL and HENRY S. JEWELL, Chicago, Ill. Filed May 4, 1925. Serial No. 27,717. 6 Claims. (Cl. 29—86.3.)



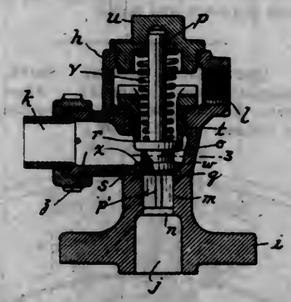
3. A device of the class described comprising a pair of pivoted members adapted to be manually operated to open position, a dog member pivoted to one of said members adapted to be moved by gravity to engage the other of said members when the same is operated to open position for holding said members in open position, and an additional member disposed between said pivoted members for insuring connection between said dog member and said other of said pivoted members.

1,629,709. GUARD FOR PULLEYS. HAROLD FRANK JONES, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Original application filed Aug. 5, 1924, Serial No. 730,153. Divided and this application filed Nov. 21, 1925. Serial No. 70,550. 7 Claims. (Cl. 242—157.)



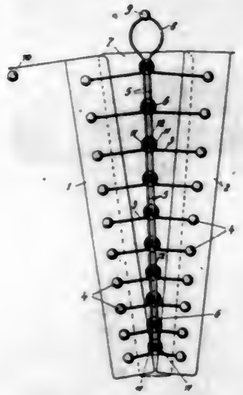
1. A guard for a traveling material guiding device, comprising a plurality of flexible members operatively associated with the device and normally engaging each other at a point adjacent the moving material and centrally disposed with respect to the moving material.

1,629,710. THERMOSENSITIVE CIRCUIT CONTROLLER. PAUL E. KLOPSTEG, Chicago, and WINFIELD H. STANNARD, Homewood, Ill., assignors to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed May 20, 1922. Serial No. 562,438. 7 Claims. (Cl. 200—139.)



1. A thermosensitive current controller comprising a fixed contact, a movable contact, thermosensitive means connected to said movable contact, a scale movable independently of said thermosensitive means, and means to adjust said thermosensitive means and connected to said scale whereby said scale will move with said adjusting means the movement of the scale being dependent solely upon the movement of the adjusting means and not upon the movement of said thermosensitive means.

1,629,711. CIRCUIT BREAKER. PAUL E. KLOPSTEG and WINFIELD H. STANNARD, Homewood, Ill., assignors to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 1, 1922. Serial No. 585,625. 15 Claims. (Cl. 200—138.)

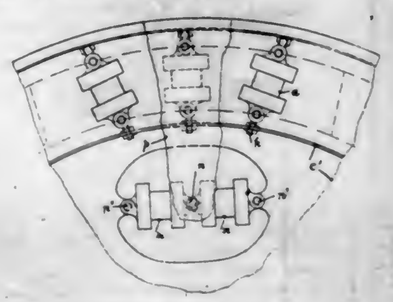


1. In a thermo-sensitive current controller, the combination of a magnet, a plurality of separable contacts, a thermosensitive element adapted to open and close said contacts, means for periodically breaking the circuit, and means for resisting the opening of said contacts until the circuit of said magnet is broken.

1,629,712. INJECTOR. STRICKLAND L. KNEASS, Philadelphia, Pa., assignor to William Sellers & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 5, 1926. Serial No. 127,306. 11 Claims. (Cl. 161—1.)

1. Means for continuously supplying steam at low pressure to an injector on a locomotive having a working cylinder comprising in combination means for controlling an exhaust steam supply, means for controlling a live steam supply, means associated with said means adapted under the influence of live steam pressure to automatically actuate said means to admit exhaust steam to said injector when exhaust is available and to admit live steam when exhaust is not available and means for delaying the admission of exhaust steam after exhaust becomes available and for permitting instantaneous admission of live steam when exhaust is not available.

1,629,713. LACE JOINT FOR SHOES AND OTHER APPAREL. FRANZ KOSLOWSKI, Glatz, Germany. Filed June 26, 1926, Serial No. 118,623, and in Germany Apr. 24, 1926. 3 Claims. (Cl. 24—207.)



1. A joint for shoes and other apparel, comprising adjacent rims to be jointed, a plurality of strings individually secured to each of said rims, buttons one for each pair of cooperating strings fixed relatively to said joint as against longitudinal displacement, said buttons being formed with eyes adapted to have the strings passed therethrough, a lace passed through said eyes and connected with said strings, said lace being formed with a loop adapted to be gripped by the finger of the wearer, and a press button having its bottom part fixed to the apparel and its top part fixed to said loop.

1,629,714. CEMENT COMPOSITION. CHARLES E. KRAUS, Babylon, N. Y. Original application filed Apr. 17, 1919, Serial No. 290,671. Divided and this application filed Sept. 23, 1924. Serial No. 739,340. 4 Claims. (Cl. 106—25.)

3. A plasticized composition containing cement rock, finely divided bentonite and liquid.

1,629,715. RESILIENT WHEEL. FRITZ LENHARDT, Mannheim-on-the-Rhine, Germany. Filed Aug. 19, 1922, Serial No. 582,916, and in Germany Aug. 19, 1921. 4 Claims. (Cl. 152—36.)

1. In a resilient wheel having a rigid outer and inner rim, rubber spokes joining the said rims and comprising rubber tensional pieces having enlarged heads, hollow bodies as holding members, enclosing, all around, the said heads under pressure and means for fastening the holding members to their corresponding rims.

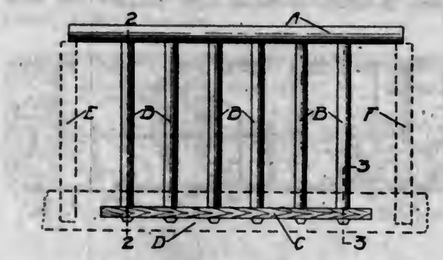
1,629,716. JELLY PREPARATION. ALBERT LEO, Winfield, Ill. Filed Oct. 5, 1925. Serial No. 60,687. 4 Claims. (Cl. 99—11.)

2. The method of making a jelly preparation, which consists in adding to granulated sugar in a moistened condition a pectin containing substance and a fruit acid, mixing the same to form a homogeneous mass of sugar granules coated with the pectin containing substance and fruit acid and drying the mass without destroying the granular structure.

1,629,717. BIRD CAGE. LEWICKI J. LEON, West Chicago, Ill. Filed July 15, 1926. Serial No. 122,519. 7 Claims. (Cl. 119—17.)

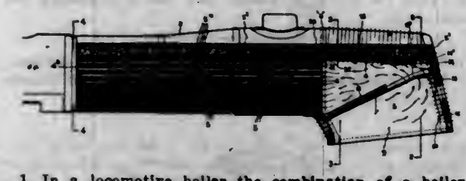
1. In a bird-cage, the combination with a cage body and a carrying loop therfor, of a plate secured to the top of the body and having an apertured boss, a stem depending from the loop and having its lower end split and extending into the aperture of said boss, and a member for expanding the split end of the stem into frictional contact with the aperture of the boss so that the loop and the cage body may be turned relatively to each other without affecting the frictional connection between the stem and the boss.

1,629,718. SCAFFOLD BRACKET. DAVID J. LOCKARD and DAVID E. LOCKARD, Toledo, Ohio. Filed Aug. 16, 1926. Serial No. 129,348. 5 Claims. (Cl. 304—1.)



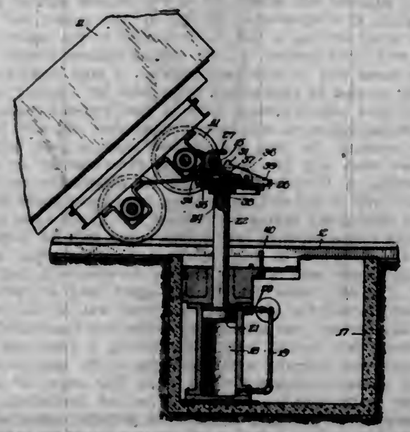
1. A scaffold bracket having pivotally connected toggle arms adapted to bear at their outer ends against opposing supports, the pivotal connection of the arms being above their support engaging ends, and platform supporting means carried by the arms and tending by its weight to bring the arms in alignment.

1,629,719. PANEL FOR ANIMAL PENS. ROBERT B. LOUDEN, Fairfield, Iowa. Original application filed Oct. 17, 1924, Serial No. 744,142. Divided and this application filed Feb. 28, 1927. Serial No. 171,484. 2 Claims. (Cl. 256—24.)



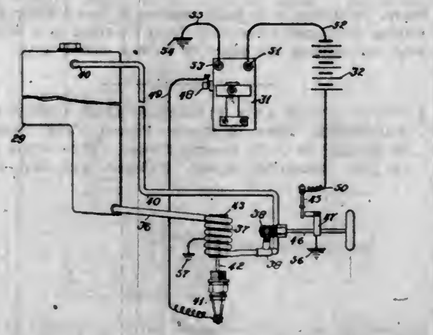
1. In partially completed panels for animal pens, the combination of a horizontally disposed tubular top member having a series of spaced apart holes in the wall of its lower side, a series of vertically disposed fillers corresponding with the number of holes in the top member, and a bottom temporary supporting member having a series of spaced apart holes corresponding with the holes in the top member, the holes in both members being the same size as the diameter of the fillers, or a shade smaller, the ends of the fillers being tapered or beveled

for easy initial entrance into the holes in the members, and said top and bottom members being tightly pressed on to the ends of the fillers until their upper ends will



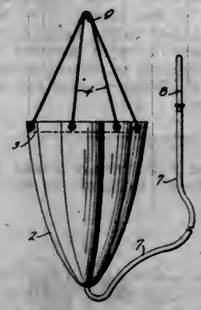
come approximately in contact with the outer wall of the top member, and their lower ends will pass through the holes in the bottom member.

1,629,720. LOCOMOTIVE BOILER. MYLES MAHONEY, Montreal, Quebec, Canada. Filed Jan. 15, 1925. Serial No. 2,581. 4 Claims. (Cl. 122—73.)



1. In a locomotive boiler the combination of a boiler barrel; a smoke-box; a fire-box the crown sheet whereof has an upwardly extending chamber at the top rear corner thereof and in open communication with the fire-box; fire tubes communicating with the fire-box and extending through the barrel to the smoke-box, and safety fire tubes communicating with the chamber and extending through the barrel above the fire-box for the purpose of directing a portion of the burning gases therethrough from the top of the rear end of the fire-box to the smoke-box, each of such safety fire tubes having an upwardly extending bend adapted to direct steam and water into the upwardly extending chamber in the event of a break in the bend.

1,629,721. CAR-TILTING MECHANISM. EDWARD A. MALMGREN, Duluth, Minn. Filed Oct. 16, 1925. Serial No. 62,799. 6 Claims. (Cl. 214—44.)



3. Car tilting mechanism comprising a stop member adapted to engage a portion of the car to arrest movement of the car, cushioning means for the stop member, and elevating mechanism adapted to raise and lower the stop member and cushioning means.

1,629,722. BURNER APPARATUS. ELZEAR MICHAUD, Indianapolis, Ind., assignor to Ernest L. Dayton, Detroit, Mich. Filed May 11, 1922. Serial No. 560,110. 5 Claims. (Cl. 154—53.)

1. In an apparatus of the class described, the combination of a liquid fuel supply tank, a pipe line leading from the tank and returning thereto and comprising means for trapping liquid fuel to which the fuel feeds by gravity from the tank through the pipe line, and a burner device connected by the pipe line with the tank, the supply pipe between the tank and the burner device lying entirely below the normal level of the fuel in the tank, said burner device having an orifice through which a jet of liquid fuel passes from the pipe line by gravity feed from the tank into contact with said trapping means and through which gas is forced for feeding a flame against said trapping means when the trapping means has become heated.

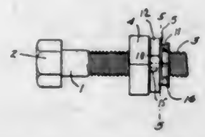
1,629,723. WATER BAG. JESSE R. MOLER, Oakland, Calif. Filed Sept. 7, 1926. Serial No. 133,897. 7 Claims. (Cl. 128—227.)

1. A water bag consisting of a single flat sheet of flexible, water-impervious material, an outlet member secured to said sheet, and means for suspending said sheet in water-retaining position.

1,629,724. PROCESS OF MANUFACTURING METAL TUBING. JOHN W. MOON, Lansdowne, Pa. Filed Oct. 20, 1923. Serial No. 669,683. 8 Claims. (Cl. 80—15.)

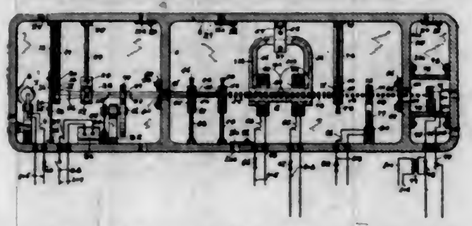
1. The process of manufacturing metal tubing which comprises flowing fluid metal in a traveling stream and during its travel molding it to shape and as it increases in length causing it to solidify at a point in advance of

the rear of the traveling stream, rolling the ingot strip, as it continues to travel, to reduce and shape the same into the form of skelp, and as the skelp continues to



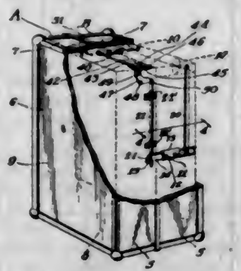
travel subjecting it to heat, bending it into tubular form, raising the temperature of at least its edges to a welding heat and uniting the edges to form a closed tube.

1,629,725. DOOR AND WINDOW-SCREEN CATCH AND FASTENER. BENTON MOORE, Fresno, Calif., assignor of one-half to J. F. Rogers, Fresno, Calif. Filed Nov. 18, 1925. Serial No. 69,763. 2 Claims (Cl. 222—211.)



1. A door and window screen catch and fastener comprising a casing adapted to be mounted upon a movable member; an abutment extending upwardly from the top wall of said casing from one edge to near the center; a rim extending upwardly from said top wall at the inner termination of said abutment, of less height but forming a continuation thereof the free end thereof tapering downwardly; a stud pivotally mounted in said casing to extend vertically and projecting through the top wall thereof; a latch rigidly secured at one end upon the upper end of said stud to extend at a right angle thereto, said latch having its free end bifurcated and projecting beyond the side of said casing; a spring coiled around said stud within said casing adapted to resist upward movement thereof; a catch mounted in said casing adapted to be positioned to prevent upward movement of said latch; and a stationary catch for engaging the free end of said latch.

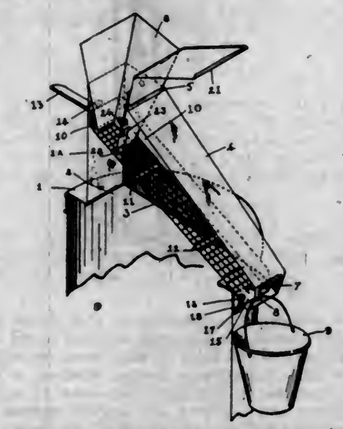
1,629,726. LOCK NUT. EDGAR MORSE, Rock Island, Ill. Filed Jan. 8, 1926. Serial No. 79,940. 4 Claims. (Cl. 151—13.)



1. A device of the class described, comprising a nut, provided with a circular extension having locking elements, a collar held rotatably on the end of said extension, and provided with locking elements adapted to register with said first-named locking elements, a locking ring mounted on said extension, adapted for engagement with the locking elements on said extension and collar, to hold one of said parts from rotation independently of the other, and a retainer carried by said collar, to prevent the release of said ring.

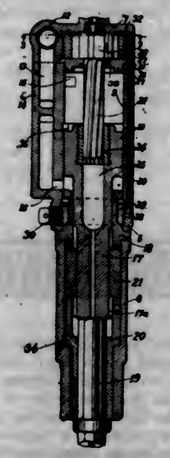
1,629,727. ELECTRIC-WAVE PRODUCING AND CHANGING DEVICE. HOWARD J. MURRAY, Brooklyn, N. Y. Filed Apr. 1, 1921, Serial No. 457,627. Renewed Nov. 13, 1926. 16 Claims. (Cl. 250—1.)

1. The combination of a light susceptible circuit element arranged to intercept a ray of radiant energy, means for creating a high frequency oscillating flux and positioned to intercept said energy, means including a second source of magnetic flux designed to vary the said radiant energy when operatively associated with the said flux thereby to affect the said light susceptible element to vary its electrical status, and means providing the said ray.



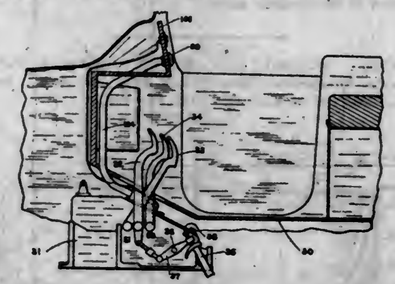
1,629,728. TRUNK LOCK. HENRY B. OSGOOD, Oshkosh, Wis. Filed Dec. 5, 1925. Serial No. 73,473. 10 Claims. (Cl. 70—115.)

1. A trunk comprising two sections, each having front and rear walls, upper and lower walls and a bottom wall, the adjacent edges of said rear walls being hinged together on a longitudinal axis, the upper wall of one of said sections being hinged thereon along a transverse axis adjacent the upper end of the bottom wall of said section, a pivot-member carried by the upper wall of the other section, a lock hasp secured to the outer end of said pivot-member, a hook locking-element carried by the inner end of said pivot-member, a stud locking-element carried by said hinged upper wall for coacting with said hook locking-element to hold said sections together, co-acting means on said hinged upper wall and said hasp for securing the free end of said hasp to said hinged upper wall and for holding said pivot-member in one position, a locking-bar mounted to reciprocate on the front wall of the section carrying the hinged upper wall, said locking-bar having an inclined slot at its outer end, means connected with said hinged upper wall for holding said locking-bar in its outermost position when said hinged upper wall is closed and for drawing said locking-bar inwardly when said hinged upper wall is open, a second locking-bar carried by the front wall of the other of said sections and mounted to reciprocate longitudinally thereof, said second locking-bar having a stud locking-element for coacting with the walls of the slot of said first named locking-bar to pull the free edges of said front walls together when said second locking-bar is moved in one direction and to push said free edges apart when said second locking-bar is moved in another direction, and connections between said pivot-member and



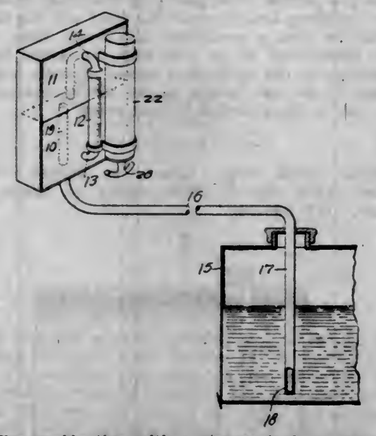
said second locking-bar for moving said stud locking-element into unlocked position when said hasp is turned to unlock said hook locking-element, and to locked position when said hasp is turned to move said hook locking-element in locked position.

1,629,729. ASH SIFTER. ALBERT PAPENFUSS, Rochester, N. Y. Filed Dec. 30, 1926. Serial No. 158,098. 3 Claims. (Cl. 209—335.)



1. In an ash sifter for ash cans, the combination of a cover having an opening therein, an elongated rectangular casing having an opening at one end at the top thereof and an opening at the opposite end thereof, a screen, a flange surrounding said screen on two sides and one end thereof, a removable hopper adapted to engage into the opening in the top of said casing, and projecting between the flange surrounding said screen means for oscillating said screen, said flange of said screen being adapted to make contact with the outside of said hopper to vibrate said hopper at the end of each oscillation.

1,629,730. LUBRICATION OF PERCUSSIVE TOOLS. ERNEST PENBERTHY, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 13, 1923. Serial No. 674,443. 10 Claims. (Cl. 121—7.)

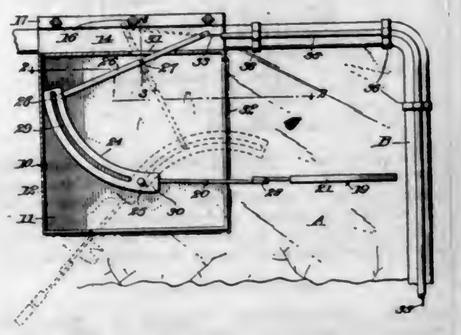


1. In a percussive tool having a piston chamber and an impact piston reciprocable therein, a chamber in line with said piston chamber and connected thereto, a lubricant chamber disposed below said second named chamber in the normal position of the tool, and a continuously open passage leading from said lubricant chamber to said second named chamber whereby the lubricant is subjected to the varying pressure within said piston chamber and is forced against gravity through said passage into said second named chamber.

1,629,731. VEHICLE LOCK. ELMER C. PETERSON, Cleveland, Ohio. Filed July 28, 1923. Serial No. 654,337. 16 Claims. (Cl. 70—50.)

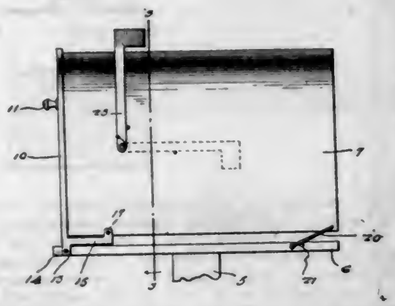
1. In apparatus of the class described, the combination of a transmission mechanism, a housing therefor, a rocking control-shaft in said housing, an arm secured on said shaft within said housing, a locking member movable into the path of said arm to prevent the movement of said shaft, and electromagnetic means for actuating said member.

1,629,732. LIQUID-LEVEL INDICATOR. WILBUR M. PHELPS, Staunton, Va. Filed Apr. 12, 1922. Serial No. 551,865. 2 Claims. (Cl. 73—54.)



1. The combination with a storage tank or receptacle for a liquid, a liquid holding chamber located away from the tank, a pipe leading from a point above the liquid level of said chamber into said tank to the minimum level to be gauged, a vertical liquid level gauge mounted adjacent said chamber so as to be readily visible and being in communication with such chamber below the level of liquid therein, means to expel the gauge contents into the chamber and the air and other contents from the pipe between such chamber and said tank, and to place atmospheric air in such pipe, and a second chamber with which the upper end of said gauge communicates, the means of communication being a pipe that terminates in such chamber and spaced from the bottom thereof, said second chamber being in communication with said means to expel the gauge-contents.

1,629,733. REFRIGERATION. BALTZAR CARL VON PLATEN and CARL GEORG MUNTERS, Stockholm, Sweden, assignors to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 7, 1926, Serial No. 153,221, and in Sweden Aug. 18, 1922. 7 Claims. (Cl. 252—5.)



1. A group of cooperating substances for refrigeration consisting of a gaseous cooling agent, a solvent therefor and an auxiliary agent which is non-soluble in the solvent, the substances having a common chemical constituent and the auxiliary agent being of low molecular weight relative to the cooling agent.

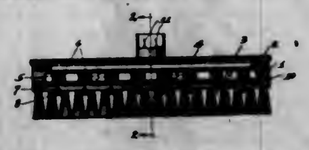
1,629,734. WINDSHIELD WIPER. WILLIAM CALVIN POOLE, Coalgrove, Ohio. Filed July 30, 1924. Serial No. 729,110. 4 Claims. (Cl. 15—255.)

1. A device of the class described including an operating lever, a pivoted crank having an elongated crank slot, means extending laterally from the lever and disposed in said slot to form a connection, said means being closer to the pivotal axis of the lever than the pivotal axis of the lever is to the crank, said means normally being at the end of the slot remote to the pivotal axis of the crank, and a wiper carried by said crank.

1,629,735. MAIL BOX. EUGENE H. RENFRO, Offerle, Kans. Filed Sept. 9, 1926. Serial No. 134,447. 1 Claim. (Cl. 232—40.)

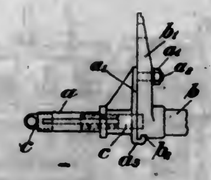
In a mail box of the character described, a supporting plate, a mail container open at one end, a lid for the open end of the box, a pivotal connection between the lid and the supporting plate, means between the lid and box for causing the raising of the box when the lid is opened and the closing of the lid when the box is lowered, and means between the rear end of the box and said supporting plate for maintaining the box in horizontal position when raised or lowered.

1,629,736. WRINGER. WILLIAM ROBERTSON, Erie, Pa., assignor to Lovell Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Apr. 26, 1922. Serial No. 556,649. 9 Claims. (Cl. 68—32.)



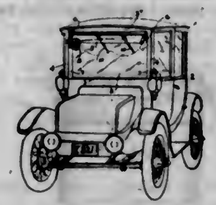
1. In a wringer, the combination of a frame having downwardly extending sides; rolls mounted in the frame; drip board pins on the sides; a drip board extending between the sides and having notches adapted to engage the pins; and means detachably connected to and locking the lower end of the board against upward movement comprising a bar extending from the frame to the lower end of the board, said means supporting the lower end of the board against downward pressure.

1,629,737. ELECTRIC FRYING PAN. EVEN J. ROHNE, Minneapolis, Minn. Filed Mar. 23, 1922. Serial No. 546,062. 3 Claims. (Cl. 219—44.)



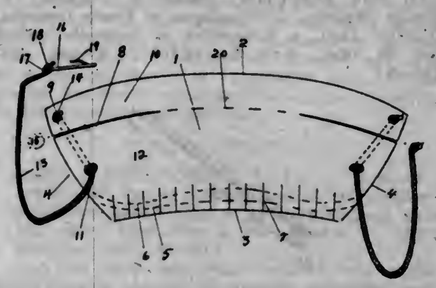
1. In an electric frying pan the combination of a pan element having an electric heating element joined to the bottom surface thereof, a removable false bottom joined to said pan element, a hollow stud projecting from said false bottom through which electric conductors are led from said heating element, diametrically opposed legs extending from said false bottom and supporting said stud, an insulating block carried by said legs and connecting clips carried by said insulating block.

1,629,738. ELECTRICALLY-HEATED STEAM BRUSH. EVEN J. ROHNE, Minneapolis, Minn. Filed Dec. 8, 1924. Serial No. 754,658. 5 Claims. (Cl. 15—128.)



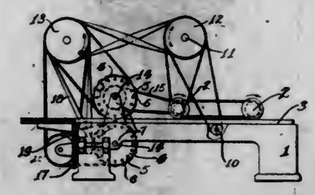
1. In a brush, the combination including a body having a heating chamber and a fluid distributing chamber, a heating element within the heating chamber, bristle tufts carried by the body, a series of perforated bosses contained within the fluid distributing chamber and communicating with the bristles, a series of cups disposed over the bosses, so as to form annular restricted passages therewith, and adapted to be heated by the heating element, whereby the fluid in the distributing chamber will be heated before being discharged into the bristles.

1,629,739. GUN CARRIAGE. HEINRICH ROMBERG, Duesseldorf, Germany. Filed Oct. 24, 1925, Serial No. 64,563, and in Germany Oct. 24, 1924. 4 claims. (Cl. 89—40.)



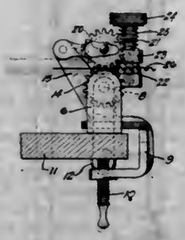
1. A wheeled gun carriage for setting the gun at different firing heights, axle trees for said wheels, an axle piece carrying said gun carriage, pins eccentrically connected with said axle trees and arms mounted on said axle piece and adapted to be swung about said pins.

1,629,740. CLEANING MECHANISM. FRITZ R. RYBERG, Cleveland, Ohio. Filed Jan. 8, 1922. Serial No. 526,474. 4 Claims. (Cl. 15—253.)



1. In a cleaner for a windshield for a vehicle having a frame in which is mounted a windshield glass, a cleaning device adapted to be pivotally mounted on the outside of the vehicle frame above the windshield glass and depending therefrom in front of the glass to move thereover, a motor adapted to be supported on the outside of the vehicle frame adjacent one side edge of the windshield glass and remote from the driver, a pitman connected at one end to said cleaning device, and driving means, including a reduction gearing connected to the shaft of said motor and a crank connected to the other end of said pitman for operating said pitman.

1,629,741. HAIR GUARD AND TEMPLATE. MURRAY SCHICK, San Francisco, Calif. Filed Apr. 6, 1925. Serial No. 20,946. 9 Claims. (Cl. 132—45.)

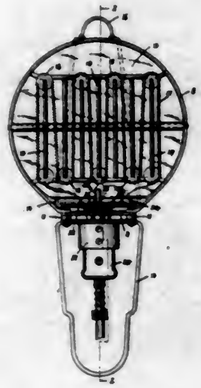


1. A hair trimming template comprising in combination a sheet of material having an outline when flat of substantially a segment of a flat ring, a plurality of slits extending inwardly from the lower edge of the template and a cord to secure the template to the back of a person's head with the slits against a person's neck.

1,629,742. MACHINE FOR MILLING LUMBER AND THE LIKE. RAY W. SCOTT, Los Angeles, Calif., assignor of one-half to Radio Lab. & Mfg. Co., a Common Law Trust Association of California, and one-half to Leon H. Scott, Pasadena, Calif. Filed Aug. 18, 1924. Serial No. 732,629. 5 Claims. (Cl. 144—136.)

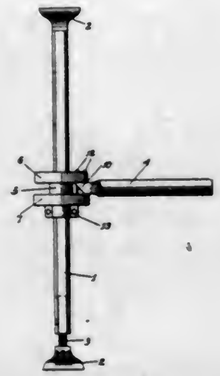
1. In a machine for milling lumber or the like, the combination of means adapted to force a board through said machine and independently driven rotating means advancing therewith for perforating the board continuously during its uninterrupted advance, said saw means being effective automatically to advance and to retract saws in planes parallel with said advance and in such manner as to cut separate outwardly expanding slots in said boards.

1,629,743. PAPER-CRIMPING MACHINE. CATHERINE E. SCOTT, Milwaukee, Wis. Filed July 9, 1926. Serial No. 121,407. 2 Claims. (Cl. 154—30.)



1. A crimping machine, comprising a bracket, a shaft journaled therein, a ribbed cylinder carried by said shaft, means for revolving the shaft, an arm extending angularly upwardly from the bracket, a bearing member formed with a bifurcated end portion, the upper end portion of said arm being engaged between said bifurcated end portion, a pin pivotally connecting the bearing member to said arm, a second shaft carried by said bearing member and parallel to said first shaft, a cooperating ribbed cylinder carried by said second shaft, and an adjustable, yielding connection between the bearing member and the bracket.

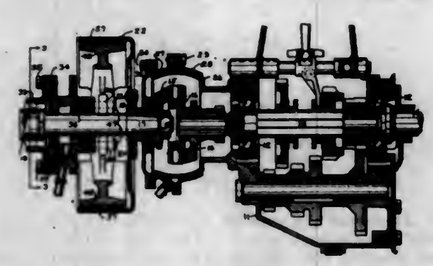
1,629,744. ELECTRIC HEATER. HAROLD N. SHAW, Milwaukee, Wis. Filed Mar. 1, 1926. Serial No. 91,517. 3 Claims. (Cl. 219—37.)



1. In an electric heater having an elongated resistance unit, a plurality of terminals, a connection between one terminal and one end portion of the resistance unit, a connection between another terminal and the other end

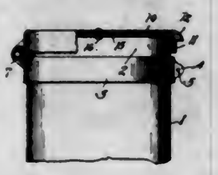
portion of the resistance unit, another connection between a third terminal and an intermediate portion of the

resistance unit, and an adjustable member movably mounted on one of said terminals to join one of the end connections with the other end connection.



1,629,745. DRILL-SUPPORTING STRUCTURE. JOHN E. SHAW, Murphy, Calif. Filed Mar. 3, 1926. Serial No. 91,911. 2 Claims. (Cl. 255—53.)

1. A drill supporting structure comprising a vertical bar adapted to be maintained in a fixed position, an arm to support a drill, a member slidably but non-turnably mounted on the bar, means between said member and the arm for removably supporting the latter in a horizontal position, said member including flanges spaced apart vertically a distance sufficient to receive one end of the arm therebetween, an upwardly projecting boss on said end of the arm, the under face of the upper flange being recessed all around to seat said boss in a number of different positions, and means between said arm and flanges to prevent lateral swinging movement of the arm.

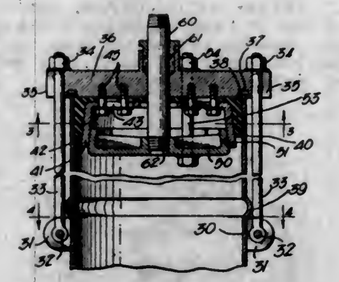


1,629,746. BRAKE. EDWIN G. SPRUNG, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed May 6, 1926. Serial No. 107,124. 11 Claims. (Cl. 188—78.)

1. In a motor vehicle, the combination with a propeller shaft, an end of which is connected by a universal joint to a transmission shaft, and a housing for said universal joint, of a brake drum secured to said propeller

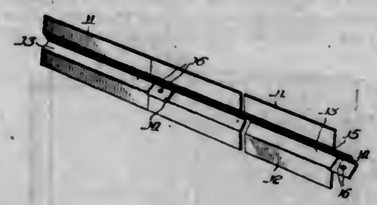
shaft adjacent said universal joint, and a brake mechanism supported by said universal joint housing, co-operating with said drum.

1,629,747. AUTOMATIC CLOSURE. NICHOLAS A. STATHES, and GEORGE A. STATHES, New York, N. Y. Filed July 2, 1926. Serial No. 120,143. 5 Claims. (Cl. 220—35.)



1. An automatically closing cap for the stem openings of automobile gasoline tanks comprising a closure cap, said closure cap being lined with packing material; a split band, the ends of which are bent to form outwardly projecting parallel ears; downwardly projecting lugs on the closure cap and upwardly projecting lugs on the split band; said lugs being perforated and a bolt passing through the perforations and pivotally connecting the band with the closure cap; concavo-convex webs across the lugs on the cap and band forming a housing, a resilient spring in the housing, said spring being tensioned against the webs for the purpose of keeping the closure cap in a downward position.

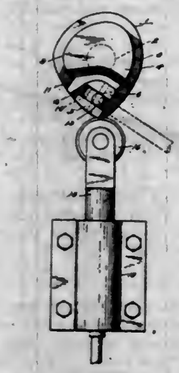
1,629,748. METHOD OF MAKING WELDING RODS AND THE RESULTING PRODUCT. WINSTON F. STOODY, Whittier, Calif., assignor to Stoody Company, Whittier, Calif., a Corporation of California. Filed Jan. 28, 1926. Serial No. 84,419. 7 Claims. (Cl. 219—8.)



7. A welding rod comprising a steel tape which is bent scroll shape in cross section having its side edges overlapping each other and portions adjacent its side edges contacting, and an alloy enclosed in the tape.

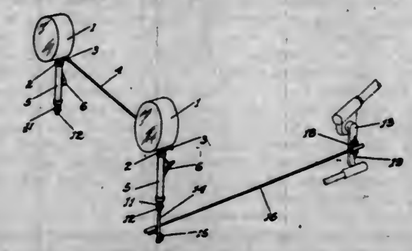
1,629,749. CASING HEAD. MORGAN L. SWEENEY, Los Angeles, Calif., assignor to Union Tank & Pipe Co., a Corporation of California. Filed Aug. 19, 1924. Serial No. 732,888. 9 Claims. (Cl. 166—14.)

1. A casing head comprising: a flexible packing member adapted to be placed inside the open end of a casing; slips fitting inside said flexible packing member; an expander fitting inside said slips and so formed as to expand said slips against the inner surface of said flexible packing member and thus force said flexible packing member outward against the inner surface of said casing; means adapted to pull said expander in a direction to expand said slips; and an inlet pipe rigidly secured to said expander and extending to the exterior of said casing.



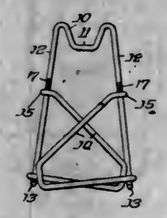
1,629,750. ROAD STRIP. GEORGE L. WELLER, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 19, 1925. Serial No. 57,311. 4 Claims. (Cl. 94—18.)

1. A road strip having a longitudinally extending, laterally off-set channel located intermediate its margins, said channel being extended beyond the end of the margins at one end, the extended portion being deflected inwardly to the extent of the thickness of the metal constituting the strip, whereby said extended portion may fit within the channel of an adjacent strip and allow the top and bottom margins of the strip to be positioned in end abutment and alignment.



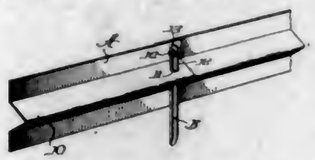
1,629,751. LINK-FORMING DEVICE. WILLIAM F. WEMLINGER, Columbus, Ohio, assignor of one-third to Leo Bauer and one-third to Jethro Billingham, Columbus, Ohio. Filed June 2, 1924. Serial No. 717,305. 2 Claims. (Cl. 153—40.)

1. A link former comprising a rotatable body having an offset forming shoulder of irregular peripheral contour provided on the working face thereof, said shoulder being arranged within the marginal limits of said body to provide a backing flange on said face, clamping means for securing one end of the stock to be bent adjacent to said shoulder, a guide engaging said former to force the stock into shaping relation with said shoulder upon rotation of



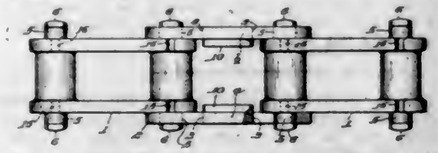
the body, there being a stop releasing recess provided in said face and entering said shoulder to facilitate removal of a formed link therefrom.

1,629,752. DIRIGIBLE HEADLIGHT FOR MOTOR VEHICLES. ERNEST G. WENTWORTH, Sacramento, Calif. Filed Apr. 19, 1926. Serial No. 102,838. 2 Claims. (Cl. 240—62.)



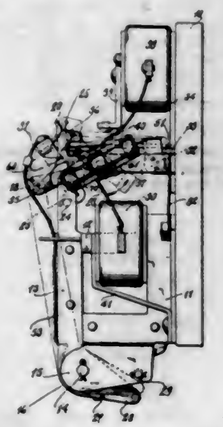
1. A dirigible headlight structure for motor vehicles including a vertical spindle for supporting a headlight turnably mounted on the vehicle, an arm projecting horizontally from the spindle, a rod connected at one end to the arm, a block to which the other end of the rod is connected, a vertical guide member for the block adapted for rigid attachment to a longitudinally movable part of the steering mechanism of the vehicle, and means for adjusting the setting of the block in the guide member.

1,629,753. SCREED CHAIR. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Jan. 3, 1927. Serial No. 158,624. 5 Claims. (Cl. 72—122.)



1. In combination, an inverted U-shaped support having a seat in its upper end and a U-shaped brace pivoted to one leg of said support and adapted to occupy a position at right angles thereto.

1,629,754. STAKE. WILLIAM E. WHITE, Chicago, Ill., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 14, 1927. Serial No. 168,095. 5 Claims. (Cl. 94—18.)

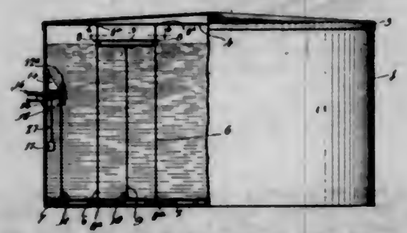


1. A stake for road strips, comprising a length of metal and a tongue of metal extending longitudinally of the stake, located near the upper end thereof and projecting laterally therefrom and adapted to be deflected by contact with the strip as the stake is driven.

1,629,755. DRIVE CHAIN. GEORGE W. WILMOT and FRANCIS H. BLATCH, Hazleton, Pa., assignors to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed Dec. 11, 1923. Serial No. 679,896. 5 Claims. (Cl. 74—32.)

3. In a drive-chain, the combination of links which respectively consist of oppositely disposed spaced bars having stop projections upon their inner sides and also which have slots adjacent their opposite ends which slots extend longitudinally thereof, links which alternate with the first named links, the said second named links each being provided with head portions which are situated intermediate the side bars of the alternating first named links, the said second named links being provided respectively with notches adjacent their opposite ends, the said notches occurring alternately upon the tops and bottoms of the said links.

1,629,756. ELECTRICAL SWITCH. GUSTAV O. WILMS, Milwaukee, Wis., assignor to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 14, 1921. Serial No. 461,288. 12 Claims. (Cl. 200—97.)

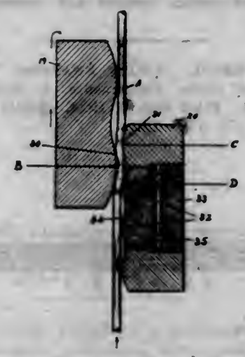


1. An electric switch of the class described comprising a movable armature, an electromagnet acting on said armature, a switch for connecting said electromagnet with an electric supply circuit, and a delaying means arranged to retard the action of said switch, said delaying means being rendered inactive substantially immediately upon the armature reaching a point of rest.

1,629,757. THERMOSTATIC CONTROL DEVICE. EDWARD WILSON, St. Louis, Mo., assignor to The National Pump & Compressor Company, St. Louis, Mo., a Corporation of Delaware. Filed Dec. 17, 1924. Serial No. 756,486. 8 Claims. (Cl. 297—10.)

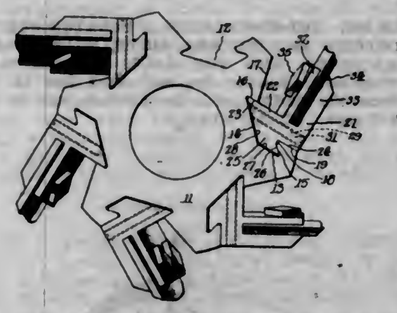
1. A thermostatic control device comprising an element to be actuated, a curved resilient arm, connections from said arm for actuating said element, and a corrugated tubular actuator mounted within the curvature of and attached to said arm.

1,629,758. TANK-GAUGING DEVICE. GEORGE O. WILSON, San Francisco, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Nov. 10, 1924. Serial No. 748,825. 2 Claims. (Cl. 73—82.)



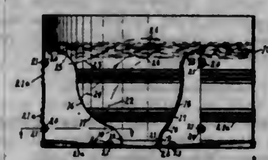
1. In a sealed tank, a liquid gauge comprising a float, means for guiding the movement of the float, a drum located within the tank below the normal liquid surface, flexible means for connecting the drum to the float, said latter means being so arranged as to permit the float to descend below the drum, means for holding said connecting means in tension, a shaft, and a registering device located outside of the tank and connected to the drum by means of the shaft, a stuffing box through which the shaft extends, said shaft being adapted to transmit rotary motion only.

1,629,759. STRAIGHTENING MACHINE. GEORGE A. WISE, Pittsburgh, Pa., assignor to Sutton-Abramsen Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 9, 1925. Serial No. 74,320. 17 Claims. (Cl. 153—54.)



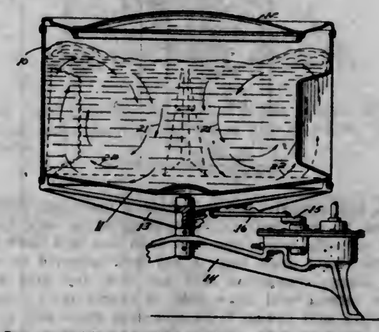
11. In a machine for straightening and reeling bars and the like, the combination of two cooperating disks,

shafts carrying said disks, and bearings for said shafts disposed out of mutual alinement with each other, each of said disks comprising a portion fixed to its shaft and



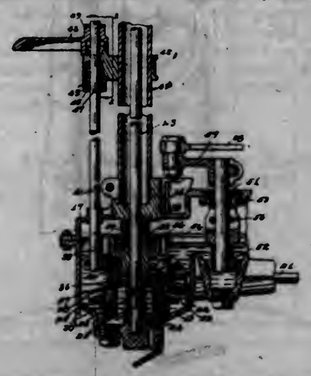
a portion concentric therewith mounted for free rotation with respect to the shaft and the fixed portion of the disk.

1,629,760. CUTTER HEAD. CHARLES WOLF, Beloit, Wis., assignor to Yates-American Machine Company, Beloit, Wis., a Corporation of Delaware. Filed Feb. 17, 1926. Serial No. 88,789. 6 Claims. (Cl. 144—230.)



1. A cutter-head having an undercut groove in its surface and a face external to said groove, in combination with a knife-carrier in said groove having a transverse wedging engagement with a wall of said groove and having a surface bearing on said cutter-head face, and means tending to increase said wedging action by moving said carrier crosswise of said groove.

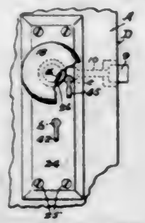
1,629,761. WASHING MACHINE. OLIVER B. WOODROW, Newton, Iowa. Filed Apr. 13, 1925. Serial No. 22,796. 1 claim. (Cl. 259—7.)



In a washing machine, the combination of a tub body having a bottom and sides, a series of agitator blades mounted therein, each blade being formed with an upright member with its outer edge adjacent to the side of the tub body and its inner edge projected toward the center of the tub body, each blade being also formed with a lower portion adjacent to the bottom of the tub body and extended upwardly a short distance from the tub body, the inner end of said lower portion being spaced apart a considerable distance from the center of the tub body, and the inner edge of the upright member of the blade being spaced substantially midway between the inner edge of the lower portion and the outer edge of the tub body, the space within the interior of the body between the inner ends of the blades at the bottom being free and unobstructed to permit the passage of garments across the center of the body by the currents created by the agitator blades when the body is oscillated, the upwardly extended portion being designed to create currents of water within the tub in a direction toward the center of the tub and the lower portion of the blade being designed to create upwardly extending currents within the body of the tub, substantially as and for the purposes stated.

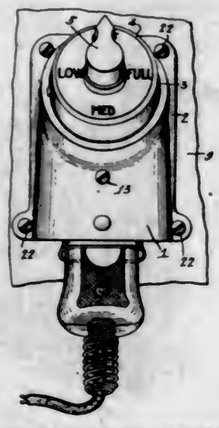
1,629,762. WASHING MACHINE. OLIVER B. WOODROW, Newton, Iowa. Filed Aug. 9, 1926. Serial No. 128,281. 4 Claims. (Cl. 259—75.)

1. In a washing machine, the combination of a substantially upright tub, means for imparting an oscillating rotary movement to the tub, and a series of impellers in substantially upright position adjacent to the interior wall of the tub, the sides of said impellers being tapered from a maximum width at their lower ends to a minimum width at their upper ends, for the purposes stated.



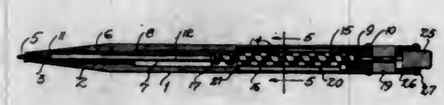
1,629,763. CLUTCH MECHANISM FOR WASHING MACHINES. OLIVER B. WOODROW, Newton, Iowa. Original application filed Apr. 13, 1925, Serial No. 22,797. Divided and this application filed Nov. 2, 1925. Serial No. 66,349. 2 Claims. (Cl. 192—109.)

1. In a mechanism of the class described, the combination of a shaft, a conical clutch member fixed to the shaft, said clutch member beyond its clutching face



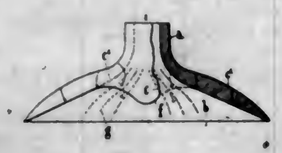
being extended outwardly and then at an angle slightly divergent from the working face of the clutch member, a second clutch member slidingly mounted on the shaft and having a substantially conical shaped working face to coact with the working face of the first named clutch member, a casing in which said parts are contained, said casing being designed to also contain oil, said fixed clutch member being formed with oil passageways, whereby when the sliding clutch member is moved toward the fixed clutch member, oil contained between the sliding clutch member and the fixed clutch member will be forced out through said openings and the clutching action retarded thereby.

1,629,764. LOCK. WILLIAM E. WREAD, Los Angeles, Calif., assignor, by mesne assignments, to Wread Products Corporation, a Corporation of California. Filed Sept. 8, 1925. Serial No. 54,965. 11 Claims. (Cl. 70—29.)



1. A lock comprising a lock body, a draw bolt slidably mounted in said body, a knob mounted on said body; means operably connecting said knob and said draw bolt to retract said draw bolt; a key lock mounted on said body; means connecting said key lock and said draw bolt to retract said draw bolt; a thumb latch; means connecting said thumb latch and said draw bolt to retract said draw bolt, said knob operated draw bolt retracting means, key operated draw bolt retracting means and thumb latch operated draw bolt retracting means each being independently operable to retract said draw bolt irrespective of the other retracting means.

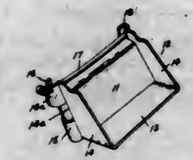
1,629,765. SWITCH BRACKET. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartzbaugh Manufacturing Co., Toledo, Ohio, a Corporation. Filed Oct. 12, 1925. Serial No. 62,105. 2 Claims. (Cl. 200—169.)



1. A switch and terminal bracket comprising a switch casing member having side walls with lateral attaching means and an outwardly spaced skirt portion open at its rear and bottom, a transversely disposed insulated block having terminal members and secured to the inner face of said skirt, and a controlling switch located in the casing member and connected to said terminals.

1,629,766. PENCIL. JULIUS SWANBERG, Chicago, Ill., assignor, by mesne assignments, to Robert Chelton, Chicago, Ill. Filed Apr. 2, 1924. Serial No. 703,590. 4 Claims. (Cl. 120—18.)

3. In a pencil, a casing, a lead-propelling mechanism rotatably mounted therein, and resilient helical means in the casing cooperating with said lead-propelling mechanism to propel the lead, said helical means being in engagement under compression with a portion of said lead-propelling mechanism, whereby to retard rotation of the mechanism.



1,629,767. JET-PROPULSION APPARATUS FOR THE DRIVING OF VEHICLES, SHIPS, BOATS, FLYING MACHINES, AND THE LIKE. SALUSTIO VALDÉS, Westminster, London, England. Filed Dec. 15, 1924, Serial No. 756,131, and in Great Britain Mar. 18, 1924. 8 Claims. (Cl. 115—11.)

1. Improved reaction propelling device for a vehicle comprising in combination a hollow hub, a hollow extension connected to and flaring outwardly from such hub, a pair of broad shallow lips terminating such extension from between which pressure fluid is adapted to issue, and convergent stream line external surfaces to the lips and extension member, whereby the medium in which the propeller is immersed flows towards and across the lips so that the issuing pressure fluid obtains full impact upon the external medium.

1,629,768. GROUSER. PAUL WEEKS, Detroit, Mich., assignor to the Secretary of War of the United States, trustee. Filed June 21, 1926. Serial No. 117,651. 6 Claims. (Cl. 305—10.) (Granted under the act of Mar. 3, 1883, 22 Stat. L., 625.)

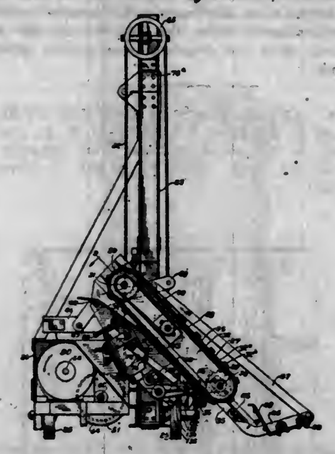
1. In a combination, a track for vehicles consisting of tread plates having link members, a grouser for each tread plate, said grouser formed of a transverse pressure plate adapted when in place to rest on the link members and longitudinally extending substantially triangular side plates each provided with an aperture, a pair of ears formed on said side plates for gripping the tread plate, the foremost of said ears enlarged at one

end to facilitate application of the grouser, and a spring key insertable through the apertures of the side plates and engageable against the tread plate.

1,629,769. CROSS-DYEING CELLULOSE FABRIC. JOHN C. WATSON, Attleboro, Mass., assignor of one-half to Thayer P. Gates, Providence, R. I. Filed July 20, 1926. Serial No. 123,802. 22 Claims. (Cl. 8—5.)

4. The herein described improved process of manufacturing an all cellulose textile fabric having component sets of warp and filling threads of contrasting colors which comprises treating before weaving one of said component sets of threads with an intermediate dye component, then weaving said component set with the other component set to form the fabric and, treating the fabric with a second intermediate dye component to couple said components to form a dye stuff impregnated on the prepared set.

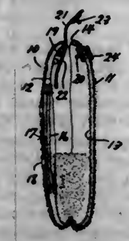
17. The herein described improved step in the process of manufacturing an all cellulose textile fabric in contrasting colors, which comprises simultaneously treating the warp in the slashing process with a size and with a solution of a naphthol, each of which has no appreciable effect upon the functioning of the other.



1,629,770. CROSS-DYEING CELLULOSE FABRIC. JOHN C. WATSON, Attleboro, Mass., assignor of one-half to Thayer P. Gates, Providence, R. I. Filed July 20, 1926. Serial No. 123,803. 28 Claims. (Cl. 8—5.)

1. The herein described improved process of manufacturing an all cellulose textile fabric having component sets of warp and filling threads of contrasting colors which comprises treating before weaving one of said component sets with a dyestuff, treating the other component set with a different dye-stuff, then weaving said component sets to form the fabric and after weaving treating the fabric with a chemical which acts on one component set to form a dyestuff of one color thereon and acts on the other component set to form a dyestuff of a different contrasting color thereon.

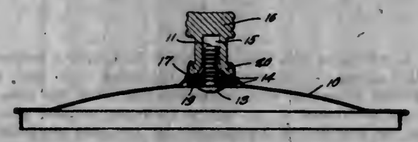
9. The herein described improved process of manufacturing an all cellulose textile fabric in contrasting colors, which comprises simultaneously treating the warp in the slashing process with a size and with a stabilized soluble derivative of a vat dyestuff, each of which has no appreciable effect on the functioning of the other, weaving the fabric in the usual manner with a filling, and treating the fabric to form the vat dyestuff on the prepared warp.



1,629,771. PORTABLE STACKING MACHINE. WILFRED S. YOUNG, Chicago, Ill., assignor to Economy Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed July 26, 1922. Serial No. 577,563. 53 Claims. (Cl. 214—95.)

1. A raising and lowering machine comprising, in combination with a stationary upright frame, a load-supporting platform, a cradle guided for up and down movements in the frame and movably supporting the platform, and

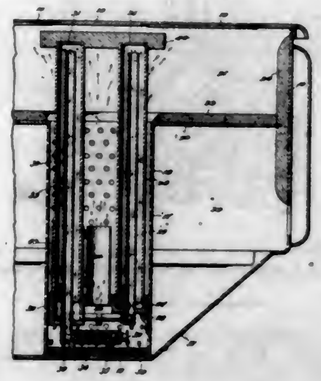
motive power means for elevating the cradle with its platform and imparting endwise bodily movement to the platform.



1,629,772. POWDER PUFF. SAVERIO BIONDI, Los Angeles, Calif. Filed Dec. 18, 1925. Serial No. 76,304. 2 Claims. (Cl. 132—78.5.)

1. A powder puff of the character described comprising an outer casing including a pair of sections secured together, a lining secured within the casing and likewise formed of connected sections, the space within the lining constituting a reservoir for the storage of powder to be used, one section of the casing being provided with a plurality of eyelets permitting the discharge of powder therethrough, the lining at said apertured or eyelet side of the casing being formed with an opening, wire screen located between the lining and the apertured side of the casing for limiting the flow of powder,

---

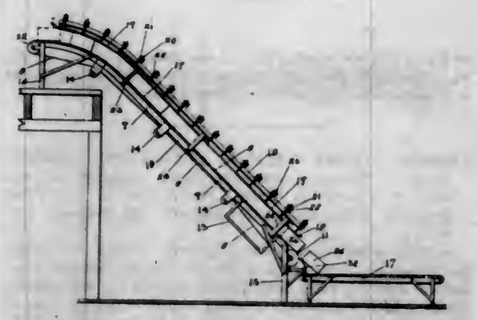


1,629,773. KNOB. ERNST F. BOSSUNG, Hamilton, Ohio. Filed Oct. 17, 1925. Serial No. 63,152. 1 Claim. (Cl. 16—121.)

A knob attachment for use upon pan tops having a bore extending within one end thereof, a shank forming a plurality of frusto-conical shaped members disposed in

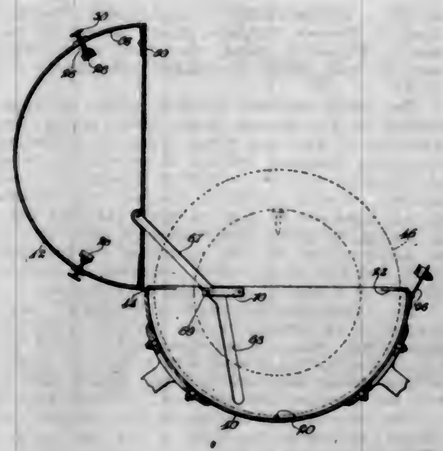
end to end relation and extended through the top and within said bore, a disk member seated upon the top below the knob, attaching ears carried by the disk and secured to the knob, and spring lugs struck centrally and extending upwardly from the disk within the bore for engagement with the frusto-conical shaped portions of the shank.

1,629,774. APPARATUS FOR BURNING FUEL OILS. CHARLES E. CHAPMAN, Fort Edward, N. Y., assignor of one-half to Joseph Goodfellow, Fort Edward, N. Y. Filed Oct. 16, 1925. Serial No. 62,851. 6 Claims. (Cl. 158—56.)



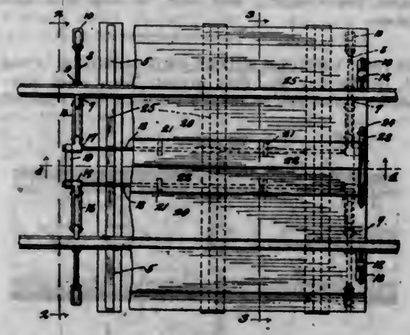
1. An apparatus for burning fuel oil including a steam generator heated to a greater degree at one end than the other, means supplying water to the cool end of said generator, an oil vapor generator heated to a greater degree at one end than the other, means supplying oil to the cool end of said vapor generator, means for conducting steam from the heated end of said steam generator to the cool end of said vapor generator to mingle with the oil vapors and form a fuel mixture, a portion of the latter means being housed within the steam generator, a nozzle supplied by said mixture and disposed to effect the heating of said generators by the combustion of said mixture, and means for conducting the fuel mixture from the heated end of said vapor generator to said nozzle and having a portion thereof housed within the vapor generator.

1,629,775. PEN ATTACHMENT. STANLEY COLLANDER, Scranton, Pa. Filed Oct. 12, 1922. Serial No. 594,123. Renewed Oct. 20, 1926. 3 Claims. (Cl. 120—84.)



1. A device of the class described including a hollow handle having a longitudinally extending slot and, a transverse extending slot communicating with the other slot and positioned in its end, a U-shaped member positioned in the hollow handle having its ends projected through the second mentioned slot and bent to provide angular extensions fixed to the end of the handle, said member provided with notches, an eraser having projections for engaging the slot and means on the eraser projecting from the first mentioned slot whereby the eraser may be moved to disengage its projection from the notches and move longitudinally of the handle either in a projected position or a withdrawn position.

1,629,776. CONVEYER. FRANK W. CUTLER, Portland, Oreg., assignor to Cutler Manufacturing Company, Portland, Oreg., a Partnership. Filed Oct. 5, 1925. Serial No. 60,596. 5 Claims. (Cl. 198—160.)

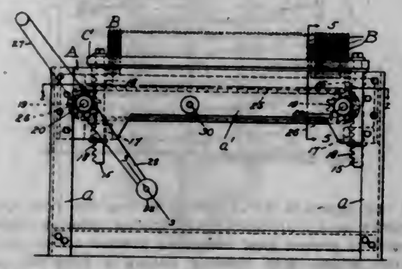


1. An endless traveling conveyer; a member parallel to said conveyer; and yieldably mounted articulated bars mounted upon said member and adapted to contact with material upon said conveyer.

1,629,777. TIRE CARRIER AND PROTECTOR. CHRIST DAHL, Chicago, Ill. Filed Dec. 2, 1925. Serial No. 72,791. 1 Claim. (Cl. 224—29.)

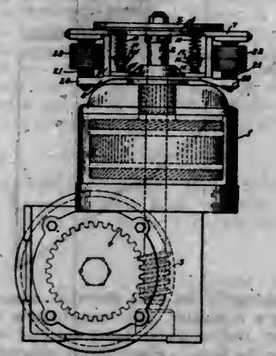
A tire carrier comprising a stationary hollow semi-cylindrical tire receiving section, a similarly shaped cover section hinged thereto, internal ribs formed on the abutting peripheral edges of said sections for seating said cover section in service position, said ribs being extended to form spacers for a tire in the carrier, and manually adjustable means for binding a tire in said carrier against said spacer ribs.

1,629,778. CROSSING. STEVEN G. DAVIS, Perrysville, Ind. Filed Jan. 13, 1927. Serial No. 160,917. 4 Claims. (Cl. 238—8.)



1. A highway crossing for railway tracks embodying supporting bars having notches and secured to the ties of the railway track, clamping members secured to the rails, rods supported by the clamping members and resting in the notches, outer highway sections having hook members, means for removably connecting the hook members to the clamping members, center planks forming a part of the highway crossing and having hooks engaging the rods to hold the planks in position, and means engaging the upper surfaces of the planks for holding the planks against upward movement.

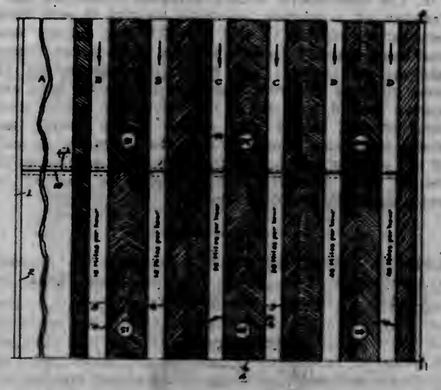
1,629,779. FASTENER. FERNAND DEGUELDRE, Brussels, and LUCIENE DEMARET, née DEGUELDRE, La Louviere, Belgium. Filed May 27, 1926, Serial No. 112,121, and in Belgium May 4, 1926. 2 Claims. (Cl. 24—248.)



1. A fastener for wearing apparel, comprising an oblong plate having raised longitudinal edges, a U-shaped wire pivoted to one end of said plate, the shanks of said wire being adapted to lie against said edges substantially throughout their length, and catches on said plate for receiving the ends of said shanks.

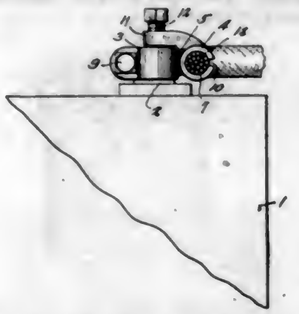
1,629,780. APPARATUS FOR USE IN ASSEMBLING RADIATOR CORES. CHARLES W. DIPPERT, Kenmore, N. Y. Filed July 22, 1926. Serial No. 124,269. 22 Claims. (Cl. 29—84.)

1. An apparatus for use in assembling fin and tube radiator cores, including a support for one edge of each fin, and a plurality of guide members adapted to cooperate with the faces of said fins for positioning the fins in correct alinement for the insertion of tubes therethrough.



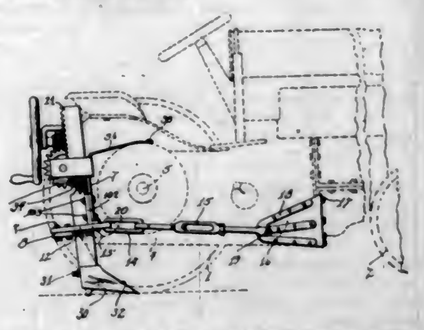
1,629,781. ELECTRICALLY-RELEASED BRAKE. JOHN W. DODE, Brookline, Mass., assignor to George T. McLauthlin Company, Boston, Mass., a Corporation of Rhode Island. Filed June 3, 1925. Serial No. 34,523. 6 Claims. (Cl. 188—171.)

1. The combination with a motor having a casing and a rotor shaft, of a frame carried by said casing and through which said shaft passes, said frame having marginal portions directed away from said casing and having guideways at their free ends, a plate movable axially of said shaft and having portions fitting said guideways and preventing rotation of said plate with said shaft, a disk fixed to said shaft outwardly of said plate, posts extending outwardly from said frame between said marginal portions, abutments adjustable lengthwise of said posts, springs bearing between said abutments and plate for pressing said plate toward said disk, and electromagnets carried by said frame between said margins and energizable to draw said plate away from said disk against the action of said springs.



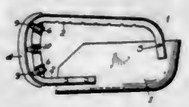
1,629,782. ONE-WAY MOTOR WAY OR STREET. CLYDE T. ELDREDGE, San Francisco, Calif. Filed July 7, 1924. Serial No. 724,625. 4 Claims. (Cl. 94—2.)

1. In a concrete street or highway, a pair of spaced smooth tracking area for road vehicles with a grooved surface formed on the street adjacent the tracking areas having grooves, extending at an angle to the smooth tracking areas.



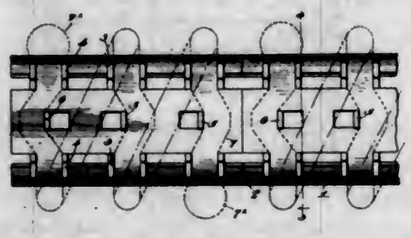
3. A street paving comprising a slab of concrete covering the roadway with a transversely extending concrete girder thereunder formed integrally with the slab, and a slot in the slab aligned over the girder extending from the surface of the slab downwardly a distance substantially equal to the thickness of the slab.

1,629,783. CONNECTER. HARRY FINKLE, Philmont, N. Y. Filed June 29, 1926. Serial No. 119,408. 2 Claims. (Cl. 173—239.)



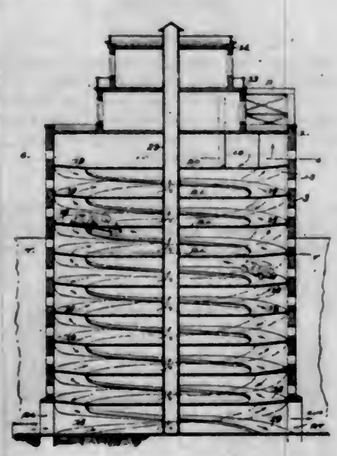
1. A connecter of the class described, comprising means for holding a conductor, and comprising a socket for a battery post, the connecter being supplied with an arm overhanging the socket, and a thrust member movable in the arm and adapted to cooperate with a battery post to dislodge the connecter therefrom.

1,629,784. SCARIFIER. CLARENCE E. GILBERT, Aberdeen, S. Dak. Filed Sept. 2, 1924. Serial No. 735,470. 4 Claims. (Cl. 262—8.)



1. The combination with a standard tractor having a drawbar, of a scarifier removably secured to said drawbar, cutters carried by said scarifier, said cutters being positioned directly below the rear axle of the tractor whereby said cutters will remain in substantially the same plane as the front wheels of the tractor pass over uneven ground, and means for preventing lateral movement of said cutters with respect to the tractor, said means comprising adjustable members secured to the ends of the scarifier and having their free ends secured to the tractor, said members being adapted to prevent the swinging of the scarifier rearwardly.

1,629,785. SCRAPER SHOE. CLARENCE E. GILBERT, Aberdeen, S. Dak. Filed June 21, 1926. Serial No. 117,517. 3 Claims. (Cl. 37—140.)

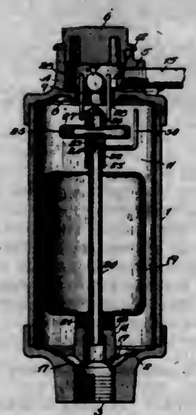


1. The combination with a scraper bucket having a shoe holding member, of a curved shoe of wear-resisting material arranged to fit on a portion of said shoe holding member and having an extension on one side thereof, and clamping means carried by said extension and arranged to engage the inner part of said shoe holding member for clamping said shoe to said shoe holding member.

1,629,786. VEHICLE WHEEL-GRIP MEMBER. CHARLES H. GUNTHORPE, Sr., Port Arthur, Tex. Filed Mar. 29, 1926. Serial No. 98,258. 3 Claims. (Cl. 152—16.)

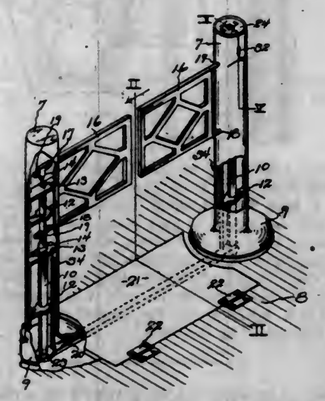
2. A device of the character described comprising a strip of light gauge metal adapted to encircle the tread of an automobile wheel tire and to contact with the periphery of said tire, said strip being curved transversely to conform to the curvature of the peripheral portion of the associated tire, said strip being formed with longitudinally spaced pairs of outwardly turned lugs arranged in two rows respectively located at opposite sides of the longitudinal median line of the strip, the lugs of each pair being struck oppositely from the body of the strip, and a flexible traction member wound about the rim of the wheel and about the strip on said wheel tire, the convolutions of said flexible traction member extending between adacent pairs of lugs of each of said rows of lugs on the strip.

1,629,787. BRIDGE APPROACH. ALLEN S. HACKETT, New Orleans, La. Filed May 7, 1926. Serial No. 107,458. 2 Claims. (Cl. 20—1.)



1. An approach for a bridge having the floor ending abruptly at an altitude above ground lever, a building erected at ground level extending upward across the end of the bridge, said building having a relatively large opening at which the bridge floor communicates with the interior of the building and having a pair of openings at ground level being diametrically opposite each other, a continuous spiral ramp located within the building and communicating at the lower end with one of said ground level openings, a second continuous spiral ramp having its convolutions interposed between those of the first mentioned ramp and communicating at its lower end with the other ground level opening, and tangential portions extending from the opposite and upper ends of said ramps being disposed side by side and communicating with said relatively large bridge opening.

1,629,788. ENVELOPE. LINWOOD WENDELL HARGROVES and HERBERT LOUIS HERMAN, Augusta, Ga. Filed Mar. 1, 1923. Serial No. 622,073. 1 Claim. (Cl. 229—78.)

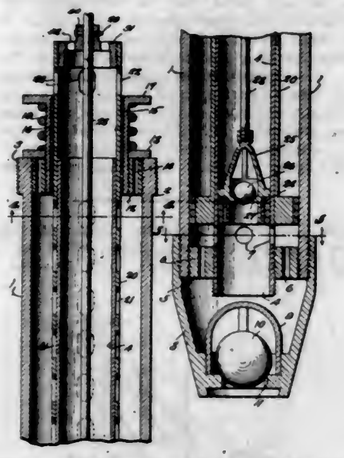


In an envelope, a body portion having an open end and a closed end, cloth members secured transversely of the body portion at a point adacent to the open end of the body portion, and on opposite sides thereof, to permit the open end of the body portion to be folded laterally in either direction to close the body portion, eyelets secured to the body portion at points in spaced relation with the open end of the body portion, fastening members secured to the body portion at opposite sides thereof and adapted to be inserted in the eyelets when the open end of the body portion is bent laterally in either direction, and each of the outer faces of the body portion adjacent to the open end thereof being ruled to receive the name and address of the person sending the envelope.

1,629,789. AIR AND VACUUM VALVE. AMOS HARRISON, Chicago, Ill., assignor to Jas. P. Marsh & Company, Chicago, Ill., a Corporation of Illinois. Filed June 21, 1920. Serial No. 390,568. 2 Claims. (Cl. 236—62.)

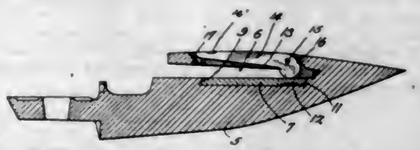
1. In a device of the kind described and in combination, a casing comprising a tubular shell provided with end closures, the closure at the lower end provided with a chambered upwardly-extending part having a port therethrough for the admission to or discharge of fluid from the casing, the upper closure provided with a chamber communicating with the casing, and having an adjustable valve seat in said last mentioned closure, valve mechanism seating on said valve seat for controlling the flow of fluid between said upper closure and casing, means for automatically controlling said valve mechanism by either the admission of a predetermined amount of fluid to the casing or a predetermined temperature therein, and a movable tubular part open at its upper end adjacent the upper closure and open at its lower end and extended into and communicating with the interior of the upwardly-extending chambered part of the lower closure at a point above the inner surface of the bottom wall of the casing.

1,629,790. AUTOMATIC GATE. HARRY M. HIRSCH and FRANK A. HARRIS, Parsons, Kans. Filed Oct. 29, 1925. Serial No. 65,610. 5 Claims. (Cl. 39—18.)



1. In a gate of the character described a pair of spaced apart tubular posts, means housed by each post for swingingly supporting a gate member, and adapted to carry said member through a spiral path when swung, a slot formed in the wall of each tubular post to receive a portion of the respective gate and means for operating said swinging means, said slots being spirally formed in the wall of said tubular posts to correspond to the spiral path of travel of the gate.

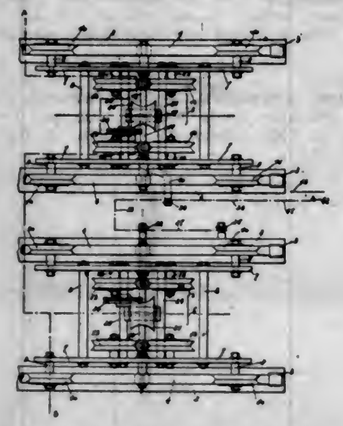
1,629,791. RAIL JOINT. ZACHARY T. HOSKINS, Chicago, Ill. Filed Sept. 22, 1924. Serial No. 739,098. 5 Claims. (Cl. 238—260.)



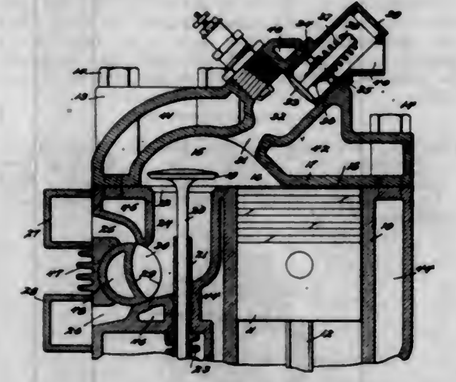
1. In a rail joint of the kind described and in combination, abutting rails, a tie plate, splice bars arranged on either side thereof, and bridging the joint between the rails, the bars extended to overlie and seat on the tie plate, means for securing the bars and tie plate to the tie, said rail ends and splice bars provided with bolt holes, and bolts passing through the bars and rail ends, the bolts passing through one rail end being of slightly less diameter than the bolts passing through the other rail end, whereby said bolts are of less diameter than the holes through which they pass for permitting movement of one rail end relative the other.

1,629,792. DOUBLE-ACTING PUMP. JOHN SAMUEL HUNTER, Coalinga, Calif. Filed Mar. 1, 1926. Serial No. 91,547. 1 Claim. (Cl. 103—187.)

A pump comprising an outer barrel, a foot valve for the outer barrel, an inner barrel fixed within the outer barrel, a tube slidable upon the inner barrel and provided with an outlet, a first piston carried by the tube and slidable between the barrels, a second piston slidable within the inner barrel and provided with a downwardly closing valve, means for connecting the second piston to the tube to move therewith, and a spring-seated relief valve which operates at the upper end of the outer barrel, externally of the tube.



1,629,793. LEDGER-PLATE FASTENER FOR GUARD FINGERS. MATIAS M. HUSTAD, Ortley, S. Dak., assignor of one-half to Ole J. Orton, Ortley, S. Dak. Filed Dec. 5, 1925. Serial No. 73,499. 2 Claims. (Cl. 56—311.)

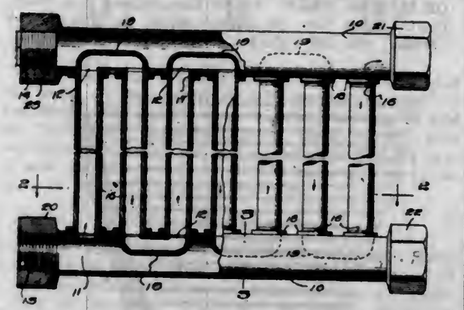


1. A cutter bar guard finger having a blade opening, the lower surface of the blade opening being cut away, a ledger plate positioned in the cut away portion, said ledger plate having a forwardly extended portion, an arm pivotally supported above the ledger plate and adapted to move vertically with respect to the ledger plate, said arm having a cam shaped enlargement at one of its ends adapted to engage the forwardly extended portion of the plate to lock the plate against movement, and means for normally locking the arm against movement.

1,629,794. TARGET-PRACTICE DEVICE. JOSEPH ELIE THÉODULE JACQUEMIN and MAURICE PASCHAL CÉLESTIN FRÈRE, Brussels, Belgium. Filed Apr. 29, 1924. Serial No. 709,928, and in Belgium May 1, 1923. 6 Claims. (Cl. 124—15.5.)

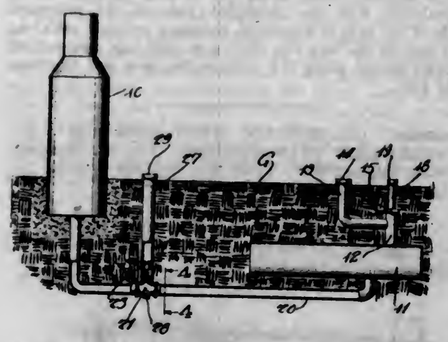
1. In a target practice device, in combination two movable supporting elements, the said supporting elements being arranged in vertical parallel pinnes and adapted to follow the movements of a freely manipulated gun during the aiming of a marksman, a registering pantograph acted upon by the said supporting elements at two movable points, means for recording the movements of the said pantograph and a correcting device, the said correcting device being inserted between one of the supporting elements and the movable point of the pantograph which is acted upon by the said supporting element.

1,629,795. INTERNAL-COMBUSTION ENGINE. FRANK MYRON JOBBS, Ann Arbor, Mich. Filed Mar. 4, 1924. Serial No. 696,878. 12 Claims. (Cl. 123—75.)



1. In an internal combustion engine of the L-head type, a cylinder, a valve, a piston reciprocating in said cylinder, a combustion chamber adjoining and communicating restrictedly with the end of said cylinder, the end of said cylinder being otherwise permanently closed by a head substantially engaged by the top of the piston at upper center, an isolated pocket in communication with said combustion chamber through a restricted port, said port being directed toward said valve and means for supplying said pocket with a rich combustible mixture.

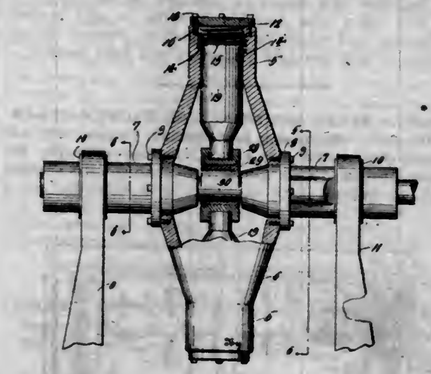
1,629,796. MANIFOLD. WILLIAM C. KERWIN, Joplin, Mo. Filed Aug. 25, 1926. Serial No. 131,498. 2 Claims. (Cl. 257—252.)



1. A device of the character described comprising a pair of spaced headers provided with openings at the ends thereof adapted to receive closure members whereby a selected pair of the said openings may be closed, each of said headers being also provided with spaced openings

in the wall thereof, means communicating with the headers for conducting fluid in a circuitous path back and forth from one header to the other, said fluid conducting means comprising spaced pipes whose ends are secured within the said spaced openings in said headers, means provided within each header to prevent the discharge of fluid from the fluid conducting means into said headers

except at the ends of said fluid conducting means whereby upon the closure of either of the two end openings in each header fluid may be admitted at either of the two remaining end openings and discharged from the other of said remaining end opening after passing through the entire length of the said circuitous fluid conducting means, substantially as described.



1,629,797. FILLING-STATION VALVE AND KEY. ADAM KNITTEL, Tyner, Tenn. Filed Mar. 10, 1926. Serial No. 93,789. 2 Claims. (Cl. 251—100.)
